MY DEAR CONGRESSMAN: Dr. Paul D. Dickens of our Finance Division has called my attention to your letter of February 19, in which you ask for certain information to supplement that given in our release of June 19, 1939. We do not have sufficient statistical data available to provide an exact answer to your question relative to the gold-clause provisions in the United States corporate bonds held by foreigners, nor do we have any information pertaining to the dates when such bonds were negotiated. We feel quite certain, however, that the major portion of such holdings related to issues that were sold to the public prior to 1934.

The latest statistics which we have available on a bicountry basis relate to the end of 1934. At that time investors to the United Kingdom held \$87,000,000 of United States corporate bonds, and French investors held approximately \$50,000,000 of such securities. Although changes have undoubtedly been made in these portfolios since the end of 1934, we have no reason to believe that these holdings have changed materially in value or that there has been any substantial shift from bonds issued prior to 1934 to bonds issued at a later date.

Sincerely yours,

JAMES W. YOUNG, Director.

We may now understand that \$7,883,000,000 of foreign investments were made when 1 ounce of gold was worth \$20.67 or when \$1 contained 25.8 grains of gold nine-tenths

fine. Gold is now worth \$35 an ounce, but gold in the dollar has been reduced to 15.521 grains, nine-tenths fine. I shall consider these private holdings in my discussion, as there appears to be no authentic record of foreign-owned United States corporate bonds. The Treasury Department apparently knows nothing about it, and the Department of Commerce records show only \$137,000,000 of such bonds.

These \$7,883,000,000, when converted, amount to 381,373,971 ounces of fine gold. Multiplying this with the present price of gold, \$35 per ounce, we find that these foreign-owned American securities amount to \$13,348,088,985, which represents the new international dollar.

Deducting this amount from the \$13,084,652,182.69 of gold leaves \$4,736,563,197.69 balance in the United States Treasury. So it appears that we are not so well off after all. If we now deduct the \$2,000,000,000 in the stabilization fund, which under the present management may be lost, we will then have a balance of \$2,736,563,197.69 of gold in the United States Treasury, which, when converted into the old dollar is \$2,775,863,983 less than what was in the Treasury in 1922. Let us now grant that the Executive and the Secretary of the Treasury possess sufficient ability to save the \$2,000,000,000 in the gold stabilization fund. We will even then have \$1,285,721,108 less gold in the United States Treasury than we had in 1922. We are, therefore, in this position today: When all our own securities are liquidated, we are a debtor Nation with less than \$200,000,000 in gold in the United States Treasury, instead of the \$18,000,000,000 we are supposed to have.

This situation should be of considerable interest to Members of Congress, particularly when we recall that all outstanding gold certificates are payable in gold, and not one of them is owned by the people of this Nation, but instead they are held by interests outside of the Treasury or the Governors of the Federal Reserve banks. This can mean only one thing: When foreign holdings are cashed, and our gold certificates liquidated, no gold is left in the United States Treasury as security for the business structure of this Nation and our people.

The question now arises, Is there any likelihood that foreign investors in American securities will cash in on such holdings? The answer is "Yes," and here is the evidence from the Washington Post, February 19, 1940:

BRITAIN CALLS IN 60 UNITED STATES STOCKS FROM PUBLIC—PURPOSE IS TO INSURE ORDERLY CONVERSION, TREASURY SAYS

LONDON, February 18.—Britain's drive for dollars to pay her war bills today brought a treasury order requiring British owners of 60 selected American securities to turn them over to the Bank of England at current prices.

The order will make the bank owner of a huge block of American stocks. Total value was not made known, although Britons were required at the beginning of the war to register their foreign holdings.

It was estimated just before the war that British investments in the United States totaled £200,000,000, the equivalent of nearly \$1,000,000,000 under the then prevailing rate of exchange.

The treasury order said its purpose was "to insure that realization of securities in American markets shall be orderly and that the total volume of sales from the United Kingdom should continue at about the average volume of recent months."

If this statement is based upon fact and if there was only \$1,000,000,000 British investment before the war, we may assume that the difference of \$6,883,000,000 as listed in the Department of Commerce release has been credited to England since the opening of hostilities. If this is true, as it appears to be, it can only be considered as a deliberate attempt by our own international financiers to finance the present war for England at the expense of the taxpayers of the United States.

It is the duty of Congress to ascertain the manner in which England acquired these securities, whether they were bought, or whether it was only an extension of credit with the securities held by the international bankers of the United States, for there seems to be a definite understanding as to the manner in which these securities are to be negotiated, as this quotation from the same article indicates:

The British action was welcomed here, because so long as British nationals were permitted to undertake dribbling liquidation of their American holdings, this problem has hung over the American markets.

It appears from this statement that the American financial groups, including the Treasury Department, are apprehensive that this credit may be used too rapidly and so bring about a drop in these securities, an attitude that again shows collusion between the British and American internationalists. It is again as it was in 1917, a rape of America.

Had Members of Congress the interest of our own Nation at heart, they should insist that these English investments be credited against the defaulted World War debts, upon which not even interest has been paid.

Those Members of Congress who stood so stanchly by the internationalist and supported the trade treaties may, if they have any interest at all in the United States and in their own people, give a little consideration to this.

The investments to which I have referred were made before the Gold Reserve Act was enacted in 1934, when an ounce of gold was worth exactly \$20.67 in credit or merchandise. Today the same ounce of gold is worth \$35 in credit or merchandise, which is \$14.33 more than 1 ounce of gold bought before the act was adopted.

Let us take an example: In 1933, 100 ounces of gold at \$20.67 per ounce amounted to \$2,067, the price of an automobile. Today, the same 100 ounces of gold at \$35 amounts to \$3,500, which will buy the same automobile and give the foreign buyer \$1,433 in change. Who takes this loss? The taxpayers of the United States. Let us take another example: Before 1934, 1 ounce of gold at \$20.67 was the price of one cow. Today, the foreign buyer will, with the same ounce of gold, buy one cow for \$20.67, but he will, in addition to that, receive \$14.33 in change or credit with his purchase. Is it now any wonder that our manufacturing industries and farm industries are steadily disintegrating?

Are we not the most Santa Clausy good neighbors that foreign nations have ever had? Under our present international monetary system, we give a foreign buyer 69 cents of merchandise free for every 31 cents he spends with us.

The great New Deal majority that supported the trade pacts and even denied Congress the constitutional right to approve these treaties, and the right of protest by American producers, should indeed crawl into a hole and pull the hole in after them. The motion to recommit is so important to industries, to agriculture, and to labor that I shall quote the motion:

Mr. TREADWAY moves to recommit the joint resolution (H. J. Res. 407) to extend the authority of the President under section 350 of the Tariff Act of 1930, as amended, to the Committee on Ways and Means, with instructions to report the same back to the House forthwith with the following amendment: "Provided, That no such foreign-trade agreement concluded after the date of the enactment of this joint resolution shall take effect until it shall have been approved by the Congress by law: *Provided further*, That so much of said section 350 as suspends the application of section 516 (b) of the Tariff Act of 1930 (relating to appeal of protest by American producers) to any article with respect to which such foreign-trade agreements have been concluded, or to any provisions of such foreign-trade agreements is hereby repealed; *Provided further*, That the authority conferred under said section 350 does not embrace authority to include in any trade agreement the excise taxes upon the importation of petroleum, coal, lumber, and copper imposed by subchapter B or chapter 29 of the Internal Revenue Code: *Provided further*, That no rate reduction shall be included in any foreign-trade agreement which permits the entry into American markets of products of workers, farmers, or miners of foreign countries at total landed costs, all tariff duties paid, which total costs are less than the cost of production or wholesale selling price of competitive products of American workers, miners, or farmers where such American products are commercially available.

In other words, this motion to recommit asked that trade pacts be handled according to the Constitution, for the protection of the farmers, miners, and producers in the United States against unfair foreign competition.

Did any one of those who voted "no" to this recommitment give the slightest consideration to the fact that for every grain of gold expended in the United States for merchandise we furnish 69 percent absolutely free and without cost to the foreign buyer? That for every ounce of gold spent for merchandise in the United States we give him \$14.33 more than he could buy in 1932, or, in other words, for every dollar of foreign investments to which I have referred, when expended for merchandise, we donate 69 cents.

Those who voted "no" to the motion to recommit voted against the American workers, miners, farmers, and business. They voted for an unconstitutional act, which deprives the people of their constitutional rights as set forth in the tenth amendment. They violated their oath of obligation.

As it stands now, we furnish over 70 percent of all merchandise sold to foreign nations free. This seems incredible, but is nevertheless a fact, so is it any wonder that foreigners have little or no respect for us? Who is responsible for this? Those voters who selected Congressmen to follow the Executive and the internationalist instead of the Constitution of the United States.

## Conviction, and Courage of Conviction

### EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

ADDRESS BY HON. ROBERT L. RODGERS, OF PENNSYLVANIA, BEFORE THE REPUBLICAN CLUB OF FREDERICK, MD., FEBRUARY 22, 1940

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of an address made by me before the Republican Club of Frederick, Md., at the time of their Washington's Birthday observance, on the evening of February 22, 1940, as follows:

Mr. Chairman, fellow Republicans, ladies and gentlemen, I appreciate the honor conferred upon me in being invited to be with you on this occasion and to have a part in this program. I am glad to come to the historic city of Frederick—in the historic State of Maryland—and especially so in recognition of this historic occasion, the observance of the birthday of George Washington, who has been rightly called the Father of his Country. It is pleasing also that this meeting is under the auspices of that political organization that furnished the leadership to preserve the Nation which Washington so ably and so heroically helped to found. In passing, I believe it also fitting to observe that it has been under the administrations of this same political organization that the United States has experienced its greatest periods of growth, development, and prosperity; and, again, it is this same political organization that is today the hope of the Nation.

It is not my purpose, however, to make a political or partisan speech, but I shall direct my effort with reference to Washington and to certain historical events in the earlier life of our country with their patriotic significance and certain present-day application, and under the caption Conviction and Courage of Conviction.

The career of Washington, his experiences, the services which he rendered were most varied. Active in colonial times—both in peace and war—Commander in Chief of the Continental Armies during the Revolution, deeply concerned and personally active during the chaotic condition of the sovereign States following that war—for 4 months presided over the deliberations of the Constitutional Convention, which brought forth, according to the words of the eminent Gladstone, "The greatest work ever struck off at a given time by the brain and purpose of man"—and, lastly, for 8 years Chief Executive of this new experiment in government.

I wish to refer to the Declaration of Independence and its three subdivisions. First, the preamble, which states, among other things, that "all men are endowed by their Creator with certain unalienable rights. . . . That to secure these rights, governments are instituted among men deriving their just powers from the consent of the governed." This was not only a radical declaration for that time but it was contrary to the age-old and long-accepted doctrine of the divine right of kings, for it said in effect that no accident of birth gave any man or set of men a right to rule over or to impose their will upon other men. It was a challenge not to England only but to every throne and ruling class of the Old World.

Next in order we have a recital of those "facts submitted to a candid world," or, as our lawyer friends today would term it, "a bill of particulars." And, finally, we have the conclusion in which those heroic members pledged their lives, their fortunes, and their sacred honor to the carrying out and perpetuating of the principles involved, and the maintaining of the facts as submitted to a candid world in the bill of particulars. The Declaration was not only made and the pledge entered into but it was signed by the individual members who knew full well that, in the event of failure, in the event of an unsuccessful revolution, they would be arrested, tried, condemned, and executed as traitors to their King.

We should remember that these men were not only patriotic men who had convictions but also had the courage of their convictions. One of the signers to the Declaration wrote in an exceptionally

large hand, so that his signature was outstanding. When some person remarked as to this, he said he wanted King George to be able to read it without his "specs."

The Declaration of Independence was a document preliminary to war. It was a vital piece of practical business, not alone a piece of rhetoric. If we pass beyond the preamble, and continue into the Bill of Particulars, we will find that it is very express and detailed, that it consists of a series of definite specifications concerning actual public business of that day. Not the business of our day, but the business of the Revolution by which the Nation was set up—the business of 1776. Its general statements—its general declarations—can mean but little to us unless supplemented by a similar Bill of Particulars as to what we consider the essential business and issues of our own day.

Liberty and independence do not consist in mere general declarations but consist in the translation of those declarations into definite action. Therefore, we must translate them into terms of our own conditions and of our own lives. In brief, we must file a Bill of Particulars of the year 1940.

The task to which we should continually address and readdress ourselves is the task of proving that we are worthy of the men who drew this great Declaration and who fought and won the Revolutionary War, and try to conclude what they would do under our circumstances.

George Washington, while not a signer of the Declaration, favored and supported the movement. And why? Washington was an aristocrat. He had been a faithful subject of King George. He had served in the King's army with valor and distinction. He was a man of wealth and influence. He had everything to lose and apparently nothing to gain by casting his lot with those who rebelled against the power and authority of the King. Then why did he do as he did? The answer must be because of his conviction and his courage of that conviction—because he was prompted by the virtues of righteousness. His living example of the virtues of unselfish consecration and lofty patriotism should impress us that those virtues were conditions not more vital to our Nation's beginning than to its development and durability—not more vital to his day than to our day.

All that Washington did is bound up in our national life and interwoven with the warp of our national destiny. His universal and unaffected sympathy with those in every sphere of American life, his thorough knowledge of existing American conditions, his wonderful foresight of conditions yet to be, his powerful influence in the councils of those who were to make or mar the fate of a Nation, made him a tremendous factor in the construction and adoption of the constitutional chart by which the course of the newly launched ship of state could be safely sailed. It was he who first took the helm and demonstrated, for the guidance of all who might succeed him, how, and in what spirit and intent, the responsibilities of our Chief Magistrate should be discharged.

We need not attempt to make more secure the immortal fame of Washington or to add to the strength and beauty of his imperishable monument built upon a Nation's affectionate remembrance. Washington has no need of us. But in every moment, from the time he first drew his sword in the cause of American independence down to this hour, the American people have needed him.

It is not important now, nor will it be in the years to come, to remind our countrymen that Washington has lived and that his achievements in his country's service are above all praise. But it is important, and more important now than ever before, that we should clearly apprehend and adequately value the virtues and ideals of which he was the embodiment, and that we should realize how essential to our safety and perpetuity are the consecration and patriotism which he exemplified. The American people today need the example and teachings of Washington no less than those who fashioned our Nation needed his labors and guidance.

Shortly before his inauguration as first President, he wrote a letter to Lafayette in which he expressed his great desire to establish a general system of policy which, if pursued, would "insure permanent felicity to the commonwealth"; and he added, "I think I see before me a path as clear and as direct as a ray of light, which leads to the attainment of that object. Nothing but harmony, honesty, industry, and frugality is necessary to make us a great and a happy people."

When Washington wrote that nothing but these four essentials were necessary to make us a great and happy people, he had in mind, no doubt:

1. Harmony of American brotherhood and unselfish good will.
2. Honesty—that insures against the betrayal of public trust or private confidence.
3. Industry—that recognizes in faithful work and intelligent endeavor a reasonable promise of well-earned returns. Today we more frequently term it "free enterprise."
4. That frugality which outlaws waste and extravagance as the enemies of thrift and promoters of covetous discontent.

Today are we not forced to confess that there are signs of the times that indicate a weakness and relaxation of our hold upon these virtues? By careful and painstaking self-examination, if we find that the wickedness of destructive agitators, the selfish depravity of demagogues have stirred up discontent and strife where there should be peace and harmony, have arrayed mutual interests against each other which should dwell together in hearty cooperation; if we find that the old standards of sturdy, uncompromising American honesty have become corroded and weakened; if we find a disposition among us to turn from the highway of honorable industry to travel the detours of unknown destination; if we find

that widespread wastefulness and extravagance have discredited the wholesome frugality which was once the pride of Americanism, we should then recall Washington's admonition that harmony, honesty, industry, and frugality are "essential pillars of public welfare" and forthwith endeavor to effect the needed change in our course.

Our country is infinitely more than a domain affording to those who dwell upon it immense material advantages and opportunities. In such a country we live. But let us think of a more glorious Nation, built upon the will of free men, set apart for the propagation and cultivation of humanity's best ideal of a free government, and made ready for the growth and fruitage of the highest aspirations of patriotism. This is the country that lives in us. I indulge in no mere figure of speech when I say that our Nation, the immortal spirit of our domain, lives in us—in our hearts and minds and consciences. There it must find its nutriment or die. This thought, presents to our minds the impressiveness and responsibility of American citizenship.

We referred to the fact that Washington was an aristocrat; that he had everything to lose and apparently nothing to gain by taking the action that he did. In order to better appreciate that he fully recognized this fact—that he voluntarily departed from the line of least resistance and thereby assumed great handicaps, difficulties, and obstacles—let us remember, in the first place, the power of the country was not sufficiently centralized to function efficiently in time of peace, let alone during the stress and emergency of war.

The Congress of the Confederation could recommend but could not enforce. Each State could continue to function largely as it saw fit. When Washington took command of the Continental Army there was no uniformity of dress, nor of arms, no uniform drill regulations and but little military discipline. Also, there were an average of only nine cartridges for each of the men in his command.

Not only these handicaps and difficulties, but also the added burdens which followed, for instance:

The treason of Benedict Arnold.

The Conway cabal.

The campaigns and battles that lost the most important position in the country—New York City.

The campaigns and battles that lost the second most important position—that of Philadelphia.

Followed by the winter at Valley Forge.

When Washington went into camp at Valley Forge he had approximately 11,000 men, but without food, without clothing, without shelter, without medical supplies—more than half the Army died before springtime. They lie buried in the grounds about Valley Forge. Their graves, with only one exception, are unknown and unmarked.

History probably would have justified Washington in yielding to the apparently inevitable and making peace on the best terms available, but we do not learn that he faltered even for a moment. As one writer has expressed it:

"When the night of storm was abroad in its fury

And darkness curtained the hills,

When the plow stood still in the fields of promise

And briars encumbered the garden of beauty,

When the brave began to fear the power of man,

And the plous to doubt the favor of God—

There stood Washington pure and firm, stalwart, and imposing

With the courage of his conviction undaunted,

Unflinching in his fidelity to his trust."

No; we cannot conceive of the burdens, the physical exhaustion, the nervous strain, and mental agony which Washington had to undergo. Neither can we conceive what would have been had Washington failed. Then the United States, as we know it, might not have been, and we, or whoever peopled this country today, might have been—probably would have been—subjects of a foreign power and not citizens of a free republic.

But it is to be remembered—and it should give us courage and inspiration—that after Valley Forge came Yorktown, and the newborn star of independence burst asunder the clouds of time and careered to its place in the Heavens, destined in the course of events, in the constellation of nations, to become a star of the first magnitude.

And with us, as individuals, as a community, a State, or a Nation, when the day seems dark, when obstacles appear unsurmountable, when our faith in the future is challenged, let us remember that there have been many Valley Forges in the past that have always been followed by other Yorktowns.

There were times other than Valley Forge when Washington, more than any other one man, was the savior. During the deliberations of the Constitutional Convention, when it was proposed to yield vital principle to temporary expediency, Washington said, "If to please the people we offer those things which we ourselves disapprove, how can we afterwards defend our work. Let us rather raise a standard to which the wise and the just may repair." The counsel and admonition of Washington prevailed and that standard was raised.

The question before us today is, Shall that standard be maintained? That it is in danger, there is no question. We know all too well of the existence of subversive elements within our own land, supported by elements abroad, that would cause the destruction of our constitutional form of government, which would be as fatal to us as a Nation as would have been the dismemberment of the Union in the 1860's.

There are wars and rumors of more wars abroad, and the end is not yet. It must be apparent to the thoughtful observer that there is an issue involved in the conflicts abroad which, if not yet, may

become the chief and final issue. And that is a conflict—a fight to the finish—between Paganism and Christendom, between materialism and spiritualism, between the doctrine of Karl Marx on one hand and the doctrine of the New Testament on the other.

Religion and religious teachings have been denounced as an unhealthy opiate administered to innocent people. We know that even thus far in these conflicts abroad, churches have been destroyed or converted to other uses—priests, preachers, and teachers of religion have been cruelly put to death—bonfires have been made of Bibles, the sanctity of the home has been set at naught. The power and interest of the state is supreme, individuals are not "endowed by their Creator with certain inalienable rights," governments do not "derive their just powers from the consent of the governed."

We cannot conceive that democracy, in the broad sense that we use the term, could long exist outside of Christendom. Therefore it is the object of these subversive elements to destroy Christendom. And we know that totalitarianism cannot exist within Christendom. Therefore our objective is to preserve Christendom. Today, as in the past, as in the days of Washington, in order to meet these present issues we must have conviction and we must have the courage of that conviction.

A minister that I well know quite frequently, in his sermons or public addresses, quotes the lines of verse the title of which is "The Day's Demand." It seems to apply especially well at this point. I do not know the author, but I believe I quote correctly:

"God give us men!

A time like this demands

Strong hearts, true faith, and ready hands;

God give us men,

Whom the lust of office cannot kill;

Men, whom the spoils of office cannot buy;

Men, who possess convictions and a will;

Men, who have honor—and will not lie;

Men, who can stand before the demagogue

And damn his treacherous flatteries to his face.

Stalwart men—sun-crowned

Who live above the fog, in public trust and private life;

For while the rabble, with their thumb-worn creeds,

Their large professions and their little deeds,

Mingle in selfish strife,

Lo! Freedom weeps,

Wrong rules the land

And waiting justice sleeps.

God give us men!"

In that memorable address, known as the Cooper-Union speech, given by Abraham Lincoln in New York City, February 1860, 80 years ago this month, he appealed to the Christian principles, the religious conviction, the moral fiber of the people, and in his conclusion said, "Let us have faith that right makes might and in that faith let us, to the end, dare to do our duty as we understand it."

In brief, he appealed to them to have the courage of their convictions.

On this day, in the midst of the many and perplexing problems that confront community, State, and Nation, as well as the entire world, on this Washington's Birthday observance, in emulation of his conviction and his courage of that conviction, let us, too, have faith that the principles of righteousness must eventually prevail; and in that faith let us, too, dare to do our duty as we understand it.

The courage of Washington remained with him to the end. When the black camel of death knelt at the threshold of his earthly home and summoned him to go on that long journey to that undiscovered country from whose bourne no traveler ere returns, the stout heart of the brave old warrior answered, "I am not afraid to go."

When the body of our martyred President, James A. Garfield, lay in state at Washington there was a floral tribute placed with the casket by the direction of Victoria, widowed Queen of England. With that tribute there was also an inscription, fitting to the close of the life of such a one as Garfield—and I can think of nothing more fitting to quote with reference to the close of the life of Washington than these same words—

"Life's work well done,

Life's race well run,

Life's crown well won."

And it has been beautifully and fittingly said:  
"Providence left him childless that his country might call him father."

## A Wage-Hour Amendment to the Reciprocal Trade Agreements Law Is Necessary

### EXTENSION OF REMARKS

OF

HON. CHARLES F. RISK

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

Mr. RISK. Mr. Speaker, due to the lack of opportunity on Friday last to explain the amendment offered by me to the

resolution extending the life of the reciprocal trade agreements law, as a result of the vote to shut off all debate on amendments after 6 o'clock, p. m., I wish to take this opportunity to present some of the substantial reasons why this amendment should have prevailed and why the Democratic majority should have voted for it instead of defeating it, having in mind the fact that it was defeated by a solid Democratic vote, while the Republicans to a man supported it.

My amendment reads as follows:

*Provided, however,* That no goods, whether subject to the provisions of any existing trade agreement between the United States and a foreign nation or hereafter entered into, shall be received for entry into the United States unless accompanied by a manifest which has affixed thereto a certificate by an American consul that the goods represented by such manifest have been produced in accordance with the provisions of sections 6, 7, and 12 of the Fair Labor Standards Act of 1938 (Public, No. 718, 75th Cong.).

The amendment is admittedly drastic to the reciprocal trade agreements law, yet I doubt if anyone will challenge the contention that the amendment is in complete harmony with the announced objectives of the wage-hour law. The words "announced objectives" are here used advisedly, since there is a grave doubt in the minds of many of our people that the wage-hour law, necessary as it was and had been for some time prior to its enactment, was sponsored by this administration for any reason other than to make a play for what the newspapers and politicians are wont to call the labor vote in the 1938 election. If the administration had intended by the enactment of the wage-hour law to assist in the raising of the standards of living of the American workman, then why has it grasped, maintained, and exercised the power to degrade him by throwing open our markets to the importations of goods produced under conditions intolerable to us in the United States, either because of the substandard conditions under which they are produced or because their manufacture has been exacted under terms and conditions laid down and ruthlessly enforced by foreign dictatorial governments?

The announced objectives of the wage-hour law, contained in that section entitled "Finding and declaration of policy," are "to correct and as rapidly as practicable to eliminate" conditions elsewhere in the same section found to be "labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers."

This amendment provides merely that this Government apply to any foreign country shipping competitive goods in here, the same labor standards as to wages, hours, and child labor as it applies in this country.

According to the most recent tables compiled by the International Labor Office, the average daily wage in 1938 in Japan was 58 cents—this includes male and female, skilled and unskilled—and the hours average 9 and 10 per day. The average hourly wage in Japan, then, is approximately one-eighth of that in the United States. In some European countries the average daily wages are 60, 70, 80, and 90 cents. And even in those countries where the rates of pay are higher, like the Scandinavian countries, Holland, England, and France, they are much below those in the United States.

The argument is advanced that since there has been a rise in exports under the trade agreements, there must necessarily have been an increase in employment of men and women to produce those exports. There can be no doubt of the truth of that statement. But the advocates of the trade agreements program fail to go the entire distance and explain that because of the low labor standards abroad, the cost of production is, as nearly as it is possible to say, not more than one-third of the cost in this country, and that consequently if a given quantity of competitive imports required 1,000 man-hours to produce, there is a corresponding displacement of 3,000 man-hours in this country. If we can manufacture a commodity in sufficient quantity to take care of our needs, that commodity should not be received here for import excepting on some fair basis of equality in the cost of production, which means largely equality in the wage rates paid. Only by such method is it possible to secure any benefits from the wage-hour law in this country. Why should those

well qualified to work in the manufacture or the finishing of textile products be forced to stay on relief?

Why should our people remain idle while the mills in Great Britain, France, Italy, Japan, and other countries are humming merrily along in the production of wools, worsted, cotton goods, laces, and rayons, of which large quantities are destined to land at these shores at prices that cannot be met by producers in the United States?

If the employees in the great shoe industry in this country have a warm spot in their hearts for Hitler, who saved their bread and butter by taking over Czechoslovakia, thus causing the abrogation of a trade agreement with that country that had them up in arms at the injustice of it all, who can blame them? Their own benign Government had abandoned them.

Let us see what the American Federation of Labor thinks about the principle embodied in my amendment. On page 1369 of volume 2 of the committee hearings on this resolution, there is set out the text of a resolution unanimously adopted by the executive council of the American Federation of Labor at its meeting held here in April of 1933. It reads as follows:

Whereas the provisions of reciprocal-trade treaties negotiated by the State Department with foreign nations affect, very vitally, both the economic conditions of American workers and unemployment and there are many organizations, representing thousands of workers, affiliated with the American Federation of Labor which are seriously affected by these trade treaties, and for that reason are deeply interested in their provisions; and

Whereas the economic and industrial interests of these workers demand that the American Federation of Labor exercise all efforts possible to prevent the importation of goods from foreign countries, under the provisions of reciprocal-trade treaties, where lower wages, longer hours, and lower living standards prevail than exist in competing industries within the United States: Therefore be it

*Resolved*, That the executive council of the American Federation of Labor expresses its opposition to reciprocal-trade treaties which discriminate against American workers. We are opposed to reciprocal trade treaties provisions which provide for importation of goods and merchandise which because of low labor costs abroad are sold at a lower price than the same goods and merchandise produced by workers in the United States, where wages and conditions of labor are established on a higher standard than those which prevail abroad; and be it further

*Resolved*, That a committee representing the American Federation of Labor be accorded the privilege of presenting labor's point of view relating to the provisions of reciprocal-trade agreements affecting labor before said agreements are negotiated and ratified.

The American Wage Earners' Protective Conference, which is the so-called tariff group of the American Federation of Labor, takes the position as outlined by its president, Matthew Woll, in an address delivered at Huntington, W. Va., on December 14, 1939. Quoting from that speech:

This group further declared that the principle and policies underlying the reciprocal-trade treaties are inconsistent and in conflict with the principle and practice of the wage and hour law, the Walsh-Healy Act, and the Wagner Labor Relations Act in that through the enactment of labor legislation we seek to improve the standards of work and wages involving a larger labor cost, while in the reciprocal trade treaty policy we encourage the purchase and distribution in America of foreign-made goods and manufactured products made under much inferior and substandard conditions of employment. It has been demonstrated that some 90 percent of our industrial imports would be precluded entry into American markets if the legislative standard of wages of 30 cents an hour and a limited workweek of not more than 42 hours per week would be enforced in foreign countries on the production of those goods produced by foreign workers and sold in the American market in competition with the products of American workers.

Think of that! Ninety percent of the industrial imports would be kept out if our wage-hour standards could be applied. What a boon to men and women hitherto engaged in industrial pursuits and now forced to see some politician in order to get on relief.

And lest there be any doubt as to whether the American Wage Earners' Protective Conference represents the American Federation of Labor, let me refer you to the same volume of the hearings on page 1368, wherein appears a copy of a letter from William Green, president of the A. F. of L., to Matthew Woll, then fourth vice president. The letter is as follows:

AMERICAN FEDERATION OF LABOR,  
Washington, D. C., May 7, 1929.

MR. MATTHEW WOLL,  
Fourth Vice President, American Federation of Labor,  
New York, N. Y.

DEAR SIR AND BROTHER: In reply to your letter of April 26, may I first explain that the American Federation of Labor has steadfastly

refrained from giving approval or endorsement to a protective tariff or to a modification or reduction of tariff schedules as represented in the term frequently used, "free trade."

It has been the policy of the American Federation of Labor, however, to cooperate with and assist national and international unions affiliated with the American Federation of Labor in presenting demands to Congress for an increase or decrease in tariff schedules affecting industries in which men and women were employed over which these national and international unions exercised jurisdiction. This means that each national and international union may shape its own policies regarding tariff schedules with a feeling of assurance that the American Federation of Labor would respond to any request made for cooperation and assistance.

This policy will be pursued with regard to the tariff policies pursued by the organizations which you explain are component parts of the American Wage Earners' Protective Conference. Each of these organizations for which you are authorized to speak may feel assured that the American Federation of Labor will assist and cooperate with them in the advancement of such tariff policies as they may formulate and decide upon.

With all good wishes, I beg to remain,  
Fraternally yours,

WM. GREEN,  
President, American Federation of Labor.

There, Mr. Speaker, is the stand of labor on the principle contained in the amendment offered by me last Friday. Frankly, it is difficult to understand the one administration, within itself, through representatives of different agencies of the executive branch, calmly, yet none the less boldly, voicing once more its concern for the common man and sincerity of purpose in governmental action in his behalf.

Unfortunately, the spirit of many of our men and women is well-nigh broken from the buffeting they have received at the hands of representatives of relief agencies. Were it not for that they would be fighting, and fighting hard in opposition to a Government that seems to have lost all sense of proportion in its treatment of the public. But there is a new generation, young and virile, ready and waiting to pierce the veil of secrecy and demand of its Government the reason for the many inconsistencies bordering on hypocrisy.

## So-Called Finnish Loan Bill a Fraud

### EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

EDITORIAL FROM THE MILWAUKEE JOURNAL OF FEBRUARY 17, 1940

MR. THILL. Mr. Speaker, Senate bill 3069, considered by the House today, has been called the Finnish loan bill. There is no guaranty that any of the funds provided for in this bill will go to Finland. This legislation provides for increasing the lending authority of the Export-Import Bank of Washington from \$100,000,000 to \$200,000,000.

Under leave to extend my remarks, I include the following editorial, which appeared in the Milwaukee Journal under date of February 17, 1940:

[From the Milwaukee Journal of February 17, 1940]

#### FRAUD OF THE FINNISH LOAN

Congressman EATON, of New Jersey, said to Congress what needed to be said on this question of authorizing a Government loan to Finland by the back-stairs route of increasing the capital of the Export-Import Bank:

"I, for one, am ashamed of this straddling, evasive Import Bank bill. If we do not want to help Finland, let us say so and why. If we do want to help Finland, let us do it in a straightforward manner, worthy of a great and free Nation."

Everybody else knows, as well as Congressman EATON, that what we are preparing to do is fling a sop to Finland. We do not want to go to war. Nor do we want to turn our backs entirely on Finland. So we will give her the money in a form that Russia cannot legitimately object to, and that will not help Finland unless some other country will do the "dirty work" of translating our non-military loan into military aid through an exchange of goods. If some other country does do that, of course, our hands are still unsold.

It is about as hypocritical and self-righteous a thing as has been proposed and as has made headway in this country in a long time. Twenty millions, assuming that Finland gets the full amount that can legally be loaned her under the bill setting up one hundred millions more for the Export-Import Bank, will not win a war. We know that, and Finland knows it. The money is not even to be spent for the things that Finland needs most. Mr. EATON says it is to go for "powder puffs and carpet slippers." That is not literally correct, of course, but it expresses the idea graphically.

What we say here has nothing to do with the relief work headed by former President Hoover. That is a strictly humanitarian activity involving no question of Government participation. It is the kind of thing any nation should do that has money and a heart. We are talking about the playing of politics with the question of helping Finland win the war.

The Journal laid down for its own guidance last October the policy of noninvolvement in the European war. Then the invasion of Finland occurred to catch the popular imagination. The heroic fight by Finland appealed to our sympathies too. But we could not see that the case of Finland was any different from that of Czechoslovakia or Poland.

To maintain this position in the face of a wave of emotionalism was to invite criticism. The Journal has had its share. But at least we have not practiced the hypocrisy that is now being cooked up at Washington.

Any citizen or any Congressman has a right to advocate military aid to Finland, and in quantity sufficient to win her war. But to pretend to give aid and not give it—the whole thing seems to have boiled down to a slick scheme to get another \$100,000,000 for New Deal lending, at a time when Congress is disturbed over tremendous defaults of loans previously made by these Government lending agencies.

**Dr. William I. Sirovich**

#### EXTENSION OF REMARKS

OF

**HON. MARTIN J. KENNEDY**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 27, 1940*

Mr. MARTIN J. KENNEDY. Mr. Speaker, ladies, and gentlemen, on December 17 Dr. WILLIAM I. SIROVICH, chairman of the House Committee on Patents, died in his home in New York City. The shock saddened my holidays, and I am sure it similarly affected the other Members. Representative SIROVICH was elected to Congress in November 1926, from the Fourteenth District of my State.

No more shall we hear that brilliant oratory that held us spellbound, nor shall we know that friendly encouragement he offered. During the 13 years that he served as a Representative I doubt a more keen mind, a wider vocabulary of the ancient languages, or a more remarkable memory could have been found in this House. Nor was there a more benevolent character.

It is ironical that he, who warned us against overwork and of the necessity for lightening our tasks with proper diversion, was himself a victim of that very zeal. He was never idle mentally. He ignored symptoms that would have aroused him if they had developed in a friend. At times he must have had a premonition that his earthly time was short, because during the last two sessions he frequently was on the verge of collapse but refused to give up any of his official duties.

I attended the funeral services and followed the cortege to his last resting place on this earth. Now and then, as I look about this Chamber, I picture in my mind his well-tailored figure, the ever present red carnation in his lapel, his friendly smile, and his overpowering sincerity as he held our attention.

The night before he died he attended a formal dinner of the Rose Sirovich Relief Society, a society named after his mother. I like to think that his last thoughts were of the woman who had borne such a brilliant son.

Dr. SIROVICH was a humanitarian—a physician and surgeon by profession. He attained high rank as a statesman, and he gave all of his legislative ability to bettering the economic conditions of his people, just as he gave his services as a doctor to heal the ills of his people.

His modest home was his office, and when he was not here working as a legislator to correct defects in government he was to be found in his surgery prescribing for and attending old friends who came to his home to have the doctor remedy the defects of the body.

Before he came to Congress Dr. SIROVICH was active in welfare work and at one time he served, by appointment of Governor Sulzer, as a member of a special committee on widows' pensions. On the same committee was Franklin D. Roosevelt, then a State senator. One of the last official acts of Dr. SIROVICH was to pay a visit to the President at the White House, and I can well believe that one of the topics he discussed with the President concerned the welfare of the underprivileged.

As a physician and surgeon, as a Member of Congress, and as an individual he was a great benefactor. His fame grew and his plurality increased each time he stood for reelection to Congress. Probably because of his intense interest in behalf of the less fortunate, Dr. SIROVICH never married. He once referred to himself as the "stepfather of 40,000 orphans," and there are many orphaned children growing to manhood and womanhood who will long remember his unselfish character and kindness.

Those of us who were here on the floor just a minute before the special session adjourned last November witnessed a scene that demonstrated his loyalty. An employee of one of the Government departments had been criticized—unjustly, he thought—on the floor that day, and the last utterance of Dr. SIROVICH was a defense of this employee. He ended his tribute as follows:

It takes a lifetime for a man to build up an honorable character. It takes but a moment to destroy it.

Dr. SIROVICH left his work unfinished, but he left it well done and everlasting. I can only hope that over his grave the winds blow soft and gently and the sun shines warmly, as did his heart beat for the people of all races and creeds.

#### National Defense

#### EXTENSION OF REMARKS

OF

**HON. DOW W. HARTER**

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 27, 1940*

ADDRESS BY BRIG. GEN. LORENZO D. GASSER, DEPUTY CHIEF OF STAFF

Mr. HARTER of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Brig. Gen. Lorenzo D. Gasser, the Deputy Chief of Staff, at Akron, Ohio, February 22, 1940:

Before discussing with you tonight the subject of national defense and our present military program, I think it befitting to recall a short but significant statement made by our first President, whose birthday we have today celebrated.

In an address before Congress, delivered December 3, 1793, President Washington said: "There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by a reputation of weakness. If we are to avoid insult, we must be able to repel it. If we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

Washington, above all others at that time, had reason to know the hardships, the suffering, and the wastefulness of war. Yet in his great wisdom he warned that there could be no lasting peace and security for a nation which did not equip itself with the means for protection and for the enforcement of its rights as a free state in the family of nations.

It behooves us, therefore, to take stock of our defensive forces periodically and to determine as well as we may whether or not we have the strength to maintain "that rank among nations" to which this country has lifted itself during the 160 years of its existence.

We realize, of course, that the governing factors which shape any nation's military program are its foreign policy, its geographic location, the extent of its possessions, and its economic position in the realm of international finance and commerce.

At this point I want to emphasize that the Army and Navy do not formulate our foreign policy. The leadership in that field belongs to the President, while its confirmation and adoption are the responsibility of the Congress. There is no so-called Army clique or Navy clique influencing the action of the President or of the Congress in such matters.

However, our military program must be based upon our foreign policy and shaped to meet the ever-changing economic and political conditions—the desires and ambitions of all other nations of the world with which we are associated in the so-called family of nations.

Let us therefore examine our military program in the light of present world conditions and in the light of the policies which have been adopted by our Government to meet these conditions.

Today we face the stark reality that Mars rules with undisputed sway over a major portion of the civilized world.

Wars, declared or undeclared, are raging on the Asiatic and the European shores of the two oceans which wash our Atlantic and our Pacific seacoasts. And the progress of modern science has greatly reduced the time and space factors which in the past made these oceanic barriers impressive defensive obstacles.

We are at peace with all the people of the world.

We have announced firmly our intention to maintain a neutral attitude in the quarrels of those at war—declared or undeclared.

At the same time we are determined that our rights as a neutral shall be observed and that our national interests shall be respected wherever they may be encountered.

And we have pledged our word with the 20 neighboring republics of this hemisphere for a neutral guaranty of continental-solidarity, and have made that pledge one of the most important factors in our dealings with other nations. Unlike the Monroe Doctrine, this is a bilateral agreement in which each of the democracies of this hemisphere has an equal voice and assumes equal responsibilities and equal obligations in the maintenance of peace within the confines of this hemisphere and the security of the hemisphere from outside aggression. Based on these factors, what then are our defense requirements?

I know of no better analysis of these requirements than that contained in a speech delivered last year before the Senate by the Honorable MORRIS SHEPPARD, chairman of the Military Affairs Committee, in the presentation of a bill embodying the major portion of the President's program for the increase of the Army Air Corps, and improving the defenses of the Panama Canal. I quote as follows:

"Let us examine our present defense requirements. We cannot draw a line around the sea and land frontiers of the continental United States and say that this alone is what we will defend. It is not so simple as that. The Panama Canal, Hawaii, Puerto Rico, and Alaska are vital links in our defense chain. These possessions are often referred to as outposts. So to designate them is to commit an error. Outposts are usually considered as warning or delaying forces to be withdrawn when they have accomplished their mission. There can be no withdrawal from Panama, Hawaii, Puerto Rico, and Alaska. To permit these strategical areas to fall into the hands of the enemy would jeopardize the security of the continental United States itself.

"The whole defense story, however, has not yet been told. If there is one foreign policy to which the American people subscribe, it is the doctrine that the western world belongs to the western nations, and that freedom and democracy must be preserved on this hemisphere. A violation of the Monroe Doctrine would probably not occur as a sudden, overt act. It could easily take the form of a step-by-step movement, of a peaceful penetration by foreign nationals until definite and powerful minorities would be established, with the result that before military force replaced diplomatic negotiations, hostile nations might already have a foothold in areas that would threaten the most important link in our entire system of defense, the Panama Canal. With the Panama Canal out of commission permanently, or for a prolonged period of time, our Navy as at present constituted would be helpless as the guardian of the two oceans, and our present defense system would collapse. It is to be hoped that it will never be necessary to fight to preserve the Monroe Doctrine and the liberties of this hemisphere, but if we must fight, prompt action will be imperative. Inability to act promptly would in the end necessitate a long and costly war effort. But what is more important, ability to act promptly is the best form of security against the necessity for action.

"If war should occur, existing naval and air bases must be defended, and additional ones occupied. The Army's responsibilities in this respect are not generally understood. Both the Army and the Navy are maintained to provide that great objective mentioned in the preamble to the Constitution, namely: 'the common defense.' Together they constitute the Nation's military power. Each has its function. Each may on occasion be our first line of defense. Each contributes to the success of the other's mission. The Army is responsible for the defense of all permanent naval bases, and also conducts operations in support of the Navy for the establishment and defense of naval bases. When additional bases are needed by the Navy, either in peace or war, the Army must provide for their protection. It is the Army protection that affords

the Navy the freedom of mobility and action essential to the Navy for the accomplishment of its mission.

"With respect to air bases, the ground forces of the Army have much the same relation to aviation as they do to the Navy. Airplanes must have a base, a place to land, and facilities for refueling, re-arming, and reconditioning. Without such a base they are rendered ineffective for continuous action. As in the case of the Navy, the ground forces of the Army must occupy and defend the bases required by our aviation."

In analyzing our present defensive needs and the composition of the minimum in defensive requirements, we must not lose sight of the fact that armies and the cost of maintaining them have changed materially since the day when that small band of ragged, shoeless, and half-starved men emerged from Valley Forge and found ultimate victory at Yorktown.

We must remember that while the art of war, as practiced by Hannibal, by Napoleon, and by other great leaders, has not changed materially, the instruments through which that art is made effective have changed.

During 1917-18 the rate of movement of ground troops was still at an average of 2½ miles per hour, whereas today this average has been increased by motorization and mechanization to 25 miles per hour or more. We have only to recall the fate of Poland to come to the tragic realization that in modern warfare immediate and annihilating defeat faces that nation which cannot parry the initial onslaught of an aggressor employing a highly modernized force supported by mechanized ground elements and modern aviation.

And thus, as distances are decreased by the rapid increase in speed and operating radius of offensive weapons of warfare, so must the sphere of our defensive operations be extended to keep hostile forces from our shores and from strategically vital points on this continent.

Our national-defense plans should be so drawn as to deny invasion of this country by a hostile foreign foe. We must therefore maintain in peace a regular army and a navy properly trained, equipped, and supplied and so disposed that we may reasonably be assured of not only stopping the initial onslaught before it reaches our mainland, but be able to take the offensive in denying enemy bases on land lying within striking distance of this country.

The Regular Army's mission in this plan is to hold these advanced positions. In the Pacific, Alaska is of far-reaching importance as a base for aviation and in denying access to a potential enemy in that area.

The Hawaiian group of islands, 2,000 miles from our shores, with the great naval base at Pearl Harbor, constitutes one of the key defenses to our western coast and to the Pacific entrance to the Panama Canal.

The Panama Canal constitutes a vital link in our defensive armor, therefore the utmost protection must be afforded that important waterway, not only in the immediate vicinity of the Canal, but, likewise, we must have control of the Atlantic entrance, which, in turn, demands control of the Caribbean Sea. It is for this reason that a strong force of the Regular Army, including ground and aviation units, has recently been established on the island of Puerto Rico.

The Regular Army, however, is charged with other missions. After providing for our foreign garrisons, we must maintain in this country a force strong enough for the initial protection of our continental limits against sudden attack, strong enough to reinforce promptly our overseas garrisons, strong enough to control on short notice any threat to the Panama Canal, and strong enough to serve as a base for the creation of our war army.

With these broader missions in view, and with the time and space factors materially reduced, we can no longer base our military program upon any assurance that the oceanic isolation of the United States would afford time in which to bring into being our potential strength against an aggressor.

In evaluating the strength and effectiveness of our present-day Military Establishment to carry out its acknowledged mission, it might be well to trace briefly its development during the past 20 years.

Immediately following the World War, the revision of our National Defense Act divided the country territorially into nine corps areas. This constituted an approximately equal division of our manpower. Under the plan each corps area was to contain 1 Regular Army division, 2 National Guard divisions, and 3 Organized Reserve divisions, making a total of 9 Regular Army, 18 National Guard, and 27 Reserve divisions, the last named consisting of officers only, while so-called corps, army, and General Headquarters units were assigned without regard to corps areas.

While in reality none of these divisional units was complete, and the corps, army, and General Headquarters units were largely missing, still it served as a sound basis for planning. Subsequently the War Department created 4 field armies, each consisting of from 6 to 9 divisions, and such corps and army units as were located within the limits of each army area. This was a forward step in the planning and execution of the training of the larger field units, such as divisions, corps, and armies. However, the program for 18,000 officers and 280,000 men for the Regular Army, authorized in the National Defense Act, never materialized. Economy and the theory that the World War would in effect result in ending recourse to war as a national policy for all nations operated to reduce our Regular Army to a low figure of 115,000 men, while our

war reserves of matériel and munitions were reduced far below the safety point.

More recently, and as a direct result of growing unrest in the international situation, the Regular Army was gradually increased to 165,000, while last year Congress doubled the Air Corps and added a material increase in coast-defense troops for the Panama Canal, bringing the total enlisted strength of the Regular Army to approximately 210,000 men, together with a large increase in appropriations for critical items of equipment and munitions. Last September, due to the critical world situation, the President directed that the Regular Army be further increased to 227,000 men and the National Guard to 235,000. Of this number, 70,000 Regulars are required to garrison the outposts which I have previously enumerated, namely, to defend our naval bases. These missions are purely defensive but vitally important to our national safety.

The plan for mobilizing the Army of the United States, which embodies the Regular Army, the National Guard, and the Organized Reserves is known as the protective mobilization plan, which envisages, first, an initial protective force, consisting primarily of existing units of the permanent establishment and the National Guard, all to be mobilized at peace strength and not later than 30 M. By 120 M this force is to be brought to war strength and missing units activated. This, in effect, will produce a force of 9 Regular Army divisions, 18 National Guard divisions, corps troops for 4 corps, army troops for 2 armies, essential General Headquarters units and harbor-defense troops, and War Department and corps area service command overhead. If the emergency so justifies, the protective mobilization plan envisages four augmentations which would bring into being all of the Reserve divisions, with the necessary additional corps, army, and General Headquarters units at stated periods, so adjusted as to synchronize with the matériel procurement program. The critical part of this plan is the state of readiness of the initial protective force, not only in the units of which this force is composed, their training and leadership, but also the equipment which they must have. Next in order are the units comprising the basic protective mobilization plan, which raises the initial protective force to approximately 1,000,000 men, ready for the field within 4 months, or, as we term it, 120 M.

Here again the critical items of equipment and munitions constitute probably the most important factor in preparedness. The time lag of from 1 to 2 years required in the manufacture of many essential items of equipment renders mandatory the procurement and maintenance of a war reserve in peace to meet our immediate requirements in war. The cost is not great when measured by the great stake involved, namely, the defense of this country. Three hundred million dollars will do the trick.

The next thing of equal importance is training, for without a well-trained Army, properly led, our equipment—no matter how good it may be—will be useless. The Army maneuvers conducted during each of the past 4 years have indicated the necessity for more frequent assembly of the divisions and corps of the Regular Army and for much longer periods than have been financially possible in the past under a system of providing field training for each of the four armies only once in 4 years, and then only for a 2-week period. This system, together with the general lack of corps troops—heavy artillery, engineers, medical regiments, signal battalions, quartermaster truck trains, and maintenance elements—have made it virtually impossible for the mobile combat troops of the Regular Army to be trained as an immediately available, effective, first-line combat force, experienced in the technique of large-scale field operations. Higher commanders and staffs must be given opportunities for training in the technique, tactics, and teamwork involved, and troops must be accustomed to operating in large groups. The purely theoretical training in the Army schools must be supplemented by practical training in the field. There is no known short cut to adequate combat training. The First Division of the A. E. F. arrived in France in July 1917 and entered into intensive training for the first time as a division. It was not prepared to take its position in the line until the following January, even under the forced training schedule of a unit in wartime and practically within sound of the guns on the battle front. Fortunately, under the protection of the Allies, it was given a year in which to find itself, its first operation being launched 12 months after the concentration at Hoboken.

The future problems for our Army visualize no such protected period for overcoming peacetime military deficiencies. We must be prepared from the outset. Modern armies cannot be thrown together hastily and sent into the field with the expectation that they can win battles. Troops must have a comparatively long period of basic training under competent officers and other instructors, who must themselves be highly trained in their specialty and be alive to its relative place in the team of which it is a part. This training for the individual and for the smaller units can be accomplished at the smaller stations, but the training of larger units is a different proposition.

With a view to providing for the training of large units, we have concentrated in southern camps and on the Pacific coast five infantry divisions, corps troops, one cavalry division, and the mechanized cavalry brigade. Before the end of this fiscal year the divisions will have completed their training as divisions and they will be assembled with corps units into two corps for additional field maneuvers. Later the two corps will be concentrated for extensive maneuvers involving all units up to and including an army. National Guard divisions and brigade commanders with their staffs are participating in these maneuvers, as well as a large number of Reserve officers.

The National Guard forms a powerful component of the Army. As stated previously, it constitutes, with the Regular Army, the initial protective force in our protective mobilization plan. The Regular Army is closely identified and keenly interested in its training; in fact, as much so as are the guardsmen themselves. This is but natural, for our mission is the same, and they will be fighting side by side in the next war just as they did during the World War.

The officers of the Reserve Corps are in reality the minutemen in our national defense plans. Not only will they be required to organize and command the additional forces to be raised but thousands of them will be required on M Day to fill the commissioned ranks of the Regular Army and National Guard; also staff and administrative positions in the service from the zone of the interior to include the combat zone. Their training is a vital element in our plans for defense.

The Reserve Officers' Training Corps, which is the product of the military training conducted at civilian educational institutions, as well as the citizens' military training camps, although not a part of the armed forces, are important factors in the training of the youth of this country. Many of these young men enter the Reserve Corps as officers. Those who do not constitute a distinct asset in our great body of citizens, for the training they receive is never forgotten.

This is a rather hasty sketch of the Army's plans for national defense. The program to make it effective is receiving constant study by the War Department. It is in no sense theoretical, but is an essentially practical problem.

Equipment for the Army is adopted only after thorough test. The same is true in the adoption of any type of organization in the Army. If a fighting organization, the build-up is based upon the tactics to be employed to insure the best use of the weapon with which it is armed. If the organization is a supply unit, we study in minute detail the quantity and weight of the supplies, including munitions, required to maintain the fighting elements. The probable requirements of facilities to evacuate the sick and wounded are likewise carefully weighed. The proportion of combat units, namely, the ratio of Infantry to Field Artillery, the amount of Cavalry, the proportion of the force to be designated to man our coast defenses—all these receive careful study. What percentage of our force should be mechanized? The role of the Air Corps and how large should that force be in relation to the balance of the Army. Types of airplanes, and the ratio of bombers, reconnaissance, and pursuit.

In determining all these factors the War Department General Staff is constantly in touch with the experts and specialists represented by the chief of each arm and service and their officers, all of whom form a part of the War Department. The views of all must be obtained. Each presents the requirements of his own arm or service in the most favorable light. The War Department General Staff is the agency that must weigh these varied requirements and make such modification as may be necessary to produce a well-rounded organization. The team is everything, and it must be so organized that its constituent elements will supplement each other. There is no short road to victory in the conflict between nations that are well prepared. The so-called "blitzkrieg" or Douhet theory of warfare has not materialized on the western front, with its much-vaunted, fast-moving mechanized units, supported by great masses of bombardment and attack planes. The highly mechanized ground forces and the fighting planes in the air are indeed powerful and important factors. However, they do not constitute the dominant elements which make success on the battlefield possible. The great battle team is still the Infantry and Field Artillery, which reaches its highest perfection as a team in the Infantry Division, with the additional impetus furnished by the corps, Army, and General Headquarters units.

Unquestionably many of you have heard the doubt expressed as to the need for these measures for national defense. Whom are we going to fight? Will not the nations now at war in Europe and in Asia be so exhausted when the present struggle is ended that there will be no possibility of our interests in the Western Hemisphere being threatened? All I can say is that we heard the same comments 20 years ago. Should we, in the face of an arming world, ignore the possibilities that may confront us at any moment? Can we afford to gamble? You have no doubt heard it charged that the Army wants war. I can say to you that I know of no group of men that view it with more horror. No man in his senses who has participated in such a catastrophe would want to repeat that experience.

In conclusion let me say that any discussion of our system of national defense would be incomplete were we to confine ourselves merely to those elements which I have covered. Behind all of this, and of primary importance, is public sentiment. In a representative form of government such as ours the Army belongs to the people. The obligation of service is a voluntary one, and without the whole-hearted support of our citizens it is doomed to failure.

An educated public opinion is therefore a vital factor in the defense of this Nation. These educators of the public are primarily the men and women who have felt the brunt of past wars in which this Nation has been called upon to uphold its national policies on the field of battle. Those great patriotic organizations which are the outgrowth of former wars from the American Revolution to the World War constitute the leaders in this educational field to the end that in our dealings with other nations we will attain that position to which President Washington referred and bring to our people the realization that "if we desire to secure peace . . . it must be known that we are at all times ready for war."

## A Practical Highway Platform for Tomorrow

## EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

## EDITORIAL FROM BETTER ROADS

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the current issue of Better Roads, a national magazine published in Chicago:

[From Better Roads for February 1940]

## MEMORANDUM TO CONGRESS

Nearly a quarter century ago Congress enacted a law that established a foundation for main-line road building in this country. The support thus provided has been continuous with gratifying results. The Congress now in session will consider legislation extending Federal aid to highways for another 2-year period beyond the fiscal year 1941. In a sense that is routine legislation, and those who are directly concerned with improving the roads of the Nation can be thankful that sustained Federal participation in the road programs of the States, on one scale or another, is taken for granted. Yet Federal-aid highway legislation passed in 1940 will signify something more. The years we have just passed through have been years of stock taking, which must inevitably be reflected in the action of Congress.

We have witnessed a great period of automotive expansion in the United States. We can only guess at the possibilities of further expansion, yet the facts we have at present, without straining for a peek at 1950 or 1960, point to two very pressing needs—for further intensive improvement of the primary highway system, and for extensive development of the feeder roads that branch off in all directions through the countryside. Enactment of the first Federal-aid highway law gave stimulus and leadership to the organization of main-line road building. Continuance of undiminished Federal highway aid, this year and in years to come, is an act supporting the planning and further perfection of a primary highway transportation system, and the rapid completion of the secondary network that is of major importance in every State.

The main problems of primary-road improvement are different from the problems of 25 years ago. Then the task at hand was getting a system of main roads linked up, and the Federal Government very properly assumed a share in it. Now we have that system, but we have a new task—bringing many of the system's links up to the modern standards required by the traffic using the roads today. The interest of the Federal Government in the development of our primary State highways has grown with every year that has gone by, for with each year the Nation has come to place greater dependence on its highway links.

Congress can be satisfied that primary-road modernization in years to come will be well directed. Intensive studies have pointed to the weak links in the system, where efforts must be concentrated first. Correction of these deficiencies is a normal peace-time need of the Nation, with permanent claim to Federal interest and encouragement.

Four years ago, Congress directed its attention beyond the system of primary highways and provided small authorizations for the improvement of secondary or feeder roads—the first authorizations of this kind to be made in a regular Federal-aid highway act. The States and their subdivisions welcomed this new partner in the attack on a major problem of extensive road development. These first small authorizations were an acknowledgment of the interest of the Nation as a whole in a relatively neglected portion of the rural highway system. They represented a definite investment in national stability and well-being.

The progress record of secondary Federal-aid road building hasn't been spectacular. It couldn't have been with the funds provided, which were cut to 60 percent of the original amount during the past 2 years. The program has displayed all the hesitations normal to undertaking something new. Conflicts over basic policies are still unresolved. Nevertheless the determination to deal with these problems exists. That determination, in which the interest and cooperation of the local communities count for much, will be stiffened if Congress restores authorizations for this purpose to at least the scale of the amounts provided 4 years ago.

A quarter-century ago Congress took a step that has had a profound influence on our highway history. In 1940 it can determine to influence as profoundly the intensive and extensive highway development ahead. Its action on the Federal-aid road legislation will help write a practical highway platform for tomorrow.

## Wheeler-Lea Bill

## EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

## PETITION OF THE NATIONAL LEAGUE OF WHOLESALE FRESH FRUIT AND VEGETABLE DISTRIBUTORS

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a petition of the National League of Wholesale Fresh Fruit and Vegetable Distributors on the Wheeler-Lea bill, as follows:

## PETITION OF THE NATIONAL LEAGUE OF WHOLESALE FRESH FRUIT AND VEGETABLE DISTRIBUTORS

The National League of Wholesale Fresh Fruit and Vegetable Distributors urges upon Congress that action upon any conference report which may be submitted by the joint Senate and House conference committee on the Wheeler-Lea omnibus transportation bill (S. 2009), or any substitute thereof, be delayed for a period of at least 30 days to permit producers, shippers, the interested public, and Members of Congress themselves to study its far-reaching and highly technical provisions. Any report submitted by the joint conference committee must represent a compromise between the numerous conflicting provisions of the Wheeler Senate bill and the Lea House bill with or without the vitally important amendments written into both bills while they were under discussion on the floors of the Senate and of the House.

The National League of Wholesale Fresh Fruit and Vegetable Distributors, being vitally concerned with any legislation which may have the effect of increasing costs of transportation on the necessities of life in which they deal, calls the attention of Congress to the fact that the transportation legislation now under consideration by a joint Senate and House conference committee introduces radical changes in land- and water-transportation supervision and rate-making control. There is no immediate public demand for such legislation and no reason exists for its hasty passage by Congress.

This organization realizes that both the House and Senate bills were introduced and passed as railroad-relief measures, but it is our belief that the railroads will obtain very little real relief from either bill or any combination of the two bills. Possibly some railroads might benefit from restrictive regulation of certain types of water or highway carrier, but we believe they would benefit more by certain reforms within their own ranks.

Your attention is respectfully called to the fact that since these bills were introduced the terminal lines at Kansas City, Mo.-Kans., and at Denver, Colo., have constructed, at a cost of several million dollars, completely duplicated terminal facilities. The Interstate Commerce Commission condemns the Denver situation in no uncertain terms in its findings of January 8, 1940, in I. C. C. Docket 28262. If Congress would require railroads to secure Interstate Commerce Commission approval of investments and expenditures for nontransportation projects it would probably save the railroads more money than they would get in added revenue through throttling competitors.

This organization is convinced that by allowing sufficient time for mature consideration of this important legislation Congress will be performing a distinct service to the public.

Respectfully submitted.

J. R. VAN ARNUM,  
Transportation Secretary.

WASHINGTON, D. C., February 20, 1940.

## Looking Forward—Will Steel Come to Portland?

## EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

## ARTICLE BY DR. E. T. HODGE, PROFESSOR OF GEOLOGY, OREGON STATE COLLEGE

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Dr. E. T. Hodge, professor of geology at Oregon State College, which was published in the Sunday Oregonian for February 18, 1940:

[From the Sunday Oregonian for February 18, 1940]

**LOOKING FORWARD—WILL STEEL COME TO PORTLAND—COLUMBIA ESTUARY IS LOGICAL PLACE FOR ITS DEVELOPMENT**

(By Dr. E. T. Hodge, professor of geology, Oregon State College)

It is true, as Napoleon said, that an army marches on its stomach, yet every soldier knows that it fights with steel. This is such an elementary fact that all countries with anything worth while to protect have attempted to make themselves independent of others for steel, or have made military or diplomatic agreements with steel-producing countries.

Countries with less liberty and less wealth than the United States have gone to great expense and thought to create within their own boundaries a steel industry. Japan with no coking coal and no iron ores has a steel industry of such size as to be able to compete with us not only for our foreign markets, but for our domestic market as well. Japan uses Philippine iron ores and United States scrap iron as sources of raw materials.

This accomplishment but emphasizes the possibilities of developing a substantial steel industry on the Pacific coast as discussed recently by national leaders, including the President of the United States. The logical place for such development is the estuary of the Columbia River. Both peacetime needs and considerations of national defense justify such a development, which is economically feasible.

We hear much talk about strategic materials. The military man, however, is as much or more concerned about strategic industries. Russia, for instance, has large supplies of strategic materials, but her military power is very uncertain because of underdeveloped strategic industries, particularly steel. Germany, with a limited supply of strategic materials, makes a bid for world dominion because of the intelligent development, with Teutonic thoroughness, of strategic industries, especially steel.

**CENTRALIZED—NATION'S STEEL PLANTS ARE LOCATED TOGETHER**

The United States has a highly developed steel industry, which is so centralized that all the rest of the United States would be helpless should the "steel center" be injured or cut off from the rest of the country. In any event, most of the United States is a thousand miles or more away from the domestic supply of steel.

War merely emphasizes the industrial functions of peace. A large country, such as the United States, with its steel industry centralized in one area, suffers a hardship and a risk in times of peace as in war, when all steel must originate at one point.

We have been taught that an economic setting determined the location of industries. This was based on the belief that an industry had to be close to a source of raw materials and close to a market. We learn, however, today that other powerful influences hold certain industries to locations, or at least do not permit them to spread to other locations that are economically feasible. This is particularly true of industries that are monopolistic in character.

Consequently, we may conclude that for purposes of national defense a steel industry should be located on the Pacific coast. The question then arises as to whether there is an economic setting on the Pacific coast that would justify a steel industry, regardless of its military values.

Two comprehensive investigations have been made of this problem. The first, in 1918, was at the direction of large financial interests. The other, in 1935, was made by the United States engineers. The writer was associated with both investigations.

The first investigation had blast-furnace production of iron as an objective. To produce iron by blast-furnace methods requires 5½ tons of raw material in order to produce 1 ton of iron. This throws the heaviest cost upon an adequate supply of raw materials. Detailed studies showed that Vancouver Island and Fernie, British Columbia, and Puget Sound, Wash., were sources of a satisfactory coke. Because of possible tariff restrictions, the Puget Sound coal was considered to be the only satisfactory source.

Also because satisfactory fluxes and refractories are available in the Northwest, it was concluded that the proposed plant should be located in the Northwest on tidewater. The iron-ore supply was to be obtained from the Kasaan Peninsula, Alaska; Louise and Vancouver Islands, British Columbia; and from Eagle Mountain in Riverside County, Calif.

The 1918 investigation found an existing consumption of 1,500,000 tons of steel products each year upon the Pacific coast, and concluded that 600,000 tons of steel could be produced and sold by the type of smelting and steel-producing plant that might be established. The conclusion was favorable, but it was arrived at just as the country was entering the war. After the war, other influences made it unwise to proceed with the project.

When the United States engineers undertook an investigation in 1935, they had unusual facilities to obtain, from records not open to others, the actual facts regarding the steel shipped in from the outside to the Pacific coast. The years investigated were 1929, 1933, and 1934, which gave for 1929, 2,693,224 tons, for 1933, 913,492 tons, and for 1934, 1,253,608 tons. The figures cover a "boom" year and a year just following the depth of the depression. Most of this steel was brought in by boat from Atlantic sources. These figures indicate the great dependence of the Pacific coastal area upon distant sources for its essential and universally used steel materials.

An industry producing materials so basic to human, everyday needs is a vast industry of complicated procedures producing mani-

fold products. Consequently, much of the above tonnage consists of a great variety and number of different items.

It is not to be expected that the beginnings of a steel industry on the Pacific coast could economically or practically attempt to produce all our needs in steel. Hence the figures must be analyzed to determine those simple products which we used in large tonnage and which can be made by simple manufacturing processes.

For example, we find that there is imported to the Pacific coast in the average year the following:

Steel:	Tons
Tin plate and ternes.....	240,000
Plates and sheets.....	48,000
Bars and rods.....	89,000
Wire and nails.....	90,000
Pipe.....	98,000
Structural steel.....	75,000
Other simple materials.....	78,000
Total steel.....	818,000
Pig iron.....	90,000
Total iron and steel.....	908,000

It will be noted that pig iron and steel of simple manufacture in the average year nearly equals the receipts of all iron and steel for the "depression" year, but is less than half of the imported products of the luxury "boom" year.

All of the above products are of a type that can be made in a steel plant with rolling, drawing, and spinning machinery. The volume is greater than the annual production of many of such plants in the present steel center.

**MALAYS—TIN MINED THERE AND SHIPPED ACROSS PACIFIC**

The departure from old-fashioned economies is absurdly evident in the fact that the Pacific coast canning industry is supplied yearly with over 200,000 tons of tin plate which has the following history:

The tin is mined in the Malays, shipped across the Pacific Ocean, through the Panama Canal, up the Atlantic coast, and then to a rolling and tinning plant. About half of the iron is mined on the west coast of South America and follows through the Panama Canal to the same plants. Then this manufactured tin plate, made from western materials, is shipped back again to use on the Pacific coast.

In the light of the above evidence as to an existing market for iron and steel, a plan with a capacity of 750,000 tons could safely be established. Such a plant by its existence would enable other iron-working plants to be developed, and they would by their development increase the market for the pioneer plant. Such a plant would be able to save the Pacific-coast consumer the handling and freight charges on the iron and steel he now uses, and in consequence he would use more of it.

The plant of that size would require the following raw materials each year—1,245,000 tons of 60 percent iron ore, 225,000 tons of 81 percent fixed carbon coke, 275,000 tons of 98 percent CaCO<sub>3</sub> flux (or limestone), and many thousand tons of dead burned dolomite or magnesite, chromite and refractory clays.

All of the above raw materials should be available at a low cost of transportation, preferably by ocean carriage. Hence the plant should be located on tidal waters. Such a location has the advantage that the steel products can be shipped not only to the coastal United States but to all foreign countries.

**DOLOMITES ARE FOUND IN PARTS OF WASHINGTON**

To meet the above conditions, the report of the United States engineers indicates sources of iron ore, including Kasaan Peninsula, Alaska; Vancouver, Louise, and Texada Islands; British Columbia, and several huge deposits on the west coast of Mexico and South America, and in several places in California and Nevada. One of these deposits, in El Tofo, Chile, now supplies most of the iron ore used by the Bethlehem Steel Co. plant on the east coast. This ore can be delivered as cheaply to Portland as it is now delivered to Sparrows Point, Md.

Satisfactory coke can be obtained from the Wilkinson field in the State of Washington. This coke has a high ash content, but the ash acts as a flux for the calcareous ores that would be used.

Dolomites occur in northeastern Washington and at Chewelah, Wash., where one of the largest magnesite deposits of the world is located. Refractory clays of superior quality occur in Washington and Oregon. Chromite is widespread along the northern Pacific coast. The cheapest source of limestone is Dall Island, Alaska, though some local deposits are also available.

**DEPOSITS EXIST ALONG COLUMBIA RIVER**

Though the northern iron ore deposits would serve for a time, the main dependence would have to be placed upon southern deposits. Another economic advantage of using such a source of at least part of the raw materials is that it would supply much-needed return cargo for ships in the South American trade, which could then bring noncompeting products to this country in exchange for American lumber and manufactured articles.

Iron ore deposits along the lower Columbia have been surveyed as a possible source of raw material without conclusive evidence that they would be adequate. Private detailed surveys are said to be under way.

Consequently, as mentioned at the outset, the most central location on the west coast for a steel plant with reference to raw materials and the market is the estuary of the Columbia River.

The investigation by the United States engineers was prompted by the need for finding a market for hydroelectric power; hence

attention was given to electric smelting. Electric smelting of iron ore is as yet an unsolved problem.

My friend, Dr. Axel Wahlberg, of Sweden, a noted engineer, who died last November, sent me data in regard to electric smelting of iron ore in Sweden. If there is any country in the world where this industry should have grown, it is in that country, where they would like to save wood for wood pulp and other industries, rather than use it for charcoal for producing pig iron. In the type of furnace used for this work in Sweden it is a well-established fact that charcoal rather than coal or coke is essential to the operation.

Furthermore, Sweden has ore of excellent quality that is highly desirable in the electric smelting process. In spite of this there has been no great development in the use of the electric blast furnace in Sweden.

#### SIZE ALSO A FACTOR IN THE MATTER

The unit size is also a factor in this matter, in that as yet no very large electrical smelting furnaces have been built. Dimensions given would indicate a relatively small daily production of electrically smelted pig iron per unit when compared with our modern furnaces using coke, in which a minimum of a thousand tons per day is the accepted unit.

It seems that Italy, owing to lack of coal and iron ore, is second in the development of electric smelting, and pyritic residues are the materials used largely in their electric-furnace operations.

While the results of the United States engineers' report were unfavorable as to smelting by electric furnaces, it must be remembered that a steel plant uses electric power in all other parts of the operation except smelting. Hence, a steel plant should be not only on tidewater, centrally located as to raw materials and market, but close to a source of a large block of low-cost electricity.

The writer, in the fifth volume of the United States engineers' report just mentioned, called attention to a newly discovered process by which wood waste can be converted into an ideal coke, both for reducing purposes and to make electrodes. The indicated economics of using wood waste revive the possibility that electric smelting may be economically feasible.

Regardless of whether electric smelting is feasible or not, however, the fact remains that much electricity will be needed. All the evidence points to the lower Columbia River as the proper site for an iron-smelting and steel-manufacturing industry. Whether such an industry will come by way of private capital or as the result of governmental promotions, the writer cannot predict. He is of the opinion, however, that a steel industry will soon be established in the Northwest, and probably within the Columbia Valley.

### Relief of Suffering and Distress Abroad

#### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

#### LIST OF ACTS RELATING TO RELIEF OF SUFFERING AND DISTRESS ABROAD

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the acts of Congress relating to relief of suffering or distress abroad from 1812 to the present time, prepared for me by the Legislative Reference Service of the Library of Congress. This information is of particular importance at the present time in view of the hearings now being conducted by the House Committee on Foreign Affairs on several bills and resolutions relating to the relief of the unfortunate people of Poland, showing a long line of legislative precedent for favorable action at this time. The list is as follows:

[Library of Congress, Legislative Reference Service]

#### ACTS OF CONGRESS RELATING TO RELIEF OF SUFFERING OR DISTRESS ABROAD

Act of May 8, 1812 (2 Stat. 730, ch. 79) authorized the President to purchase and tender "such provisions as he shall deem advisable" to the Government of Venezuela "for the relief of the citizens who have suffered by the late earthquake"; and appropriated \$50,000 for the purpose.

Resolution of March 3, 1847 (9 Stat. 207, No. 10) authorized the Secretary of the Navy to dispatch two ships to carry contributions "to the famishing poor of Ireland and Scotland."

Resolution of February 10, 1871 (16 Stat. 596, No. 28) authorized the President to station naval vessels at ports of New York City, Boston, and Philadelphia "to receive on board for transportation such supplies as may be furnished by the people of the United States for the destitute and suffering people of France and Germany."

Joint resolution of April 1, 1880 (21 Stat. 303, No. 16) authorized the Secretary of the Navy to employ any vessel of the Navy, or to charter a suitable ship, to carry contributions "to the famishing poor of Ireland"; and appropriated any necessary sum of money therefor.

Joint resolution of February 19, 1897 (29 Stat. 701-702), as amended June 1, 1897 (30 Stat. 220, No. 12) authorized the Secretary of the Navy to charter not over two vessels to transport contributions for the relief of "the famishing poor of India"; and appropriated any necessary sum of money therefor.

Joint resolution of April 7, 1897 (30 Stat. 219, No. 8) authorized the Secretary of the Navy to charter an American vessel of 2,400 tons capacity to transport contributions "to the famishing poor of India"; and appropriated any necessary sum of money therefor.

Act of May 13, 1898 (30 Stat. 419, ch. 345), authorized Army officers during the Spanish War to issue supplies and otherwise render aid to "inhabitants of the Island of Cuba who are destitute and in imminent danger of perishing unless they receive the same."

Act of March 3, 1899 (30 Stat. 1069), appropriated \$100,000 for Army subsistence supplies "to be issued to inhabitants of the island of Cuba who are destitute and in imminent danger of perishing unless they receive the same."

Act of May 13, 1902 (32 Stat. 198, ch. 787), appropriated \$200,000 to enable the President to distribute provisions, clothing, medicines, etc., and "take such other steps as he shall deem advisable for the purpose of rescuing and succoring the people who are in peril and threatened with starvation" after the eruption of Mont Pelee in the French West Indies, and requested the President to obtain the approval of the French Government.

Act of January 18, 1907 (34 Stat. 850, ch. 154), authorized the President to distribute any necessary naval stores "among the suffering and destitute people of the island of Jamaica" suffering in consequence of an earthquake and conflagration.

Act of May 27, 1908 (35 Stat. 387, sec. 7), relieved officers of the Isthmian Canal Commission from liability for \$11,205.53 for "materials and supplies furnished to the sufferers by the Jamaican earthquake" of January 14, 1907.

Act of January 9, 1909 (35 Stat. 584, ch. 7), appropriated \$800,000 to enable the President to distribute "provisions, clothing, medicines, and other necessary articles" among the "suffering and destitute people of Italy" suffering in consequence of an earthquake, and authorized the employment of any vessels of the Navy or other vessels for this purpose.

Act of May 13, 1910 (36 Stat. 367, ch. 232), authorized the President to distribute "tents, blankets, and other necessary articles" among the "suffering and destitute people of Costa Rica" suffering in consequence of an earthquake.

Act of February 18, 1911 (36 Stat. 919, ch. 114), authorized the Secretary of War to use an Army transport for carriage to China under supervision of American Red Cross "of supplies donated by the people of the United States for the relief of the sufferers from famine in China," and appropriated \$50,000 for expenses.

Joint resolution of August 20, 1914 (38 Stat. 777), authorized the American Red Cross "during the continuance of the present war" to charter vessels of foreign registry, to carry the American flag, "for all uses in connection with the work of said society." The purposes of the society enumerated in the act of January 5, 1905 (33 Stat. 600, sec. 3), include carrying on a system of international relief in time of peace and applying it in mitigating suffering caused by pestilence, famine, etc.

Joint resolution of September 11, 1914 (38 Stat. 778, No. 40), appropriated \$1,000,000 to enable the United States to fulfill the obligations devolving upon it in connection with its representation of the interests of foreign governments and their nationals, to "extend temporary assistance to other governments and their nationals made necessary by hostilities" in Europe and elsewhere, and "for the care or benefit of citizens or subjects of foreign nations." Acts of March 4, 1915 (38 Stat. 1138), and September 8, 1916 (39 Stat. 802), reappropriated the unexpended balance of this appropriation, for the same purposes.

Act of May 22, 1918 (40 Stat. 558, ch. 80), authorized national banks to contribute to the American Red Cross, and provided that all money so contributed should be used in furnishing aid to wounded soldiers, etc., and "the relief and mitigation of the suffering caused by the war to the people of the United States and their allied nations." [Such contributions were presumably outside the scope of the ordinary corporate powers of national banks; see U. S. Code 12:24.]

The Naval Appropriation Act of July 1, 1918 (40 Stat. 705), authorized the Secretary of the Navy to ascertain and pay "all claims for damages to and loss of private property of inhabitants of any European country not an enemy or ally of an enemy" caused by "men in the naval service during the period of the present war"; provided any such claim does not exceed \$1,000.

Act of February 25, 1919 (40 Stat. 1161, ch. 38), appropriated \$100,000,000 for purchase, transportation, and distribution of "food-stuffs and other urgent supplies" to populations in Europe outside of Germany, German-Austria, Hungary, Bulgaria and Turkey (but including Armenians and other Christian and Jewish subjects of Turkey); expenditures to be reimbursed as far as possible by the peoples thereby relieved.

Act of July 11, 1919 (41 Stat. 130, ch. 4), authorized the Secretary of War to place at the disposal of the American Red Cross any "medical and surgical supplies and supplementary and dietary foodstuffs" no longer necessary for the United States Army, to be used "to relieve and supply the pressing needs of the peoples of countries involved in the late war."

Act of March 30, 1920 (41 Stat. 548, ch. 113), authorized the United States Grain Corporation to dispose of flour in its possession up to 5,000,000 barrels "to relieve populations in the countries of Europe or countries contiguous thereto suffering for the want of food."

Act of December 22, 1921 (42 Stat. 351, ch. 15), authorized the President to spend \$20,000,000 of funds of the United States Grain Corporation for corn, seed grain, and preserved milk to be distributed "for the relief of the distressed and starving people of Russia and for spring planting in areas where seed grains have been exhausted."

Act of January 20, 1922 (42 Stat. 357, ch. 30), authorized the President to transfer up to \$4,000,000 worth of surplus medical, etc., supplies to American relief organizations, without charge, "for the relief of the distressed and famine-stricken people of Russia."

Act of May 28, 1924 (43 Stat. 195), authorized the Navy paymaster general to expend from the naval supply account issues ordered by the Secretary of the Navy "for the relief of sufferers in Japan following the earthquake which occurred September 1, 1923."

Act of February 24, 1925 (43 Stat. 963, ch. 297), approved issuance of Army supplies up to \$6,017,069.03 "for the relief of sufferers from the earthquake in Japan on September 1, 1923."

NOTE.—The President, by a proclamation of August 25, 1906 (34 Stat. 3227), asked for contributions through the National Red Cross Association for relief in connection with earthquake at Valparaiso, Chile. (W. C. Gilbert and W. H. McClenon, October 14, 1937.)

## Gold and Its Power—Part 2

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1940

Mr. THORKELSON. Mr. Speaker, in this second part of my discourse on gold and its power, I shall again discuss those who place gold above principle and who drape themselves with a mantle of philanthropy while they partition or divide other people's property. I shall again discuss those anti-Americans who employ the subversionists or the Communists to create dissension and spread hatreds in order to further their own ends. The internationalists being indifferent to nationalistic interest are not patriotic citizens, but are instead, as the name implies, international adventurers who exploit such nations as grant them the rights and equalities of their own nationals. Their power is predicated upon ownership or control by subterfuge or otherwise of gold which they use to sell, buy, and bribe themselves into power.

We have been too lenient with these destroyers and should, for the protection of our Nation and the people, embargo the gold now in the Treasury instead of allowing it to remain as it is, security for the international financiers. It must be understood that gold and money is the property of those of our citizens who are holding claims against this metal in the form of currency, securities, and investments.

The right to designate ownership of gold money or its equivalent is a power that the people did not delegate to Congress, but is instead one of the unwritten powers of the Constitution which the people reserve to the States and to themselves, and Congress is obligated to protect that right.

We, the Members of Congress, give little or no consideration to this unwritten power, in spite of the fact that we have obligated ourselves "to preserve, to protect and defend" this inalienable right of security which the people set aside for their own protection. Members of Congress forget that they represent the people and that their action should in no sense be predicated upon what the President may believe is best, or upon what various Federal departments may think is proper, but should instead rest solely upon the Constitution of the United States, for it is in that document the people of this Nation give orders to Congress. For Members to stand on the floor of the House and say that the Constitution is outmoded is, if nothing else, a woeful display of ignorance. They should bear in mind that the document is not validated by an act of Congress but is instead the fundamental and basic law by which the people command the Congress. Those who are inclined to treat this document lightly should bear in mind that no changes can be made in the document except in the form of an amendment, as set forth in article V.

I heard one of my colleagues say that some parts of the Constitution were outmoded, and for an example he referred to article 2 in the Bill of Rights:

A well-regulated militia, being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed.

I can only say that this article is still in force until it is amended by the people of this Nation, and no act of Congress can incriminate those who bear arms, for they are strictly within their rights. The people have a perfect right to bear arms and protect themselves within their State. Members of Congress should understand that the Constitution is a document which restrains and restricts the power of Congress, and by which the electorate can fire all the Members of the House every 2 years, and in which they could, before the seventeenth amendment was adopted, recall the Senators whenever they pleased, but now every 6 years. The people should now reduce the Senate term to 2 years in order to eliminate "rubber stamps."

I could not refrain, as I recalled debates on trade pacts and on other matters discussed before the House, from deviating from the subject under discussion. I shall now return to the consideration of gold and its power.

Designation of power "to regulate the value of money" is mentioned first in article I, section 8:

Congress shall have the power to coin money, regulate the value thereof, and of foreign coin.

This paragraph is quite clear and bestows the right on Congress "to coin money and to regulate the value thereof," but is in no sense a power to deprive the people of the use and of the security afforded by this standard recognized medium of value.

We may now assume that inasmuch as gold is the only metal that gives standard value to money, it must remain, as the Constitution intended, in circulation and the common property of all people. Congress in 1934, in a most unconstitutional manner, relinquished its right to regulate the value of money when it gave this power to the President and to the Treasury Department. Congress also made it impossible for the United States to comply with article I, section 10, when it deprived the people of the right to own gold money and to be secured by gold in the Treasury of the United States.

Section 10 states:

No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts, or grant any title of nobility.

This section is clear also, for it states explicitly that—

No State . . . shall make anything but gold and silver coin a tender in payment of debts.

It should be obvious even to those who now sit upon the Supreme Bench that the use of silver, gold, and its equivalent to pay debts is mandatory.

Rightfully gold and its equivalent in money is earned by and belongs to the people, and they are for that reason entitled to its security. Congress has no constitutional authority to deprive the people of this property or deny them the right, as the document provides, to pay debts with silver or gold coin; yet the people in every State were without their consent deprived of this right.

Perjury is a felony which is as applicable to Congressmen and other governmental officials as it is to civilians who take an oath in performance of duty and violate their obligation.

Gold and monetary wealth are created by such people as are engaged in developing our natural resources and in the manufacture of such products into commodities as we need for our general welfare. Money is therefore a property earned by those who labor on farms, in factories, and in other productive occupations. These various activities are classified as our Nation's industries and should for that reason be entitled to share in the same security as that which is now set aside for the sole protection of the international financiers.

The internationalist is, as I have already said, an insidious destroyer, who, like a parasite which undermines the health

of men, saps the vitality of such nations in which he is allowed the freedom to operate and the use of public wealth to entrench himself at the expense of industrious and patriotic citizens.

The power of the internationalist is in direct relation to national indebtedness. Nations which depend upon imports of raw material and other necessities are in a certain sense at the mercy of those who own and control the gold, for no commerce can be carried on without gold credit. The internationalist, to wield his power, must therefore bring about indebtedness and this is accomplished by internal dissension which will result in strikes and strife. This causes industrial indebtedness of such plants as have not sufficient surplus to absorb losses which are sustained when the factories are closed. They are forced to borrow money, which leaves them under the domination of the bank or the source from which the money is received. This in a sense is the end of industrial independence. It is in this manner the internationalist builds up his local and national power, and it is in exactly this manner that he builds up international power, substituting for local strikes international wars.

This summer, when your Members of Congress mount the rostrum, you, the people, should ask these questions:

First, why did you vote for the Gold Reserve Act, an act that has made it a criminal offense for the citizens of this Nation to own, to be secured and protected by the gold in the United States Treasury?

Second, why did you support a law which deprived the people of ownership of gold and which also repudiated gold securities that were owned by the people?

Third, why did you, as a Member of Congress, after having deprived your own people of protection, bestow the title and ownership of gold on the international financiers?

Fourth, why did you as a Member of Congress support a law which allows foreign nations to buy \$35 worth of merchandise or credit with an ounce of gold that will buy only \$20.67 of merchandise or credit in other nations?

Fifth, why did you vote for trade pacts and treaties under which we, the people, furnish more than 70 percent of the merchandise sold to foreign nations free?

Sixth, why did you vote for the reorganization plan, a law under which you have relinquished your own rights to the executive department, and which is now costing the taxpayers many additional dollars in Federal administration?

Seventh, why have you supported legislation which has created many corporations competitive to private industries?

These and many more questions should be asked when Members seek reelection to office. It is well for the people of this Nation to bear in mind that our industries and business are gradually falling into the hands of the internationalists for 69 percent less than their real gold value. Let no one forget that \$35 an ounce for gold is a subsidy to those who have the gold, and the owners of this metal are not we, the people, but are, instead, the internationalists, who now, as in the past, control international banking.

It is quite true that 70 cents an ounce for silver and \$35 an ounce for gold has stimulated gold and silver mining in the United States, and to that I am not opposed, particularly in view of the fact that our gold production is only about \$25,000,000 per month. I grant that this subsidy is money well spent in the United States and in the development of our own production. What I object to is the money we have expended to stimulate gold and silver production in the world.

I cannot forget that for every ounce of gold which has come into the United States our taxpayers have, in addition to its standard price of \$20.67, paid \$14.33 in merchandise or credit. The taxpayers of this Nation should remember also that for every ounce of silver imported into the United States we have paid foreign nations 30 cents to 40 cents more than the price for which it could have been bought in the open market. I repeat again, I believe we are justified in stimulating our own mineral production, but we are not justified in stimulating and subsidizing world production.

We committed a most fatal blunder when we tied the international dollar to 15.521 grains of gold, for it left us open to exploitation. Did any other nation commit such blunder?

Certainly not, for each and every one of them abandoned the gold standard in order to protect its own industries and to close the door to exploitation of such industries by foreign powers.

The stupidity of our Treasury Department is evident as we observe the condition of the financial structure which is now about ready to fall. Even the greatest optimist cannot laugh off a national debt that actually, if the facts were known, is now \$50,000,000,000. Neither can our sky-gazers treat disparagingly the \$8,000,000,000 of foreign-owned American securities, because they are redeemable in gold at \$35 per ounce, and will, when presented through the proper channels, reduce the gold in the Treasury by nearly \$14,000,000,000. That, if nothing else, should be significant that "something is rotten in the state of Denmark."

Is it possible that our financial structure may collapse as it did in Germany? It surely is, and is so admitted by some of the so-called experts in the Treasury Department. The internationalist is well educated in two lines: He knows how to create indebtedness and cause inflation. I realize that many scoff at this idea, but to those who treat it lightly I can only say that were we compelled to liquidate foreign obligations and outstanding gold certificates today, no gold would be left in the Treasury, and evidence for this may be found in the Department of Commerce Release and in the Treasury's Daily Balance Sheet.

What is the purpose of inflation? It is to debase and destroy a nation's currency so that all prices will tumble to the lowest point. When the currency structure collapses, the internationalists, like birds of prey, return to reap their profit, for a bankrupt nation is legitimate plunder.

A few golden shekels will buy a wad of inflated currency, which in turn buys industries, real estate, and other property, exactly as it was bought in Germany during the inflation of 1923. The stage is set for that in the United States, and do not let anyone fool you by telling you differently, for we are now operating with nothing but purely inflated currency, the value of which is only what it can buy from day to day. To say that it cannot happen here is not facing the issue squarely, for it can and it will happen unless Congress provides some safeguard to protect and keep the gold which is now in the Treasury. According to the daily papers, this was an issue before the Swedish Parliament. Sweden has already taken measures to keep the gold in the country. Why? To protect its own currency, for depletion of the gold reserve can only end in inflation, and that is extremely dangerous to a nation that must depend upon its major supplies from without.

In conclusion, let me briefly discuss the money which we are now using. It is not my intention to describe moneys used by primitive people, but I shall, for its similarity, compare it to the wampum which was used by North American Indians.

I maintain that the legal tender we are now using in domestic transactions, while more convenient, is similar to the wampum used by the North American Indians. It is actually retrogressive and, therefore, may be compared to money used before the horse and buggy days.

Wampum was beads made of shells, which represented money, and was to be had in two colors, black or dark purple, and white. The black or dark purple had double value of the white, but neither had anything but purchasing power.

Legal tender are bills made of paper which represent money and is to be made in various denominations and colors. The numbers printed on these bills represent the value, but none of these bills or legal tender has anything but purchasing power.

It follows, therefore, that wampum and legal tender are alike, for legal tender money, like wampum, is devoid of inherent value and only useful in the United States. It was to overcome this restricted usefulness of money that our present currency was adopted. It was to join hands with progress and facilitate trading that gold was adopted by all nations to represent the value of money. However, with the present legal tender, we are now back a thousand years to primitive wampum, so maybe the Indians were right, after all.

## Side Lights on Finland

## EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

ARTICLE BY EDWARD T. HEALD

Mr. SECCOMBE. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following article entitled "Side Lights on Finland," by Edward T. Heald, secretary of the Y. M. C. A. at Canton, Ohio:

## SIDE LIGHTS ON FINLAND

(By Edward T. Heald)

## 1. THREE TRIPS

These side lights are based on three trips into or through Finland, each trip being at a different stage in Finnish history. The first visit was a railroad trip from the north to the south of Finland in early September 1916 on my way from America to Russia. Finland was then subject to Tsarist Russia, and I had less the idea of being in Finland than in Russia. I was prevented from enjoying the scenery by the fact that I was intensely occupied with my first experience with a Russian spy, who happened to be one of my seat mates. For some reason he fastened his attentions on me. As my other seat mates one by one sidled away from his obvious attempts to trap us, I became more and more embarrassed as I was finally left alone with my none-too-welcome companion, who kept trying to get me to agree with him about the iniquities of the Russian bureaucracy and the glories of the democratic movement. In the southern part of Finland the window curtains were drawn down so that we could not see the reputed heavy fortifications near Viborg. The second trip was a 10-day holiday trip which was authorized by John R. Mott in July 1917, and on which I was accompanied by Mrs. Heald. This was chiefly by steamer along the picturesque canals and lakes of the interior of Finland, and at that time Finland was still subject to Russia, but it was the revolutionary Russia of the Kerensky regime. The third trip was 9 years later, in 1926, when I attended the world conference of the Y. M. C. A. held at Helsingfors, now called Helsinki, at which time Finland had been established for 8 years in her independence. The 10 days of this trip were spent entirely in Helsinki and its suburbs.

## 2. THE LAY OF THE LAND, CITIES, CLIMATE, LENGTH OF DAYS

The railway trip from Stockholm north through Sweden to Haparanda at the northern end of the Gulf of Bothnia, and then south through Finland, reveals interesting contrasts and resemblances between Sweden and Finland. Both are heavily forested, but Sweden's forests of pine, birch, spruce, and aspen are on thousands of mountains and hills, reminding of Colorado, the railroad constantly crossing dashing mountain streams on high trestles. The pine, birch, and spruce forests of Finland are on flat land dotted with innumerable lakes and swamps. The lakes are variously estimated to be from 10,000 to 60,000 in number, and a large scale atlas shows more water than land in many parts of Finland. This is a great contrast to the flat plains of Poland and Russia, and by the same token much more easily defended against mechanized warfare. We traveled for a week on one of the trim miniature Finnish steamers, with its 8 or 10 neat little cabins, coursing along canals and chains of lakes, in a country reminding of the upper Mississippi River in northern Minnesota or in northern Wisconsin. We could have kept on another 2 or 3 days without retracing our course if time had permitted. Still further north, beyond the waistline, the lakes practically disappear, the forests continue, the country grows rougher and hillier, much like Labrador. This country is very thinly populated and is vividly described by the book *Escape From the Soviet*, by Madame Tchernavin, who spoke at the high school here a few years ago. It took them over 10 days to walk across from Kandalaska to the Finnish frontier, only 70 miles as a crow flies. They did not see a human being or a sign of habitation in those 10 days. The one spot of spectacular scenery was at Imatra Falls, called Finland's Niagara, but more like the rapids above and below Niagara than the falls themselves. Important power plants here offer vulnerable targets for the Russians, whose frontier is only about 75 miles southward, and whose puppet Finnish communist state of Karelia is about the same distance northeastward. We stayed one night at the beautiful Government Hotel, overlooking Imatra Falls, but that is too fast a way to use up holiday funds.

Finland offers another contrast with Russia and the Baltic provinces across the Gulf of Finland. Those countries are also forested in these northern parts, mostly with pine, as are Finland and Sweden, but in contrast there are few lakes, and the country is dirty and dusty while in Finland it is clean and fresh. My first and only airplane trip was from Helsinki across the Finnish Gulf to Tallinn, capital of Estonia. It is about 60 miles across, and a

magnificent picture on the clear sunshiny day we had, the land of Estonia coming into view just as the land of Finland receded from view at our altitude of 1,500 feet over marvelously blue waters.

Finland's greatest asset is her forests. She has been cutting her forests scientifically for 250 years, leaving more feet of timber standing every year. Her greatest exports are furniture made from her forests, pulpwood, and paper made from her trees, and firewood for Petrograd and northern Russia. The latter is floated by barges to Petrograd and stacked in great piles along Petrograd's (now Leningrad's) streets, rising as high as houses. It was Petrograd's principal fuel when I was there. It has to be under way from Finland by the end of July or it will be caught by ice before it reaches Leningrad, which reminds one that Finland's navigation season is short—only five and a half or six months in the south and two and a half in the north.

Also there is a great difference in the working day, which also means the fighting day. At this time of the year it is perpetual night in northern Finland, 2 or 3 hours of daylight in central Finland, and 4 or 5 hours in southern Finland. When I was in Petrograd the winter daylight was from 9:30 to 2:30, which perhaps explains why office hours became established from 10 to 3 in Russia and Finland before the days of electric lights, and custom has continued them into summer and modern days.

Naturally, in fighting an enemy 60 times her size Finland's greatest advantage is in these short winter days. Later, when it will be light enough to read newspapers at midnight without artificial light—I could do that for 6 weeks even at Petrograd—the Russians can keep the fighting going 24 hours a day with their superior forces, and so more rapidly wear the Finns down.

Finnish cities reflect both Scandinavian and Russian influences in architecture, life, and customs, though there is an increasing architectural distinctiveness in public buildings and railway stations, which is uniquely Finnish. Viipuri, or Viborg, which is the first good-sized city north of the Russian frontier, was a neat progressive modern city of about 50,000 when I was there in 1917. It had a fine Y. M. C. A. Hospital for men and women. Tammerfors, the center of the munitions industry, and Finland's chief industrial city, impressed me as being more like an American city than any other on our route between New York and Petrograd. Helsinki, with over 200,000 population, is a handsome city with fine public and business buildings, an imposing waterfront, fine churches, beautiful residential suburbs, and would have been a fine center for the Olympic games in 1940.

These Finnish towns, with their poetical names, Vallinkoski, Villmanstrand, Ruokoletti, Punkajara, Kuokio, Puumaala remind us that Longfellow's *Hiawatha* was inspired by the Finnish epic, *Kalevala*.

## A LOOK AT THE PEOPLE

Racially the Finns have no kinship with the Russians nor the Scandinavians, but they are of the same stock as the Hungarians.

They are to Russia what the Czechs are to Germany; both Finland and Czechia feel themselves superior culturally and politically to their bigger neighbors, while the latter look upon their small democratic neighbors as thorns in the flesh, fit only to be trampled upon and destroyed.

During the week that we traveled Finland's canals and lakes in 1917, chatting daily with the captain, we saw Finland's hatred of the Russians through his eyes. At that time 800,000 Russian soldiers were quartered on 3,000,000 Finns, who were taxed for their support. At the time of our American Revolution we thought it too much for 3,000,000 Americans to be taxed for the support of 10,000 British soldiers. Imagine 80 times that number. They were everywhere. They could commandeer whatever they wanted. We watched them in the market places bargaining off their sugar cubes to the Finns who were not allowed sugar by their Russian masters. Now and then we would see a group of the Russian soldiers flirting with a Finn girl or two. Nothing got the captain madder than this. "Any Finnish girl who keeps company with a Russian soldier is a disgrace to her country. We tell her go along and stay with the Russian. We don't want her to come back." We passed a large building that had its windows and doors barred up. "That is a Russian seminary building," explained the captain. "The Russians built that to train teachers to teach the Russian language to Finns in the common schools. As soon as the revolution occurred we closed that building and it won't be opened again without a fight."

One of the most striking illustrations of the Finnish hatred of the Russians was the statue of Peter the Great, a statue of heroic size looking down on the city of Viborg. Peter's face wears the contemptuous smile of the conqueror. The picture postal we bought of the statue showed a beautiful green grass plot at the base. When we saw it the plot of green grass had disappeared, and all around was a scrap heap of bottles, cans, and trash which the incensed Finns had evidently thrown at the statue since the March revolution had given them equal privilege with the Russians to vent their spite on the Czar's regime.

In no respect did the captain show his wrath against the Russians more than with reference to the Socialist regime, as he called it, then in power, or lack of power, under Kerensky. We cannot deal adequately with Finland's relation to Russia without dealing with Finland's relation to the revolution, and here again the Finns present a striking parallel to the Czechs. Both races are dead against communism or socialism. Both countries represent the most advanced forms of democracy as we know it. The Finns were in the vanguard of the March revolution in Petrograd when the Czar's regime was overthrown. The first of the prison fortresses in Petrograd to break open on Monday night that overthrew the old

regime was the Peter and Paul Fortress, where the Finnish political offenders were concentrated. We met Finns on the streets of Petrograd that night. They proudly explained, "We nee Russkee; we Finlandskke." They each had 2,000 rubles, then worth about \$600, furnished them by the Finnish Revolutionary Committee to take care of them until they got home; certainly an ample amount.

As the Bolshevik influences gained in Russia under Lenin and Trotsky, throwing the social and economic conditions of that country into chaos, the agitation spread up into Finland through those 800,000 Russian soldiers. Our captain exploded about it. "The Finnish Socialists are not Bolsheviks but Scheideman Socialists," he said; "but that is bad enough. Thieving is growing. We used to keep our doors unlocked in Finland; now there are thieves everywhere, and we have to lock them. Most of the thieves are Russian soldiers, it is true, but the effect upon the Finns has been bad. They are losing their habit of hard work. The Finns used to love hard work and long hours. Now they listen to their Socialist comrade. The Finns used to save. Now they spend all they get."

As the revolution rushed to its communistic climax the Finns increased their resistance to it, and in 1918 accepted German aid to drive the Russians out of Finland and declared their independence. It was the same time that the Baltic Provinces across the gulf—Estonia, Latvia, and Lithuania; likewise Poland and Czechoslovakia—freed themselves from Russian and German rule and asserted their independence, all of them becoming democratic republics. The desertion of Czechoslovakia by England and France and Hitler's pact with Stalin have now sealed the fate of all these little democracies until Finland is the only one left fighting for freedom.

When you hear it said that Finland wouldn't have resisted Russia unless England and France had encouraged her, don't believe it. They know if Soviet Russia restores her rule over Finland all is lost—her economic system, her political and religious freedom, and probably her homes and her country. For if Stalin hesitated not to deport and allow to starve two or three million of the Russian Kulaks, the so-called wealthy peasants, who would correspond to our 25- to 80-acre farmers, because they resisted collectivization; if he doomed three to five million Russian peasants to starvation rather than buy grain to feed them or even allow it to be sent in as gifts, rather than admit the break-down of the 5-year plan in agriculture, what reason do we have for supposing that he and the Soviet power politics will be more kind-hearted to the Finns? Personally I think if we could be prepared to arrange for a mass migration of the Finns to Alaska, if and when the fortunes of war doom them to defeat, we would be doing a master stroke of policy for the Finns, for Alaska, and for the United States. Their whole race history provides them for a marvelous adaptability to take over a land of snows and forests such as Alaska. It might be the only way to preserve them as a race.

I don't want to prophesy again—I predicted that the Czechs would fight before giving up their independence. I was not prepared for the depth of treachery by the Allies which was confirmed to me just recently by two unquestioned authorities when France and England warned Czechoslovakia that if she resisted, they would support Germany against her with moral and material means. And Bonnet of France was the leader and spokesman of this treachery. But I don't see how a country of 3,000,000 can continue an indefinite resistance to a country of 180,000,000. As the days lengthen the advantage will be increasingly Russia's until she can overwhelm by pure numbers. I hope this prophecy will be as wrong as the others. The one miracle that can prevent its coming to pass is a political revolution or crack-up in Russia. But those who have studied Russia and Germany as late as last summer think the crack-up will come in Germany before it will in Russia. Still, if there is anything that experience teaches in these countries, it is that the unexpected is always happening.

Everywhere we ran into the determination of the Finns not to speak the Russian language. There were four languages required to be learned by the Finnish navigation laws, said the captain: Finnish, Swedish, German, and English, in the order named, but not Russian. Whenever I spoke Russian they would never answer.

The Russian distrust of the Finns was shown in their not allowing any Finns in the Russian Army except 500 volunteers at the front. They were afraid that the Finns would start a revolution, and in this they were doubtless justified.

This refusal of the Russians to put the Finns into their army is matched by the present policy of Germany not to let the Czechs arm.

When we crossed the frontier from Russia into Finland we felt as if we were suddenly transported from a land and people of turmoil, disorder, chaos, dirt, and noise to a land and people of quiet, beauty, cleanliness, order, and peace. Yet there is no physical boundary except a little creek small enough to wade across.

The old Russian or church calendar, 13 days behind our western calendar, which was still in force in Russia when we visited Finland in 1917, was already abolished in Finland where the western calendar was in use. In counting time  $2\frac{1}{2}$  means a half hour before 2.

In Helsinki, Russian influences were noticeable in the office hours, which were from 10 to 3, in cobblestone pavements, in isvosicks and lamavols wagons, in the character of lettering on stores, and in the habit of promenades.

After the Russian influences, and almost parallel with it, are the Swedish influences. Finland was independent during the first 550 years of her existence until 1157; then under Swedish rule for the

next 550 years until Peter the Great conquered in 1710 to 1716. Thus, the Russians ruled the country only 210 years, or less than half the time Finland has been independent, or half the time she was under Swedish rule.

The appearance of the country, the cities, the civilization, and the culture are more akin to Scandinavia than to Russia. The importance of their sea-faring life is another tie with Scandinavia. The interesting medieval castles scattered throughout Finland, many of them well preserved, were built under Swedish rule. The strongest and most famous of these castles we visited at Viborg. It was built by Torkel Knutson in 1293, when he conquered the Karelian Finlanders. The Finns in America have come mostly from the west and southwest of Finland—and are of Swedish descent.

A third influence is the German. Up until Hitler's pact with Russia the Finns felt very kindly to the Germans, as Germany gave her military aid that helped her gain her independence from Russia. German names are common in Finnish cities, and they figure importantly in the country's leaders, as evidenced by the Mannerheim line.

In religion the Finns are 99-percent Lutheran, the Reformed religion having been introduced by the Swedes in 1528. The headquarters for the Y. M. C. A. world conference held in Helsingfors in 1926 was the imposing Johannes Lutheran Church. The President of the Republic was patron of the conference and welcomed the conference in German. It is interesting that our townsman, Rev. Oscar Mees, has been asked to head up the Lutheran aid in the United States for the Finns. He says it is the first time in our history that all branches of the Lutheran Church in America have united in a project.

The Russian church is hardly to be found, except one fine Russian church building in Helsinki, the Nikolai, which was built by the old regime.

The Y. M. C. A. had a fine building and organization in Helsingfors, established after Finland gained her independence, as the Y. M. C. A. was not allowed under the old regime in Russia. The Helsinki Y. M. C. A. reminded one of an American Y. M. C. A., as did the secretaries. The general secretary had organized the boot-blacks of the city, of whom there were a great many, and helped to equip them, until they were a large and flourishing department.

The Y. M. C. A. delegates to the Y. M. C. A. conference who were Rotarians organized the first Finnish Rotary Club at Helsinki, which meeting I was privileged to attend.

The scheduling of the Olympic games for Finland in 1940 was another example of Finland's enterprise.

The city of Helsinki was closed tight as a drum on Sunday. Prohibition was strictly enforced in Finland in 1926—much more strictly than in Scandinavia, where it was also on the statute books.

Food was scarce and high priced, while rooms were cheap, and this was as true in 1926 as in 1916 and 1917. When I first went through Finland in 1916 I was impressed with the poor soil and hard living conditions of northern Finland, where the summers are too short to grow many crops. There was no fruit for love or money and few vegetables and no butter. When we went into Finland in 1917 I didn't have time to go through the red tape necessary to get a bread permit in Petrograd, and as a result we couldn't buy any bread during the 10 days we were in Finland, but the captain shared his bread with us, which was one reason we spent most of our vacation on a steamer. Our fellow travelers recommended that we patronize the Finnish pensions as being cheaper, so the first one we spied we patronized, but when they brought the bill for one dinner it was equivalent to \$7.50 American money for the two of us, which was the first and last time we ate at a Finnish pension. At Helsinki in 1926 the breakfasts were furnished to the delegates by the Finnish Republic, at the automat restaurants. Breakfasts consisted of a roll and a cup of coffee, and there was no butter on the roll. But my room in a prominent downtown hotel in Helsinki, shared with another delegate, only cost 50 cents each per night. Bicycles were the commonest means of transportation, both in the cities and in the country.

Helsinki presents an imposing appearance as one approaches it by steamer from the Gulf of Finland and it loses none of its imposing effect when you go through its streets. Its apartment buildings are built up solidly to the edge of the country. The suburbs are picturesque and beautiful, usually located around clear blue water lakes.

An Englishman on the same train with me going into Finland in 1917 described the Finns as a gray race with gray minds living in a gray land. When it comes to gray matter in their brains it would appear that the Englishman was right.

The Finns are rightly proud of their culture and their cultural leaders. Our captain praised their national architect, Sarinen; their sculptor, Vallgren, their novelist, Aho; their national epic, Kalevala; and their national musical genius, Sibelius, and his wonderful Finlandia. It is interesting that Finlandia was first introduced into America in 1905 by the Russian Symphony Orchestra.

The Finnish character has exhibited itself to the world in being the only country to keep up payments of interest on her war loans from the United States, not allowing even a desperate war to excuse herself from her obligations. The Finns are a solid, stocky, stolid physical type, much like the Russian peasant. But their carriage is more alert and brisk than the peasant. Women are much in evidence in lines usually considered exclusively men's work, such as conductors on streetcars, street sweepers, etc.

Hitler has said that no nation or race that is so small that it won't fight deserves to survive. The Finns have shown not only

the readiness to fight, but the ability, resourcefulness, and heroism to do so with a success that has amazed the world.

In conclusion, Finland should inspire us again with new conviction, and faith in the democratic process as producing a superior type of individual whether viewed as citizen or fighter as compared with the mass production methods of dictatorial despotism.

No country is more deserving of our moral and material support than Finland.

## The Texas Farm Tenancy Committee Report

### EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

REPORT BY C. M. EVANS, VICE CHAIRMAN OF THE TEXAS AGRICULTURAL WORKERS ASSOCIATION

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting herewith a copy of a report made by the Honorable C. M. Evans, vice chairman of the Texas Agricultural Workers Association. Mr. C. M. Evans is director of region 8 of the Farm Security Administration. This region includes the States of Texas and Oklahoma. Mr. Evans and his splendid organization is doing a wonderful job in these two States. His organization receives good cooperation from its borrowers. I do not know of a department in this Government that is doing more for the farmers, who need assistance, than the Farm Security Administration; and I do not know of any organization whose personnel has its heart more into their work than the personnel of the Farm Security Administration at Dallas.

The report referred to, which was made recently by Mr. Evans, is as follows:

REPORT OF THE FARM TENANCY COMMITTEE OF THE TEXAS AGRICULTURAL WORKERS ASSOCIATION

(This report is made by C. M. Evans, vice chairman, in place of Dr. C. H. Hamilton, chairman, who resigned because of removal from the State)

The farm-tenancy committee appointed by the Texas Agricultural Workers Association at its session a year ago gave the major portion of its activities to a series of 14 meetings at which opinion of farmers themselves was surveyed and analyzed. The 14 meetings were held last spring and extended from Willacy County in the Rio Grande Valley to Fannin County in the Red River Valley, and from Hall County in the west to Anderson County in the east. Both landowners and tenants were invited, and attendance ranged up to several hundred. Each farmer present was invited to answer a series of 29 questions which were presented and answered in writing.

#### MOVEMENT OF TENANTS OFF FARMS

One of the first questions was as to whether or not there has actually been considerable movement of tenant farmers off the farm. Eighty-six percent of the answers said that there has been such a movement in their section.

#### BETTER CONTRACTS NEEDED

Questions were then asked as to how a more profitable working relation could be established between landlords and tenants, in order to prevent landlords from setting their tenants adrift. Both tenants and landlords were generally favorable to written rental contracts. Eighty percent of those making answer held that the written agreement would bring about a greater feeling of security on the part of the tenant and would lead to higher returns both for the tenant and the owner.

#### LONGER RENTAL CONTRACTS DESIRABLE

Getting down to the details that should be incorporated in a written rental agreement, 87 percent said that leases should be encouraged for longer terms, preferably from 3 to 5 years. Sixty-eight percent of the tenant farmers were in favor of some sort of legislation but only 37 percent of the landowners. The nearest they came to agreement on legislation was that there should be a legal requirement for a minimum time to be given a tenant before he is forced to quit the farm. Eighty-seven percent of the tenants favored such legislation and 45 percent of the landlords.

#### TENANTS' COMPENSATION FOR IMPROVEMENTS

There was general agreement that tenants should receive compensation for improvements which they make upon a farm. A large majority of both tenants and owners said that the tenant should be permitted to remove equipment that he had placed upon

the farm, such as fences, outbuildings, etc., and in the case of substantial permanent improvements which had been placed there with the landlord's consent, it was agreed that the tenant, upon leaving, should be compensated for the unused value of these improvements. Eighty-five percent of the landlords joined with 93 percent of the tenants in agreeing to this.

#### PROMOTE FARM OWNERSHIP

The one point upon which all agreed most unanimously was that something needed to be done to promote ownership of the farm by the man who works it. Ninety-five percent of the landowners and 96 percent of the tenants said that the Farm Security Administration program of helping good tenant farmers to buy farms should be expanded. This farm-ownership program is now entering its third year. The average loan has been around \$6,000, 73 percent of the loan going for the original purchase price of the land, and about 22 percent for new improvements or repairs.

#### EFFECT OF DRIFT OF TENANTS AWAY FROM LAND

As acting chairman of this farm-tenancy committee, I invite your attention to certain facts which indicate the need for intensifying and expanding the work of this committee during the coming year. The drift of farmers away from the land is already beginning to have results which are far-reaching, not only upon rural life but also upon urban life. During 1938 the number of children of school age in Texas decreased by approximately 2,000. During 1939 the decrease of children of school age amounted to 14,000, or seven times the decrease of the previous year. Only three cities in the State failed to show a decrease in scholastics; these cities, Houston, Austin, and Corpus Christi, apparently growing so fast by reason of new families moving in that their scholastic population remained stable or showed a slight increase. In the city of Dallas the decrease in scholastics last year was 2,000.

#### SCHOLASTICS INCREASE IN RURAL AREAS BUT DECREASE IN CITIES

The number of scholastics in rural areas is still increasing, but the decrease in the cities of Texas is more than enough to offset it. Meanwhile, the cities are continuing to siphon off the farm population and to destroy the source from which they have received their essential stream of new blood in the past. This siphoning off of the farm population is not done intentionally or willingly by the cities. It is the unhealthy result of the growth in large-scale farming which sends displaced farmers to town looking for jobs, mostly in vain, with a large percentage of these displaced farmers going on relief in the cities or taking to the highways as migrants.

#### WORK OF FARM-TENANCY COMMITTEE

Work of the farm-tenancy committee, or of individuals and organizations represented upon it, has stirred up a great deal of public interest during the past year. Many of our leading newspapers have repeatedly called attention to the serious situation created by displacement of tenants. As an instance of interest taken by religious and civic organizations, I invite your attention to the pamphlet recently published by the Home Mission Board of the Southern Baptist Convention. It devotes an entire chapter to the migratory labor situation in Texas and urges cooperation in remedial measures.

Certain members of the State Democratic executive committee have expressed their desire for guidance as to measures which the committee might consider for endorsement and presentation to the people at the next election. The State junior chamber of commerce has made a start toward active and concrete action in an independent way by assisting a young farm tenant near Austin to purchase a farm without down payment and with 30 years' time, inducing an Austin bank to put up \$1,000 on long time to help the purchaser supply himself with suitable livestock and equipment.

A typical example of editorial comment in a rural paper says: "Present lease contracts seldom give the tenant an incentive to maintain and improve the fertility of the soil. Most of the agreements were developed during a period when the soil was exploited as a matter of course."

And the editor expresses his opinion that, "There should be a written contract to the effect that improvements made by the tenant, if with the knowledge and consent of the owner, should be paid for by the owner at termination of the lease. Some of the later contracts are more fair, but if you wait until it is a general custom to make these changes it will be a long time. Proper legislative measures should be enacted before more of our land is destroyed on tenant-populated farms because of unfair contracts."

I present these instances of public interest to indicate that action of some kind or other by uncoordinated individuals or groups is getting under way and that the time is ripe for a well-considered plan upon which all might have an opportunity to unite. And it is obvious that without such a plan, forcefully supported, we will have confusion and futility.

#### GEORGIA FACT-FINDING COMMITTEE

I invite your attention here to the successful operation in Georgia of the Citizens' Fact Finding Committee, which has recently completed its second year of operation. This committee covered a large list of subjects and industries, its scope being much wider, of course, than that of our farm-tenancy committee of the Texas Agricultural Workers Association. The Georgia committee was supported by the congress of parents and teachers, council of church women, State organizations of civic clubs, League of Women Voters, press association, farmers' organizations, and many others. The first year of its work was conducted on a cash budget of less than \$5,000, supplemented by almost twice that sum in goods and

services. The second year's budget was \$30,000, ten thousand received in cash from Georgia individuals, ten thousand from grants and foundations, and ten thousand given by Georgia in goods and services.

The Georgia fact-finding movement is based on confidence in democratic processes and in the recognized principle that in a democracy the driving force must come from the people. It has put out a large number of pamphlets under the general heading of "Let us reason together." I attach the Georgia pamphlet on agriculture issued November 1939. After listing the general problems the pamphlet asks, "What can we do now?" Its answer is, "Often the best intentions are nullified because of diversity of effort. Only one activity is suggested. It is recommended that every one of Georgia's 159 counties pass, adopt, print, and place in the hands of every family a county farm program which is for a period of years to serve as a guide for the county's agricultural families."

#### RECOMMENDATIONS

Goals recommended for the county programs include:

1. Adding an annual cash income of \$100 for every person living on the farm.
2. Making every farm self-sustaining in food and feed, so far as possible.
3. Reducing soil erosion and restoring fertility.
4. Cash income every month in the year through a detailed farm-and-home plan.
5. Greater security for tenants and stable productive investments for landlords through improved written leases, and similar steps to promote security of tenure.
6. Improved market facilities.
7. Duplicating of yields per acre.
8. Cheaper livestock production through improved pastures.
9. Increased timber production on farms.
10. More efficient functioning of farm organizations.

I present this reference to the Georgia movement, not as a recommendation that we do the same but as evidence that other States have seen the need for unified and dynamic action.

My recommendations at this time are:

1. That this committee be continued and enter into a more intensive study of action needed to promote more secure land tenure. Security of tenure upon the land is the essential basis for all agricultural progress. Not only is it essential to progress and welfare of the farmer himself but it is the indispensable foundation of democracy. I need not remind you that industrial and commercial enterprises in general are tending more and more toward monopolistic types, which mean a feudalistic economic organization and have as an inevitable corollary a feudalistic influence in government. The independent small farmer is democracy's last stand.

And let me again invite your attention to the fact that the physical existence of the State depends upon the new population, which is now being supplied only by the farm, and that only through an immediate and effective movement for increased security of the small farmer will we maintain a pool of healthy new life upon which the city may draw to prevent its otherwise inevitable disintegration.

We are now witnessing a flow of farmers to the city, but they are refugee farmers, plucked up by the roots and tossed off the land. Their maladjusted and migratory existence has left them, and the children they bring with them, unfit in body and soul to provide the type of citizenship which in the past has been supplied from the farm which we previously knew, where homes were more stable, where strength of body and mind was built, where loyalty to democratic institutions was a natural inheritance. The present movement is but the polluted death flow of a once vigorous but now stagnant and dwindling stream.

This new group which now comes into the city is tossed up by an agricultural revolution which is wrecking farm homes and family life. Unfit bodies, untrained minds smoldering with discontent and resentment against a system which has cast them adrift, contribute nothing but new sickness, instead of the revivifying stream of healthy blood which our farms once provided, and which they can provide again if opportunity is restored for small farmers upon their own land.

The city must be made to realize that this is a matter vital to its very existence, for success of a land-tenure movement can be achieved only with cooperation of the city's legislators and Congressmen. Urban votes in the Nation outnumber farm votes by 3 to 1, and even in our own agricultural State the town and city have the majority.

I therefore recommend that this committee take special action to bring the above facts to the attention of groups and leaders in Texas cities and to obtain their cooperation in the measures herein suggested.

2. I recommend for specific action at this session of the Texas Agricultural Workers Association that resolutions be presented to Congress setting forth the attitude of Texas landowners and tenants as indicated by the survey of this committee last spring, and urging Congress to expand the present land ownership program in line with this farm opinion.

3. I also recommend that resolutions be directed to the Governor of Texas and to the State legislature inviting their attention to the above-stated facts and urging their cooperation in such ways as may be found practical. In this connection it has been suggested that a Texas land tenure commission be set up, and I ask this committee to make an immediate study of the possible effectiveness of such a commission in providing information and guidance for State action.

## Stream Pollution

### EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

LETTER FROM THE SECRETARY OF THE PENNSYLVANIA DIVISION OF THE IZAAK WALTON LEAGUE OF AMERICA

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks I wish to include the following letter received by me from P. S. Platt, secretary of the Pennsylvania division of the Izaak Walton League of America:

IZAAK WALTON LEAGUE OF AMERICA,  
PENNSYLVANIA DIVISION,  
February 28, 1940.

HON. ROBERT A. GRANT,  
Member of Congress

Washington, D. C.

DEAR MR. GRANT: I want to take this opportunity to express the appreciation of Pennsylvania conservationists for your sincere interest in the stream-pollution issue now before Congress.

You, of course, know that this is not an issue of fishermen against industry. We see eye to eye in the doctrine that water is a common property, and there must be no recognition of the Barkley doctrine, which bestows upon bureaucracy, or special privilege, the right to pollute public waters at the expense of the public.

In scanning the Appendix of the CONGRESSIONAL RECORD page 1002, I note with some amazement the extension of remarks by the Honorable CHARLES H. ELSTON, who appears to be speaking on behalf of the polluters of the Ohio River. In general, this document is typical of the propaganda emanating from organized polluting industry.

Specifically, we take exception to the following of Mr. ELSTON's remarks: In his first paragraph he refers to the Barkley bill as a bill "designed to control and eliminate so far as possible the menace of water pollution in the United States." The conservationists challenge anyone to point out any section of this bill which bestows upon any authority any provisions for control of pollution. In the matter of financial stimulation, the Barkley bill as reported by the House Rivers and Harbors Committee provides absolutely nothing which is not available at the present time.

Reference to this bill's being the "culmination of 26 years of intensive study" is made. What we want to know is when are we going to stop using the stethoscope and start administering the prescription. As a past member of our State sanitary water board, let me say that the "voluntary cooperation" recommended by the supporters of S. 685 is, practically speaking, a myth. This cooperation can be secured very nicely when there is a big stake in the background, as is demonstrated by the testimony of Col. John C. H. Lee, Corps of Engineers, United States Army, in the Senate hearings on the Clark bill, S. 1691, March 1939.

We have a high regard for Surg. Gen. Thomas Parran and are thoroughly conversant with the strides which have been made in the sewage treatment during the past 6 years, but a careful analysis of Public Health Service figures shows that, in spite of the increased treatment, the extension of sewer systems in responsible for an added amount of sewage being dumped into public waters.

We note the reference to the existing enforcement machinery in almost every State. Our only answer to such reference is, What is the result?

To be very frank, we disagree with Mr. ELSTON's statement to the effect that the Izaak Walton League favors the objective of S. 685. If any objectives are stated in this bill, we have not been able to detect them.

There is, in this extension of remarks, an implication that the Izaak Walton League is just another inconsequential minority group. In answer, let me suggest that the league is happy to act as the spokesman for that great unorganized majority of public opinion in conservation affairs. The long list of organizations which have approved the Barkley bill represents practically all organized polluting associations and bureaucracies which hope to maintain the existing status of pollution.

Mr. ELSTON's list includes an error—namely, the American Forestry Association, which, under date of February 24, 1940, states—

"Erroneous reports have been circulated to the effect that the American Forestry Association is supporting S. 685, known as the Barkley bill. \* \* \* With full recognition of the emergency of pollution and a need for its early solution, would it not be better to wait another year without legislation rather than enact an ineffective law? \* \* \* The American Forestry Association authorizes me to suggest that S. 685 and H. R. 7971, together with other bills of similar nature now before the House, be referred back to the Committee on Rivers and Harbors for further study."

"JAMES G. K. McCURE, President."

The philosophy back of the Barkley bill appears to be well exemplified on page 58 of House Document 155, which is the basis for this bill. Speaking of standards of water quality, this document states "stream systems are nature's sewers."

We conservationists are more inclined to subscribe to the doctrine of the late Mr. Justice Oliver Wendell Holmes when he said "A river is more than an amenity—it is a treasure." The Justice was, of course, referring to an unpolluted river.

We certainly do hope, in the interest of the public, that this Barkley bill does not pass. We feel that its passage would be a step backward. When we ask for a loaf of bread, we gladly accept a slice, but we do not like to be sold a stone.

Sincerely yours,

P. G. PLATT, *Secretary.*

### Stream-Pollution Control

#### EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

EDITORIAL FROM THE AKRON (OHIO) BEACON OF FEBRUARY 8, 1940

Mr. HARTER of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron (Ohio) Beacon of February 8, 1940:

[From the Akron (Ohio) Beacon of February 8, 1940]

MUNDT, NOT BARKLEY

Senator BARKLEY, of Kentucky, has given assurance that there will be stream-pollution-control legislation passed at the current session of Congress. Unfortunately he is not specific as to the form it will take.

No one need strain himself guessing, however. BARKLEY has a bill in the hopper which, though thoroughly inadequate, ill-advised, and wasteful, is undoubtedly the legislation to which he refers. The differences between it and the Mundt bill, thus far kept from House consideration, represent the disparity between a bad measure and a good one.

The Barkley bill contemplates grants to cities and subdivisions for study of the situation. The Mundt bill calls for expenditure of money to curb the polluting of streams and rivers. It is no coincidence that sportsmen are united in fighting the Barkley proposition, political pork in disguise, and strongly urge the adoption of the Mundt pure-streams bill.

The Akron district, blessed with more contaminated waterways than one would think it possible to find in such an area, would do well to give all possible support to the sportsmen.

### Leading Kentucky Newspaper Doubts Value of Barkley Bill on Pollution

#### EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

Mr. JENSEN. Mr. Speaker, tomorrow this House is to be called upon to decide upon the important question of pollution legislation. Members are receiving communications from conservation and sportsmen's organizations throughout America urging them to vote to recommit the so-called Barkley bill, S. 685, which will be before us for consideration, and, failing in that, to vote for its outright defeat. These same groups urge the adoption of the Mundt bill or the Mundt amendment to the Barkley bill.

The following two editorials from the Louisville Times, published in Louisville, Ky., cast some important light upon this problem and seem to indicate additional reasons why this House should not adopt the Barkley bill at this time. It should seem obvious to all Members that by further committee study and consideration a better bill on the subject of pollution can be prepared than S. 685, which, in the form in which

the committee is bringing it to us, seems to have the almost united opposition of America's leading conservation organizations:

[From the Louisville (Ky.) Times of October 11, 1939]

ERROR OF JUDGMENT

In the argument upon water-pollution legislation there are differing contributors who are not subject to legitimate, or persuasive, assailment as crooks or persons unworthy of consideration. There are honest, intelligent men on both sides.

The Barkley-Spence bill approaches pollution within the formula of State rights, and with the idea of procurement of cooperation between States and cooperation of persuaded polluters.

The Clark-Mundt bill's objective is drastic action by the Federal Government against polluters.

Barkley-Spence bill supporters say the more direct and violent approach would be unconstitutional and that Congress would not pass the Clark-Mundt bill.

Clark-Mundt bill supporters say the Barkley-Spence bill will waste time, pollution increasing, and that eventually—so why not now?—the more drastic law must be passed.

They say polluters' lobbyists, long in that employment, support the Barkley-Spence bill, as the lesser evil, to their employers.

The Cincinnati Chamber of Commerce circularizes the press with argument for the Barkley-Spence bill. It calls supporters of the Clark-Mundt bill a group of highly vocal fishermen.

Regardless of who is right in the water-pollution controversy, the Cincinnati Chamber of Commerce is indiscreet in calling opponents of its bill highly vocal fishermen.

The Izaak Walton League would be no more tactless and no more inaccurate if it should refer to the Cincinnati Chamber of Commerce as a richly provided group reflecting aims of water polluters.

[From the Louisville (Ky.) Times of February 21, 1940]

NEW PUBLIC HEARINGS NEEDED TO REVEAL RELATIVE MERITS OF WATER POLLUTION BILLS

The latest revised version of the water pollution bill opens a new fight upon it, not by polluters, but by an antipollution group.

Something is wrong, obviously, with procedure in Washington. There is inadequacy of information in Congress and outside of Congress as to relative merits of measures pending.

Water pollution—not in the Ohio Valley particularly—presents one of the Nation's gravest problems.

If Congress should pass a bill which would not actually advance pollution abatement, 10 years or more might pass before the public would be aware of its defects.

The Izaak Walton League of America, which wants actual, enforceable, measures against pollution is a respectable national organization which has little money because it is not a business enterprise.

What it has to say, regardless of whether it is right or wrong, deserves attention in Washington, but that is not all.

Congress should know what it's voting about.

Neither House of Congress, apparently, is fully informed.

Public hearings, duly attended by, and reported by the daily press and other vehicles of publicity would be valuable.

Better no pollution bill at this time than one which would not be efficacious and which would cause expense and delay.

Representative MANSFIELD's assertion that the Izaak Walton League "disregards effect of pollution on human health" is ridiculous as well as untrue.

The league and every intelligent citizen value American waters as producers of fish for market and fishing as sport.

Mr. Speaker, when a great newspaper from Senator BARKLEY's own State of Kentucky recommends that the Senator's bill be recommitted to committee for further study, it seems to me that we should avoid hastily passing legislation such as S. 685 until we are sure it will retard rather than advance the menace of water pollution.

### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. ALBERT SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

Mr. CAMP. Mr. Speaker, to my mind the present joint resolution—House Joint Resolution 407—to extend the authority of the President under section 350 of the Tariff Act of 1930, as amended, which, if passed, will enable the President, through the Secretary of State, to continue for another 3-year period to enter into foreign-trade agreements or reciprocal-trade agreements, is the most important legislation we

have considered or perhaps will consider at this session of Congress. It affects the prosperity of every American, and, to my way of thinking, is the greatest hope we have of reducing unemployment, increasing the income of farm, mine, and factory, and restoring that normal commercial activity and stability that we have so long desired.

There was a time when our foreign trade was of such proportions that the specter of unemployment was unknown and the worry of our cotton and grain farmers was not the question of markets but the problem of supplying the world demand. Ships bearing cargoes of American manufactured goods and agricultural products sailed the seven seas, our ports were beehives of commercial activity, and our people enjoyed a firm and stable prosperity.

In other words, we traded with the world. We brought to our country goods from all over the world, and we sold to the world our entire surplus of manufactured goods and agricultural products.

But something happened to this world trade of ours. Fewer and fewer ships came to our shores. The cotton and grain and other products of our farms began to accumulate in our warehouses and elevators, manufacturers piled up unsalable goods for a while, and then, finding no markets for them, closed down their factories until the American or home market could consume them. Unemployment became prevalent. These unemployed could not buy; the home or domestic market lagged more and more; and we entered upon a period of depression. Our whole people suffered.

I believe the underlying cause of our misery was the recession of our world trade. What caused the loss of our foreign markets and the recession of our trade? I think it can be traced directly to the tariff laws of this country enacted under Republican administrations; the Fordney-McCumber Tariff Act, which was in force during the period from 1922 to 1929; and the iniquitous Hawley-Smoot Tariff Act, which, enacted in 1930, inflicted the final and mortal wound to American world trade. The high tariff wall built by this act simply closed our ports. Our per capita farm income, already lowered and ruinous during the Fordney-McCumber period, dropped from \$294 in 1930 to \$167 in 1933.

In 1933 the new administration at Washington began a study of the causes of the loss of our world trade. The President had called to his aid as Secretary of State a statesman who had given many years of his life to the study of world trade and tariffs and who had foreseen the inevitable result of the iniquitous tariff policy of this Government under the Republican administrations. This quiet and studious man from the rugged State of Tennessee, Hon. Cordell Hull, believed that by making reciprocal treaties with the foreign countries much of our trade could be revived and prosperity gradually brought back. So the Congress passed the act of June 12, 1934, empowering the President to make these reciprocal-trade agreements.

What are these trade agreements? They are nothing more nor less than a method of breaking up the log jam and opening up the trade channels between our country and the other countries of the world.

Some people have an erroneous idea of the meaning of foreign or world trade. They seem to cling to the idea that trading with the world means selling the rest of the world our goods without buying any of theirs. Trading means the exchange of goods for goods—just as the farmer takes his produce to town and exchanges it for the supplies he needs, as the trapper on the frontier used to exchange his furs for food and clothing. So we see that if we will have world trade we must take the goods and products of other countries in exchange for ours. We must buy as well as sell. To revive this trading this administration devised these reciprocal-trade agreements. These agreements make it easier for the foreign buyers of our goods to find a market for their goods here. Each one provides increased opportunities for a country to expand its purchases of our goods, provides that the trade of one country shall be treated fairly by the other country to the agreement relative to the trade of a third country, thereby preventing discrimination.

These trade treaties became necessary because as we built high tariff walls in this country, other countries of the world

retaliated by building high tariff walls against our goods and these tariffs became formidable barriers to world trade. It was found to be impossible to get rid of all these trade barriers at once, but these trade agreements, by reducing our tariffs on some goods in exchange for an agreement on the part of another country to reduce its tariffs and other restrictions on our goods, encouraged trade instead of discouraging it.

These trade agreements are openly and fairly made. Mr. Noble, Under Secretary of Commerce, has given a clear description of the method of their negotiation, as follows:

Before we enter into trade-agreement negotiations with a country, public announcement is made of our intention to do so. The trade-agreements work is conducted by the Trade Agreements Committee, an interdepartmental undertaking in which participate the Departments of State, Treasury, Agriculture, and Commerce, and the Tariff Commission. This Committee is made up of nonpartisan experts, men of experience and judgment in foreign trade, who have no interest in anything except what is best for the country as a whole.

As a result of study of the trade and products of the two countries, there is published at the time announcement is made of intention to negotiate a trade agreement a list of products in respect of which we will consider making concessions to the other country.

When these products have been announced in this open and aboveboard manner, so that everybody who produces or deals in these products may know about it, then a date is set when all interested persons may be heard. If you don't think a product in which you are interested should be included in these negotiations, you have a full chance to say so. You can appear before the Committee for Reciprocity Information at public hearings in Washington and state your case, or you can file a written brief of your arguments and have them carefully considered. In one way or another everybody affected has a chance to be heard—an equal chance. There are no back-door methods; no chances for lobbyists to exert political pressure; no secret deals or swaps.

In the past 6 years we have concluded reciprocal agreements with 16 countries. In the period from 1933 to 1938 the purchases made by these countries in the United States increased \$464,000,000, while the purchases made by these same countries elsewhere sharply declined. Our exports to all foreign countries since these treaties began has increased nearly 46 percent, or slightly more than \$1,000,000,000. The purchasing power from foreign trade has increased our American industrial pay rolls. This has benefited our farmers by increasing our home markets. Let us illustrate with one country only. Between 1929 and 1932 our exports to Canada fell from over \$900,000,000 to less than \$250,000,000. In the year 1938, under the trade agreements, these exports recovered more than \$450,000,000. The loss of over \$600,000,000 in trade to one country alone doubtless had a great influence on the depression in the United States, and the recovery of trade made under the treaty certainly had its effect in contributing to our recovery. To one man, more than to all others, should be given the credit for the adoption of this wise and beneficial policy of our administration. The far-seeing wisdom of this man has been reflected in the negotiation of each agreement. His honesty of purpose, his devotion to duty, his real ability shine out like a beacon in these troublous times. We are grateful for the untiring labor of that Christian statesman and economist, Cordell Hull.

### The Antilynching Bill

#### EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

EXTRACTS FROM ADDRESS BY ISAAC FISHER

Mr. NORRELL. Mr. Speaker, ladies and gentlemen of the House, so much was said recently while we had the antilynching bill under discussion concerning the treatment of the Negroes in the South, that I have concluded to insert in the Record, with your permission, extracts from an address delivered at Pine Bluff, Ark., recently by Isaac Fisher, prominent Negro educator, upon the occasion of the dedica-

tory services at the Arkansas Mechanical and Normal College for Negroes. This address was delivered upon the completion of two new dormitories and a new library building at the college.

Isaac Fisher now resides at Tallahassee, Fla., and was president of this institution from 1902 to 1911. He is now director of research and publications for the Florida Agricultural and Mechanical College for Negroes. He was for 9 years with Fisk University as editor of the official school publications and prior to going to Florida a few months ago completed his tenth year as editor of the official publications for Hampton Institute for colored at Hampton, Va.

I offer extracts from his address as conclusive evidence of the treatment the Negroes are receiving by the people of Arkansas and the people of the South:

Mr. Freeman, gentlemen of the board of trustees, President Watson, members of the faculty, students, friends, one and all, it is a remarkable thing which you do here today. While certain of the most powerful nations known to history are snuffing out the torch of liberty in many places, a torch that has been held by some of the freest white peoples on earth, and chaining them to bondages worse than death, Arkansas, one of the States of the old South, is dedicating new buildings to give greater liberty and new freedom to the descendants of colored people who saw slavery within her dominion a little while ago.

While the refinements of science are being used to hurl lightning death from the air upon some of the most sacred and classical examples of architectural beauty in the Old World, Arkansas is giving her colored people new structures in which the pursuit of knowledge may be made easier. While some of the world's most eminent white scholars have been banished from the lands of their birth; and made to wander as poverty-stricken and homeless exiles upon the face of the earth because of their race, Arkansas is here serving notice upon the world that it is building a great temple of knowledge for her colored people, in spite of their race, and saying to them, "This is your home; be at peace." These unusual circumstances require more than a perfunctory attempt at oratory.

The college was moved, and it has prospered under this able man until it is known today as one of the most progressive State colleges for Negroes in the entire South; and its president is acclaimed as one of the most highly successful administrators of Negro land-grant colleges. I need not burden you with the statistical story of the meager equipment of earlier years in the Branch Normal College, as compared with the splendid facilities of your new college today. All men and women of Arkansas know the story. My business now is to do what your president wants done today. Of all the persons whom he might have named, he has called me back to dedicate your new buildings to the purposes which were in my heart, purposes which he has made his own and, under God, has brought to fruition.

And now, members of the board of trustees, let me change the person in which I have been speaking and substitute that of the president of this college. It is Dr. John B. Watson speaking, he whom you have so signally honored. These are his words: "As for me, I had it in heart to thank the Governor of the State, the board of trustees of this college, and the people of Arkansas—to thank them in the name of all the colored people here and elsewhere for the splendid buildings you have erected here and for the college you have created here that our colored citizens might have a chance for the best in education. I had it in my heart to let you know that, in gratitude, my people will not fail you, for they are a grateful people; but that, in the years which are ahead, they will give you a loyalty which will help make the State and our country great and ever greater. And these loyal citizens will say for you, wherever they may be, 'God save the Commonwealth of Arkansas.'"

### Reserve Officers a Strong Arm in Our National Defense Set-up

#### EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 20, 1940

ADDRESS BY HON. J. BUELL SNYDER, OF PENNSYLVANIA

Mr. SNYDER. Mr. Speaker, under permission to extend my remarks in the RECORD, I include my address before the

Reserve Officers' Association of the United States, February 16, 1940, Washington Hotel, Washington, D. C.:

It is a privilege to be with you this evening and to meet so many who are unselfishly working in the cause of a peaceful, a happier, and more prosperous America.

I am committed to the idea that the best guarantor of peace is a defense establishment, on land and on sea, of such proportions as will compel the respect of foreign nations which otherwise might attempt, in diverse ways, to trespass in directions hostile to our national interests.

In all sincerity, I do not know of any agency which has done or is doing more to sell that idea to the people of America than the Reserve Officers' Association of the United States, and I commend you for it. You are doing a splendid job.

The military history of the United States is replete with evidence of individual heroism on the part of the soldiers and sailors of our country. Unfortunately, however, we have suffered far too great losses of lives and treasure owing to lack of ordinary prudence and foresight against an event that has occurred every 25 years in our history—war.

If we could couple the quality of the individual American soldier and sailor with reasonable foresight and prudence on the part of the Government, speaking for the people, we likely could avoid war in the future.

At least we should be able to bring effective force to bear which would lead to an early and decisive ending. During the several years that I have found it my duty to deal with military matters in Congress I have often wondered why the people who have advanced so greatly along so many lines have been so imprudent, without foresight to avoid war, and to preserve peace.

No reasonable person can question my statement when I say that the United States never has had anything approaching adequate national defense. In searching for the reason for this fact we come to the conclusion that the only explanation is that the American people have not had the opportunity to know about military affairs. Up to the time of the World War, in 1917, it is easy to see why the American people knew little, if anything, of consequence about their Military Establishment. It was because our very small Army and Navy were off by themselves in Army posts or on the ocean.

Since the World War, however, a great change has occurred, and we now find that a clear majority of the American people are in favor of a truly adequate national defense, sufficient to protect us against all eventualities. What is the reason for this change of public opinion and what has caused it?

The men who have largely caused it are our hosts here this evening, the Reserve officers of the Army of the United States.

Their organization, the Officers' Reserve Corps, only has come into being since the World War, but in that short span of time they have, together with their wards, the Reserve Officers' Training Corps, the National Guard, and the Civilian Military Training Camps, turned the course of public opinion to the commendable decision that our best safeguard for peace is a complete and efficient Military Establishment.

This long sought result has been accomplished largely through the voluntary efforts of these patriotic gentlemen and with a ridiculously small expenditure by the Government along the lines of military training. It is quite apparent that 3 or 4 percent of our annual military expenditure will suffice for the training and maintenance of the Officers' Reserve Corps and its accompanying civilian elements. This relatively small percentage is the cost of the skeletonized citizen army that will make up more than three-fourths of the whole Army in case of a national emergency.

In addition to the commendation that we owe to the Reserve officers for their patriotic services, I wish to acknowledge that their organization, at such small cost to the Government, has been very gratifying to me in my capacity as chairman of the House Subcommittee on Army Appropriations.

I wish to assure you that my committee is intensely interested in national defense.

I am proud to be chairman of the committee in the United States Congress for the last 4 years that has been cited by Army officials as doing more to preserve peace and keep our boys on our own shores than any other committee or group. Scores of fancy-named organizations have sprung up in the last few years with glowing titles such as the Organization for Peace and Democracy, Commission to Study Peace, etc. Many of these leaders want to tell us how to adjust our house. But invariably it is just words, words, words.

Yes, my friends, the adjustments and installations that the Army has obtained during the last 5 years spell peace in larger letters than all the other fancy-named organizations combined, save that of our churches, homes, and schools.

I point with pride to the actions and activities of my committee in the last few years to substantiate that statement. We are ready at all times to give every consideration to all proposals submitted by the Commander in Chief of our military and naval forces.

In conclusion, my friends, we must ever remember that it was through the sacrifices of brave men that our country was created and preserved. To them we owe our inheritance. To them, duty of country came next to duty to God.

How strange, how ignoble, would they deem those who now decry the very concepts of patriotism and loyalty; designedly they would leave us a prey to weakness, disunion, and lawlessness.

We enjoy working with the Reserve officers and all similar patriotic groups in building a network that will preserve, protect,

and defend the sacred institutions of the United States of America. I am confident that any recommendations that the Commander-in-Chief of our military and naval forces may deem it wise to present, will find a ready and responsive Congress and a national spirit wholly sympathetic.

To the great host of Americans, who like myself revere the traditions of our country, who believe that we have received a priceless heritage, your acts of service are reassuring and heartening.

May your fine spirit carry on, thwarting the sinister efforts of these hostile to our traditions—inspiring new generations to dedicate themselves to the ideals that we of our generation received from our predecessors.

To you, men of the Reserve officers and affiliated groups, no pleas need be made to foster this spirit. You know and have lived by the code of the soldier. You have put country above self. In a special sense you are fitted to be guardians of the Republic. Inspired by such as you, we shall continue united, strong, and worthy of our inheritance.

I thank you.

### Relief for Poland

#### EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESSANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

Mr. D'ALESSANDRO. Mr. Speaker, as a member of the Committee for the Relief of Polish War Victims, I respectfully solicit the support of the Committee on Foreign Affairs and your approval of House Joint Resolution 430, for the relief of stricken Poland.

This resolution, if passed, will authorize the President, through the American National Red Cross, or such agent or agencies as he may designate, to purchase in the United States and transport and distribute grain, fats, milk, and other foodstuffs and clothing for, and adapted to the relief of, the distress of starving men, women, and children of Poland, and authorizes the appropriation of a sum, not exceeding \$15,000,000, to be expended under the direction of the President, or so much thereof as may be necessary, for the purpose of carrying out the provisions of this joint resolution. It also provides that the President shall on or before December 31, 1940, submit to the Congress, an itemized and detailed report of the expenditures and activities made and conducted through the agencies selected by him under the authority of this joint resolution.

It is understandable enough that there can be no peace in Europe unless the nations of that continent have some faith and confidence in one another. It is easy to understand that Poland could not stand by and meekly submit to Hitler's crushing it. The Poles are a great people. They have a glorious history. Nothing that they have done justified the attack which was made on Poland. They had been assured against aggression. Europe's civilization is much in debt to the great Polish people. They have made a glorious contribution to the advancement of our civilization, yet, today, we see the heel of the aggressor on the heart of Poland. Hitler, notwithstanding his solemn pledge of security given to Poland, aided by Stalin, crushed Poland. Where will the aggression end? What will satisfy the greed and avarice of these two mad dictators?

Everything that we hold dear—religion, liberty, peace, security—they brutally destroyed. The Poles are a peace-loving, God-fearing people, and Poland will rise again.

I have been conscious of this, because when I appear here today, gentlemen, I feel that I am doing so on behalf of the millions of American-Polish people who are now deeply disturbed over conditions in their fatherland.

WASHINGTON, January 31, 1940.

HON. THOMAS D'ALESSANDRO, JR.,

House of Representatives, Washington, D. C.

DEAR MR. CONGRESSMAN: Permit me to assure you again of our deep appreciation of your sympathy in the cause of Poland. Our

country might be suppressed temporarily, but we fervently hope and firmly believe that now, as in the past, right will triumph over might.

Believe me, my dear Mr. Congressman.

Yours sincerely,

GEORGE POTOCKI,  
Ambassador of Poland.

HOUSE OF REPRESENTATIVES,  
Washington, D. C., February 27, 1940.

HON. THOMAS D'ALESSANDRO, JR.,  
House of Representatives, Washington, D. C.

DEAR COLLEAGUE: Thank you for the support you offered today before the Foreign Relations Committee on behalf of my bill, House Joint Resolution 430, calling for relief to Poland.

Your remarks were well chosen and appropriate and show that you are not uninformed on the subject of Poland's history. My knowledge of your work in Congress, however, shows that you have consistently championed the rights of our minority groups.

With kindest personal regards, I am

Sincerely yours,

RUDOLPH G. TENEROWICZ, M. C.

### Landlordism in the United States

#### EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

Mr. BURDICK. Mr. Speaker, in our economic field, when business is lagging and men and women lose their jobs and the unemployment rolls increase, we have too often blamed either one or the other or both of two factors of our present-day business life. We have either blamed capital or labor and sometimes both. Most writers attribute business disturbances to one or the other of these factors. Henry George admitted, in his works, that there was another disturbing element in our national life but did not say that the presence of this—landlordism—was the one proximate cause of unrest, but classified the landlord as another capitalist.

There is a vast difference between a capitalist and a landlord. The capitalist has accumulated wealth either made by himself or others, but it represents stored-up labor. The landlord's holdings represent nothing except title to the actual land. The landlord does not use the land; he does not occupy the land; he makes no improvement upon the land; he makes better arrangements for himself. He leases out the land to someone else to use; someone else improves it; someone else erects buildings upon it; someone else occupies it, and someone else conducts a business there and makes the land valuable. In the meantime, the landlord has done nothing, either in the way of creating wealth or spending wealth where the property is situated.

It is reported to be a fact that citizens of London, England, collect in the United States ground rental from a tract of land, if all together, would be larger than the British Isles, France, and Germany. Those who occupy this land; those who have erected buildings upon it under the lease system; those who pay for city improvements; those who pay taxes upon the improvements, and pay ground rent based upon the strategic location and upon the importance of the business, and the advantages which that locality enjoys are the classes that pay the cost of government which the landlord is not asked to pay. The Government furnishes protection and civic improvements, but does not collect from the landlord the full value of that service. Because the Government does not collect in full for its service the landlord becomes richer, and not only on what he receives as rent but because the value of his ground "increases" when all these advantages are contributed not by the landlord but by the Government at far less than cost.

Let us take, for example, a business block at Fourteenth and F Streets, in the city of Washington. The title to the ground is owned by someone in London. The block is occupied by a

department store erected by the businessman on a lease of 50 to 99 years. Every dollar of improvements is paid by the businessman; the landlord pays nothing. The ground rental of this property is \$1,000 per front-foot. Suppose the property is 50 feet in extent; that would make the ground rental \$50,000 annually.

From this ground rental of \$50,000 the Government takes \$10,000, but the service of government, if spread out equally, would be \$50,000. The Government loses \$40,000 annually and the landlord gains that much for which there can be no possible consideration. The landlord's net profit is in this case \$40,000 annually, and that amount capitalized at 6 percent would fix the value of the property at \$666,000. It is hardly fair to say, however, that the Government has lost \$40,000 on this transaction, for the Government has lost nothing. The \$40,000 which they failed to charge up to the landlord is made up by a countless number of inspection fees, licenses, fees, and what not, until the average businessman does not know whether he is coming or going.

Suppose now the Government would collect \$20,000 of the \$50,000, the landlord would gain \$30,000 annually. In that event, the property would be worth \$500,000. Now, let us suppose that the Government should collect for all of its service, namely, \$50,000, the landlord would then have nothing left, and nothing capitalized on nothing would be nothing. Nothing, therefore, would be the value of the ground—as it ought to be.

When our forefathers came here they did not look for someone to employ them. They had access to a continent of free land; they went to work on that land and provided their own jobs.

The land is still here, but the people living here are suffering. It is not only labor that has suffered but capital as well. Many millions in this country who may have been classified as capitalists 10 years ago are now either living on public or private charity or living on the remnants of their life's savings, their capital.

The trouble is that the title to land has gotten into the hands of the few, and the many cannot use the land. The many have been dispossessed and are on their way to the cities to live on relief. This situation creates more landlords, and the more landlords we get the more certain we are that this democracy will fail. The Roman Empire was once a mighty nation; they had nothing to fear from without. No power on earth could have overcome it except a power from within. That power from within did destroy it; that power was the creation of large estates of land from which the people were dispossessed. The people flocked to the cities—they could not produce for themselves—their land was taken away. They came to the cities, some hungry, some starving, and their number increased until a great majority of the Roman people were in that condition. Weakened at home, Rome fell an easy prey to the fierce German tribes of the north.

We speak of our national defense; in what, I ask, does our national defense consist of more than any one other thing—in the peace, prosperity, and tranquillity of our own people? The President was right when he stressed that matter in his message delivered to this Congress at the opening of this session.

I do not have sufficient information upon which to base a valuable opinion on the world situation, but I am certain that the people of this country will protect our own shores at any cost. I am equally sure that they will refuse to support the cause if our armies and navies attempt to fight a war on foreign soil.

Our job in this Congress is to set our own house in order and give the great majority of our people something to fight for when we ask for their support to defend this democracy. Just ask yourselves one question: What is the mental attitude of a citizen of this country who, with his family, has been dispossessed of his home and is headed for the nearest relief camp, all through no fault of his own?

## Stream-Pollution Control

### EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

LETTER FROM THE SCHUYLKILL RIVER VALLEY RESTORATION ASSOCIATION, INC.

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Schuylkill River Valley Restoration Association:

SCHUYLKILL RIVER VALLEY RESTORATION ASSOCIATION, INC.,  
PHILADELPHIA, PA., February 27, 1940.

HON. FRANCIS J. MYERS,  
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MYERS: At a regularly slated meeting of this association held in Philadelphia, February 9, it was forcibly brought to the attention of the membership that the Commonwealth of Pennsylvania has, for reasons not yet satisfactorily explained, refused to offer the sponsor's share of the previously approved W. P. A. comprehensive plan for removal of culm from the Schuylkill River. The State administration has also refrained from exercising its power to prohibit the influx of culm from new sources as recommended by the report of the United States Army engineers.

The people of the Schuylkill Valley are demanding relief from the present intolerably polluted condition of the river; our pleas directed toward duly constituted State agencies have been ignored. We believe this experience to have exploded the mythical philosophy of "voluntary cooperation" and "local administration" of stream-pollution control with jurisdiction in a pure research organization as provided in the Barkley bill S. 685, and urge that your energies be directed toward the defeat of this bill, the passage of which could only result in further bureau aggrandizement serving a futile purpose.

No further studies, research, or investigations are necessary in the solution of this problem. The time for action has come. We believe the Mundt bill (H. R. 7971) to be the only bill now before Congress which offers any plan for a remedy especially since it vests authority in the United States Army engineers, which is the only action-conscious Federal agency as applied to the correction of water pollution. We urge your support of H. R. 7971 in every way possible.

Sincerely yours,

H. C. CONNOR, JR.,  
Corresponding Secretary.

## British Mail Seizures

### EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

Mr. THILL. Mr. Speaker, during recent weeks the American people have become rather incensed over British interference with American ships and mails. It is another demonstration of the action of all belligerents who will do practically anything to strangle their foe.

Many of my constituents have written letters of protest to me regarding Great Britain's actions, particularly with reference to the reported seizure of 2,600 pounds of letters at bayonet point from a Pan American Airways clipper at Bermuda on January 18, 1940.

The following news article appeared in the February 22 issue of the Washington (D. C.) Post. Similar news articles appeared in practically every daily newspaper throughout the country:

[From the Washington Post of February 22, 1940]

BAYONETS USED TO HALT CLIPPER MAIL—CENSORS IN BERMUDA INVOKED  
MARINES WHEN PLANE CAPTAIN RESISTED SEARCH

New York, February 21.—The British began censorship of United States air mails at Bermuda on January 18 by seizing 2,600 pounds

of letters from a Pan American Airways clipper at bayonet point, it was learned tonight.

Capt. Charles A. Lorber, of Baltimore, in command of the flying boat plying between the United States and Lisbon via Bermuda, not only ordered British censorship officials off his craft but also refused to surrender the mail until the British made a show of armed force.

The incident is only part of the story of censorship in the British colony, which has been cloaked in official silence for more than a month.

#### COLONY CENSORS NEWS

Pan American Airways, with head offices here, declined comment when informed that a witness to the incident had agreed to tell the story for publication.

Unsuccessful efforts have been made to obtain details of the censorship set-up at Bermuda, together with the story of the original seizure. News itself is subject to censorship in the British colony because the Government controls all commercial communication.

On January 18 Captain Lorber landed adjacent to Darrells Island, Pan American Airways' Bermuda base, and pulled up to the dock where his passengers disembarked.

#### CAPTAIN STANDS GROUND

A staff of British censors came aboard.

"Captain Lorber," said their spokesman, "We are going to remove your mail."

Lorber protested, "You can't do that. This is a United States vessel."

"Yes, we can," was the rejoinder. "You are in Bermuda waters." Lorber, a veteran of the company's trans-Pacific run, stood his ground.

"The only person I will allow on this aircraft," he said, "is the port doctor, according to custom. I'll do everything in my power to prevent the removal of that mail."

Thereupon he ordered the censorship staff ashore.

As his visitors walked off the craft their spokesman blew a whistle. A launch, containing a group of British marines, put out from shore. As they came alongside Lorber saw each man carried a rifle with fixed bayonet.

Lorber mounted the stairway leading to the flight deck.

The marines clambered up on the plane's hydrostabilizer, entered the doorway above it, and followed the captain to that deck, where the mail bags were stowed.

Lorber glanced at the show of force.

"The situation," he said, "now is obviously out of my hands. May I trouble you for a receipt for this mail?"

Once ashore, Lorber wrote a formal protest against the seizure, signed by him and by George Wardman, Pan American Airways' Bermuda representative.

The censors removed half of the 5,200 pounds of mail, a record load for the eastbound crossing. Retained for censoring were all letters not addressed to England or France. Included among the mail censored were letters destined for Germany, Italy, Sweden, Portugal, the Azores, and other points.

Clipper mail loads have decreased steadily since the censorship at Bermuda, the only point at which the British can censor clipper mail, was established. Westbound as well as eastbound letters are removed regularly by the censors.

No clash of authority has occurred since the first day. The censors are given a free hand, and the American Government has stipulated that certain classes of postal merchandise, to which the censors might object, cannot be consigned to Europe by clipper.

The censorship is so complete that passengers arriving in Bermuda with empty envelopes for air mail "covers" carrying Bermuda stamps for mailing to the United States are required to open them for examination.

In response to the request of some of my constituents I wrote to the Honorable Cordell Hull, Secretary of State, protesting British interference with American ships and mails. Under date of February 23, Secretary Hull addressed a reply to my letter, as follows:

DEPARTMENT OF STATE,  
Washington, February 23, 1940.

The Honorable LEWIS D. THILL,  
House of Representatives.

MY DEAR MR. THILL: I have received your letter of February 20, 1940, in which you refer to protests which you have received from your constituents regarding British interference with American ships and mails. You express the hope that this Department is vigorously protesting such interference and will continue to keep American rights inviolate.

I want to thank you for your interest in these matters and to assure you that the Department is following most closely all developments in connection with the European war in which American interests are in any way involved. As you may know, protests have been addressed to the British and French Governments against their interference with American ships and cargoes and mails. As of possible interest to you, I enclose copies of press releases containing the texts of certain of these protests and also the text of the British reply regarding the mails question. All of these questions are continuing to receive our most careful attention.

Sincerely yours,

CORDELL HULL.

LXXXVI—App—66

During the last few days the daily newspapers carried a story to the effect that the Pan American Airways clipper plane would omit Bermuda as a stopping point. Thus one of the sore spots of British censorship would be removed.

If the present war continues for some time to come—and as is most likely it will increase in fury and viciousness as time goes on—there will arise many instances where so-called American rights will be violated. Under such circumstances, what can be done? We certainly do not want to go to war with the nation that offends us. Perhaps all we can do is to withdraw from such offending nation any privileges and courtesies which she receives from this country.

Perhaps further insults to American rights by the belligerents will serve to cool the ardor of those Americans who permit emotionalism to overcome reason and urge the United States to take sides in the present war.

The following editorial from the Milwaukee Journal under date of February 23, 1940, capably discusses British seizure of American mail:

[From the Milwaukee Journal of February 23, 1940]

#### BRITISH MAIL SEIZURES

Seizing American mail at Bermuda at the point of bayonets naturally makes American hackles rise. If it had been done to a British plane by a belligerent which wanted British sympathy, talk would have been heard in London of the British Navy.

An explanation from London sources that the Bermuda incident was due to "a conflict of personalities" isn't very soothing, either. A way to have avoided that would have been an understanding with Washington about what measures would be taken.

Obviously, Captain Lorber had not sailed with instructions from our State Department to deliver the mail if the British authorities demanded it. To do so without waiting until force was invoked might have waived American rights.

Again it must be said that the British adopt undiplomatic, irritating methods for a country which wants our sympathy and aid and, short of military aid, is getting a good deal that it needs from the United States.

We are not going to war over these incidents. But that is a long way from saying we are ready to stand for everything short of open attack on us. Various Senators express different degrees of resentment. Senator PITTMAN admits a right to search our ships voluntarily entering belligerent ports, as the airplane did in stopping at Bermuda, but draws the line against forcing our vessels into such ports for examination. Senator Clark of Missouri has a bill to prohibit our planes from stopping at Bermuda.

Secretary Hull has hinted we might omit Bermuda from the route of the trans-Atlantic planes. Apparently the decision will turn on how valuable the Bermuda stop is, whether in improving the course or in business we pick up there.

Clearly, there should be more definite explanation by the administration, from the President or the State Department, of what American rights are and what is being done to preserve them. The President is charged with the conduct of foreign relations, and there is a great deal of support for a President's course.

The cry in the World War was, "Stand behind the President." Indeed, it was overdone then. President Wilson had not enough indication of American sentiment. Today the situation is reversed and the country has not enough understanding of its Government's policy.

In the meantime British blundering and our indignation may have a silver lining. At the least it is a definite check on those overeager Americans who think we ought to hasten to take sides in these wars we had no say about starting.

#### Privileges of Being an American

#### EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

ADDRESS BY HAROLD E. COCKLEY

Mr. KUNKEL. Mr. Speaker, a few days ago I had the privilege of attending a banquet given by the World War Memorial Association of Palmyra at which Harold E. Cockley made a short address. It struck me as being one of the most excellent expositions of why we should be proud and happy

to be American citizens that I have ever heard. Under leave to extend my remarks in the RECORD, the address follows:

Comrades of the American Legion, fellow members of the Memorial Association, honored guests, and all our friends, greetings and a cordial welcome.

Once again it is my happy privilege to welcome you to this our seventh annual banquet. Not only do I consider it a privilege to greet you in this manner—it is more of a privilege to associate with you and be one of you.

It really is a privilege for all of us to assemble here on this occasion. We didn't have to ask anyone if we could come. What we say and do here as long as we are orderly is pretty much our own business.

We all seem to take a lot for granted and seldom realize just how many privileges we actually do have. We live in good, well-kept homes, comfortably furnished with all conveniences, wear good clothes and we think nothing of it. Nearly all of us have cars which we use every day. Occasionally we plan pleasure trips of four or five hundred miles, we need not secure permits or submit to being searched at boundary or State lines; we come and go pretty much as we please.

We sit at our radios, tune in any station we desire, far or near. Our Government does not tell us what we can listen to, or should we differ or disagree with any of their commentators on any particular issue, we are not censured. We discuss the matter among ourselves and we have the right to let them know our views on it.

We have the privilege of joining civic, social, and fraternal organizations. We have the influence of fine churches of all denominations. And whether we go to church or not you and I would not want to live in a community without them.

We have all types of recreations. Have access to good literature, by which we can keep active, alert, and healthy minds.

Our children attend modernly equipped schools, and we have the assurance that they are receiving every advantage. We have clinics to safeguard their health and teachers in whom we have the utmost confidence, for most of them we know personally.

Some of you here tonight have children in universities or higher institutions of learning, free to select or take up any course that they see fit, without fear of persecution from state or any so-called political groups. How different the picture in a country where a certain dictator holds sway. Probably some of you have read of the purge of Czech students; of the ruthless arrest of hundreds of young men and women, and the cold-blooded execution of some of them by a firing squad in full view of hundreds of their classmates. And all because of their resentment of the political control of their state.

It is hard for us to envisage the brutality of an act like this among civilized people, but it actually occurred just a few months ago in the city of Prague.

Just a few short weeks ago we celebrated Christmas. We decorated our homes, our streets, with a gorgeous display of lights everywhere, and all around us permeated the spirit of good will. I wonder if any of us thought of Christmas elsewhere—of an unfortunate people in the land where another dictator, mad with power, persecuting, trying to stamp out even the name of Christmas, and all that Christmas stands for.

These are just a few of the many privileges that you and I enjoy in our everyday life. You may wonder why I mention them here this evening. Well sometimes it does a fellow good to do a little checking up with himself to find out just how fortunate we really are. And especially is this true to those of us who reside here in the Lebanon Valley. We are a much-privileged people. And so we assemble here tonight, approximately 500 of us, for a good sociable time. Some of you have grown up together, been friends and closely associated with each other since boyhood and youth. Some of you have become friends, and, I am happy to say, through the medium of this organization. Friends and friendships that we are going to appreciate more and more as the years pass by.

We have prepared a program for you here tonight that I am sure will prove interesting, inspiring, and entertaining. I would like to see all of you enter into the spirit of the occasion, and to see comradeship and all-around good fellowship prevail the entire evening.

### Russia's Attack Upon Finland Justifies Aid to Finland

#### EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1940

Mr. PITTENGER. Mr. Speaker, the House of Representatives is now considering a bill which, we are told, will make it possible to render aid to the little Finnish Republic. On various occasions I have made my position clear. I favor aid to Finland because Finland is fighting to preserve the

ideals of western civilization. Finland was attacked by Russia. There is no more heroic story than the defense which this republic has made against overpowering odds. It is entitled to the admiration of the world, and, in my opinion, when history is written, the record of the brave stand taken by the Finnish people will stand out as one of the great landmarks for all time.

The Russian communistic government made its attack on Finland last October. That event meant more than just one powerful, brutal nation trampling upon the rights of a small nation. It meant that the Russian communistic government had started on its way for world domination. The Russian Communists are opposed to religion and to freedom in government. They rule by tyranny and fear. The average individual has no rights which they are bound to respect. Finland is fighting against these tyrannical ideas and ideals, which are contrary to our form of government and to the principles of Christianity.

I do not believe any argument can be made against help for Finland at this time, unless you believe in the doctrine of communism, and unless you want to see that form of civilization take its place as the dominant factor in the years that are to come. Consequently I favor aid to Finland, and I do not care if you call it a loan or a donation, or whether materials that will help Finland win the war are sent from this Republic of the United States to the Republic of Finland. I regret that this Government has not moved more rapidly, because time is an element, and I hope that it may not be said in the future that we delayed aid until it was too late.

We should take another step and we should do it for our own preservation as well as the preservation of anticommunistic governments throughout the world.

We should break off diplomatic relations with Russia, and there should be an embargo against the shipment to that country of any materials from the United States which Russia can use to further her attacks upon the small nations of the world.

I hope, Mr. Speaker, that action may be taken today and the world notified that the United States intends to aid in every way possible the small countries which are in the pathway of communistic Russia.

### "States' Rights" and the Rights of the States

#### EXTENSION OF REMARKS

OF

HON. T. V. SMITH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

ARTICLE BY HON. T. V. SMITH, OF ILLINOIS

Mr. SMITH of Illinois. Mr. Speaker, under leave to extend my remarks, I include an article of mine published in the current issue of the magazine entitled "State Government." This is an organ of the Council of State Governments, itself a clearing house of the major State officials of our Federal Republic.

The article is as follows:

STATES' RIGHTS AND THE RIGHTS OF THE STATES—POWER COMES FROM INFLUENCE; INFLUENCE COMES FROM COMPETENCE, NOT COMPLAINT

(By Hon. T. V. Smith)

"If \* \* \* the people should in the future, become more partial to the Federal than to the State Governments, the change can only result from such manifest and irresistible proofs of better administration, as will overcome all their antecedent propensities, and in that case the people ought not surely to be precluded from giving most of their confidence, where they may discover it most due \* \* \*."—James Madison.

Insofar as States are power organizations, their rights are determined not by dogma but by prowess. This much have we learned

from life. And this lesson is as it should be, according to James Madison. If the States have lost rights in the evolution of the American constitutional system, hawking aloud the ancient dogma of "States' rights" does little to recover what is lost. It only adds the shame of self-pity to the fact of diminished competence.

## I

Indeed it is doubtful whether the dogma of "States' rights" is ever raised until it is too late for the cry to help maintain the genuine rights of States. At any rate, Hegel, the philosopher of State power, has left us a provocative, even if dark, saying to that effect. The Owl of Minerva, as he put it, never takes flight until the shades of night are falling. That means, I suppose, that many politicians have a way of locking the door only after the horse is stolen. Less colloquially, it seems to mean that self-consciousness is the symbol of diminished power, and that a cry for rights is a confession of weakness.

It appears indeed that when New England long ago talked big about "States' rights," the talk was, as we now see, a confession of weakness. Tall talk was trying to substitute for inefficient competition. When the talk migrated to the South and crystallized as a sacred dogma, it betokened, as we now see, an inferior labor system and a state of mind closely approaching self-pity. Whatever power States have lost, or do lose, has its cause obscured rather than clarified by reassertions of such dogma.

Beyond the hue and cry of certain aspirants to the pedestal of statesmanship, however, it is not entirely clear how much power the States have actually lost. If they have lost, and lost heavily, it is due chiefly to the reason assigned by Madison, as quoted in our preview. If rights have been lost and it is desired to recover them, the way is clear—Increase efficiency in competition with the Federal Government. If this cannot be done, little can be done to implement the plaint of the States. In the clinches of history, contemporary as well as past, competence counts for a thousand-fold more than complaint. The States may indeed in sovereignty be as bad off today as some of them pretend. What of rights they have lost, however, have been compensated for in privileges gained. That accounts for the willingness with which the States have lost what they have lost, especially during the depression years. There certainly has been no snatching of power from them; there has, to the contrary, been much beseeching on their part for the privilege of participating in the numerous benefits offered by the Federal Government. There seems relatively little ground for fear or even for discouragement at the course of our recent history in this regard.

## II

For, truth to tell, the States ought not primarily to be power units, anyhow; and so they do not justly and wisely feel as dead loss some compensated loss of power. Much influence remains, after whatever power they may have lost. Take the influence, for instance, that comes from their being the training ground for national statesmanship. It is no news to students of government that more than one-third of our present Members of Congress have had their early training in State legislatures. One-half of the Supreme Court throughout its history have come up through official State training. Nearly half of all Cabinet members from the beginning of the Republic have held State jobs before reaching national eminence. More than 7,000 of our fellow citizens learn each year anew in State legislatures the lessons of tolerance, good sportsmanship, and democratic leadership. This privilege of being the training ground for national responsibility is an enhancement of State influence not to be deprecated save by the ignorant or fearful.

But is it not implied that good men in the past began their service in the State only because in the past the States were more powerful, in relation to the National Government, than they are now? Even if we beg that question, the moral is plain: If power is to catch up with influence, competence must take the place of complaint. And this goes for every department of State government along the whole front of their far-flung enterprises.

## III

Refusing to beg the question, we can say this for the Federal Government in recent years: What it has done has been done not to destroy the States but to save their solvency, to preserve their dignity, to further their integrity.

Federal solicitude for the solvency of the States is no new thing. Alexander Hamilton was the first New Dealer in this regard. Instead of passing by on the other side of the impoverished original States, Hamilton boldly proposed that the new Federal Government, itself in debt some fifty-five millions, should assume the debt burden of the 13 States, some twenty-five millions more (millions then looked like billions now). It was ruin for the Government, shouted all those who made it their business to fear their own fears. So today. Strangely enough, there was not much complaint of the loss of "State rights" then, and not much now, from the shuffling of debts off shoulders that could not bear them to shoulders that could.

Solvency of States saved in recent years, the Federal Government has continued its older policy of helping the States maintain their dignity. To extend the power of the States beyond the State boundaries is no help to the dignity of the State idea in our system. And it is precisely this sort of trial which we inflict when we leave to the States the matter of controlling corporations that outrun the State in scope, if not also in power. By Federal control over interstate commerce in general and by a growing disposition

federally to regulate specifically the great corporations, the National Government has been doing its share to keep intact the dignity of the several States. By such methods culminating in the wage and hour law, we have raised a friendly ceiling over the States and laid a solid floor under State standards of industrial decency.

And, faith, it has not been done a day too soon for the dignity of the States. They are quite helpless before great interstate monopolies that can migrate from State to State like birds of passage, and can even secede from the Nation, as the States are unable to do. Moreover, in dealing with these giants the States are at a great disadvantage in being required by the Constitution to maintain a democratic form of government. The corporations can be feudalistic or even totalitarian, so far as State power is concerned, to say nay to their will to power. They can, and do, as the La Follette committee has revealed, maintain private police forces and stock their arsenals not only with guns and revolvers but with other weapons such as gases.

## IV

In preserving the solvency and maintaining the dignity of the States through trying days of readjustment, the Federal Government has in this generation contributed its share toward the integrity of the States in our constitutional system. There is enough constitutional leeway left between the States and the Nation to call our attention to the role that prowess plays even in constitutional evolution. The question of sovereignty is always a practical as well as a theoretical one. How sovereign, for instance, is a State that cannot secede? Certainly it has only a middle-sized sovereignty. And it proved itself unable through prowess to seize more, when the war of disunion failed. Yet States are not wholly subsidiary; for inside the sphere of their own competency States carry on the most important business without so much as a "by your leave" to the Federal Government. That sounds like at least a middle-sized sovereignty.

Although they are never fully sovereign nor are they yet wholly subsidiary, the States in relation to the Nation present, then, as Woodrow Wilson once remarked, not so much a problem of sovereignty as "a question of vitality."

Beyond all questions of power and even underlying questions of influence, is the role which sentiment plays in furnishing "vitality" and in maintaining integrity. Sovereigns of at least our sentiments, the States carry on an unbroken continuity of morale, whatever may be at any given moment the results of competitive prowess. The increment fluctuates from age to age; but sentiment holds steady for men of States (statesmen). I would not myself know what to do without my States—my Illinois, the State of Abraham Lincoln; and my Texas, the Lone Star State of Sam Houston, that mighty Samson of the Southwest! These States are to me, as yours must be to you, freighted with great memories.

To have the solvency and the dignity of the States maintained through, or even by, the Federal Government is in no sense, it seems to me, to undermine the integrity of the State element under our Constitution. So long as men are proud of their States, the essential influence of the States remains. Though Virginia may not be pregnant this year, as Senator GLASS recently remarked, she remains, nevertheless, the Old Dominion and the mother of Presidents. Sentiment is the true savior of States as regards their inner integrity. This preserved, I do not know why we should not accept with equanimity as one of the facts of fortune any changing status of power which differential prowess may yield at any given time as between the several States, and the Nation as a whole.

## V

The council of State governments seems to me to have been going at the matter in exactly the right spirit and manner. Judicially and realistically, it has seen that the status of the States is not a matter to justify hysteria, nor one to be bettered by plaintive appeal to any dogmas, however ancient or sectionally sacrosanct. It has kept to the fore, however, the problem of the States. It has sought to keep alive the pride of States in meeting their own internal problems. And it has sought particularly and conspicuously to increase State competence in handling the multitude of problems that continually arise in the no man's land between States.

All the Nation now knows, through the warning sounded by the Council of State Governments, how serious is the movement increasing barriers to commerce between the States. Remedial work in this and other danger zones is being furthered through the instrumentality of the council. This problem of near tariffs and other serious State and interstate problems will in the long run require further extension of Federal power or they will beget a new efficiency of action in and between the States. What has to be done will be done—and done in the long run by the agency that does it with the least expense and friction. The Council of State Governments is determined that the question of differential expense and friction is not to be settled by negligence or default. That is clearly right. That assured, we may all, whether as State or as Federal officials, accept with composure the results of a competition of merit between State and Federal units.

## VI

But let me close with a touching story of State loyalty. A Missouri woman living in the little neck which runs down into what might well have been Arkansas, was told by a traveler—perhaps it was the Arkansas Traveler—that her part of Missouri was to be

thrown into Arkansas. She burst out in consternation, which I believe all of us can understand through our smiles: "Oh, not that, sir, oh, no! Not that! We'd all die of chills and fever if you threw us into Arkansas!" And who can say that Missourians wouldn't—wouldn't, I mean, die of imaginative chills, of emotional fever? Arkansas, on the other side, may be a poor State to us ignorant aliens, but you may bet your last dollar that her 2,000,000 citizens love her.

I'm willing to make that the test of my temperature about the health of our States. I'll not despair of our State system so long as one person can be found who'll speak up like that for Arkansas. Do I hear one? One? Why, I hear a State full. Such devotion may not add up to "States rights" but as fulfilled in practice this devotion does spell out the present effective rights of the States. If these be not enough to satisfy Arkansas there remains revolution—or less dramatic but more fruitful recourse to the evolution of superior competence in augmenting the benefits and diminishing the burdens of our common life.

### Seeds Are Sprouting Here

## EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

EDITORIAL FROM THE SHELBYVILLE (IND.) REPUBLICAN OF  
FEBRUARY 26, 1940

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a very carefully written and timely editorial appearing in the Shelbyville Republican, of Shelbyville, Ind., on the 26th day of February 1940, which editorial follows:

[From the Shelbyville (Ind.) Republican of February 26, 1940]

### SEEDS ARE SPROUTING HERE

Gov. Charles A. Sprague, of Oregon, recently wrote letters to the State's congressional delegation, in which he expressed his disturbance at the mounting encroachment of Federal agencies in local administration.

He paid particular attention to the administration of the Social Security Act which, he said, "is a very grave threat to the efficiency and economy of operations within this State." He concluded: "I am further concerned because of the threat to extend this Federal authority over other departments of State government to which the Federal Government makes any contribution. This would include roads and highways, county agricultural agents, vocational education, public health, reclamation, and other departments."

The whole trend of legislation in recent years has been toward the bureaucratic centralization of Federal authority, at the expense of States' rights and local governments. Blanket rules laid down in Washington are automatically applied to the entire country, ignoring local needs, wishes, and problems. Expanding Federal Government has become a definite threat to the financial well-being of the States.

The great Federal electric projects, for example, tax-built, tax-subsidized, and tax-free have seized business which was once done by highly taxed private properties. They have taken millions of dollars worth of property of various kinds, ranging from real estate to automobiles, off the tax rolls. By their very existence these Government pets have prevented private enterprise from expanding and creating new taxable property. So serious has this become that in the T. V. A. area State officials have asked Congress to make up the heavy tax losses that have followed socialization of the private power business in that area. These pleas seem futile—Government does not tax itself.

The menace of bureaucracy is faced by the people of this country. It is the forerunner of state socialism. In Oregon, the State's leading municipal electric system refused to take Bonneville power because it would not have its local power rates dictated by Federal authorities, as well as because it could generate power cheaper than Bonneville could furnish it. It has since developed that Bonneville receded from its demand to dictate rates, but its power was still rejected. Over the Nation there is growing uneasiness at the rapid extension of Federal domination of local rights and property.

One of the most important issues the country faces is statism, socialism, communism, Government ownership, or whatever you wish to call it. Any of them means the vesture of all power in a centralized government. This has always been a destroyer of liberty and democracy. We see it today in Europe's cruel dictatorships. Those who wish to look can see the seeds of it sprouting here.

### A Biased Tribunal

## EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

EDITORIAL FROM THE NORWICH (N. Y.) SUN

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my remarks, I include a recent editorial entitled "A Biased Tribunal" by Mr. P. L. Clark, editor of the Norwich Sun, Norwich, N. Y.:

[From the Norwich (N. Y.) Sun]

### A BIASED TRIBUNAL

Any facts lacking to complete the public indictment of the National Labor Board for subservience to the radical philosophy of C. I. O. are furnished in testimony before the House committee investigating the Board.

The latest admission relates to an informal but effective hook-up between the Labor Board and the R. F. C., whereby corporations asking for Government loans were obliged to wait because the would-be borrowers had been accused of unfair labor practices. This amounts to using public funds, provided by taxation, to compel employers to adopt toward their workers a course prescribed by the Labor Board.

These employers had not been found guilty of unlawful labor practices. It was merely that accusations had been filed. Their guilt or innocence was not a consideration. They were suspect, and that was enough.

Testimony before the House committee revealed the existence of an agreement between the Labor Board and the R. F. C. touching this point. Even if the agreement on its face is defensible, the use made of it by the Board is not.

It will be agreed that the Government should refuse loans to anyone whose solvency is questionable. A violator of law is entitled to no favors. But the Labor Board used its power to hold back loans to firms which had not even been tried for a violation, and whose solvency was not in question.

This is a high-handed procedure. It can be explained only on the theory that the Labor Board, in an excess of zeal for the radical policies of the C. I. O., is always ready to use the strong arm of the Federal Government—of which the Board is an infinitesimal part—to coerce employers who refuse to bow to its autocratic demands. If there is any justice in this, the dictionaries need to change their definition of the word.

How the official mind works at Board headquarters was amusingly revealed in testimony on Wednesday. Robert Condon, an attorney performing "legislative work," was shown to have labeled one of his office files "potential A. F. of L. beefs" and another "A. F. of L. squawks." Condon told the committee that he would not have used such labels had he known they were to become public.

It might pass as merely a joke were the records of the Board not so replete with evidence that in the thinking which prevails in the Labor Board any complaint the A. F. of L. makes is either a "beef" or a "squawk." Only when the C. I. O. makes demands are they accepted as if written on the tablets of eternal truth.

Other testimony given the House committee this week indicates that members of the Labor Board carried on an active campaign to bring witnesses before Congress who would resist proposals to amend the Wagner Act, made by the A. F. of L. and other organizations. If the testimony is true the Board did not hesitate to use taxpayers' money to lobby against legislation which would curb the Board's autocratic power.

The Wagner Act should be amended to make it fair to employers. Two of the present Board personnel, Chairman Madden and Member Smith, as well as Secretary Witt, ought to be removed from office.

We have said this before. Cumulative evidence before the House committee investigating the Board adds weight to the suggestion.

## Some Facts on the First World War

## EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

## ARTICLE FROM THE WAREHOUSE WORKERS' BULLETIN

Mr. GEYER of California. Mr. Speaker, now is a good time to keep in mind the results of war. May we always count the cost before taking any step in that direction.

The Warehouse Workers' Bulletin, the official publication of the Los Angeles Warehouse Workers Union, of January 26 gives us the following food for thought:

[From the Warehouse Workers Bulletin]

## SOME FACTS ON THE FIRST WORLD WAR

## DEATH

Nearly 10,000,000 soldiers were killed.  
Over 20,000,000 more were wounded.  
Prisoners or "missing," nearly 6,000,000 (about half of the "missing" can be counted as dead).

Famine, disease, and pestilence took a total of over 28,000,000 people "among the civil population alone," according to the Swedish statistician, Hersch. Influenza alone took over 15,000,000 lives.

## HOME

Left fatherless as a result of the war were 9,000,000 children.  
War widows numbered about 5,000,000.  
Some 10,000,000 were rendered homeless due to the war.

## COST

Direct net money cost of the war for all belligerent countries amounted to over \$200,000,000,000. For the United States alone, during 2 years, the direct cost was over \$22,000,000,000.

Total indirect costs (property damage, etc.) amounted to about \$150,000,000,000 for all countries.

The daily cost of the war in 1918 was \$224,000,000.

## PROFIT

For every casualty in the World War a profit of 50,000 marks (roughly, \$12,000) was made by the capitalist class, according to Lehmann-Russbuldt, German expert on war.

Profits of leading American corporations ranged from 25 percent to 3,000 percent and more during the war years.

## MILLIONAIRES

Eighteen leading United States companies increased their net profits of \$74,650,000 for the period 1912-14 to \$337,000,000 for the period 1916-18, or almost four and a half times the pre-war average.

The number of known millionaires in the United States increased from about 7,500 in 1914 to about 25,000 in 1918.

## The Spirit of Remonstrance

## EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

## ADDRESS BY HON. JOHN LORD O'BRIAN

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. John Lord O'Brian, delivered before a meeting of the New York State Bar Association on January 27, 1940:

This annual function seems to take on fresh significance with every recurring year. It exemplifies to many of us the spirit of toleration, of urbanity, and magnanimity which in all generations seems characteristic of English-speaking lawyers. Tonight is an

occasion for special rejoicing, because we are paying tribute to a great Court and to a group of men who for many years have devoted themselves faithfully to doing justice and are, in the finest sense of the word, ministers of justice.

If into the atmosphere of this happy occasion I seem to inject a more serious element, it is only because I feel confident that I shall be calling into the open thoughts which many of you have long entertained in the back of your minds. For no serious-minded man in these days can reflect upon the passing events without being acutely conscious and apprehensive over the tragic happenings daily transpiring in Europe and in the Far East, and without trying to formulate in his own mind what should be his individual attitude toward those tragedies. Confronted with the spectacle of a war waged against all traditional forms of religion and with a resurgence of brutal oppression and calculated horror to an extent unknown for centuries, some of us have become seriously disturbed by the activities of those leaders of public opinion who in increasing numbers are urging that these matters are no concern of the Americans, that expressions of resentment are both futile and dangerous, and that any widespread discussion of these happenings might lead to dangerous states of emotion.

It is because as a class we are the true realists that these matters have a special concern for lawyers. We know better than other men that willingness to discuss is the necessary corollary of the right of free speech. When Trevelyan said that, commencing with the thirteenth century, the rise of the common-law lawyer was almost as important as that of the parliament man, he was thinking of the lawyers in every generation as the remonstrants, the protestants, and the active defenders of individual right. That has always been true of the lawyers in America. During the sweeping changes which have been taking place within the last 10 years, certainly no group has been more active, or, may I say, more vociferous, than the lawyers. In all our domestic affairs we have been watchful, critical, and outspoken; yet when it comes to discussion of what is now going on abroad we seem chilled by the same blanket of doubt and moral fog that affects so many of our fellow citizens. This paradox is the more puzzling because we are the most realistic of all professions, the most sensitive to invasion of individual right, and in the past our predecessors have been the most resolute and most uncompromising defenders of that right to express opinion freely and of the right of protest, which are the essence of human freedom.

Whatever the cause, it is undeniable that on all sides influences are at work tending to discourage full discussion of those events abroad which in the long twilight ahead cannot fail to have a deep significance for us.

This subject is a delicate one. To avoid misunderstanding may I say that I am not now speaking of national policy, or as an isolationist or as an interventionist. Those like myself are opposed to America actively participating in the wars now being waged. But like the great majority of Americans, at present without articulate leadership, we are opposed to any policy which would deaden the sense of individual responsibility of the citizen, or which would have a smothering effect upon his instinctive resentment or discourage expression of his sense of moral indignation. The way to secure peace and make it a lasting peace is to face frankly and to discuss freely disagreeable and tragic realities. To some of us it seems that we will make little progress by adopting methods of indirection, by affecting an attitude of unconcern or by countenancing any course which tends to obscure the grave moral issues or encourage our people into an attitude of indifference. The fact that the present attitude of unconcern will weaken and may destroy the position of American moral leadership in the world is now a matter of much less concern than the disastrous effect which these teachings will have upon the moral fiber of the American people themselves.

In recent conversations with leaders of some of our great universities, I was startled to learn that a majority of our young college people seem indifferent to what is going on in Europe, that many of them are actually convinced that America was carried into the last war chiefly by the machinations of selfish businessmen and by the hysteria of a superficial emotion, and further that a number believe that it would have been just as well if Germany had won the last war. These views, if typical, are disappointing and annoying; but a better understanding of history will surely correct these exaggerations. What is more depressing is that like many of their elders, many of these young people seem vastly more stirred up over Mr. Browder and the abstract right of free speech than they are by the spectacle of the heroism in Finland where Thermopylae are daily being reenacted before our very eyes. The generous ardor and spirit of adventure that we associate with you seems, temporarily at least, to be in a state of eclipse. But as lawyers we should be more concerned with the great number of mature citizens who hold some of these same views and who are busily trying to persuade their fellowmen that their safety depends upon closing their eyes to what is going on abroad.

The baleful word "propaganda" seems to have become a sort of national slogan of alibi and escape. On all sides even the best intentioned men resort to it in order to escape the necessity of meeting ideas with ideas, of relying upon the power of persuasion. False propaganda only makes it more difficult to get at the facts,

but the facts are there just the same. Our experience in the Great War showed that the intelligence and native shrewdness of the average American made ineffectual the best devised foreign propaganda. Despite this experience, it is no exaggeration to say that today the constantly reiterated warnings against propaganda are actually producing a new type of intellectual cowardice. Those who constantly repeat these warnings are in reality saying that our individual citizens are incapable of distinguishing between truth and falsehood or between right and wrong and are incapable of controlling their emotions. What a reflection upon the integrity of our citizens and what a travesty on our professed confidence in the intelligence of our people! Nevertheless this constantly expressed fear of propaganda is everywhere interfering with and hampering that public discussion so necessary for an informed and wise public opinion.

Our anxiety over these sinister influences is increased by the conflict between these attitudes and the historical American tradition of individual freedom and individual responsibility. Cannot we lawyers make it clear that willingness to discuss and readiness to meet with ideas the challenge of other ideas is the most fundamental of all attributes of our political philosophy? Our entire system of free public education is based upon it and out of it has developed the American type of government of public opinion. Our people from the earliest days, unconsciously perhaps, have been demonstrating in every generation their faith in the doctrine that the test of truth is its "ability to get itself accepted" in the market place of ideas. And departure now from this attitude brings danger. No one knows as well as the lawyer, trained in the tradition of the common law, that the disintegrating forces in society never cease to operate; that the safety of the state rests always on the sense of right of the individual, upon his sense of personal obligation and upon his readiness to do his duty.

The American political philosophy is not for the timid or the weaklings. All through our history we have been characterized by a willingness to take the risk incident to expressions of conscientious conviction and to live dangerously if occasion demands. For, as Senator Root once said, there can never be any sovereignty superior to the law of morals. It is over 600 years since the earliest of the guaranties of individual liberty were made in the Magna Carta. Ever since that time men of our type, in the drab and wearisome atmosphere of the courts, have been defending the right of the common man to live his own life. As lawyers we must never forget, and we must never let our fellow citizens forget that the right to live in freedom carries with it the duty of remonstrance in times of crisis.

Lord Acton, the most erudite historian of the growth of human freedom, and Abraham Lincoln, with a wisdom born only of his own amplitude of understanding, came to the same view in the end. They were alike in their belief that the one ultimate consideration upon which all men ought to agree was respect for the sanctity, the worth, and the possible dignity of the individual human life. For they saw the individual human being as the embodiment of an invincible spirit of aspiration. John Morley once quoted Cromwell's saying, "What liberty and what prosperity depend upon are the souls of men and the spirits which are the man," adding as his own comment, "Yes, and the historic epochs that men are most eager to keep in living and inspiring memory are the epochs where the mind that is the man approved itself unconquerable by force." The words of that old Victorian liberal seem singularly apposite today. We sometimes forget that this respect for the life of the individual was the essence of the common law and it has been up to now the fundamental basis of our own civilization. At the present day we need more than anything else to remind ourselves that that same respect for the worth and dignity of human life must be the basis for any enduring form of government, for any permanent condition of peace.

In sharp contrast with these fundamental beliefs of ours are the cautionary teachings at present so much in evidence. When we were discussing the modification of our so-called neutrality statute, a pall of obscurity was thrown over the whole discussion by appeals to fears of war. Free expression of opinion was constantly discouraged by false issues and in particular by the assertion that one side or the other were war mongers. Only a few days ago the press reported that the author of a popular drama refused to permit a benefit performance to be given in aid of Finnish relief because such action might create war emotion. In Washington we frequently hear assertions that it is dangerous for Americans to discuss, much less protest, against the brutal tragedies which are exterminating multitudes of innocent people.

But it is our belief that any teaching which, in the guise of expediency, or domestic policy, or foreign policy, tends to smother the expression of common instincts of humanity brings danger to the American people. For whether men attempt to decry it by calling it emotionalism, or sentimentality, or humanitarianism, it is a stubborn fact that, men and women alike, the vast majority of Americans adhere to strong moral standards and are distinctly resentful against wrong. Any person in this country who today can look at the horrors being inflicted upon the innocent human beings in Europe or in the Far East without deeply feeling that typical American sense of resentment, is in spirit already a dead American. Too many of our cautious, well-meaning friends are confusing what they call emotions with the most profound and moving convictions of our people.

That this danger is a real one was vividly shown by the lack of adequate expressions of resentment at the time of the murder of our fellow citizens on the *Athenia* and again during the time of the ghastly events in Poland. At times it seemed as if many of our people were bystanders silently watching a film spectacle. At present it is again in evidence in the effort of some of our leaders to

discourage our Government from giving aid of any kind to heroic Finland. In times of crisis the expression of moral resentment becomes more than a right; it becomes a duty, and any public policy which ignores that truth is an inadequate policy.

The same cry of caution, born of expediency, was heard recently when the leaders of this administration protested against the infamies being perpetrated in Poland. But here our leaders rose above partisan considerations of policy and they spoke the authentic voice of the real America. They correctly interpreted the conscience of those great silent masses of our people who, chastened by the discipline of daily toil, have always been the first to distinguish right from wrong in public policy. For the whole American structure is built on the premise that the ordinary man may be trusted to judge of fair play and to make his own decision between right and wrong.

Most, if not all, of us approve the action of our Government in withdrawing our ships from the war zones abroad and of preventing our citizens from exposing themselves to the same dangers. But our moral frontiers are another matter. They must never be withdrawn and we must never appear to acquiesce in the action of those brutal powers which have brought such inhumanity into the civilized world. To those forces we are eternally opposed, and we can never express too often or too forcibly our hostility to the spread of their influence. This is said not in criticism of any action of our national administration, for we are in full accord with it in its foreign policy up to this time. On the contrary, speaking in the tradition of those lawyers of the common law who defended individual freedom, we are seeking to strengthen the support of those leaders at Washington who believe that the safest foreign policy as well as the safest domestic policy is a policy determined on the basis of the sense of right and wrong held by the average American. For the self-respect of America is identical with the requirements for self-respect in the individual. There must be some way short of participating in war by which our citizens can make clear their sense of moral indignation, and whatever happens let us see to it that we do not stultify ourselves. American distinctive achievements in the field of foreign policy in the past have frequently been the result of independent as well as courageous action. For many of us the highest aspiration of America in the field of foreign policy was expressed in the protest which Secretary Stimson made against the action of Japan in Manchuria. At the time many derided this as a futile gesture; but who can now deny that the present moral collapse of the world is due in part to the fact that leaders of other nations put aside that sense of moral conviction which was so clear to every truly patriotic American and adopted in its place measures based only on expediency?

Those of us who hold these views have no dogma to assert, have no panacea to suggest, have no foreign policy to dictate. We need give no advice to foreign nations. There has been too much of that. Our concern is only with the moral values and moral sense of America. Whether or not our individual expressions of resentment and protest be immediately effective is not the question. The enduring life of this Nation depends, above all things, upon a willingness to discuss and a willingness to express courageously our resentment against wrongs perpetrated on helpless humanity. As has often been said, America is not an abstract formula of government and it is something more than a place. It is a moral tradition and there is in that American moral tradition nothing of neutrality as between right and wrong.

Every true lawyer lives in the hope that when his career comes to an end man will say of him, in homely, old-fashioned phrase, that he lived in the "great tradition." To be a part of that tradition does not require success in professional achievement. Many leaders of lost causes are there immortalized. The only test is whether one has made a distinctive contribution to his time. In bygone generations those who truly earned this distinction were in every instance men sensitive to wrong and ready to defend the unfortunate under all circumstances. Are we now a part of this tradition?

I suggest, my fellow lawyers, that in these difficult days our supreme duty is to show a willingness to discuss what is going on in the world, to cut away from the shibboleths and clichés, to get down to the underlying moral issues. In doing this we shall be reminding our fellow Americans that in this country individual conscience is the basis of the state, and that the only way to help to bring about a lasting peace is to proceed in accord with the free and willing expression of the conscientious convictions of our citizens.

And the world at large will know with definiteness and have no excuse for misunderstanding the true spirit of the American people.

### Anticonservation Legislation Supported by Politicians Versus Antipollution Legislation Supported by Conservationists

#### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

Mr. MUNDT. Mr. Speaker, on Thursday and Friday of this week this House must decide the stand it is to take on the

national problem of pollution. Within the past few days you have received frantic appeals from the Cincinnati Chamber of Commerce and from spokesmen for other pollution offenders urging you to support S. 685, the so-called Barkley bill, and asking you to defeat H. R. 7971, which I introduced to deal with the pollution problem.

#### A REAL TEST OF CONGRESSIONAL CREDULITY

It is easy to understand why cities and industries or chambers of commerce in which polluting groups are in control should oppose H. R. 7971, because it proposes an effective method of regulating the pollution evil. It is easy to understand why the polluter should not want to clean up; it is because it is more profitable and convenient for him to pollute than to clean up that so many of America's best streams and rivers are now virtually open sewers, serving as a menace to human health and a flowing graveyard for fish and animal life. But it strains the credulity of every Congressman when these polluters circularize Congress and testify before our committees in favor of S. 685. Either the polluters have lost their sanity or S. 685 has lost its sting. An examination of S. 685 reveals the answer. The polluters are still sane. But they are trying to coax Congress into voting for a bill dealing with pollution which would tend to protect them in their nefarious practice of polluting the public waters of America. In fact, the so-called Barkley bill, S. 685, concludes its final section with this telltale and truthful confession:

This act may be cited as the Water Pollution Act.

Too true, unfortunately; too true.

#### S. 685 SHOULD BE RECOMMENDED; NEW HEARINGS ARE WARRANTED

Mr. Speaker, I realize that it would not be in harmony with good legislative practice and that it would not be consistent with fair play with my colleagues to attempt to offer H. R. 7971 as a substitute for S. 685 by the device of striking out all after the enacting clause of the Barkley bill. I have no desire to put Members "on the spot" with their constituents and with their consciences by asking them to make a snap judgment in accepting or rejecting H. R. 7971 as being preferable to S. 685. However, I do believe it to be both fair and wise to urge that S. 685 be recommitted to committee, so that open, public, and deliberate hearings may be held on H. R. 7971, and all other legislation dealing with pollution. In this way we can proceed with a little less speed and a lot more intelligence to a desirable solution to the pollution problem. We must be sure that if we do not make headway in pollution control, that we at least do not play into the hands of the polluters and retard pollution control in America. The best guaranty of this is to recommit S. 685.

#### MUNDT AMENDMENT OFFERS A COMPROMISE COURSE

The committee substitute to S. 685 which will be offered the House is the same old, toothless S. 685 which criticizes pollution vigorously and then condones it with \$250,000 per year worth of expensive adjectives. It adds nothing which will help eliminate pollution. It discontinues the former subsidy of \$750,000 per year to State health boards which was originally proposed, and it also discontinues all grants-in-aid for pollution-control works.

In order that this House may have the opportunity to vote for a constructive step toward pollution elimination I am going to offer the following amendment to the committee version of S. 685:

Immediately after subsection (c) of section 2 of the committee amendment add the following subsection:

"(d) (1) After date of enactment of this act no new sources of pollution, either by sewage or industrial waste, shall be permitted to be discharged into the navigable waters of the United States and streams tributary thereto until such time as the division shall have reviewed and approved treatment works established to produce such reduction in the deleterious effects of such sewage or industrial wastes as the division determines are necessary to assure that such wastes will not be injurious to human health or to any form of life, including aquatic life, or to migratory birds as defined in the Migratory Bird Treaties of August 16, 1916, and March 15, 1937; and

(2) The discharge of new sources of water pollution without review and approval of the division as required under the foregoing provisions is hereby declared to be against the public policy of the United States and to be a public and common nuisance. An action to prevent or abate any such nuisance may be brought in the name

of the United States by any United States attorney, and it shall be the duty of such attorney to bring such an action when requested to do so by the division, the Surgeon General, any duly constituted interstate agency dealing with control of water pollution, any State agency dealing with control of water pollution, any State health authority, or any incorporated municipality. Such action shall be brought as an action in equity and may be brought in any court of the United States having jurisdiction to hear and determine equity cases."

I believe Members will find this amendment to be both reasonable and sensible. It simply proposes to give some pollution-discouraging effect to S. 685 by outlawing all new sources of pollution after date of enactment of S. 685, should this bill become a law. I still deplore the ineffectiveness of S. 685 in its approach to the pollution problem, but by the addition of my amendment to stop new sources of pollution we shall, at least, stop aggravating the problem while we are studying it. We shall at least be writing in one section of the bill to meet the desires of conservationists and sportsmen and to dampen the ardor of polluters for S. 685. In fact, we shall be applying the control features of H. R. 7971 to new sources of pollution and applying the "study the problem" philosophy of S. 685 to existing forms of pollution. Perhaps that is a happy compromise; at least, it would be a start in the direction of pollution control. I am authorized by the Izaak Walton League of America and other major national conservation organizations which have been fighting the pollution problem for years that with this amendment added to S. 685 they are willing to support it and to ask Members to vote for it. Without at least adding an amendment to outlaw new sources of pollution, however, these great conservation groups remain firm in their opposition to S. 685 and urge all Members wishing to serve the cause of clean streams to join in recommitting S. 685—the so-called Barkley bill—back to the Rivers and Harbors Committee where hearings may be held and the conflicting viewpoints resolved into a revised piece of legislation which will do more about pollution than to criticize it at the expense of the American taxpayer.

As indicative of the national importance of this legislation on the pollution problem and of the serious and sincere determination of national conservation groups to avoid passing an outright subterfuge such as S. 685, supported and advocated by America's worst polluters, I submit the following letter from the American Forestry Association. Each Member of Congress apparently received this letter written for the precise purpose of emphasizing that this great conservation organization does not support the Barkley bill but that it is definitely in favor of recommitting the whole pollution problem to committee for more extensive open hearings. Joined with the American Forestry Association in this stand is the Izaak Walton League of America, the American Wildlife Federation, the American Audubon Society, the American Wildlife Institute, the National Parks Association, the American Association for the Advancement of Science and other groups of similar significance and integrity. Certainly such a concerted demand merits fair consideration by the Members of this Congress.

THE AMERICAN FORESTRY ASSOCIATION,  
Washington, D. C., February 26, 1940.

MEMBER OF CONGRESS,  
Washington, D. C.

DEAR SIR: The House has for early consideration two bills, the primary purpose of which is identical, viz., "to prevent the pollution of the navigable waters of the United States." Upon passage of House Resolution 249, pending since July 10, 1939, the House will be authorized to consider S. 685. This bill passed the Senate on May 1, 1939, and the House Committee on Rivers and Harbors submitted amendments and a special report on February 20. The other bill of major importance is H. R. 7971.

Obviously, only one law can be enacted. Yet the supporters of each bill vigorously declare for the merits of one and decry the weaknesses of the other. Each group voices a statesmanlike and public-spirited desire to correct the evil of polluted waters, with its Nation-wide threat to public health, aquatic life, outdoor recreation, and the permanent beauty of our natural heritage in lands and living waters.

Erroneous reports have been circulated to the effect that the American Forestry Association is supporting S. 685—known as the Barkley bill. Without reference to any bill, the directors on May 17, 1939, adopted the following resolution:

"That the American Forestry Association favors the principle of State control of the pollution of waters with the aid of Federal studies and Federal contributions rendered through the agency of the United States Public Health Service."

With full recognition of the urgency of the pollution problem and the need for its early solution, would it not be better to wait another year without legislation rather than enact an ineffective law?

The directors of the American Forestry Association authorize me to suggest that S. 685 and H. R. 7971, together with other bills of a similar nature now before the House, be referred back to the Committee on Rivers and Harbors for further study. I trust this will meet with your approval.

Respectfully yours,

JAMES G. K. McCLOURE, President.

Mr. Speaker, the amendment which I shall propose to S. 685 will change that bill from a pollution-continuing measure to a pollution-discouraging measure. I hope my amendment may be adopted so that this week we can take a forward step in the regulation and elimination of pollution in this country. If no such amendment is adopted, I trust this body will vote to recommit S. 685 to committee in the interests of conservation progress.

### War Records of Dies' Foes

#### EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1940

EXCERPT FROM THE WEEKLY WASHINGTON MERRY-GO-ROUND

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt by Pearson and Allen from the Weekly Merry-Go-Round of February 11, 1940:

#### DIES' OPPONENTS

During the torrid debate on the resolution to continue the Dies committee the charge was freely made that those opposed to the resolution were lacking in patriotism.

However, some of the dissenters had brilliant war records, notably, BRADLEY and McGRANERY, of Pennsylvania; FRIES, of Illinois; GEYER and IZAC, of California; HOOK and TENEROWICZ, of Michigan; and WALLGREN, of Washington.

Izac's record is particularly unusual. An Annapolis-trained lieutenant in the Navy, he was awarded the coveted Congressional Medal of Honor by President Wilson for one of the most daring feats of heroism in World War annals.

Lieutenant Izac was captured when his ship, the U. S. S. *President Lincoln*, was attacked and sunk by a German U-boat. Later, while being transported on the sub to a prison camp, he obtained information of such importance on the movements of U-boats that he determined to escape and give it to American naval authorities.

His first attempt was unsuccessful and almost fatal. According to his citation, he "jumped through the window of a rapidly moving train (en route to the prison camp), at the imminent risk of death." A fusillade of gunfire by guards missed him, but he was badly injured by the fall. Recaptured, he was beaten and kicked into insensibility.

One of his captors broke the stock of a heavy army rifle over Izac's shoulder. When he recovered from this mauling he made a second and successful bolt for liberty, "breaking his way through barbed-wire fences and deliberately drawing the fire of armed guards" so that others might escape in the confusion.

Izac made his way through the mountains of southwest Germany, living on raw vegetables, and swam the River Rhine at night almost under the noses of German sentries before reaching the allied lines.

### St. Lawrence Seaway and Power Project

#### EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

STATEMENT BY THE NIAGARA FRONTIER PLANNING BOARD

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement in

opposition to the St. Lawrence seaway and power projects submitted by the Niagara Frontier Planning Board at the budget hearing held in the city of Albany, February 12, 1940:

NIAGARA FRONTIER PLANNING BOARD,  
City Hall, Buffalo, N. Y.

To the Honorable Members of the Finance Committee of the Senate and the Ways and Means Committee of the Assembly of the State of New York:

GENTLEMEN: I appear here on behalf of and by the direction of the Niagara Frontier Planning Board, an official State body created by chapter 267 of the Laws of 1925 of the State of New York. The board consists of the six mayors of the cities of Buffalo, Niagara Falls, Lockport, Tonawanda, North Tonawanda, and Lackawanna, and six supervisors, representing the counties of Erie and Niagara, appointed by the chairman of the boards of supervisors of these two counties.

In my capacity as chairman of this board, having been selected by this body to preside over their deliberations, I hold a brief for and officially represent the 1,000,000 taxpayers who live and carry on their modest affairs in western New York. We also speak for a large number of organizations which are cooperating with us in opposition to the St. Lawrence seaway. Amongst these are:

The Central Labor Council of Buffalo, which has recently changed its name to the Federation of Labor of Buffalo and Vicinity; every labor union having to do with the port of Buffalo and Great Lakes and Barge Canal shipping; the great railroad brotherhoods; the United Mine Workers of America and many other labor unions; and other organizations.

We are here to protest the allocation by the State of New York of any part of the hard-earned tax money that we pay toward the support of the State to help foist upon the State of New York such an extravagant and harmful project as the St. Lawrence seaway and power scheme.

For nearly 10 years the State has been appropriating each year \$80,000 to \$100,000 for the support of the misnamed Power Authority of the State of New York. During the last 9 years approximately \$1,000,000 has been provided to this agency to make reports and to carry on propaganda in favor of the St. Lawrence seaway. I would like to call your attention to the fact that the jurisdiction of this body is limited to the development of plans for the production of power in the St. Lawrence River and that it has no jurisdiction in relation to the development of any other power project using public waters anywhere else throughout the State of New York. This is the reason that we have used the phrase "misnamed." A more proper designation for this body would be the "St. Lawrence seaway and power project propaganda agency."

We not so much are concerned over what may appear to some to be the small amount of \$80,000 included in the Governor's recommended budget for the support of this agency as we are in the implications contained therein and the harmful result to the State of New York and our country as a whole if the plans which they have been so vigorously supporting eventually materialize.

The engineering staff of the Niagara Frontier Planning Board, which, by the way, is wholly supported by public appropriations, has for many years been making studies of the costs of this project and its economic consequences. Our review of the estimates of cost, prepared by the joint board of engineers appointed by the Governments of the United States and the Dominion of Canada, shows that in case the single-stage development at Barnhart Island is to be constructed (and this is by far the most economical of any one of the many plans studied by this board), the costs will be so great as to send a cold chill down the spine of every taxpayer in the United States from Maine to California and from Florida to Seattle.

We are not going into details, but we are, however, ready to submit to any impartial body without fear of challenge our considered conclusion that the cost of this project to the United States as a whole, over the period of years required for amortization—eliminating entirely the \$90,000,000 to be contributed by the power authority of the State of New York and the substantial contributions toward the cost that will have to be made by the Dominion of Canada—will amount to at least \$484,000,000. This figure does not include any annual charge for operation and maintenance but does include approximately \$100,000,000 agreed contribution by the United States to be paid for Canadian labor and materials.

The taxpayers of the State of New York pay each year 26 percent of the Federal tax burden. This means that if the St. Lawrence seaway and power project becomes a reality, the taxpayers of the State of New York will be surcharged with the extra burden of providing over \$125,000,000 in additional taxes to be paid to the United States Treasury.

The trouble is that this is not the half of it. If the State of New York were to be benefited through the development of this project in like measure, we might be glad to assume this extra burden. We are a wealthy State and have already invested many millions of dollars for improvements which we consider to be worth while. We, for instance, have invested \$260,000,000 in the barge canal which we are even now seeing improved. We have even built elevators at Oswego. Some of us don't think much of the idea; still the State has invested a good many hard-earned dollars in this elevator business.

The State has invested many millions of dollars in port terminals and many of our local bodies, like the Port Authority of Albany and the Port Authority of New York, have done likewise. The State of New York has also spent hundreds of millions in the development of our system of State highways—a good investment. The State is amply able to invest \$90,000,000 in this venture and in addition assume an increased Federal tax burden of \$120,000,000

more, if, by any stretch of the imagination the plan could be proved to be of the slightest benefit to the State.

The trouble with this Alice-in-Wonderland scheme is not only that it will render superfluous many of the facilities that the State of New York and its citizens have so adequately provided to handle the flow of traffic between the center of our country and the seaboard at the ports of Buffalo, Oswego, Albany, and the great port of New York, but that it will also be an unfair blow below the belt to the security of American labor, transportation industry, and to thousands of our citizens whose livelihood is dependent upon the prosperity of such labor and business.

The computations of our engineering staff have been checked by the traffic experts and economists of the American Association of Railways, the Lake Carriers Association, the New York State Waterways Association, and by practical operators on the Great Lakes and barge canal. They prove that, if the claims of the advocates of the seaway materialize as to the amount and character of the tonnage which will bypass New York State to and from the seaboard via the Welland Canal and the other Canadian canals to be built in the St. Lawrence largely through the use of our funds, it will mean a loss of over \$35,000,000 a year to New York State labor employed on the Great Lakes, railroads, canals, highways, and at the terminals and ports and in allied businesses and industries, and to the families dependent upon this traffic for their livelihood.

According to the claims of the proponents of this seaway, for instance, upward of 68 percent of the tonnage now transferred at the port of Buffalo would be bypassed through the Welland Canal and St. Lawrence route with resultant serious loss of business to allied industries. Frankly, I have yet to be shown a single substantial benefit that would come to the State of New York through the building of this seaway and would warrant the assumption of this additional Federal tax burden of \$125,000,000 by the taxpayers of the State.

It may be claimed by some that the building of this seaway will permit the production of such a quantity of low-cost electrical energy, through the use of the waters of the St. Lawrence for a hydroelectric development, as will justify the State in undertaking this project. Granting, for the sake of argument, the most rosy estimates of the St. Lawrence Power Development Commission of the State of New York in its report to the Governor and legislature in 1931 that such power can be produced and sold to the citizens of up-State New York at a saving of \$7,500,000 annually under the cost of producing an equivalent amount of power by steam plants, where does this leave us?

It leaves us with a \$35,000,000 loss and only a \$7,500,000 gain. To us it certainly seems a foolish thing for the taxpayers of the State of New York to assume an additional Federal tax burden of \$125,000,000 for the purpose of constructing the St. Lawrence seaway in order to insure that they will suffer a net loss of \$27,500,000 a year, the difference between these two amounts.

The Niagara Frontier Planning Board is not opposed to the development of hydroelectric power on the St. Lawrence or anywhere else in the State. We, however, demand that such power development be definitely and permanently divorced from the seaway project.

In conclusion, and in compliance with the suggestion that those who appear at this hearing make definite recommendations in respect to items in the budget, we respectfully request the total elimination of the item of \$80,000 for the support of the Power Authority of the State of New York, the leading propaganda agency for the St. Lawrence seaway project.

We further respectfully request that no future appropriations be made for this agency until after a thorough investigation has been made and concluded by a nonpartisan, unprejudiced committee or committees appointed by the State senate or assembly into the economic effects of the construction of said proposed seaway upon the State of New York. And in case such committee or committees are appointed, we would esteem it a privilege if we might be permitted to appear before them and submit complete and detailed data through competent witnesses in proof of the great harm to the best interests of our State that will result from the construction of this seaway.

NIAGARA FRONTIER PLANNING BOARD,  
C. J. HAMLIN, Chairman.

### Comparative Per Capita Cost of Government by 10-Year Intervals

#### EXTENSION OF REMARKS

OF

#### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

TABLE BASED ON STATISTICS FROM ANNUAL REPORT OF THE  
SECRETARY OF THE TREASURY AND THE STATISTICAL  
ABSTRACT OF THE UNITED STATES, 1938

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a comparative

table showing the per capita cost of Government by 10-year intervals, from 1790 to 1940.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Comparative table showing the comparative per capita cost of government by 10-year intervals, from 1790 to 1939-40, based upon statistics on expenditures and population found in the annual report of the Secretary of the Treasury and the Statistical Abstract of the United States, 1938

[Compiled Oct. 10, 1939, by Paul O. Peters, Syndicate Trade Press, Washington]

10-year interval	Population from census	Expenditures in dollars	Per capita cost
1790.....	3,929,214	\$4,345,424	\$1.53
1800.....	5,308,483	11,000,069	2.07
1810.....	7,239,881	8,652,479	1.19
1820.....	9,638,543	19,421,553	2.02
1830.....	12,866,020	17,075,774	1.32
1840.....	17,069,453	29,035,815	1.70
1850.....	23,191,876	44,756,737	1.93
1860.....	31,443,321	72,411,658	2.30
1870.....	38,558,371	328,786,783	8.52
1880.....	50,155,783	301,109,391	6.02
1890.....	62,947,714	377,448,536	6.00
1900.....	75,994,575	621,395,005	8.17
1910.....	91,972,266	915,131,593	9.95
1920.....	105,710,620	6,900,697,632	65.28
1930.....	122,775,046	4,706,138,122	38.41
1939-40.....	130,000,000	13,110,000,000	100.84

<sup>1</sup> Appropriations authorized by 1st sess. 76th Cong., for fiscal year ending June 30, 1940.

NOTES.—The per capita costs of government include the following items: Civil and miscellaneous needs, War Department, including rivers and harbors and the Panama Canal; Navy Department, expenditures for Indians, pensions, postal deficiencies, interest on public debt, public debt retirement since 1915, and postal expenditures exclusive of postal deficiencies.

Care of Indians assumed large proportions about 1836 when expenditures mounted to \$4,615,141. In 1938 the expenditures for Indians accounted for \$33,378,389. Pensions began to appear in the expense account of the Government as early as 1789, the amount that year being only \$175,000. In 1938 pensions took \$402,779,033 in Federal funds.

Interest on the public debt was by comparison an insignificant part of the Federal expenses for many years. In 1940 the estimate for this item is \$1,050,000,000, and where debt retirement has loomed large in other years, but \$100,000,000 has been set up in the 1940 Budget for debt retirement. In 1938, \$628,186,746 was spent by the Post Office Department, exclusive of postal deficiencies, amounting to \$44,253,861. Emergency relief expenditures in 1938 amounted to \$1,996,000,000. Veterans' benefits, other than pensions, cost \$170,000,000 in 1938.

### Proposed Loan to Finland

#### EXTENSION OF REMARKS

OF

#### HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

RADIO ADDRESS BY HON. WILLIAM H. KING, OF UTAH

Mr. BROWN. Mr. President, I ask unanimous consent that an address delivered by the senior Senator from Utah [Mr. KING] over station WOL on February 26, 1940, on the Finnish-aid question, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, in this period which many persons claim has developed the highest civilization ever enjoyed by the world, tragic conditions exist in many lands which may qualify such claim and demonstrate that the goal of peace, justice, and liberty is far distant. Sanguinary conflicts exist in Asia where millions of human beings are starved, bombed, and butchered by a government which is receiving military aid from this Republic. Japan has built a powerful military machine and one of the largest navies in the world, and thus becomes a potential enemy to this Republic. And yet we are annually furnishing her supplies of the value of millions of dollars and thus aiding her in her merciless and devastating crusade against the people of China.

In Europe Communist Russia, and the Nazi regime, controlled by Hitler, have entered into a conspiracy to destroy democratic nations, and to superimpose upon Europe and other countries a military, materialistic, and indeed Godless authority, which seeks to crush individualism and destroy the liberty of millions of people. Austria and Czechoslovakia have been destroyed and brought under the iron rule of Nazi-ism. Poland has been crushed and her mutilated body divided between communistic Russia and the Nazi Government of Germany. Estonia, Latvia, and Lithuania

breathe only as Stalin wills. The democratic nations of Europe see in bolshevism and nazi-ism relentless and merciless foes which seek their destruction. Wherever democracy exists, and freedom brings peace and joy to individuals and peoples, the dark shadow of communism and nazi-ism is before them. The efforts and resources of democratic peoples are diverted from the paths of peace, and largely devoted to preparations to resist the aggressions and assaults of the Soviet regime and the Nazi Government which, as I have indicated, are determined to destroy individualism, democratic nations, and the fruits of modern civilization, and to superimpose upon the world their hateful and debasing philosophy. The communistic Stalin Government, with its 180,000,000 of people, extending from the Pacific Ocean to the Baltic Sea, true to its purpose to destroy democratic governments everywhere, is engaged in savage assaults upon democratic, civilized, and Christian Finland.

Communism cannot permit democracy to live side by side with it—indeed, it is a foe to democracy everywhere, and will not be content until liberty-loving people are brought under its control. For that reason, Finland, a progressive, independent nation, must be destroyed.

For more than a thousand years the Finnish people have inhabited the territory we know as Finland. They have developed a high degree of civilization, and in their lives and in their Government they realize the fruits of genuine democracy.

Hundreds of years ago they were converted to Christianity and organized their lives and their political institutions along liberal, progressive, and, indeed, Christian lines. For 800 years they were associated with Sweden, not as a colony or dependency, but, as has been said, as an integral or equal part of the Swedish Kingdom. As all know, the Finns are not Slavs, but are more closely allied to the Nordic race. While maintaining their own language and culture, they were receptive to the democratic and spiritual influences which guided Christian and democratic nations of Europe. I should add, however, that during the Napoleonic period Finland was separated from Sweden and Czar Alexander of Russia and Napoleon brought Finland under nominal Russian rule. However, the Finns maintained their characteristics, their high degree of civilization, their democratic institutions, and resisted all attempts to affect an amalgamation or union, spiritually, politically, or otherwise, with the czaristic government. In 1917 Finland declared its independence, and recognition by many states was promptly accorded it. It adopted a democratic constitution, the general principles of which were not dissimilar to those of this Republic. During the intervening years it has maintained its independence and made remarkable progress materially, culturally, and spiritually. It occupies a most important position geographically, and in a sense is a key for the protection of the Scandinavian states. It has an area of 147,000 square miles and a population of 3,800,000 people. More than 60 percent of its inhabitants are engaged in agriculture and 16 percent in industry and manufactures. Approximately 13 percent are in commerce, transport, and other occupations. More than 62 percent of the land is owned by individuals and more than 90 percent of the land consists of small holdings. Thirty-eight percent of the area is still owned by the government.

Notwithstanding the severity of the climate, the snow and the cold, its inhabitants have made great progress in the development of their country. Cities of importance have been built and railroads and other means of communication meet the requirements of the growing and progressive population. Schools and educational institutions have brought to the people a high degree of culture, and less than 1 percent of its inhabitants over 15 years of age are illiterate. Finland has produced great artists, musicians, poets, writers, statesmen, and scientists. It has been in the van of every liberal and progressive movement and is entitled to the respect, indeed affection of all peoples who love liberty and justice and who are animated by the spirit of the Christian religion.

Communism finds no fertile soil in Finland, and the achievements and peace and happiness of the Finnish people under democratic institutions have undoubtedly aroused the anger, jealousy, and hatred of Stalin and his communistic abettors.

Notwithstanding the fact that the Bolshevik Government pledged itself to respect the independence of Finland and to recognize the boundaries of her territory, Stalin launched his wicked and cowardly attack by land and sea and sky.

I should add that in 1932 a nonaggression pact was entered into between Stalin and the Republic of Finland, and in 1934 it was renewed. Among other things, it provided that any dispute which might arise between the two countries should be settled in an amicable way. The treaty was to remain in force until 1945.

It should be noted that both Finland and the Soviet Government were adherents to the Kellogg-Briand Pact, which solemnly declared that the parties to the same condemned recourse to war and renounced it as an instrument of their national policy toward each other. And further that the settlement or solution of all disputes or conflicts, of whatever nature or origin, which might arise, was never to be sought except by pacific means.

Notwithstanding these solemn engagements upon the part of the Bolshevik Government, it wantonly assaulted Finland. It has marshaled tens of thousands of soldiers and launched attacks upon cities, towns, and hamlets; upon schools, hospitals, and peaceful noncombatants. It has ignored every rule of war and adopted savage and barbarous methods for the destruction of Finland and the annihilation of its people.

History will not record a more heroic and glorious defense of home and country than that which has characterized the Finnish people. The American people, and indeed the people in all countries

where there is liberty and freedom, have been thrilled by the courage and heroism of the Finnish people. Their indignation has been aroused at the course of Stalin and his Bolshevik methods to destroy a peaceful, God-fearing, and democratic people. The Finnish leaders attempted in every honorable way to avert a conflict and made concessions which were infringements upon the sovereignty of their country in order to avert a conflict which they knew would be attended with most sanguinary and frightful results.

They are fighting for their country, for their homes, for their families, for liberty. They have offended no one; they gave no occasion whatever for communistic assaults; they are standing like those at Thermopole, holding back the hordes of Asiatic benightedness. Finland has earned the admiration—indeed, the affection—of all democratic peoples; it is fighting for civilization and the ideals of Christianity. It is the view of an overwhelming majority of the American people that Finland should secure help, because the Finnish people are fighting the battle of western civilization against the enemies of freedom and Christianity, and against a godless and Bolshevik philosophy.

Finland is not fighting alone for her people, she is defending the cause of civilization, justice, and liberty. She is defending the weak and oppressed wherever they may be found. She is a living symbol of a cause which incarnates the hopes, aspirations, and desires of all who seek peace, happiness, and salvation. It seems to me that democratic nations should realize that not only their ideals but their interests are involved in this contest, and yet our Republic is aiding Bolshevik Russia. We are furnishing her with gasoline and other supplies which are important to her in her remorseless efforts to destroy Finland. During the past few months we have furnished her with more than 1,300,000 barrels of gasoline, of a high octane content, which has been employed in bombing helpless men, women, and children of Finland. And I might add in passing, that we are receiving millions of her gold which costs her but \$12 per ounce and paying her at the rate of \$35 per ounce.

It must be apparent that if Finland is destroyed the Scandinavian States may be the next victims of communistic attack, and in such attack Hitler may, and doubtless will, collaborate with Stalin.

We may not close our eyes to the dark clouds which hover over democratic nations. Many believe that republican institutions and democratic governments, are more in danger today than they were in 1914 or in many preceding periods. Certainly communism and nazi-ism, mortal foes of liberty and democratic governments, will wage unrelenting warfare to accomplish their destruction. In this crisis the overwhelming majority of the American people believe that effective aid should be rendered to Finland. They desire that credit should be extended to the Finnish Government in order that it may purchase not only food, but whatever supplies are essential to aid in repelling the attacks of the Bolsheviks.

The American people will not be satisfied with a mere gesture of good will and sympathy to the heroic Finns. They desire that important contributions shall be made by individuals and by groups to aid Finland in obtaining the necessary supplies for the defense of her territory. They desire that credit shall be extended by our Government in order that the Finns may be able to secure munitions and supplies imperatively needed if the hordes at their doors are prevented from triumphing. There should be no delay in affording help to those who are defending their country, as well as the cause of justice and liberty.

Finland's manpower is limited and her resources may not be sufficient for a protracted contest. She needs help and support now. Sweden, as I am advised, has already contributed to Finland more than \$25,000,000 in cash, and supplies and material of the value of \$70,000,000, with no limitation upon the use to which the same might be put.

There are no legal or moral restrictions upon our Government that would prevent aid to Finland in this dark hour. Our Government may extend credit to be employed by the Finns for any purpose that will aid the cause which she is defending. The measure which passed the Senate, providing for the extension of credit by the Export-Import Bank for nonmilitary purchases in the United States, does not adequately meet the situation or provide the aid which should be given by the American people and by our Government to save from destruction a democratic nation and nearly 4,000,000 of people. Already, we know, hundreds of thousands of Finns have been driven from their homes, and succor and support, food, and clothing and medicines are imperatively required. Moreover it is apparent that the Bolsheviks, with their inexhaustible manpower, will launch more formidable attacks not only upon land but from the skies. Finland therefore must, if she is to continue the contest, receive immediate help from the people of the United States and from the people of other nations. A voice should be heard everywhere—"Finland shall not be destroyed. Democratic institutions shall not perish at the hands of an autocratic and godless regime."

When the people of the United States were struggling for liberty, France generously rendered help; and the cause of the oppressed in all ages has appealed to those who love liberty.

As was said by an American poet:

"Is true freedom but to break  
Fetters for our own dear sake?  
And with leathern hearts forget  
That we owe mankind a debt?  
No; true freedom is to share  
All the chains our brothers wear  
And with heart and hand to be  
Earnest to make others free."

## The Democratic Party—Its Mission, Past and Present

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

RADIO ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. BARKLEY. Mr. President, on February 19, in the city of Boston, the senior Senator from Massachusetts [Mr. WALSH] delivered over the radio a very able address on the subject The Democratic Party—Its Mission, Past and Present. I ask unanimous consent that the address may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with pleasure that I accepted several weeks ago the call of the Democratic State committee of Massachusetts to participate in its radio forum for the discussion of Democratic policies and accomplishments.

The special subject suggested for me to discuss tonight is what I conceive to be the more important differences between the major political parties—namely, the Democratic and Republican Parties.

It is the solemn duty of all citizens to strive for the general social, economic, and political betterment of human life and happiness. The chief medium through which that betterment may be effected is the State. It would be an unfortunate day for our country when men lose their respect for the effectiveness of the State to fulfill the State's first duty, that of furthering the well-being of the citizen. The State should be first and always the guardian of the unalienable rights of the citizen and the promoter of the general welfare of the human family. That political organization or party is best for the citizen and the State which most intelligently and adequately secures and preserves these rights.

It is but natural, therefore, that there should be in the actual working out of the many problems of the Government sincere and legitimate differences of opinion as to what policies or what principles are more conducive than others to the general welfare of the people. These indicate the importance, the responsibility, and the differences in the political parties.

In my opinion that political party and those political leaders who will apply principles of natural justice and truth to the concrete facts can best render this service and thereby secure and preserve an abiding faith in the capacity of our form of government to serve society. Because we believe the Democratic Party is best equipped to render this service is the reason for our membership in it. Our party must continue constantly to equip itself to meet these requirements.

Something more than political platforms or party principles or promises is of supreme importance. From the viewpoint of the fair-minded citizen the important consideration that concerns him is to know clearly and unmistakably the kind of political philosophy that leaders and candidates of political organizations represent. Herein must lie the difference between political parties and herein does lie today the difference between political leaders.

After all, what the average citizen, the man with no self-interest to serve, is concerned about is getting to be less and less a knowledge of the political label that a candidate bears or even a knowledge of political platforms and more and more a clear, distinct, and thoroughgoing knowledge of party leaders' convictions on the major issues before the American public. In addition, and what is even more important, they seek to learn that their political leaders or candidates who seek their suffrage are free to serve their countrymen without direct or indirect control or restraint exercised by any self-interested group.

Let us in the light of these basic principles turn to a discussion of the two major political parties in this country—thus we can best discern just what has been and is the difference between the two parties and what is the call to the Democratic Party as a governmental instrumentality for promoting the public welfare.

Of necessity I must speak briefly concerning the aims, ideals and responsibilities of the Democratic Party. However, I shall speak of them in no narrow and blind partisan spirit. I shall not claim for the Democratic Party a monopoly of all the virtues.

It has seemed to me that if I were required to encompass in a single phrase or sentence the underlying distinction between the two great parties in our country I should say that in the Republican Party the major emphasis has been on property rights and in the Democratic Party the major emphasis has been on human rights. The Republican Party's long control of the political machinery of the Government has made it ultraconservative and the servant of vested and selfish interests. This is but natural. The danger ahead for the Democratic Party is, if it long remains in power, that it may

go to extremes in its liberal and reform measures and approach the dangerous threshold of extreme radicalism.

Through the years I believe the Democratic Party has been more responsive to the natural inborn aspirations of the masses for the improvement of their lot. It is the Democratic Party, over the long years that has been thinking most constantly of the needs of the lowly and the suffering and toilworn people and when given the opportunity has translated these thoughts into action. The defense of the rights, the champion of the causes and the extension of hope and cheer into the lives of the underprivileged has ever been one of the missions of our party.

The Democratic Party, even in the years when it was out of office and was the minority and the opposition in the Congress, was ever vigilant in exposing the abuses of privilege and the exploitation by the powerful few. It was ever working for social justice in the best sense of that term. Indeed, the Democratic Party rendered exceedingly effective service to the country during the long years it was out of office, in constructive criticism and in powerful measures for reform. Many who are not disposed to favor or support the principles of the Democratic Party, concede this valuable and useful service to the country.

Under the present situation in American politics, the people make the political issues. The ever-changing economic status of the people from one of apparent prosperity of the depths of recurring depressions and those continuing problems relating to their personal liberty and the equality of their economic opportunities constantly bring to the surface issues that vitally concern them. It is the first duty of public men and political leaders to respect this concern and I believe the Democratic Party has responded more promptly and sympathetically to this demand of the people than the other major political party.

In my judgment, since the depression began in 1929 the voters have made the unemployment problem and the general business depression prevailing throughout the country the dominant political issue in American life. The voters believe that the calamitous conditions which brought about this depression should have been foreseen and preventive measures invoked by the Government long before the economic structure of the country collapsed. It was this conviction on the part of the voters that swept the Democratic Party into power in 1932 and has continued it in power ever since.

In assuming power the Democratic Party immediately undertook an extensive program of reform and recovery. Such a broad and comprehensive program involved the setting up of a large number of new Government agencies, expenditures of vast sums of money and the regulation, never before attempted, of the activities both of the individual and business.

All this naturally led to differences of opinion and criticism. The claim has been made that the attempted reforms were inaugurated too rapidly and in some cases were too sweeping, that unnecessarily large sums of money have been spent for relief and pump-priming and that waste and extravagance has resulted.

I don't think any partisan of the present administration would claim that the stupendous task undertaken has been immune from some complaints. One fact, however, stands out boldly: That the objectives have invariably been praiseworthy is not seriously disputed and that the majority of the American people in each succeeding election since the inauguration of these policies has continued to register general approval of these objectives and the achievements thereunder.

You who are listening to me are familiar with many of the measures that have been undertaken by the Democratic Party to promote economic recovery and social betterment, as well as to end abuses of long standing. The regulation of the stock exchange; the safeguarding of the people's savings by rigid bank regulation and insuring of bank deposits; the protection of the worker against sweatshop wages; securing for the employee his inalienable right of collective bargaining; a reasonable living wage to unorganized workers; more jobs for the unemployed through Government edict lowering sharply the weekly working hours; generous Government loans to industries in financial difficulties; industry freed from sweatshop competitors; decent living homes for people of meager incomes; sectional advantages in industry abolished by uniform hours of employment and uniform minimum wages in all parts of the country; to the aged, the orphaned, the crippled, and the blind a guaranty against pauperism through social-security legislation; unemployed youths, millions of them, trained in C. C. camps and through agencies of the National Youth Administration; food, clothing, shelter, and employment to the needy—these achievements mark a new era in our political and national life.

In effecting such drastic reforms and undertaking such new and untried activities sometimes they have been attended with bureaucratic excesses and public irritation. Our party has now the duty to correct and modify some overreaching methods of administration and possibly some modifications of certain remedial laws. There is no indication anywhere of a general repudiation of the objectives sought. Whatever criticism from the opposing political parties have been generally directed toward the methods of administration.

Let us proceed to polish and perfect the long record of reform we have made, which of necessity had to be done in haste and which in operation would inevitably show defects and possible injustices. Our party must now prove that it is capable of performing this new task, the task of perfecting what it was necessary to do and necessary to do in haste. We should do it with as much harmony and cohesion as possible, without asking any member of our party to surrender his individual and intellectual integrity for

some particular phase of legislation or administration. If we have the constructive ability to recognize that we may have made some mistakes in administration and method—any other attitude would indicate a claim to be superhuman—and that we are incapable of recognizing mistakes and correcting them—we may emphasize and consolidate the gains made and go forth with renewed vigor and confidence to future victories.

We Democrats cannot escape the fact that there is a particularly heavy responsibility and duty on our party at this time—living, as we are today, in most troubled times, with wars and threats of war and political and economic upheavals throughout the world. We are faced today with grave dangers at home and abroad. Our party is in entire control of the Federal Government. We must live up to the high responsibilities that are imposed upon the Democratic Party—which, briefly stated, should with fixed determination prevent our participation in wars not of our making and strive mightily to solve successfully our unsolved domestic problems.

This is no time for mutiny; no time for secession. The task is unmistakably ours. Whatever honest differences of opinion we entertain, let them be directed to the formulation of a sound and sane policy that in the end will strengthen the Democratic Party, preserve democratic institutions, and redound to the general welfare of our citizens.

As we view the war perils in Europe and the governmental problems that confront us at home, and as we approach the political campaign which lies ahead of us, let us be mindful of the underlying realities of our national life. Let us remember that we stand today a united people in the most favored land on the face of the globe, with its vast resources, both God-given and man-made. Let us remember we live under the most democratic and stable government in existence.

Let us remember we are going forward under resolute and courageous Democratic leadership, and let us resolve to continue Democratic leadership.

## Naturalization and Citizenship

### EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

RADIO ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the RECORD an address delivered by me on the subject Naturalization and Citizenship over the radio in Boston on November 16, 1939, to aliens seeking naturalization.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been invited to discuss over this radio tonight the subject of naturalization and citizenship. I am not interested in urging any alien residing in the United States to become a citizen. An alien who needs to be urged, or at least to have pressure exerted upon him in order to become a citizen, will not make a good American citizen. The purpose of my talk is not to urge negligent and unwilling aliens to take the necessary steps to enjoy the privileges, and assume the duties of American citizenship. Rather, it is to encourage the willing and anxious aliens who desire American citizenship and to point out to them that the method of procedure is not as difficult as many assume.

It is gratifying to know that most of our alien population have a real appreciation of the benefits and blessings that America offers to them and their children. At times I think the foreign-born who have experienced absence of civil and religious liberties in the countries of their birth have a greater understanding and appreciation of the free institutions of America than those of us who have inherited them and accept them as a matter of course. It is the old story—the things most appreciated in life are those that are equipped through toil, suffering, and sacrifice. The alien is able also to make contrasts, practical contrasts, from his own experience and those of his forbears, and therefore most of them are appreciative of and anxious to become citizens of this Republic.

My talk tonight is to assure you, our alien residents, that the process to citizenship is an easy one, to point out to you that the difficulties and fears you entertain are greatly overestimated. America welcomes all resident aliens to citizenship, and its desire is to make your change of status from alien to citizen as easy as possible. America merely asks that you give her the affections of your heart that have been developed largely by reason of the knowledge of the personal freedom, the equality of opportunities, and other priceless rights that America gives to the alien and his children in contrast with the land of the alien's birth.

Something more than finding it easier to obtain a livelihood in America than in a foreign land is required of him or her who seeks to change his citizenship to that of America. America expects you to realize fully the rights and privileges her citizens enjoy, to evaluate the freedom, security, and other opportunities to live in America as freemen and with the least degree of bondage that is possible. America expects the alien to seek the high privilege of American citizenship because he is convinced of her superior governmental institutions and of her superior exaltation of this dignity of human beings and her protection of the inalienable rights of men and women, however poor and humble, who live under her protecting flag. Once the alien understands and comprehends what America offers, what America guarantees to all her children, he may be assured that America knows that his heart, his affections, and his sympathies will be for America above every other country in the world. America does not ask you to forget your fatherland, to lessen your pride in the achievements and accomplishments of the men and women of your race in the past. She does not even ask you to surrender your language. America recognizes that the Almighty has not given all the gifts and virtues that humanity possesses to one race, to one nationality, to one nation. She asks you to preserve and bring into the life of America the noblest and best traditions of your race and of your fatherland. Because of the wise political philosophy of her founders and because America has been free from the long-continued and apparently never-ending feuds of Europe, America feels that she can give the alien and his children more than the fatherland in the way of personal, civil, religious, and political freedom and also in the opportunity for material advancement and progress.

America does not claim to possess all the leaders who have contributed to the progress of civilization or the spiritual values of the world. There is no foreign country that cannot through the centuries, point to outstanding scholars, statesmen, soldiers, and saints who have contributed abundantly to the progress and advancement of the human family. America hopes and believes that she has retained and preserved, more than any other land, all that is best and noblest in the advancement of the human family. Unless you are satisfied that the God-given inalienable rights to live, to worship God according to the dictates of conscience, to enjoy freedom of speech, freedom of the press, enjoyment in the largest measure of security, as well as the enjoyment of one's possessions earned by the sweat of his brow, and enjoyment to a high degree of that great national virtue called justice—you should not undertake the duties and responsibilities of American citizenship.

Those who fail to understand the benefits, privileges, and blessings of the free institutions of America are false to themselves and their native land in undertaking to transfer their citizenship to America. America does not seek or want a citizenry of impostors. America wants the heart and affections of the aliens because she believes and claims that in return she can give the alien, as a member of the human family, more of the things of real value in life (not riches) but a larger measure of personal opportunity and freedom than any other land. If these noble and patriotic sentiments guide and prompt the alien to seek American citizenship, he will be welcomed to the fullest enjoyment of American citizenship and enjoy all the rights, privileges, and opportunities that she guarantees equally with those whose ancestors have lived in this Republic since its inception.

I have always felt that the transfer of citizenship by the alien to American citizenship was altogether too much a matter of form and that it ought to be a ceremony approaching as nearly as possible a sacramental religious act. I do not mean that it should be difficult, but I do mean that it should be solemn and profoundly impressive. To those upon whom citizenship is bestowed, as well as those who already enjoy American citizenship, the process of naturalization—the term used in bestowing citizenship upon a foreign-born alien—may appear complicated. It is not intended to be such. The naturalization laws are of a general nature and are cheerfully explained by officials of the Federal Government who are connected with the Naturalization Service. There may be some delay in becoming naturalized. This is necessary in order that unworthy, undeserving aliens should not be speedily inducted into the full enjoyment of American citizenship. For this reason residence requirements, certain character requirements, and to some extent certain educational requirements must be complied with. It is not difficult to meet these requirements. If one cannot meet the basic character requirement, America does not want a citizen who possesses proper requirements to be penalized by association with and denying of rights by those born in other lands who lack the necessary character requirements.

The process of naturalization is exceedingly easy and simple. In fact, many believe too easy. Of all persons applying for citizenship, considerably less than 3 percent are refused because of lack of one or more of the several requirements. You must be able to speak the English language, unless physically unable to do so. This does not prevent your retaining the language of your kith and kin in the old land. You must be able to sign your name to your citizenship application. Indeed, the requirements are meager. The whole procedure of filing the necessary papers and waiting for the necessary length of time for investigation by Government officials is a judicial one. The judges who preside in the naturalization courts are sympathetic, and in no respect are they, or should they, be severe or contemptuous. They are and should be gratified to know of your ambition to enjoy the privileges and assume the responsibility of American citizenship.

Time does not permit a detailed discussion of the requirements for naturalization. Full information on the subject of naturalization can be obtained from civil and Federal organizations interested in the promotion of Americanism, or at the clerk's office of the superior court of our State courts, or the United States courts. I regret that the law requires the payment of a fee to be naturalized. I personally have urged and succeeded in reducing this fee from time to time. It should only be a nominal fee. After naturalization comes registration, which means being enrolled by name in the office of the registrar of voters in the city or town where one resides. Naturalization papers give you the right to enjoy all the privileges of American citizenship, but in order to enjoy one of the highest and greatest of the rights of American citizenship, the right to vote in elections, it is necessary to register as a voter in the city or town where you reside. All American rights are available to the naturalized alien. The process of registering in order to vote is simply for the purpose of having honest elections and correct and honest records of those entitled to vote, and therefore prevent illegal, dishonest, and corrupt election of officials.

I conclude by urging all of our aliens who have the right disposition, whose residence in America has made them realize the value of our free institutions and has given them the understanding of the benefits and privileges America offers its citizens as compared with other lands, to seek the earliest opportunity to become citizens of this Republic. Let me add that citizenship is a priceless privilege. The Federal Government urges no one to become a citizen. It welcomes to citizenship all those who seek it with the proper disposition and attitude. All aliens, then, who desire to secure a full participation in the life of our country should seek, at the earliest opportunity, American citizenship. Do this not because of mere material benefits that America offers to you and yours, but because of the dignity, the freedom, the liberty, the inalienable rights and the opportunities for peace, position, and happiness that American citizenship bestows upon you.

### Life Insurance

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

LETTER BY HON. JOSEPH C. O'MAHONEY, OF WYOMING, AND  
BULLETIN OF THE AMERICAN LIFE CONVENTION

Mr. MALONEY. Mr. President, throughout his services in the Senate, and particularly since the beginning of the studies of the Temporary National Economic Committee, of which he is the chairman, the senior Senator from Wyoming [Mr. O'MAHONEY] has been an exponent—both in and out of this Chamber—of the principle that the powers of government should be exercised to encourage free private enterprise.

Many Senators will remember his speech upon this floor during the last session in support of his amendment to a bill then pending, the purpose of which was to prevent Government competition with private enterprise. That amendment was adopted by this body.

During several weeks past there has been a disposition to attribute to the Temporary National Economic Committee, or at least to the Securities and Exchange Commission, which is represented on that committee, a purpose in the present study of life insurance to lay the basis for some form of Government competition with that industry. There has been no basis for these reports, and it has, I think, been a fortunate thing that the Senator from Wyoming, by several statements, has undertaken to clear the atmosphere, and to demonstrate that the reports which have been in circulation are based upon fear and not upon fact.

Those of us who serve with the Senator from Wyoming know that his purpose, at all times, has been to pursue an objective study of the entire economic system for the purpose of eliminating acknowledged abuses, and of making it unnecessary for government to interfere with the ordinary affairs of our citizens.

The point of view of the Senator with respect to life insurance has been very well set forth in a letter which he wrote on February 10, 1940, to Col. C. B. Robbins, general counsel of the Life Convention, which, with the bulletin issued by

Colonel Robbins, to which the Senator's letter was in answer, I think, should be published in the Record. I ask unanimous consent that that may be done.

There being no objection, the letter and bulletin were ordered to be printed in the Record, as follows:

UNITED STATES SENATE,  
Washington, D. C., February 10, 1940.

Col. C. B. ROBBINS,  
Manager and General Counsel, American Life Convention,  
230 North Michigan Avenue, Chicago, Ill.

DEAR COLONEL ROBBINS: My attention has just been called to the special bulletin, No. 789, dated January 31, 1940, in which you make certain comments upon my letter to Hon. EDWARD T. TAYLOR commenting upon the special bulletin of the American Life Convention issued on December 1, 1939.

It was my purpose in writing that letter to make clear to the public and to the insurance industry that unsubstantial fears were being disseminated through the medium of your bulletin, fears that have had no basis in anything that the Temporary National Economic Committee has done and in nothing that has been published or released by its members. Your bulletin of January 31, while accepting the statements contained in my letter, is open to the same criticism as the former bulletin in that it likewise disseminates fears which are not founded on any act or release of the committee.

You say in your new bulletin, "The statements contained in the pamphlet referring to the apparent intention of some members of the committee to recommend absorption by the Government of industrial life insurance, Federal regulation, and a change in our agency system, were not made following any statement by any member of the committee, but were the only inferences that could be drawn from the testimony of witnesses produced by the Securities and Exchange Commission and examined at great length in regard to those matters." May I say that the inference of which you complain is your inference and not the inference of any member of the committee. You speak of "the apparent intention of some members of the committee," but it is clear from your paragraph, which I have just quoted, that this intention is "apparent" to you, not as the result of any statement that has been made or any release issued by the committee, but by your inference. It occurs to me to suggest that the American Life Convention might well consider it is advisable to draw inferences which it deems antagonistic to the best interests of life insurance and to disseminate them broadcast without any attempt to verify them. No recommendations or suggestions with respect to life insurance have ever been discussed, either formally or informally, at any meeting of this committee or of the Securities and Exchange Commission.

The balance of your Bulletin No. 789 is likewise open to misinterpretation and is not based upon any act, any recommendation, or any inference drawn by the Temporary National Economic Committee. You quote a press dispatch sent out from Washington late in December, and you refer to it as a "release." The fact that you do not describe it for what it was, namely, a story sent out by a news organization, and that you refer to it as a "release," is calculated to give the impression that it had some official character. It had no official character. It was not a release of the Temporary National Economic Committee or of the Securities and Exchange Commission, and the Temporary National Economic Committee had no knowledge of it and no responsibility for it.

Three suggestions were reported in this story to have been advanced. Let me discuss them separately:

The first was "amendment of the Federal Bankruptcy Act to give the Government jurisdiction over insurance-company failures." No testimony to date has been presented to the Temporary National Economic Committee with respect to the application of the bankruptcy laws to insurance companies. It is possible that before the study is completed there may be some testimony with respect to certain failures. Such a study, however, is clearly a part of the fundamental problem of investment.

The second suggestion was "creation of a form of fund insurance similar to the Federal deposit insurance for banks." No testimony has been given to the committee on this subject, and none is contemplated. It is not on the program of the committee in any form, and, as a matter of fact, Securities and Exchange Commission experts have expressed to me the doubt as to the practicability of such a proposal.

The third suggestion was the "establishment of an even more comprehensive control system patterned after the Federal Reserve System for banks, or regulation under an administrative body such as the Securities and Exchange Commission." Again, no testimony on this subject has been heard by the committee and none is to be presented. The committee has at no time assigned any such subject to any of the agencies associated with it for study or report.

I have no hesitation whatever in saying that none of these suggestions has any basis in any action by the committee or in any recommendation to the committee, a fact which might easily have been ascertained by you by the mere expedient of addressing a question to me. That you have chosen rather to place the authority of your office and of the American Life Convention behind the circulation of a press report, frankly, seems rather amazing to me, for instead of arousing the fears of persons associated with the insurance industry you could easily have helped to alleviate them.

Now with respect to your statement that "It is regrettable that Senator O'Mahoney did not mention the matter of State as opposed to Federal supervision \* \* \*." May I call your attention to the fact that insurance companies have in times past been very active and vigorous in contending that life insurance is a national business and should not be subject to State regulation. In your original bulletin of December 1, 1939, you cited two Supreme Court cases, namely, *Paul v. Virginia* (8 Wall 168), and the *New York Life Insurance Co. v. Deer Lodge County* (231 U. S. 495), in order to support the contention that insurance contracts are not within the jurisdiction of the Federal Government over interstate commerce. It is interesting to note that in both of these cases which were taken to the courts by the insurance companies, it was the contention of the companies that insurance is within the commerce clause and, therefore, subject to Federal supervision. The *New York Life Insurance Co.* in the latter case retained the distinguished Harvard scholar Dean Roscoe Pound, to bring all the power of his intellect and knowledge to bear to support the argument which the company was making that life insurance is a business of such magnitude and importance that it should not be regulated by the States.

Inasmuch as insurance companies were the first to suggest Federal jurisdiction over the business, I am at a loss to understand why you should tremble at the thought.

Let me again express to you my conviction that there is nothing in the study of life insurance by the Temporary National Economic Committee in the slightest degree inimical to the insurance industry. The purpose of this committee is not to attack any business or any individual, its only objective, as I have repeatedly stated, is to develop fundamental facts with respect to our economic conditions in the hope of making the system of free, private enterprise more effective. To use the words of President Roosevelt in his message of April 29, 1938, when he recommended this study, may I not say to you that, in my opinion, "It should appeal to the honest common sense of every independent businessman interested primarily in running his own business at a profit rather than in controlling the business of other men."

Sincerely yours,

JOSEPH C. O'MAHONEY.

[Special Bulletin No. 789, American Life Convention, Chicago, January 31, 1940]

LETTER OF THE HONORABLE JOSEPH C. O'MAHONEY TO REPRESENTATIVE EDWARD T. TAYLOR, OF COLORADO, DISCUSSING THE AMERICAN LIFE CONVENTION PAMPHLET "LIFE INSURANCE SHOULD BE SUPERVISED, REGULATED, AND GOVERNED BY LAW IN THE STATES"

Herewith enclosed will be found copy of a letter written by the Honorable JOSEPH C. O'MAHONEY, United States Senator from Wyoming, and chairman of the Temporary National Economic Committee, to Representative EDWARD T. TAYLOR of Colorado. Attached to the letter will be found copy of special bulletin issued by the American Life Convention on December 1, 1939, transmitting the pamphlet entitled "Life Insurance Should Be Supervised, Regulated, and Governed by Law in the States," and also a copy of letter written from this office to the various convention State vice presidents at the time the pamphlet was transmitted to them.

Senator O'MAHONEY makes frequent reference both to the letter of transmittal and to the pamphlet itself, and severely criticizes certain points made in both. Senator O'MAHONEY's statement in paragraph 4, page 3, of his letter to the effect that the convention letter stated that the "Securities and Exchange Commission has 64 investigators at work" is inaccurate. What the letter said was that we were informed that the Securities and Exchange Commission had 64 investigators. That was the information which came to this office from a reliable source at the time the letter was written. Of course, we had no means of knowing accurately how many investigators the Securities and Exchange Commission actually had out, nor does it seem to us that the number is as important as the activities of those they did have out.

The letter is very interesting and very illuminating as to the attitude of the chairman of the Temporary National Economic Committee on the various matters discussed in the pamphlet issued by the American Life Convention. Senator O'MAHONEY's statement that he is in favor of private enterprise will receive the unqualified approval of every life-insurance company, and his further statement that the committee has no intention of attacking the agency system under which life insurance is written, and that there is no intention on the part of the committee to recommend absorption of industrial-life business by any governmental agency, will receive enthusiastic approval among life-insurance men.

It is regrettable that Senator O'MAHONEY did not mention the matter of State as opposed to Federal supervision, which was the whole purpose of the pamphlet, the observations contained in it as to the conduct of the investigation being merely incidental.

I am quite sure that Senator O'MAHONEY's invitation to the life-insurance companies to present to the T. N. E. C. "its own story in its own way" will be gladly accepted by the companies.

The statements contained in the pamphlet referring to the apparent intention of some members of the committee to recommend absorption by the Government of industrial life insurance, Federal regulation, and a change in our agency system, were not made following any statement by any member of the committee, but were the only inference that could be drawn from the testimony of witnesses produced by the Securities and Exchange Commission and examined at great length in regard to those matters.

The following release, sent out from Washington late in December, purports to give the views of members of the T. N. E. C. concerning Government regulation of life-insurance companies:

"Members of the Federal monopoly committee disclosed that they have been considering informally several possible methods for Government regulation of life-insurance companies.

"They have not agreed on any recommendations, but they contend that committee hearings during the last year have shown that some form of regulation should supplement existing State laws.

#### THREE SUGGESTIONS ADVANCED

"Members who favor some form of Federal regulation said that they would not advocate supplanting State jurisdiction, but rather would suggest Federal authority over matters which are beyond the jurisdiction of any one State.

"Among the suggestions which they said have been under consideration are: (1) Amendment of the Federal Bankruptcy Act to give the Government jurisdiction over insurance-company failures.

#### PRINCIPLE OF F. D. I. C.

"(2) Creation of a form of fund insurance similar to the Federal deposit insurance for banks. It would give the Government opportunity to require uniform accounting and make possible the disclosure of any irregularities.

"(3) Establishment of an even more comprehensive control system patterned after the Federal Reserve System for banks, or regulation under an administrative body such as the Securities and Exchange Commission.

"Proponents of Federal control contend that life companies are engaged in many respects in the same business as banks, yet are permitted much greater freedom of operation. Most of the evidence which the S. E. C. has presented to the committee has been designed to show that State regulation is inadequate."

C. B. ROBBINS,

Manager and General Counsel.

## Policy of the United States in the Finnish-Russian War

### EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

RADIO ADDRESS BY HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent and instructive address delivered over the radio last Monday night by the junior Senator from Michigan [Mr. Brown] in the forum conducted by the Washington Evening Star, on the policy of this country in the Finnish-Russian War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The foreign affairs of the United States have been conducted with such sound judgment and ability by President Roosevelt and Secretary of State Hull that there is no substantial group in the United States who disagree. The purpose of our policy is to keep out of trouble. The neutrality law of 1939 does just that. Those who said that if we adopted the Neutrality Act we would be marching down the road to war now find us marching the other way. The only authority that can get us into war is the American people. Wise national leadership knows that it can best serve the American people by influencing public sentiment away from involvement. The Neutrality Act has accomplished its purpose. It has influenced sentiment against participation in Europe's struggle.

Let us examine the evidence. At the outbreak of war the Gallup poll asked this question: "If it appears that Germany is defeating England and France, should the United States declare war on Germany and send our Army and Navy to Europe to fight?" That was in September 1939. Of those contacted in the scientific manner by which public opinion has many times been successfully tested, 44 percent said, "Yes, we should go to war." Last week the same question was put. Those for war had dwindled to 23 percent. Those against war had increased from 56 percent to 77 percent. We are not marching down the road to war. We are marching up the road to peace. Wise national leadership has greatly aided. The Neutrality Act of 1939 has satisfied our people. They can do and are doing what they desire to do, giving all aid possible under our neutrality to those nations we consider to be the friends of democracy and peace.

The American public is definitely pro-Ally, anti-Hitler, and definitely pro-Finnish and anti-Russian. American public senti-

ment wants the Government and the people of the United States to do what can be done within the rules and limits established by international law. An embargo upon the shipment of arms and ammunition would have been a mistake. We were outraged at the outbreak of war. We have an interest in peace. We supposed the Allies had appeased Hitler and were astounded at his utter disregard of his promise at Munich when he said Germany had no further demands in Europe. Our people wanted to show their abhorrence for one who had plunged the world into war and menaced our Nation. If we had by law prohibited our people from doing what a neutral lawfully can do, public sentiment, I fear, would have inundated the country with a demand for participation. But when the people feel that we are doing what is reasonably possible within our neutrality to aid the democracies of Europe, they are content. We know of the prohibition of the use of American ships and the prohibition of American travel in the war zones. We are satisfied that no incident can arise that would give substance to a demand for war.

The isolationist's Bible was the famous book, *Road to War*, by Walter Millis. It is interesting to call attention to the fact that the author in a recent magazine article said that the isolationists were largely concentrating their energies on keeping the United States out of the last war instead of the present one. He asks the question:

"Would a complete Hitler victory produce so direct a threat to the United States that we should risk life and wealth to prevent it?"

I say, no. He further asks:

"If the menace is not great enough for that, is it not at least sufficient to justify our lending economic aid to the Allies even at the cost of unpleasantness from the Nazis?"

This latter rhetorical question sums my own thought up in a sentence. The Neutrality Act permits the American people to give such economic aid as we can in safety, without violating the accepted principles of international law. We are not now neutral in thought and we never were since Hitler violated the promises he gave at Munich. Our morality can never condone, let alone approve, the brutal course he took toward Poland. No President can tell us, as was done in 1916, that we must be neutral in thought. We are not.

Repression of thought or of individual liberty of action as distinguished from governmental action would be unfortunate. Liberty of thought with respect to our international affairs is most desirable. The evidence I have given of the subsidence of the war spirit as shown by the two polls is proof of my contention. What then should be our view and our attitude toward the brutal attack by Russia on heroic Finland? I answer; the widest possible aid from government and from citizen within the limits of our neutrality. Within those limits what can we do?

Since the 1st of February after a series of defeats, the power and weight of Russian arms have been used in an effort to break through the Mannerheim line on the Karelian Isthmus in southeastern Finland. At the present time it is not known what the result will be. The prevailing sentiment in America is so strongly pro-Finnish and anti-Russian that some impatience is exhibited in the public press, and doubtless exists in the public mind as to the delay in getting aid such as our Nation can give to the hard-pressed Finns.

I want to discuss this general subject of Finnish aid tonight. There is no doubt that the American people are opposed to military intervention by it in any of Europe's quarrels. Our experience in the last war and the unfortunate results of the Versailles Treaty which, some believe, aided in creating the conditions which brought on the present war, were greatly disappointing to us. We ask ourselves the question, What was all our effort worth? It only postponed the struggle. It did not remove the basic causes.

Another outstanding fact has increased our determination to remain out of the struggle. It was the practical repudiation of Europe's debts to us. I look upon the \$11,000,000,000 we lost as something in the nature of an insurance premium against war. If it keeps us out, perhaps it was money well spent. But our predominant sentiment is strongly pro-Ally. There is no question but that our neutrality bill was intended and does favor the Allied cause although no one can say it is not strictly in accord with accepted international law.

The Finnish situation is different. They have paid us and are the victims of brutal aggression. I have heard no one defend the Russian position in the United States Congress. What we can do about it is another question.

International law, insofar as it attempted to regulate and control war practice, was torpedoed and sunk when the submarine became a material factor in warfare. International law is now a legal shambles. The structure is in ruins. Those guilty of the grossest breaches forget their own crimes and point the finger of scorn at others whom they charge with violations. In the *Altmark* affair, there seemed to be three features that all can agree upon. Norway did not do its full duty as a neutral; Germany was using neutral waters for war purposes; England violated the neutrality of Norway. In other words, all three violated the generally accepted tenets of international law as it was, before it became a dead letter.

Applied to the Finnish situation the principal reason why we have not made a direct loan of a substantial amount for military purposes is because of our desire to stay within what we understand to be international law. There is no doubt but that a loan for military purposes, for the purchase of munitions of war, would be a violation of international law. But this question naturally arises when one nation flagrantly violates international law, such as has Russia by attacking Finland without a declaration of war, and

deliberately violates a solemn nonaggression pact as Russia violated its pact with Finland by invading that nation—whether such nation by its action is not outside of the pale of international law. Should it be allowed to invoke the law's protection? Cannot the world take the position that such a nation is comparable to an outlaw who has plundered, killed, murdered, and thereby is not entitled to the protection of law thrown about a law-abiding citizen? That was something of the idea back of the League of Nations. A good case for such a justification can be made and would justify any action that our Nation might take.

But I say to the friends of Finland in America—and there are over a hundred million of them—that if we took the attitude I have just expressed and gave direct military aid to Finland, there is no question that we would be considered to be at war, and this I do not believe our people want. Nor do they desire to violate our own interpretation of international law. Therefore, when the Senate Banking and Currency Committee and the Senate Foreign Relations Committee, together with representatives of the executive departments, considered my original bill for \$60,000,000 unrestricted grant to Finland, they found and convinced me that some revision was necessary. This was done. The bill passed the Senate and is now pending in the House of Representatives, where it is expected that it will pass within the present week.

The opposition to the bill is two-sided. It comes first from those who say that we should not make any loan whatever to Finland and that anything we do is a violation of our neutrality. Let me answer that briefly by calling attention to the fact that the present Chief Justice of the Supreme Court of the United States and former Secretary of State, whose attainments in the field of international law are well known through his long experience in international affairs, headed the United States delegation to the Habana Conference in the year 1928. Upon the exact point at issue the Habana agreement of 1928 provided as follows:

"The neutral state is forbidden—

"(a) To deliver to the belligerent directly or indirectly or for any reason whatever, ships of war, munitions, or any other war material.

"(b) To grant to it any loans or to open credits for it during the duration of the war. \* \* \*

"Credits that a neutral state may give to facilitate the sale or exportation of its food products and raw materials are not included in this prohibition."

That convention was agreed to by our Government and was ratified by the United States Senate in accordance with our constitutional practice. No one denies that the bill which the Senate passed is strictly within that declaration. It seems to me that this is a clear and authoritative denial that our action, if the bill passes, will be in any way unneutral or in violation of international law. This provision of the Habana convention and our agreement to it convinced me that the proposal of a nonrestricted military loan would be in violation of our declared policy. The only loophole by which we could have justified a direct military loan from our Nation—our Government—as distinguished from a voluntary loan by our people, is by adopting the view that Russia and Finland are not at war. Many students of international law contend that our Government can and should adopt that view. I cannot. I think the majority of the Members of the Senate do not have that view. Finland and Russia are at war.

The second source of opposition was from those who contend that the bill does not go far enough, that no loan will be made, and that if made it will not do any good. Those who so contend entirely overlook the fact that the Federal Loan Administrator has repeatedly stated before three committees of Congress that he considered Finland a good risk; that Finland would pay. Mr. Jones said:

"I believe Finland will pay her debts. The Finnish people always have, and I believe they always will."

Asked if they would pay in the event there was no Finland, he replied:

"If they are not able to pay now, they will pay later, I believe."

In the event Russia defeats Finland, this does not mean the end of a Finnish Republic. A victory for the Allies will again mean a free Finland.

Those who argue that no loan will be made overlook the fact that the President, on January 16 last, sent a message to Congress calling attention to Finland's perfect record in the payment of her debt, calling attention to the widespread desire on the part of the people of the United States to assist Finland in financing the purchase of agricultural and manufactured products, calling attention to the fact that there would be early occasion to consider applications for loans in Scandinavia, and urging Congress to increase the capital of the Export-Import Bank so that such loans could be made. Does anyone doubt but that the President and the Federal Loan Administrator are both desirous of carrying out the wishes of the American people in this respect? They have already authorized a \$10,000,000 grant to Finland under the limited capital of the Export-Import Bank and have in plain language asked for additional capital so that they might go further. To contend that President Roosevelt and Federal Loan Administrator Jones are not minded to do all that can be done with reasonable safety is to deny the import of their plain language.

The second ground taken by these opponents of the Finnish loan bill is that the restriction in the bill will prevent any effective aid to Finland, that what Finland needs is soldiers, shot, shell, airplanes, and tanks. Of course, we as a Government, cannot send them soldiers without being at war. Many citizens not only from the United States but from other countries, particularly from the Scandinavian countries, have enlisted, and the

number is daily increasing. Let us see what the restriction of the bill is. It says that we shall not make a loan for the purchase of any articles listed as arms, ammunition, or implements of war by the President of the United States in accordance with the Neutrality Act. I have that list before me. It would take more time than I have to read it. It is better for me to detail what can be bought that will be of aid to the Finnish people. It must be remembered that the manpower of Finland, including those up to the age of 45, are in the army and their productive power thereby greatly decreased. Taking the year 1938, and I assure you it is typical, the three highest exports in value from the United States to Finland were cotton, oil, and cereals. If they needed these commodities before the war, they need them a great deal more now when their manpower has been mustered into military service. All of these and, of course, other food products, may be purchased under this bill.

The important needs of the army, I am reliably informed, are divided into four classes—transportation, foods, and medicines, general supplies, shelter and personal equipment. In transportation the army needs horses, mules, harnesses, saddles, wagons, railroad engines, rolling stock, motortrucks, automobiles, and, most important, oil and gasoline. You must remember that including transportation in Finland is largely by water. They have 2,500 miles of interior water navigation. Motorboats, rowboats, pontoons, steel for bridges are all needed and may be purchased under this bill. In communication there is telephone and radio equipment. In the line of foods and medicines, there are all foods, including forage for the horses and mules, hay, oats, etc. There are first-aid kits, splints, surgical instruments, medicines of all kinds. In shelter and personal individual equipment canvas tents, blankets, sleeping bags, mittens, socks, shoes, boots, earmuffs, all clothing, civilian gas masks, binoculars, parachutes, all of which may be purchased in the United States under this bill. Finally, in the line of general supplies, there are searchlights, which are badly needed for the spotting of airplanes, sound detectors, barbed wire, which is most valuable for defensive purposes, and many other articles too numerous to mention. All of these things not only may be purchased but they are essential, and their supply under this bill will leave funds and credits which the Finns have with other nations available for the purchase of shot and shell, or gun and plane, which we cannot under our law furnish.

So the claim that this is a mere gesture, that the money will do Finland no good, is without foundation. The American people can assume that this administration will loan and that this bill will do just what it is designed to do; it will give Finland \$30,000,000 worth of vital and essential aid.

But I think we should do more. It should be done by the American people. Much has been done and much more can be done. I am in thorough sympathy with Major General O'Ryan's organization, Fighting Funds for Finland, and I urge upon all the friends of Finland in America to contribute as liberally as they can to this organization. Contributions here in Washington can be made to the Riggs National Bank, and throughout the country in designated similar institutions. This is the field where the private citizen is unrestricted. The Senate, by resolution, has invited such aid by loan. By gift we can do more. No tenet of international law, no rule of neutrality prevents a citizen from either giving or loaning funds for any purpose whatsoever. The American spirit of fair play, our sympathy and our appreciation can be given full expression in the form of gifts to the fighting funds for Finland.

Others may view without emotion the spectacle of the mighty Russian nation, the most extensive in the world, with the largest standing army in the world, attacking a small, peaceful, inoffensive nation. I can not. Russia outnumbers Finland in population almost 50 to 1. Without the slightest provocation, on a demand for cession of territory and the establishment of naval and military bases which no nation could grant and retain its self-respect, this modern barbarian power—and I cannot call it else—launched its attack in the dead of winter, when the way over Finland's lakes was open. A fervor of patriotism has so far enabled this little nation to stop—nay, repeatedly, to defeat the Russians. Their stand has aroused the admiration of the world. Their fight is purely defensive. Their sole objective is the defense of their nation, their government, their homes, and their people.

The danger to us now seems remote. But let the unholy doctrine of these Communists who control the most extensive country in the world, with a population of 180,000,000, succeed in Finland, and it is then but a step to Sweden, to Norway, and to Denmark. They may stop there for a breathing spell, but the menace will then grow to plague the selfish but thoughtless German who unleashed and encouraged this unchristian monster. It is not difficult to vision a result in Europe that will leave Germany, England, France, and others with their youth sacrificed; their economic condition prostrate, in debt so far that repudiation is the only way left. That is the opportunity these cultures are waiting for. Christianity and civilization as we know them may be no more in the Old World. I do not predict it. Finland now holds the front for Christendom. Sweden, Norway and Denmark, England and France, prostrate Austria and the Czechs, and even Italy are doing much to aid them; let not powerful America fail them. Our Government will do all it can within our neutrality; more must come from the American people. The courageous Finn has exposed to the world the weakness of the Bolsheviks. Let us do all within our power to aid them.

## Lincoln Day Address

### EXTENSION OF REMARKS

OF

### HON. STYLES BRIDGES

OF NEW HAMPSHIRE

### IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Albuquerque, N. Mex., on the 14th instant.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On Monday, we celebrated the birth of an American whose very name is a cherished part of our national tradition. To those of us who are Republicans, the memory of Lincoln is more than dear. It is an inspiring challenge which we, as the inheritors of his party, must carry forward.

We always think of Lincoln as a great humanitarian. Love of humanity was his outstanding quality. From it sprang his passionate devotion to the cause of freedom. But both were tempered with a homespun wisdom.

Lincoln was not only an idealist, but a realist endowed with good, hard common sense. He knew what it was to struggle for existence. But the abundant life he sought for men was not one planned and distributed by the Government, but one which assured them the reward of their labors and the opportunity to rise as high as they are able.

"The legitimate object of government," he declared, "is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

Thus, Lincoln sought not the extension of the Government, but to extend to men of every race, creed, and color the ideal upon which this Nation was founded—freedom of each to seek his own destiny. In the dark days through which he guided the Nation, he saw its problems in terms of human life and happiness. That is the standard by which human progress must ever be measured.

But there is a vast difference between true humanitarianism and experiments conducted according to blue prints of theorists in the name of the ill-fed, ill-housed, and ill-clad. They may be designed to achieve for the underprivileged all that the planners consider is good for them. They must show the road to Utopia—on paper. But the real test is not the "social objective," however noble, but the result in terms of human welfare and progress.

At the beginning of the New Deal crusade three groups in particular were the object of their solicitude and promises—the unemployed, the worker, and the farmer. Eight years later, as the American people go once more to the polls, the problems of unemployment, labor, and agriculture are no less pressing than when the New Deal first took office. The man who is out of work, the farmer, and the worker are beginning to realize that the New Deal has not only failed to solve their problems but that they themselves have paid most dearly for New Deal experiments conducted on their behalf.

First, there is the New Deal policy of spending under the plea of helping those in need.

From the time that it took office in 1933 to the end of the last fiscal year, on June 30, 1939, the New Deal had spent nearly \$48,500,000,000. For the last fiscal year before the New Deal took office expenditures amounted to less than \$41 for each man, woman, and child. For the fiscal year 1939 this rose to \$70.65 per person. Taxes have been the highest in our history. In 1933 the Federal Government collected \$16.54 per capita. In 1939 this rose to \$43.21 for each person. Today the interest on the Federal debt alone is greater than the total expenditures of the National Government for any year in its history up until 1917, with the one exception of the year 1865, during the Civil War. In less than 8 years the Federal debt has risen \$22,000,000,000. In 1932 the share of each American of the debt was approximately \$158. Today it is, roughly, \$316.

It is almost impossible for any man to conceive of the meaning of the figure 42,000,000,000. And yet if such a debt were to be paid off at the rate of half a million a day, 360 days a year, it would take over 222 years to pay the forty-two million alone, to say nothing of interest. And yet we are still spending, as we have for years, at that same rate of a half million, not every day, but every hour of every year.

Obviously you and I cannot begin to pay this gigantic debt which we have accumulated within so short a time. The New Deal is sure to be remembered by future generations of Americans primarily for the heritage of debt which it bequeathed to them.

And yet, although we are leaving nearly half the price of our extravagance to be paid by posterity, you in New Mexico, along with the rest of our people, are bearing the burden of terrific

taxation which falls upon rich and poor alike. Not only has it crippled business and eaten into the buying power of the Nation but it reaches even into the relief check, depriving those in need of food and clothing. It is estimated that approximately 20 cents of the dollar spent by the poorest family in the land goes in hidden taxes paid on the bare necessities of life. For the average family it is nearer 30 cents out of every dollar, and for those who are well-to-do it is even higher. Thus these hidden taxes are paid by farmer and worker alike, adding to the cost of living of every citizen, whether he realizes it or not.

This is but one of the ways in which the New Deal, which has set itself up as the friend of the underprivileged, has actually hurt them most of all. The wealthy can afford these hidden taxes. It is the man who is unemployed, it is the poorly paid worker with a large family of little ones, it is the farmer who is struggling to make both ends meet who can afford them least. It is the little man, the man who is just starting out on a business for himself, who is taxed and regulated out of existence.

Lincoln, who began life so humbly, knew the value of money. He would have regarded a government which by its spendthrift policies places so heavy a burden upon those least able to pay as oppressive and one that must be curbed. The freedom we must seek today is freedom from the shackles of stifling taxation and the burden of increasing debt.

Then there is the New Deal campaign against business, which, strangely enough, has been carried out in the name of the underprivileged. But who has suffered most from this hostility? Businessmen have suffered surely. It has hurt industry, of course. Yet those who have suffered most have been the worker, the man who is unemployed, and the farmer.

Let me illustrate by a recent experience of mine. The dining room of the Senate Office Building is frequently crowded during the noon hour. One day I had taken the last vacant table. I had nearly finished when two gentlemen came over and, apparently not recognizing me, asked if they might sit down. One, evidently an investigator for some Government agency, was telling his friend how he went into the offices of various companies and took what he wished from their files.

"Don't they object?" asked the second.

"Oh, no," replied the first. "They figure we'll be easier on them if they give us whatever we want."

"With so much power, there's certainly plenty of opportunity for abuse," remarked his friend.

"So what?" was the reply. "What if we do abuse our power? Abusing a company is not like abusing an individual, is it?"

By this time I had finished my lunch and left the table, despite a temptation to stay and enter into the conversation. I wanted to point out that the abuse of an individual may affect but one person, while the abuse of a corporation touches many lives. It may affect not only the heads of that company but the lives of all those it employs and of their families. It may affect the lives of workers and their families who are engaged in every business dependent upon that industry. If such an abuse adds materially to the expense of production, if it results in the reduction of the wages of workers in that industry and in others dependent upon it, thus cutting their purchasing power, it will affect other industries and their workers and their families as well. If it forces the company to raise the price of its goods, it reaches into the pockets of every consumer. In short, it touches not only the head of that company but the lives of countless hundreds who have even the slightest connection with that business or apparently none at all. Government hostility toward business may be unjust to the successful head of a corporation which has been able to save for the future. But it is cruel to the man who is deprived of his right to work and kept dependent upon the Government for existence. It is cruel to the worker who is deprived of that long-awaited and much-deserved increase in wages. It is cruel to the thousands of young people who graduate from our schools each year and start out in search of jobs with high hopes but are unable to find them.

Lincoln believed it the duty of the government of a free people to assure a genuinely free economy as the first and best hope of preserving the opportunity of the individual to rise according to his abilities. To him the stifling of individual initiative and enterprise would have been too high a price for a people to pay for any administration, however attractive the picture it paints of Utopia. He would have maintained that men are not free if they are harassed, restricted unnecessarily, and regarded with suspicion or distrust by those who administer the affairs of government. The freedom of men to reap the fruit of their labors and to go forward so long as they do not interfere with the rights of others is a freedom that needs to be reasserted today.

But this is something that New Dealers, for all their boasted social objectives, cannot or will not see. Considered in these terms, no group of our people has paid a higher price for the New Deal than have the unemployed. Who is the victim when Government hostility toward business keeps them out of work? The unemployed. Who suffers most when capital is idle because men hesitate to invest due to uncertainty as to what the Government will do next? The unemployed. Finally, who suffers the most from the extravagant bureaucracy that has been set up to administer relief? The taxpayers—and that includes all of us—pay the bill, of course. But is not the group that is hurt the most the unemployed themselves, who see so much of the money appropriated for their relief dissipated in costly administration and not in-

quently allocated for political advantage rather than on the basis of human need?

The worker, too, has paid dearly. Who is most hurt when the money taken from him in the name of social security is spent on pump-priming projects? The worker. Who is the victim when Government taxes upon business must come in large part from his pay envelope? The worker. Whose job is endangered when Government competition with business causes it to lay off men? The worker's. And, last but not least, who suffers when his union is arbitrarily destroyed by a board presumably established to assure his right to genuine collective bargaining? The worker.

To Lincoln it would be obvious that the unemployed and the worker are paying too high a price for any benefits—actual or theoretical—that they may receive under such an administration; and that they cannot be truly free under such conditions. As he would not have them the slaves of other men, so he would not have them the wards of the state.

The American farmer, like the worker, has had to pay the price of New Deal policies toward other groups. He, too, has been taxed to support the unemployed who have been kept on relief by the administration. When industrial strife has added to cost of production, he, too, has had to pay a higher price for industrial goods. When some 10,000,000 of our people are barely subsisting, when taxes consume money that would otherwise go into wages, there can never be sufficient purchasing power for those who live in the cities to buy enough or pay enough for agricultural products. The farmers cannot be prosperous under such conditions. Contrary to New Deal philosophy, purchasing power cannot be increased by Government subsidy, which is looked upon as a redistribution of wealth but which in reality is more likely a slow destruction of wealth. Increased buying power can come only from two sources—a revival of business, which adds to the total wealth of our people, and a reduction of taxes, so that less of their income will be eaten up by the Government, leaving more for them to spend on themselves. Yet this simple economic truth seems to be beyond the comprehension of new dealers.

Yet the reduced buying power of the rest of our people is not the only consequence of New Deal policies from which the farmer has suffered. He, too, has been the object of special attention from the administration, and once again the very measures put forth in the name of helping him are among his most serious problems. Today he is at the mercy not only of the Department of Agriculture, but the Department of State as well. The A. A. A. has succeeded in adjusting agriculture to a program of regimented restriction and scarcity at home. On the other hand, under the reciprocal-trade program, the farmer has steadily lost his foreign markets, and has had to compete with an ever-increasing inflow of competitive agricultural products from foreign countries.

According to the report of Secretary of Commerce Hopkins, the total volume of American exports to foreign countries for the years 1938 and 1939 was about the same—a little over \$3,000,000,000. Yet the farmers' share dropped from over \$763,000,000 to approximately \$578,000,000 during the first 11 months of the year, a decrease of over 24 percent. On the other hand, the importation of foreign farm commodities increased nearly 14 percent.

Secretary Hopkins gives an interesting reason for this. It was due, he says, to the improvement in business this year, which made necessary the increased importation of foreign raw materials, to keep our factories busy. And Secretary Wallace has announced that it is vital to maintain rigid curbs on farm production at home. Between the two, it would seem that the American farmer is not to be allowed to increase production to meet the demands of American industry for raw materials. The benefits of any revival of business, apparently, is to go to the farmers of other lands. I ask you, my friends, does this make sense?

Perhaps no group of farmers have suffered more from these policies than those engaged in the raising of grains and livestock. Our exports of grain dropped in value from two hundred and fifteen million in 1938 to ninety-three million in 1939. This meant a loss of over thirty-six and a half million dollars to wheat farmers alone. In 1938 we imported approximately 10,000,000 more pounds of cattle hides than we exported. But in 1939 we brought into the country over 80,000,000 more pounds of cattle hides than we sent to other nations. In 1939 we imported nearly 130,000,000 pounds of wool, or almost three times as much as in 1938.

The result of this trend of increased imports and decreasing exports over a period of years is clearly reflected in the prices which the farmer has received. Wool brought the lowest price since 1935. Here are the average cash prices received for wheat: 1937, \$1.23; 1938, 88 cents; 1939, 57 cents—the lowest since 1933. Barley and oats also brought the lowest prices since 1933. In 1937 the farmer received an average of approximately \$1 a bushel for corn. In 1939 this dropped to 45½ cents a bushel—the lowest since 1934. Can it be mere coincidence that so many prices have dropped steadily ever since the reciprocal-trade treaties began?

True, negotiations for a new treaty with Argentina broke down. But surely it was not the fault of Secretary Hull. Do you know that the State Department offered to lower the duties on linseed, canned meats, wool, hides, tanning materials, and other animal products? True, there was to have been a quota on many of these, but that quota was to be set above the average shipment of these Argentine products to this country in recent years. Moreover, there was to be no limit to the amount that could be brought in over and above the quota at the present rate of duty,

under which the Argentinians have done very well indeed during the past few years. And, although negotiations have been temporarily suspended, there is nothing to indicate that these concessions will not be made if the power of the State Department to make them is renewed without check.

An example of restriction at home and increased imports from abroad, is furnished by potatoes. A few years ago, rigid restrictions were placed upon their production. Remember the specially stamped sacks in which we bought them for a while, and the proposed penalties for "bootleg" potatoes? It is significant that last year, when we reduced our production of potatoes by approximately 13,000,000 bushels, we increased our importation of foreign potatoes by nearly 12,000,000 bushels.

You do not need to be told what all this has meant to the farmers of corn, wheat, potatoes, cattle, and sheep in New Mexico and to the grain and livestock farmers throughout the country.

Lincoln was a firm believer in a "moderate, carefully adjusted protective tariff, so far acquiesced in as not to be a perpetual subject of political squabbles, changes, and uncertainties." He knew that if the farmers and workers of America are to be free from the unfair competition of cheap foreign labor, if they are not to be dragged down to the peasant level, they must receive such protection from their Government.

Such are conditions today that no relief or subsidy check from the Government can remedy, no eloquent expression of sympathy for or promises to the ill-fed, ill-housed, and ill-clad can compensate. The American people are awakening more and more to the fact that the New Deal has failed not only in its promises not only to bring about recovery but to aid those who need it most.

The unemployed are not content to be wards of the Government. What they demand is the opportunity to work for themselves and their loved ones, and to take their rightful place as self-respecting and creative members of their communities. After nearly 8 years they have learned to their bitter disappointment that they cannot expect this from the New Deal.

The farmer is not content with subsidy checks for not producing. He resents the attempts to regiment his farm from Washington and to restrict his production. His common sense tells him that he can succeed only under a government which encourages an economy of abundance instead of one of enforced scarcity, which protects the domestic market that is rightfully his, and which makes it possible for him to compete for the markets of the world. He knows that he has not had such a government under the New Deal.

The true friend of the unemployed is not the administration which hands out the largest relief checks but the one which makes it possible for them to go back to work in private industry. The true friend of the worker is not necessarily the administration that writes the most laws and appoints the greatest number of officials to care for his interests, but the one which makes it possible for him to have full-time employment under decent conditions at increasing wages. The true friend of the farmer is not the administration which hands out the largest subsidy checks and sends out the greatest number of officials to tell him how to run his farm and what he may or may not plant, but the one that makes it possible to expand his markets, to improve and develop new uses for his products, to raise them less expensively, and to get a higher price for them.

The Republican Party offers no tempting panaceas as the solution to the problem of unemployment, labor, or agriculture. It knows that progress is not measured in terms of social and economic theory but rather in terms of the happiness and prosperity of the individuals who, together, are the American people. It knows that the test of the solution to unemployment, labor, and agriculture is not the amount of class legislation written to benefit any one group or the number of Government officials delegated to solve their problems but the extent of prosperity of our people as a whole.

The Republican Party stands pledged to the revival of our system of free economy as the only way of progress. It stands pledged to the removal of every obstacle to employment and production and to lend every encouragement to expansion and to the creation of new wealth. This—and not social and economic theory—will be the standard against which we will measure legislation, present and future.

That is why we intend to ease the burden of taxation upon all of our people. That is why we stand for the revision of the Wagner Labor Act in the interests of industrial peace and progress and of true freedom and justice to employer and employee alike. That is why we will revise the Securities and Exchange Act to encourage every legitimate investment. That is why we will take the American Government out of competition with the American people. That is why we will protect the American market as the birthright of the American farmer and worker by returning to Congress its constitutional power to ratify the treaties, and by seeing to it that competitive foreign goods are not sold in this country below the American cost of production.

Such a program carries forward the tradition of the party of Lincoln, a party born to further human freedom. It carries forward the American tradition of progress through the release of human energies. Under it capital and labor, industry and agriculture will not fail to go forward, not as classes but as Americans, to new heights and to a happier and more prosperous day for all of our people.

## Relief Expenditures in San Antonio, Tex.

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

REPORT OF SOCIAL WELFARE AND FACT-FINDING COMMITTEE,  
BEXAR COUNTY, TEX.

Mr. BARKLEY. Mr. President, I have received a copy of a report by the Social Welfare and Fact-Finding Committee pertaining to certain conditions in the city of San Antonio, Tex., and, inasmuch as it is thought to be typical of conditions that may exist in other similar cities with reference to social and economic conditions and the matter of relief expenditures, I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

#### REPORT OF SOCIAL WELFARE AND FACT-FINDING COMMITTEE

The Social Welfare and Fact-Finding Committee held its first meeting after the preliminary appointment meeting on September 20. The committee was made up as follows: F. M. Frasher, Franz C. Groos, Theo M. Plummer, Dr. G. A. Pagenstecher, Leo M. Dubinski, Gus P. Menger, L. E. Fite, Robert E. Kingston, H. Van De Walle, Mike Pleniazek, and W. B. Tuttle.

The committee decided to make an investigation of the amount of expenditures being made in Bexar County by the Federal, State, and local governments for relief purposes, this to include employment by the W. P. A., the C. C. C., the N. Y. A., the issuance of surplus commodities, and other relief.

In order to expedite the investigation each member of the committee was assigned a definite field to look into, and requested to make a report in writing as to his findings. The committee met each Wednesday night for several weeks and heard the reports of the various members, and considered the data furnished in these reports.

Just prior to October 11 the committee requested representatives of the San Antonio Social Workers' Association to appear before it and present such information in regard to relief work, and in regard to the needy people in the city, as they deemed proper.

On Wednesday, October 11, the representatives of the San Antonio Social Workers Association appeared before the committee, being represented as follows: Brother Herbert F. Leles, president San Antonio Social Workers Association; Mrs. Val Keating, associate director of State W. P. A. Employment; Mrs. Clare Green, supervisor of City-County Family Welfare Agency; Mrs. Augusta L. Barnes, executive secretary of the American Red Cross; Mrs. Nora Kelly, supervisor of Santa Rosa Clinic; and guest speaker, Dr. G. W. Hudson, second-year interne, Santa Rosa Clinic, pediatric department.

Information was generally obtained from the agencies listed, and is believed to be substantially correct, although there were conflicts in reports from different branches of the same agencies, and the figures vary even from day to day.

The findings of the committee are as follows:

The total amount of money now being spent in Bexar County by public agencies, nearly all Federal, for relief and for made work is approximately \$7,000,000 per year, exclusive of farm subsidies. The largest part of this expenditure was by the Works Progress Administration, which on September 27 had 9,720 qualified applicants, mostly unskilled, representing about 39,000 people. The funds allocated to the W. P. A. permit the employment of only approximately 4,922 cases, leaving about 49 percent that cannot be employed. The actual pay earned by those employed is about \$43 per month though it is intended, at least in theory, to be \$53.76 per month for 130 hours' work.

For the year ending August 31, the W. P. A. expenditures were approximately as follows, including administrative expense which is partly relief:

Labor	\$3,562,929	
Nonlabor (mostly supplies)	432,359	
		\$3,995,288
Sponsors (local governments and Army):		
Labor	87,868	
Nonlabor	775,748	
		863,616
Total		4,858,904

Plus perhaps \$400,000 by Army sponsors not reported.

The second largest relief item is the free distribution of surplus commodities furnished by the Federal Government and distributed

through the State department of public welfare. The total distribution at retail values for the year ending August 31 were:

Food.....	\$474,999.74
Clothing.....	404,314.50
Total.....	879,314.24

to an average of 7,482 cases, or 33,682 persons per month, at a cost of \$9.79 per case per month, which is, of course, inadequate for the sustenance of a family, even if the ration was balanced. The average Texas case in 1938 was \$14.65. Greater quantities of commodities could have been secured if funds had been available for proper storage. Cars of eggs worth \$2,500 each have been shipped elsewhere for the lack of approximately \$40 per car for storage. Likewise, cars of butter worth \$6,000 have been lost for lack of \$200 for storage. The greatest losses cannot be estimated; they are those cars of food that are not offered to this county because its attitude is known from previous experience. This may explain why the average State case is 50 percent more than in Bexar County.

Old-age assistance: 4,616 persons in Bexar County received \$15.50 each, or \$71,548, in August, which, if this is a typical month, is at the rate of \$858,576 a year. These figures vary from month to month.

Civilian Conservation Corps: 992 Bexar County boys were paid a total of \$29,760, or at \$30 a month; \$22 each, or \$21,824, was paid direct to their families and \$3 each, or \$7,936 to the boys. If this was a typical month (September), the yearly total is \$337,120.

National Youth Administration: 745 Bexar County boys and girls were paid \$14.26 each, or \$10,623, in September, which, if typical, is at the rate of \$127,476 a year.

Student aid: 586 Bexar County students in higher grades, in addition to N. Y. A., are paid \$6 per month each, or \$42,192 per year, for lunches, bus fare, etc.

Unemployment compensation: Neither the local nor the State office apparently had any figures by counties, and the best guess is that 2,500 cases, or 10,000 people, in Bexar County receive about \$50,000 per month, or \$600,000 annually.

Summary	Cases	Persons	Amounts <sup>1</sup>
Work Projects Administration (only 4,922 cases employed).....	9,720	39,000	\$3,995,289
Surplus commodities.....	7,482	33,682	879,314
Old age (part State).....	4,616	4,616	858,506
Civilian Conservation Corps.....	992	4,000	337,100
National Youth Administration.....	745	745	127,476
Student aid.....	586	586	42,192
Unemployment compensation.....	2,500	10,000	600,000
	26,641	92,629	6,839,877
Less probable duplications.....	8,641	26,629	-----
	18,000	66,000	-----

<sup>1</sup> Federal only.

The probable duplications are principally in the Surplus Commodity case load, viz: While W. P. A. employed are seldom eligible for commodities, the unemployed are, and are therefore in both W. P. A. and Surplus Commodity figures above. There are about 5,000 such W. P. A. cases, or about 21,000 people, and the same applies in less degree to other classifications.

We omit the sponsors' costs because some are not available, and they are mostly material and nonrelief labor, or for work that would be done regardless of W. P. A. We took no account of farm subsidies, nor war pensions, nor retirement pensions, nor of about 50 cases monthly at about \$60 each of old-age insurance, which are not relief. There are also under way about \$11,000,000 of slum-clearance projects.

Except for old-age and some Surplus Commodity cases, those aided are mostly able-bodied people, and Government agencies by no means cover the field of distress, or even the most helpless and deserving cases. Types for which the governments make little or no provision, and which must depend on private charity, are illness, including permanent tuberculosis; crippled; widowhood; dependent children; broken homes; families with the breadwinner sick, disabled, imprisoned, or otherwise economically helpless; etc. These must depend mainly on private charity. Nowhere does the Federal Government provide food (except the small, unbalanced ration of the surplus commodities), rent, fuel, etc.

The committee investigations of the methods of distributing relief benefits develops the fact that in all cases, excepting those applying for old-age pensions, an applicant must register at the office of the city-county family welfare agency in the old DeZavalla School at Austin and Eighth Streets.

The city-county family welfare agency is at this time financed by the county commissioners, and it has the duty of registering applicants and investigating each case after registration. The investigation bureau has an average record of upward of 9,000 cases, of which approximately 7,500 are active. Of these, on October 1, there were as follows:

Alien employables.....	2,248
Alien unemployables.....	585
Latin American citizens.....	2,239
Latin Americans.....	5,072

There is an insufficient number of persons employed by the City-County Family Welfare Agency in registration and investigation work. During the past year Bexar County provided approximately \$18,000 toward this work. The office employs approximately 50 people, including 6 outside workers. This 50 is made up of 19 people employed by the county, 11 to 15 by the State, and about 15 young people who are in the office for filing and errand work and are supplied by the N. Y. A.

The original set-up contemplated one case worker to only 150 relief clients, and the load has grown until today there are approximately 1,250 cases for each worker. For this reason the workers are only able to grant interviews several weeks after applications, and to contact clients for investigation once in about 6 months, instead of once every month as originally planned. This is why there is so much complaint about the time required for an applicant to be given help. They need 35 case workers instead of 6, which would mean an average of about 220 cases per worker. A case worker can handle about 150 temporary or shifting cases, and about twice this many permanent and semi-permanent cases.

The rations distributed are issued through a commissary, which as a method is very inferior to the stamps and purchases through stores, as explained in the next paragraph. Nonperishable food supplies are issued monthly, and perishable food twice a month. The list of commodities supplied over a year's period might provide a fairly well-balanced ration, but no attempt is made to store and regulate the issuance of the various commodities, and as a result important food items are often lacking, and the commodities issued are not of a type to properly provide sustenance. It must be remembered that surplus commodities are surpluses bought by the Government to stabilize certain prices, and are given away only incidental to relief, and no effort is made to have a balanced ration; even if balanced it would equal in quantity only about 1 week per month necessary supplies. In addition some of the supplies are perishable and many of the people on relief have no facilities for keeping them, butter and fresh fruit and vegetables, for instance.

The committee has investigated a plan now in the experimental stage by the Federal Surplus Commodities Corporation as a substitute for the unsatisfactory commissary method of distribution, and approves it. Orange-colored food stamps are sold for cash to registered persons and are used at stores for purchasing food supplies. The object of purchasing the orange-colored stamps is that a 50-percent bonus in blue stamps is given with them. The blue stamps are good only for the purchase of those commodities which are listed as surplus by the Government. Blue stamps are also issued free without the purchase of orange stamps to those persons who are eligible for surplus commodities. This is simply a different and better way of distributing surplus commodities than by the commissary method. The plan has several advantages. It does away with the commissary and saves the beneficiary long trips to obtain his supplies. It further enables the beneficiary to obtain perishable foods in smaller quantities and all foods in far greater variety. It is also beneficial to the merchants as it does not upset the economic distribution system.

From the reports submitted by the San Antonio Social Workers Association it would appear that there is a great deal of malnutrition, particularly among the children of Latin American extraction, and that many cases of disease can be traceable directly to malnutrition and its complications.

In this connection the committee investigated a proposed plan for setting up a W. P. A. project in the schools to provide lunches for underprivileged children, but it was found that such a project would have to be applicable to all children whether underprivileged or not, and it was reported that the school board had investigated the conditions and found that there were approximately 2,000 children in serious need of additional food, and that it was not considered possible to put on a project which would involve all school operations to relieve these 2,000 children. It was also reported that private agencies which could discriminate between cases of necessity and others had in the past taken care in part of this situation.

It is the committee's understanding that the county has the legal power to furnish funds for relief purposes, including investigation of relief cases and the administration of the necessary organization. The Federal Government requires very little of the States and local governments, so little in fact that it should be done. This division, however, causes confusion and friction out of all proportion to the amount involved. The public pays for it all and will get a better job if the Federal Government does it all and has all the authority and responsibility.

An investigation of the needs of rural population developed the fact that in the eastern part of the county a large number of families, normally self-supporting, were in serious distress on account of the 2-year drought which had prevailed, and that representatives of these families in most cases did not have the means of coming to San Antonio and getting on the W. P. A. rolls, or of coming to San Antonio for ration issues; and that in some cases, by reason of being landowners, or land renters owning tools and animals, they are not eligible for either W. P. A. or agricultural relief although now in dire necessity.

During the past few years there has been a considerable development of low-wage industries in San Antonio which have in part helped support the Latin American population. Recently changes in the labor and hour law have caused the abandonment of some

of these industries, the removal of others to other locations, and the replacement of hand labor by machine in others, so that the opportunities for industrial employment have been greatly reduced.

The committee finds that in San Antonio and its suburbs the Latin American population is the most serious problem. San Antonio formerly was the home of a great many persons of Latin American extraction who played a leading part in making the cotton crop in Texas. Many of these families left San Antonio in the spring and traveled south to the Gulf, and then worked north with the cotton crop as far as Oklahoma and the Panhandle, east to the Mississippi. Each member of the family in many cases picked cotton, and the families were able to earn enough money during the summer and fall to return to San Antonio and live through the winter. The tremendous shrinkage in the cotton acreage and crop in Texas resulted in the concentration of many of these people in San Antonio without means of support, and has placed a burden locally of taking care of the machinery that formerly served a large part of the Southwest.

In addition to this, the shrinkage in cotton production has caused the elimination of the tenant farmer and the hired hand in many cases; and these persons and their families have also drifted to San Antonio where there is little chance of getting employment.

They are largely of two classes, neither of which makes them properly classed as San Antonio unemployed or as a local responsibility. The two classes are: First, those who live here but have always been transient farm labor operating from the Rio Grande to Missouri and the Mississippi, as explained above; and, second, farm labor of other countries that is now unemployed because of Federal policies and which has drifted into this city.

The Latin American population constitutes a large racial minority, and at its present rate of increase will soon become a racial majority in San Antonio. The schools already are crowded with children of Latin American extraction. This committee believes that there are many Latin Americans in San Antonio for whom there is no opportunity for gainful employment in the near future. For that reason it is believed that consideration should be given to the redistribution of population, and that some of these families should voluntarily return to the small towns and farms from which they have come, and that other families should be repatriated.

We wish to stress the fact, and emphasize it, that this committee has no unfriendly or racial feeling whatever toward Latin Americans; on the contrary we feel that their problems are our problems, but that changing agricultural and industrial conditions have caused a concentration in San Antonio and reduced their opportunities for employment, and that the fact is undeniable that there are many more Latin Americans than can be gainfully employed, and that thousands of them are aliens who are ineligible to W. P. A. work, and it is understood that alien populations are not supported by relief in France, England, and other countries, including Mexico. It is understood that American citizens going into Mexico are not permitted to become public charges. It therefore seems only fair that the matter of repatriation be considered carefully both by the city of San Antonio and the Mexican Government.

The press from time to time has carried statements that the Mexican Government desires the repatriation of Mexicans and that it was making lands and other facilities available for this purpose. It is recommended that the city of San Antonio seek to cooperate with the Mexican Government in connection with such relief repatriation.

The committee finds that the citizens of San Antonio are now contributing approximately \$250,000 per year to organizations of a character usually supported by a community chest fund, and the committee is unanimously of the opinion that it would not be possible to raise any considerable additional amount of money for relief work by voluntary private subscriptions.

The committee makes the following recommendations:

1. That an attempt be made to get an increase in W. P. A. allotments, and to provide projects so that the number of persons who can receive W. P. A. work employment will be increased.
2. That an effort be made to secure the adoption of the food stamp plan in San Antonio so that food supplies may be obtainable with better regard to a balanced and varied diet in quantities proportionate with other cities, and with greater ease by persons in need of them.
3. That an attempt be made to secure highway funds for road and bridge construction under the jurisdiction of the county authorities, so that work may be given to rural distressed citizens in the localities in which they live; and that the food-stamp plan be made available to these rural citizens to supplement their resources until such time as they may be able to make sufficient crops to support themselves.
4. That an attempt be made to bring about a reduction in the number of those in need of relief by the return of people who have migrated to San Antonio recently to their former home communities; and by the repatriation of aliens and their families.
5. That the local authorities make available sufficient funds to carry on the registration and investigation work in San Antonio and in Bexar County, so that persons in need of assistance will not have to wait an unduly long period while their cases are being investigated, and so that persons already receiving assistance may be

checked at frequent intervals, to the end that where there has been a change in conditions so that assistance is no longer necessary it may be discontinued.

Respectfully submitted,

Social Welfare and Fact Finding Committee; W. B. Tuttle, L. E. Fite, Robert E. Kingston, G. P. Menger, Theodore M. Plummer, Gustav A. Pagenstecher, F. M. Frasher, Mike Pleniazek, Leo Dubinski, Franz C. Groos.

### IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

#### ARTICLE FROM TIME MAGAZINE

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD an article on the late Senator BORAH which appeared in Time magazine on January 29, 1940. It is a splendid article; and, although it does not measure up to the admiration and effection I felt for the great Senator from Idaho. I should like to see it preserved, in order that those who come after us may know as much as possible about the distinguished man who served his country so long and so faithfully and so well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Time Magazine of January 29, 1940]

#### MAN IN A TOGA

Once he was a farm boy in Illinois, hating the black soil and the toil, reading the Bible and Shakespeare, yearning for Thespian grace and glory. He was a student in Kansas, boning for the law and persuading his roisterous fraternity fellows to pay a farmer for four stolen turkeys. He was a starveling lawyer, writing orations for practice in the hot, sandy afternoons, galloping his horse to and from a young man's fun in the Kansas night. He was the smartest sprig in Idaho, taking up for downtrodden Chinese, farmers, Mormons, while he served the corporations which owned the mines, the timber, and the Republican Party in the State. He was the bridegroom of blonde Mamie McConnell (whose papa was Governor of Idaho). He was a renegade Republican, going down with the Democrats and Bryan and 16-to-1 silver in 1896, striding back unchastened to the Republican Party in 1900. He was a theatrical, compelling, black-maned orator, bewitching the people into making the legislature send him to the United States Senate in 1907. Thereafter, until he died last week, he was BORAH of Idaho.

Last week the Capitol Plaza in Washington was white with snow. Through the windows of suite 139 in the Senate Office Building the trees, a-nod with ice, beckoned WILLIAM EDGAR BORAH to his customary walk in the Plaza park. But first, he had a little work to do.

In his inner office he was alone, save for the familiar things around him—the tidy desk, his old couch, black beneath a knitted blue shawl, two white pillows and an Army blanket, which he sometimes wore like a toga on cold afternoons in the park, on the wall a framed copy of Stanzas on Freedom, by James Russell Lowell, on the mantel two ancient lamps and a cane carved of wood from Borah Peak in Idaho. The secretaries in the outer office heard his full, fluid voice; the Senator was reading, aloud and twice over, some document which he wanted to memorize. Thus read, it would join his vast store from the Bible, Shakespeare, Britain's Burke and Fox and Pitt, Massachusetts' Daniel Webster, Emerson, many and many another remembered page.

Although no issue of moment was to come up, he attended the brief (20 minutes) Senate session that day. In the afternoon he read his mail and inquired about a Negro woman who had asked him to get her a job. He requested his young clerk, Charles Corker, to pick him up in the park around 4:30 and motor him home. "Are you sure you have the time?" twice asked BORAH, of Idaho, mindful that the stripling had prelaw classes to attend. Reassured, overcoated (without the blanket), the Senator trudged out of the office, along the echoing basement corridor, across Delaware Avenue to the park. His frail frame was stooped. His mane, still growing grandly down to his collar, was greying. Behind him on

the whitened ground he left the mark of his 74 years—the long, slurred footprints of one who has shuffled through the snow.

Next morning a child's voice on the office telephone asked how Senator BORAH was. A secretary wanted to know who was calling. "Oh," said the voice, "I'm just a little girl that talks to him in the park."

## DEATH WATCH

BORAH, of Idaho, was dying. He lay abed in apartment 41 at No. 2101 Connecticut Avenue, where he and childless Mrs. Borah had lived for 13 years amid the fruits of her ambulant, acquisitive curiosity—oriental tapestries, shawls, prints, screens, chests, scores of elephant figurines carved in white, green, blue, black, pink. That morning he had risen punctiliously at 7:30, in dressing gown had paused at the door of his wife's bedroom to chat with wispy, gray-blond "Little Borah."

To her he was Billy. She had survived the first, sometimes difficult years, with him when he was W. E. BORAH, of Boise, seemingly so engrossed in the law that he often had little time for his bride and home. She was with him when he burst on Washington, flamboyant in his Stetson hat and the long, square-cut, double-breasted coat which looked like a shortened topcoat above his baggy pants. Now "Little Borah," and all Washington, knew that lone-going WILLIAM E. BORAH would be indeed lost without her. She listened happily as he reported that his doctor had examined him and pronounced him sound. He went off to a bathroom. He did not return. "Little Borah" found him on the floor, unconscious, felled by an unpredictable, irreparable hemorrhage of the brain.

In coma, broken by intermittent fits of consciousness and one call for his wife, he lived through 4 days and 3 nights. The Chaplain of the Senate prayed, quoting the comfort of the Twenty-third Psalm: "Yea, though I walk through the valley of the shadow \* \* \*." On his last day, the Senate could bring itself to meet only for 6 minutes, gave up its usual week-end recess, and voted to convene next day—a Saturday. On Friday night his gray, weeping secretary, Miss Cora Rubin, who had worked for BORAH 30 years, telephoned reporters on deathwatch in the Senate press gallery: "The Senator passed away peacefully at 8:45 \* \* \*."

The flags on the Capitol dome dropped to half staff in the flood-lit night. All the tired phrases of tribute and condolence, worn nearly meaningless by necessitous convention, were heard in Washington. But now real tears gave them meaning. The death of no other man could have moved the Capitol just as BORAH's did. In the Senate he left 10 colleagues of 70 or more. None was his close friend; lone BORAH had no such intimate. But they grieved. "There was only one BORAH," mourned the only NORRIS of Nebraska. "His life and public service will write his proud epitaph," said snow-haired HIRAM JOHNSON, of California. "A very old friend \* \* \* a very great American," said Franklin Roosevelt, berating himself for his recent barbs at the great isolationist. Weepy ARTHUR VANDENBERG, of Michigan, Nevada's PITTMAN, SHIPSTEAD, of Minnesota, said in radioed memoriam: "He was a serious, intense, and lonely statesman \* \* \* the Constitution's most stalwart and effective friend since Daniel Webster. \* \* \* There is none to take his place!"

"I am the resurrection and the life, saith the Lord."

Over a gray casket, the Chaplain of the Senate bowed. His hands brushed the calla lilies on the top, his right hand raised in benediction. Brief (22½ minutes) but solemn was the state funeral for BORAH, of Idaho.

From the Chamber of the Senate went Franklin Roosevelt, his Cabinet, Chief Justice Charles Evans Hughes and his robed colleagues, the Members of Senate and House. From the galleries filed Eleanor Roosevelt, 150 Idahoans, a lone little girl in blue overalls and a bright red sweater. "Little Borah" left the lobby room, just off the Chamber, where she had chosen to wait out the service after one brief look beforehand at the casket. The doors of the Senate Chamber swung shut and were locked; inside, until the journey to Idaho and the grave began, was left the body of BORAH.

## The Late Joseph H. Chitwood

## EXTENSION OF REMARKS

OF

## HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

ADDRESS BY HON. JAMES P. WOODS

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an appraisal of the

life and career of Joseph H. Chitwood, formerly United States district attorney for the western district of Virginia, delivered on the occasion of his funeral by a former Member of Congress, the Honorable James P. Woods, Roanoke, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today I am sadly complying with a last request made of me by a friend of nearly 40 years' standing. I render him the poor service of dropping a flower and a tear upon the grave of his memory. I have never had and never expect to have a more loyal or devoted friend. Should it have been demanded of him that he yield his right arm for my welfare, unhesitatingly would he have stretched it forth for the sacrifice—and I likewise for him.

The local press has already accounted briefly his career and his achievements and the well-merited public distinctions that have come to him. With unflinching courage, fidelity, and with signal ability he has discharged each of the many important trusts committed to him. I am reliably informed that his last public office—the United States district attorneyship—ranked among the very few highest efficiency records in that entire Federal department—a tribute alike to him and to the subordinates under his direction.

His father having been a Confederate soldier, he was mindful of the travail of misrule Virginia had suffered since the Civil War. This intensified his antagonism for the party responsible, and at the age of 13 he began and continued making political speeches with dauntless courage, perhaps with some prejudice, and unflagging zeal for his party.

A man of positive character and convictions, he held hypocrisy, dissimulation, and equivocation in contempt. There was never any doubt as to where he stood on public questions. He was a partisan, but in the larger sense, because he felt that through his party he could best accomplish his patriotic purpose and best promote the highest interests of his State and Nation. He was a politician, but likewise in the larger sense, in that he recognized politics as the science of government whose highest and most beneficent aims can be achieved only by party organization. He was impatient with and perhaps prejudiced against the principles and political theories of the opposite party, not as a rule against its personnel, among whose members he numbered some of his warmest friends. But above all he was a patriot. He loved Virginia, and to him whatever seemed her highest welfare marked the pathway of his duty, and however rugged the way and at whatever sacrifice he followed it with rare zeal and unhesitating courage.

As a lawyer his mind was unusually alert and had proper opportunity favored him he would have become eminent as a trial lawyer in the State courts, as indeed was his achievement in the Federal courts. He regarded his office as district attorney not as a mere reward for party service but as imposing upon him a serious personal duty which he faithfully discharged by conducting the Government's case in practically all Government criminal trials; and it was usually woe to the prevaricating criminal who submitted himself to his searching cross-examination and closing argument. Easily discouraged and pessimistic in the preparation of civil cases, nevertheless when he reached the actual trial he exhibited a resourcefulness, confidence, and courage born of a firm conviction of the justice of his cause.

As a citizen, while abstemious and economical in his personal expenditures, he was every ready to contribute of his substance and his talents to every cause he considered worth while. On several occasions he was the largest city contributor to his party campaign funds. His friendship attachments throughout the State were strong, reciprocal and deservedly so. His private life was exemplary. He was faithful to home, to friends, to every trust, and ever exercised a tender devotion to his loved ones. To the graces of rare scholarship and gentle culture he added in full measure the fundamental—alas, so-called homely—virtues of speaking the truth, paying his debts, and dealing justly and liberally with his clients and fellow men, without which no man can achieve true greatness.

As today with moistened eye we each look back over his life of earnest devotion and signal achievement, to the charm of his personality, and above all else see it crowned with a Christian character—the only thing worth living for, the only thing worth dying for and the only thing worth a true man's striving to attain—it gives us the confident assurance that he lives again. In it all we read a great truth so fully exemplified in his life—that serving is the highest form of living.

To his family, owing to his liberality, he leaves only a substantial competence, but he leaves them the rich legacy of an untarnished name, and to all of us the priceless testament of a worthy example.

Roanoke City, and especially Franklin County, loved him, and so long as beats the great heart of that old county will the bosoms of her children thrill with pride at the speaking of his name. In his generation she had no son really greater.

"Green grow the turf above thee, friend of my better days.

None knew thee but to love thee, none names thee but to praise."

## Second Regional Conference of American States

## EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

ADDRESS BY HON. JOHN G. WINANT AND THE DECLARATION  
OF HABANA

Mr. THOMAS of Utah. Mr. President, last November, on the occasion of the twentieth anniversary of the first International Labor Conference, which was held here in Washington in the fall of 1919, I was one of the speakers. A week later, on November 21, 1939, the second regional conference of American states convened by the International Labor Organization opened in Habana, Cuba. The object of this conference was to consider common social and economic problems of the American republics which are members of the International Labor Organization, and specifically to consider the action taken to make effective the recommendations of the first of these regional conferences of the Americas—that held by the International Labor Organization in Santiago, Chile, in January 1936.

There were present at this conference in Habana representatives of 19 American republics, including the 16 which are members of the International Labor Organization. Not only were the governments represented, but there were also representatives of employers and labor. Among the subjects discussed at the conference were social insurance, protection of women and children, and problems of migration and settlement.

Because this conference contributes to the solidarity of the American republics and helps more firmly to cement the ties of friendship between them, I ask unanimous consent to have inserted in the Appendix of the RECORD the closing address made by the Director of the International Labor Office, Hon. John G. Winant, a citizen of the United States, who discusses, among other matters, international trade problems which have a definite bearing on our reciprocal trade agreements program here in the United States; also the "Declaration of Habana," which was adopted at this second regional conference of the International Labor Organization, and which serves to supplement in the field of labor relations the Declaration of Lima and the Declaration of Panama.

There being no objection, the address and declaration were ordered to be printed in the RECORD, as follows:

ADDRESS BY JOHN G. WINANT, DIRECTOR OF THE INTERNATIONAL LABOR  
OFFICE

May I begin by joining with every speaker who has come to the rostrum by thanking the Cuban Government and its people for their generosity in making possible this conference in a time difficult for them and of world uncertainty. They have rendered a great service not only to the peoples of the Americas, but to the world membership of the International Labor Organization in permitting us in spite of war to carry forward the great plus sign of humanity—the everlasting story of the dignity of man.

In listening to the speakers on the director's report, I was struck with the seriousness of approach and careful preparation of the addresses made. May I acknowledge with very real humility the kindly references made to the director? Robert Louis Stevenson, who was at home in the Americas and a friend of the common man, once said that we had to learn in life when we got a cake to say "Thank God" and when we got a blow to say "Just so, well hit." That has always been the spirit in which the director's report has been discussed. If I have any criticism of the debate it is that you have been over generous in failing to criticize errors of omission, but I want you to know that I have not been unmindful of the information you have contributed to the discussion in the conference, and that that information forms an essential part of the documentation necessary for the completion of the report.

In reply to the 28 speeches that have been contributed by workers, employers, and government delegates from 14 different countries, I have tried to find some common denominator, some expression of opinion and conviction that carried through the entire debate, and, yet, I feel its unity is expressed rather in the spirit

of approach and in the universal recognition that the well-being of man under a democratic form of government is our primary objective. As was so eloquently stated, "our opportunities for service to humanity were never greater," and our chance to realize them depends "upon our ability to recognize that the progress of the nations is measured not upon the production of wealth and privilege for a few but by the social well-being of all the people." And, in accepting the premise that lasting peace is based on social justice, we realize that peace is not the resultant of war, but rather a positive and living relationship among men and among nations—it is good will formalized into friendly foreign policy. In the long struggle "to create a continent conscious of democracy and interpreted as justice in the service of men" we have accepted a democratic procedure which means "full representation of all parties concerned, free discussion, and the majority rule." \* \* \* there is the same evidence of the existence of a real parliamentary sense in this conference, as in the conferences which have been held now for 20 years in Geneva. In other words, the democratic spirit and method may be said to have proved themselves in the international as well as in the national field. It is perhaps not too much to say that our presence here means that we see in the continued and intensified application of this spirit and method the best, indeed the only hope for the future."

In our discussions we have rejected in the international sphere policies of both political and economic domination, and in our attempt to obtain practical living democracy within the nations, we have looked to the welfare of the individual, believing that "the state exists for the individual and not the individual for the state." The acceptance of these concepts of political philosophy automatically rejects the idea of trade based on unfair exploitation of raw materials and cheap labor without regard to social consequences. This does not reject reciprocal-trade agreements based upon an equitable exchange of goods. It is because we have realized the importance of such agreements that the Office has completed and will soon publish a study of the effect of international trade upon the standard of living of the workers. In this study we find that with few exceptions the countries which experienced the greatest changes in imports and exports experienced also the greatest changes in employment and in pay rolls. Those whose foreign trade fell off most in the great depression had the worst unemployment and wage reductions, and those whose foreign trade increased least in the recovery showed the smallest improvements in employment and wages.

In discussing American relations, one of the speakers said, "either make of the Americas a mother country with 20 colonies or make of America a model association of 21 free republics which will respect and help one another to obtain progress for all the peoples of the New World." It was the opinion of the speaker, and I believe the unanimous opinion of the conference, that we want "a model association of 21 free republics." I only refer to this because I believe that it is of the greatest importance that we give support to those men of good will in all the countries of the Americas who want a genuine reciprocity of relationships.

The same speaker, who stated that politics cannot be a creative force unless based on objective realities, would, I am sure, agree that here in the Americas lies our greatest hope today for international, political, and economic cooperation. There may be dangers, but disregard for small nations is not centered in the New World.

I have never come into this hall without a sense of gratitude to those silent members of this conference whose martyrdom is pictured in the great painting which hangs over the speaker's desk. Only this week we commemorated their sacrifice. It was those students of '71 who made possible the right of peaceable assembly which we have enjoyed here, the freedom of discussion under which we have conducted our business, and the support of a free press which has reported our findings to our constituencies at home. In your presence here you have extended these rights of full and free citizenship to the international field. I have also been reminded of another group of students who, recently, in an oppressed European country, forgetting themselves, were able to look down the decades as they faced a firing squad, and I have been deeply conscious that the fight for those underlying principles which are the foundation of political democracy continues in our day, and it behooves us to see that the guards of democracy go armed and alert. And so as we press forward along the frontiers of social and economic democracy, let us not forget that all we do is based necessarily upon political democracy—that political democracy which, as one of the speakers said, depends upon a faith born out of sacrifice and martyrdom, and the end of life giving is not yet. Already we have learned that "the International Labor Organization can flourish only in a world in which democratic peoples have a voice."

The conference yesterday by formal action pledged its complete support for the continuation of the work of the Organization. The words of that statement are themselves impressive, but its full warmth and meaning can only be realized by those who have followed the entire debate on the report and have heard speaker after speaker express the reasons for his belief and indicate what it is that his government, his group, or his countrymen demand from the Organization, and what they count on as the result of its work.

One of these speakers has said that "we have an affectionate regard for the International Labor Organization." If it be so, it is because we have reached out to every corner of the earth in an effort to blot out slavery, to release from bondage the indentured servant, to lift the standard of the peon and the peasant, to protect womanhood, to bring to maternity protection for mother and child, to cut down accidents, to wipe out industrial disease, to introduce job security and old-age security, to encourage the right of freedom of association and to do all that lies within our power to see that all

people everywhere have a fair chance to realize the wants of mankind for food, for clothes, for shelter, and for reasonable medical care, so that they may live in health and decency and may have that degree of security that will insure peace of mind.

We have tried to coordinate sound economy with social advance, to find ways and means to enable all people to share in the benefits of scientific progress both by cutting down the load on labor and shortening the workweek.

We have made available the services of our experts in appraising the accumulated experience of all countries of the world in the development and application of labor legislation. We have pointed out that administrators should be aware of the fact that legislation is not enough, but must be implemented and made effective through proper administration, that administration may be defined as legislation in action. In our organizational procedure we have taken advantage of the advice of interested groups, and we have recognized the need of Government intervention where such intervention has been decided by the people themselves in the public interest.

In order to bring about in the shortest time possible the material and moral betterment of the laboring classes of the American Continent, we must extend to the agricultural worker of the Americas the protection already gained by the industrial worker. In some cases this means giving to agricultural workers the assurance of freedom of organization and of civil liberties already won by urban workers. In some cases it means extending to impoverished peasants technical knowledge and aid in marketing that will permit an increase in their standard of life. In still other cases it may mean turning agricultural wage earners into independent farmers. Recognizing that land ownership on a small-acreage basis has been a steady influence in the development of democratic institutions in North America, we must view with sympathy the efforts in Latin America to establish land tenure on a similar basis of small proprietorship.

We agree with the statement that "it is imperative that organized labor should have a determining voice in fixing the terms of the peace settlement which follows the present war," and we are trying to do our share in preparing the way for the transition from wartime to peacetime economy.

With all the patient hard work accomplished here, I am certain that we all realize that the conference is simply a beginning, a pointing of the way; that actual accomplishment will ultimately rest upon the action taken within the countries represented here and the degree of protection and assistance rendered to the people by your governments. Your debates have outlined not only the progress already made in the Americas but also the special fields of interest where the International Labor Organization can be of use. It will now be our duty to accept this charge and work with you in the months to come, and in the doing of it may memory often carry us back to the waters of the Caribbean—the sea which washes the shores of this lovely and hospitable island.

#### DECLARATION OF HABANA ADOPTED BY AMERICAN MEMBER STATES OF THE INTERNATIONAL LABOR ORGANIZATION NOVEMBER 30, 1939

Draft submitted by the resolutions committee on the proposal of Messrs. Marino López Blanco, government delegate, Cuba; Herminio Rodríguez, government adviser, Cuba; Antonio Villalobos and Enrique Jiménez, government delegates, Mexico; Francisco Posada, government delegate, Colombia; José Domenech, workers' delegate, Argentina; and José de Camacho, workers' delegate, Colombia.

The representatives of the governments, employers, and work people of the American Continent, having met at Habana on November 21, 1939, in accordance with the generous invitation of the Cuban Government at the second labor conference of American states which are members of the International Labor Organization, adopts the following solemn declaration which may be cited as the Declaration of Habana, 1939:

"Whereas, as is declared by the preamble to the constitution of the International Labor Organization, lasting peace can be established only if it is based on social justice; and

"Whereas the existence of conditions of labor involving injustice, hardship, and privation to large numbers of people is calculated to produce unrest so great that the peace and harmony of the world are imperiled; and

"Whereas the International Labor Organization has determined to continue the quest for social justice in peace and in war; and

"Whereas these efforts of the International Labor Organization are completely compatible with the spirit of the Declaration of Lima of December 24, 1938, and the Declaration of Continental Solidarity adopted at Panama on October 3, 1939, and with the desire to set the world an example of a whole continent determined to resolve its differences without recourse to violence; and

"Whereas in view of the constructive policy which it has adopted the International Labor Organization has an essential part to play in building up a stable international peace based upon cooperation in pursuit of social justice for all peoples everywhere: the representatives of the governments, employers, and work people of the American Continent,

"Proclaim their unshaken faith in the promotion of international cooperation and in the imperative need for achieving international peace and security by the elimination of war as an instrument of national policy, by the prescription of open, just, and honorable relations between nations, by the firm establishment of the understandings of international law as the actual rule of conduct among governments, and by the maintenance of justice and the scrupulous

respect for treaty obligations in the dealings of organized peoples with one another; and pledge the unwavering support of the governments and peoples of the American Continent for the continuance with unimpaired vigor of the efforts of the International Labor Organization to accomplish its high purpose of achieving social justice."

### Domestic Allotment Certificate Plan for Cotton

#### EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

RADIO ADDRESS BY TOM W. CHEEK

Mr. LEE. Mr. President, last Saturday Mr. Tom W. Cheek, president of the Farmers' Union of Oklahoma, delivered over the National Broadcasting Co. network a very fine speech in support of the domestic allotment certificate plan for the relief of the cotton farmer and in support of the bills which are now pending before the Agricultural Committees of the Senate and the House. I ask leave to have his speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

#### To the Farmers' Union Radio Audience and Friends:

The National Farmers' Union cotton committee extends to you fraternal greetings. To the National Broadcasting Co., we want you to know we appreciate this privilege which makes it possible for us to reach all the farmers with our educational program.

As chairman of the National Farmers' Union cotton-commodity committee, I have been requested to talk about our cotton bill which was introduced in the Senate and House in the last session of Congress. In the Senate it is S. 2434 and was introduced by Senator JOSH LEE, from Oklahoma. In the House it is H. R. 6671 and was introduced by Congressman CARTWRIGHT, from Oklahoma, who is chairman of the Oklahoma congressional delegation.

The bills propose to amend the 1938 Agricultural Adjustment Act and has to do with the marketing of cotton produced and consumed in the United States. This proposed legislation has the proper mechanics set up and provided for which will bring the money to the farmers' pockets for that portion of the crop consumed in the United States.

Each farm family producing cotton will get a domestic allotment; the total sum of which will equal the amount used and consumed in the United States. Approximately six and a half million bales is the amount we use and which is needed for home consumption. However, this figure would be materially increased when the farmers' purchasing power is restored. It is estimated that we would consume 11,000,000 bales of cotton here in America if we only had the purchasing power. We have a great capacity to consume in America. A great capacity to produce has been developed by the genius mind of invention. Applying this to our great priceless deposits of natural resources we are capable of producing five times more than we need to supply every person in America with an annual supply of abundance.

So I ask, Are we going to allow the machine to be the master and a curse of mankind, or are we going to make it our servant, bringing forth the blessings of abundance to all?

We have before us the problem of equitable distribution of our newly created wealth. It is our job to set up the mechanics which will solve the problem of distribution and at the same time put a floor under the income of farm families by recognizing the family unit as the major part of the farm plant.

We have 2,325,360 farm families who produce cotton annually. We checked and found that there are 403,257 farm families who have produced 2 bales or less amounts on the average for the last 10 years. We provided in our bill that all of you will get parity or cost of production for all of your cotton crops if you stay within the range and don't exceed 2 bales per family. If you have averaged less than 2 bales, you may produce up to 2 bales and get full parity or cost of production. We estimate that this would double your income from cotton.

The next group who produces more than 2 bales and who does not exceed 5 bales, or 2,500 pounds of lint cotton, would receive full parity or cost of production if they stayed within the average range maintained in the last 10 years. There are 763,459 farm families in this group.

In the next bracket there are 200,173 families who raise more than 5 bales but who do not exceed 6 bales. They would get full parity for 5 bales, but for the sixth bale the value of the allotment certificate would be reduced 15 cents on the dollar. The same ratio of reductions would apply to the 7-bale man, the 8-bale man, and the 9-bale man. Allotment certificates for those raising 10 bales and

above would be valued at 10 cents on the dollar. This would mean that you large producers would get 10 percent more than you are receiving now for your cotton on the world market price.

For illustration, the small cotton farmer who has raised 5 bales or less, according to his historical production for the last 10 years, would receive an allotment certificate on full parity or cost of production, whichever is higher, and not a benefit payment of 75 percent of parity. You who have been producing more than 10 bales would receive exactly the same certificate allotment value on your first 5 bales as the small producer. The big producers are graduated down in their certificate value to 10 percent of that which they receive on the first 5 bales. This will take up and use all the cotton consumed in the United States.

Where are we to get the money? These allotment certificates are sold to the manufacturers of cotton goods; the value of the certificate is based on the difference between the current market price the farmer receives and parity or cost of production, whichever is the higher. If cost of production or parity is 16 cents a pound and the current price is 8 cents, you would receive 8 cents in your certificates, which would bring the price of your cotton up to 16 cents a pound. If the current world market was 12 cents a pound, Middling cotton, the value of your certificate in that case would be 4 cents a pound, or a total of 16 cents on your domestic allotment.

The method for raising these funds with the certificate plan is provided for in the bill and would mean that we would not need to depend upon appropriation out of the Federal Treasury to pay a subsidy to farmers.

No need for increasing the price of cotton goods materially to the consumer. The spread and profit between the farmers' hand and the consumers' lap is so broad that it need not be reflected in the price to the consumer. For instance, we farmers get 8 cents a pound for lint cotton in the bale, and when we purchase a pound of this cotton back in the finished product, like a cotton shirt that weighs 1 pound, we pay \$1.25 per pound for our cotton in the finished product. Other cotton goods which the consumer buys have this same enormously wide margin of profit. Taking this into consideration, we see that it need not materially increase the price to the consumer.

We estimate that when this bill is passed in 1940 it will increase the farmers' purchasing power approximately \$325,000,000, without costing the taxpayers one thin dime.

Where will you sell your cotton when this amendment becomes a law? Just where you are selling it now or where you choose to sell it—through your own cooperative or in the open competitive market, as many of you are doing now.

Somebody asked why we don't make it apply to all other farm commodities. Because we all recognize that it takes a different machine and different mechanics to produce, harvest, and market the different commodities. Who ever heard of a doctor prescribing and mixing together all kinds of medicine known to the healing art and giving it for a case of appendicitis? The good doctor knows there are different medicines that must be administered for different ailments. A potato digger cannot be used in harvesting or combining wheat. The difference is just as wide between wheat and cotton. This bill is set up to do the job for cotton. We provided in the last section of the bill that any other commodity may be brought under this plan when the producers of that commodity so desire and by two-thirds vote express to the Secretary of Agriculture their desire to become a beneficiary of the act. The same mechanics will apply readily to the wheat commodity, and we believe the same law and mechanics will apply to the rice commodity. We believe the same plan may be worked out for many other commodity groups.

If we are practical and realistic in these things, we will go about solving the problem in a practical and realistic way, and we will all help each other solve our problems in an equitable and practical manner. These plans have been laid before the Congress and we are working on the job every day.

There is nothing mysterious or confusing about the domestic allotment plan. Members of Congress can readily see the many advantages of this cotton amendment embodied in Senate bill 2434 and H. R. 6671. The Agricultural Committee of the Congress can be informed and convinced in 1 hour's time that the plan is equitable and will work. We are asking the Members of Congress to give this important legislation due consideration at the earliest possible moment, that it may be put into operation for the marketing year of 1940.

These measures have been sponsored by dirt farmers themselves with the aid of the best legal counsel. We believe that farmers with practical experience are better qualified to work out their legislative problems than those who speak loud and long, pleading the case of the farmer and whose historical past proves that they are motivated by selfishness and their only desire is to farm the farmers. Politicians only hinder the farmers instead of helping them. We all know there is a wide difference between a politician and a statesman.

Another very important bill is our wheat bill, S. 2395, introduced in the Senate by Senator WHEELER, from Montana. Mr. Glenn J. Talbott, chairman of the National Farmers' Union wheat commodity committee, will explain this bill over NBC from this station the fourth Saturday, 23d day, in March. I want you all to hear the wheat bill explained. It carries the same domestic allotment certificate plan as the cotton bill and protection of the family size wheat farm is its major objective. May I say here that we are pleased to tell all the farmers in America that the wheat farmers have pledged their loyal support to our cotton bill and we cotton farmers in turn have pledged our loyal support to the wheat bill. We are playing the part of good neighbors. It is encouraging to

me, and I am sure it will be an inspiration to you, to know of this pledge being signed in the presence of and by our trusted leaders from the cottonfields in the South and the wheatfields in the North. We are determined that there shall never be another dividing line between the farmers of the North and the farmers of the South—that the Mason and Dixon Line is no more.

We ask all farmers to join in this crusade that justice may be done to agriculture. Duty impels all farmers to join in one common bond of brotherhood our own class organization. Together we can accomplish wonders. Without this we will make a dismal failure. This job is your job, as men and women who toil in the fields, who sow and reap, that the Nation may live. Collective and intelligent action of farmers of this great country can bring a blessing and abundance to all. I am pleading with you all to join in your own class organization, assume and share the responsibilities with us, that we may all share peace, prosperity, and happiness.

The National Legislative Committee has appealed to all co-operatives, all local unions, and to the membership in general to furnish a national legislative fund which will enable us to fight your battle for you. Every cooperative in the Nation should do its full share. It is you we are fighting for.

You and I know it is the day of organization and cooperation. Our own organization is leading the way. By collective action and 38 years of hard work we have gradually built a great militant organization. We have not submitted to a compromise of our fundamental principles and become a "yes man" organization. We are a veteran organization which claims the distinction of always working for the interest of the general welfare. In Oklahoma our membership is nearing 16,000 paid-up members for 1940, and they are still rolling in. We know that our first duty is to help the busted farmers who have lost their homes through no fault of their own while they were sowing and reaping and producing an abundance of newly-created wealth each passing year. We have done our job well in the field of production, but we have not solved the problem of distribution. You and I know that it is our duty to assume the responsibility and do the job as men and women should do.

Let us not be slackers and shirk our full duty. Pay dues in our own class organization, continue to build cooperatives by giving loyal support to our association, and keep our membership up in both the State and National Farmers' Union. Let us not patronize the other fellow who is in competition with our cooperatives. Let us not quibble over little frivolous things and try to find fault with everything that the others may try to do in our cooperative and local unions. One ounce of sincere cooperative effort is worth a million pounds of knocks. Let us all pray for a normal rainfall and a bountiful harvest in 1940. Let us not be carried off our feet by political propaganda. This is a campaign year you know. Let us take glittering generalities and political promises and measure them with the records of the past and cast our vote for the general welfare and the good of the order.

If you desire a copy of this broadcast just drop a card to the national secretary, J. M. Graves, Oklahoma City, Okla. If you enjoy hearing the Farmers' Union program every fourth Saturday of each month send a card, letter, or telegram to the National Farmers' Union, Oklahoma City, Okla.

You will be hearing us every fourth Saturday on NBC network, 11:30 a. m. to 12:30 p. m., central standard time. Write your Congressmen and Senators and thank them for their loyal support in the past and ask them to support our legislative program which is now before Congress.

Thank you for taking time to listen to this broadcast.

## Foreign Commerce

### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Foreign Commerce," from the pen of Gen. Hugh S. Johnson, which article I clipped from the Washington Daily News some time ago.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN COMMERCE

(By Hugh S. Johnson)

WASHINGTON, November 16.—Japan is going to get an absolute embargo right in the neck if she doesn't respect American rights in China, where our stake is less than \$100,000,000. Our trade with Japan is about \$500,000,000 a year. Five years of that embargo would cost us about \$2,500,000,000 to protect that \$100,000,000.

A leading item of that export is cotton of which Japan takes a big slice of all exports. Cotton surplus is a terrible problem for the South. To save that Chinese \$100,000,000 might cost southern agriculture alone much more than that. Those who own the Chinese investment could stand the loss much better.

American rights are being kicked around elsewhere. In Mexico they amount to also \$500,000,000, already battered down from almost \$700,000,000.

Japan doesn't seize American properties, she just restricts American business. Mexico does both.

It is part of our policy to build up our Latin American trade. Much of this fruitful white man's country is just as capable of amazing development as our own was in its virgin state. Our country grew so amazingly because floods of foreign capital came here for investment. It came because we respected foreign rights and also paid our debts.

#### UTTERLY IMPOSSIBLE

Our Government's plan to put a pulmotor on the lazy economics of Latin America is to procure the investment of large sums of American private, possibly public, capital to develop these marvelous countries. But how can private capital venture or the political trustees of public capital risk it in countries that do not respect foreign rights and do not pay their debts?

It is utterly impossible. All Latin American countries do not confiscate property as Mexico does, but all are invited to do so if our Government is not as insistent there as it is in China that foreign rights be respected. Some Latin American countries pay their debts, but why should they if our Government doesn't insist on that, too, as an incident of trade?

If pan-American development is our principal policy, why should we get so tough with Japan and threaten to sacrifice so much for a relatively insignificant interest in China and do almost nothing on what appears to be our principal stake and brightest hope of all, the Americas in the Western Hemisphere?

#### WAR, NOT COMMERCE

It is possible that the gesture toward Japan isn't really a matter of trade at all, that it is really something that we are doing in our apparent silent partnership with Great Britain, and that it has more to do with war than commerce.

We seem to have gone into the sacrifice business in a big way. We are willing to sacrifice several hundred thousand tons of American shipping in the Atlantic Ocean, more than the subs have sunk for all nations, to avoid diplomatic disputes over the freedom of the seas, when we could avoid them equally well without so much sacrifice. We would make an annual sacrifice of \$500,000,000 in our Japanese trade to save our \$100,000,000 stake in China. We may not be willing to sacrifice our \$500,000,000 stake in Mexico, but we are not doing anything to preserve it, even though not doing anything risks the sacrifice of many more hundreds of millions in other Latin American countries and our bright prospects of building up the Western Hemisphere trade for all the Americas.

This business of foreign trade is of deadly importance. It is the only certain way of putting our millions of unemployed back to work and sustaining markets for our vast and unmanageable agricultural surplus which has crucified our farmers for 20 years. There are methods less than war but more than mere words to persuade Mexico, too. It is only necessary to withdraw active American support of the Cardenas Communist government.

### Tariff Making Before the Hull Trade Program

#### EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

ARTICLE BY C. P. IVES

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article appearing in the Baltimore Sun of February 22, 1940, entitled "Before the Hull Trade Program."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of February 22, 1940]

BEFORE THE HULL TRADE PROGRAM—A CASE HISTORY OF HOW TARIFF MAKING, OLD STYLE, ACTUALLY WORKED OUT IN PRACTICE

(The forces in Congress resisting extension of the Hull Trade Agreements Act are largely the forces responsible for the Hawley-Smoot tariff of 1930. A study of what followed that tariff is therefore in order.)

(By C. P. Ives)

WASHINGTON.—Mr. Willis C. Hawley, who was backing a certain tariff bill announced in the newspapers of June 1, 1930, that "the pending bill when enacted into law will not only benefit our own

people, but also enlarge our foreign trade." Inasmuch as there is a considerable movement in Congress now for a revival of much the methods by which Congressman Hawley's and Senator Reed Smoot's tariff bill was finally enacted, a test by subsequent events of Mr. Hawley's claims for the bill may be appropriate.

The Hawley-Smoot tariff bill became law on June 17, 1930. In May, 1,028 of the soundest economists in the country had warned President Hoover against signing it. They had expected a man of his scientific training and international experience to heed what they considered the overwhelming testimony of both science and experience against the pending bill. But Senator Smoot suspected that the economists were mere academic visionaries; and while President Hoover did not go into that, he rejected the tariff views of the economists for those of Mr. Hawley and Mr. Smoot.

#### HOW THE RATES ROSE

As the economists had realized, however, something more than a mere recession was already upon the country. The United States, geared since the war to a world creditor position, was geared, too, into an intricate mechanism of world trade. This gearing persisted despite the high tariffs imposed by the Fordney-McCumber Tariff Act of 1922. In any test of Mr. Hawley's theories of prosperity, therefore, it will be useful to compare the Hawley-Smoot schedules with those of the Fordney-McCumber Act.

The United States Tariff Commission had naturally been interested in that same point. It estimated that the rates on agricultural products were raised 71 percent beyond the earlier act—the Hawley-Smoot tariff, it is to be remembered, was part of the Republican compensation to the farmer for refusal to enact the various debenture and equalization fee plans propounded for his relief in the twenties. On wood and its manufactures, the rates went up 31 percent. Other increases were as follows: Wool and its manufactures, 20 percent; shoes and boots, 20 percent; leather, 17 percent; earthenware, 17 percent; cotton manufactures, 15 percent; sugar, 12 percent; hides and skins, 10 percent; chemicals, 7 percent. There were, in all, 3,221 dutiable items in the 1930 act as against 2,840 in the law of 1922.

Now a national business system, geared to world trade as the American economy was in 1930 (and still is), is necessarily dependent on a certain amount of international good will toward those who run it. Inasmuch as Mr. Hawley had predicted that the new tariff would enlarge our foreign trade, one would have expected a new friendliness among our foreign traders.

But it didn't develop that way. On the contrary, the expressions abroad upon the new American tariff were rather unprecedently unpleasant. And they began much before the bill was finally enacted. Pleas or protests against the pending schedules were received during the discussion of the bill from the following fairly representative list of foreign countries or regions: Argentina, Australia, Austria, the Bahamas, Belgium, Bermuda, British India, Czechoslovakia, Denmark, the Dominican Republic, England, Finland, France, Germany, Greece, Guatemala, Honduras, the Irish Free State, Italy, Japan, Latvia, Mexico, the Netherlands, Norway, Paraguay, Persia, Portugal, Rumania, Scotland, Spain, Sweden, Switzerland, Turkey, and Uruguay.

#### PRESS REACTION

Nor were the reactions of foreign countries to the new tariff limited to the polite and formal representations made through governmental agencies. Responsible French newspapers called it a declaration of economic war and an economic blockade. It was "the most terrible blow against the economic life of the world," in the view of a Swedish journal. A Spanish editorial pictured the United States as "trampling on fair competition and on the peaceful spirit of international relationships." A paper in Germany—pre-Hitler Germany, mark—called the new tariff act a "monster of economic folly."

The reaction was not, finally, limited to expostulation, journalistic or diplomatic. While Mr. Hawley's tariff bill was still pending, Canada observed from the special vantage of a neighbor the handwriting on what was to become a new tariff wall. She busied herself immediately with defenses. "Those who raise prohibitive tariffs against our products must expect that we will extend favor to our own customers—the British—rather than to them," said Finance Minister Dunning, anticipating rather clearly the Ottawa conferences of 1932, at which the British commonwealth nations agreed as far as possible to keep their trade to themselves. A new and clearly retaliatory tariff bill went through the Canadian Parliament in May while our bill was still pending. Exactly what these Canadians and other foreigners were talking about was indicated by the trend in our imports from 1930 through 1931. Imports of leather goods dropped in value 55 percent; Canada, France, Germany, and the United Kingdom being the principal sources of these goods. Imports of wood and its manufactures, principally from Canada, dropped 45 percent in value. Earthenware imports, taken largely from Belgium, Germany, and Czechoslovakia, dropped 45 percent. The imports of hides and skins which we had been taking from Argentina, Canada, New Zealand, the United Kingdom, and Uruguay dropped 45 percent. Other drops, together with the usual origin of the products were as follows: Wool and its manufacture, Argentina, Australia, China, New Zealand, the United Kingdom, 42 percent; shoes and boots, Czechoslovakia, Switzerland, the United Kingdom, 40 percent; agricultural products, Argentina, Canada, Italy, Mexico, Spain, and Uruguay, 36 percent (with a drop in exports, as will be seen, of 46 percent); cotton manufactures, Egypt, France, Switzerland, the United Kingdom, 34 percent; chemicals, Germany, 26 percent; sugar, Cuba, 19 percent.

To be sure, the actual extent of these declines in value was modified somewhat by the fact that a general price drop was in progress

all over the world during the period. It amounted on an average to some 15 percent in the United States and from 12 percent to 15 percent abroad. But with this reservation, the decline in value of all our imports in the period was 32 percent. A hint of the relative extent of this decline may be gathered from the fact that, with our own figures included, average imports of seven major commercial countries (France, Germany, Italy, Switzerland, United Kingdom, Canada, United States) were off only 26.5 percent in the period indicated.

#### OTHER REPRISALS

With Canada leading the way in reprisals, some 70 other nations enacted tariff laws in the 2 years after enactment of the Smoot-Hawley Act. And it is interesting to correlate the enacting countries with those against whose products the Smoot-Hawley tariff had proved especially discriminative. Thus Argentina, against whose farm products we had erected barriers, raised tariffs against auto parts, wood and films, all previously taken from the United States. Australia, hit by our new tariffs on wool, raised her tariff against our gasoline, boards, auto parts, and farm products.

Belgium, hurt by the new duties on earthenware, struck back at imports of American automobiles. Canada, affected in farm, wood, leather exports, retaliated against American automobiles and farm products. So the procession went on, with new tariffs affecting us directly in China, Cuba, Czechoslovakia, France, Germany, Italy, Mexico, New Zealand, Spain, Sweden, Switzerland, the United Kingdom, and Uruguay—all countries touched vitally by our new legislation.

And of course the fundamental rule of world trade—nonetheless fundamental for being ignored or denied by the high protectionists—is that you can't sell if you won't buy. So the statistics on American exports after 1930 complement with painful exactitude the figures on our declining imports. American exports specifically discriminated against by the new (and some old) foreign tariffs dropped in value from 1930 through 1931 as follows: Cotton (sold to the United Kingdom), 56 percent; gasoline, 56 percent; automobiles, 54 percent; petroleum and its products, 45 percent; grains, 45 percent; typewriters, adding machines, 43 percent; agricultural products in general, 43 percent; wood, boards, etc., 43 percent; wool and its manufactures, 40 percent; tobacco leaf, 24 percent.

In all, total United States exports dropped 37 percent from 1930 to 1931. But the total exports of seven major commercial countries (France, Germany, Italy, Switzerland, United Kingdom, Canada, United States), with our own figures included, dropped on average only 26 percent. Again general price recessions are to be acknowledged. But again it is to be noted that the American decline is greater than the average decline of seven major commercial countries, though that average includes our own figure.

#### TARIFF MAKING, OLD STYLE

Against the whole panorama of world economic disorder from 1929 on, it is of course impossible to assign specific responsibility for such losses to the legislators who passed or the President who approved the Hawley-Smoot tariff. Other factors were involved, other influences felt. But it does seem evident that Mr. Hawley (whose "Who's Who" sketch explains that he is "regarded as an authority on taxation and tariff") guessed wrong when he promised that the Tariff Act of 1930 would "enlarge our foreign trade." And certainly many Americans can understand, if they cannot wholly accept, the late Dr. James Harvey Rogers' description of tariff making, old style, in America:

"Small, corrupt, but highly organized bands, represented by a group of paid lobbyists for whom no one but their employers has any feeling other than contempt, and who are united among themselves by the sole bond of intense personal interest in the loot that they are seeking, raid continually the public pocketbook \* \* \* That may be bearing on pretty hard, but the forces Dr. Rogers describes are now at work in Washington against Mr. Hull and the new Trade Agreements Act.

### Transportation Bill

#### EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

LETTER FROM EDWARD P. FARLEY

Mr. TRUMAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter published in yesterday's Evening Star on the pending transportation bill now being considered in conference.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Evening Star of February 28, 1940]  
ARGUMENT MADE FOR WHEELER-LEA BILL—COORDINATION OF RAIL AND WATER FREIGHT RATES HELD DESIRABLE

TO THE EDITOR OF THE STAR: The Wheeler-Lea bill, now in conference between the Senate and House of Representatives, takes from the Maritime Commission and gives to the Interstate Commerce Commission the authority to regulate domestic water carrier rates. In some quarters misunderstanding has arisen from this provision of the bill. It appears that the misunderstanding results from four general charges: 1. That regulation by the Interstate Commerce Commission constitutes further Government interference with business; 2. that regulation will tend to increase rates; 3. that the Interstate Commerce Commission is a "railroad" body, and as such will be "biased" in favor of the railroads; and 4. that domestic ship operators are opposed to the bill. These charges can be cleared up in a few words as it seems that they were made without knowledge of all attending factors.

First, the Government, through the Maritime Commission, already exercises regulatory control over domestic water rates, so the Wheeler-Lea bill is not new legislation in the sense that the Government is moving in to do something that it has not been doing. No extension of Government authority is involved. The bill simply considers water and land transportation as integral parts of a national common-carrier system which, in the public interest, requires unified regulation.

Since water and land services are competitive to a degree, and since each has its place in our national economy, there obviously is merit to the claim that the rates of each should be coordinated with the rates of the other so both will stand in proper relation to each other. Every one concerned, shippers, consumers, shipowners, railroad security owners, employees, all profit by a fair and stable rate structure, and the general public is better served by the elimination of uneconomic and unfair practices.

Unified regulation was a dominating factor in transferring water-rate regulation from the Maritime Commission to the Interstate Commerce Commission. In addition to this, there was another strong reason for the transfer. The Maritime Commission is primarily concerned with foreign-trade shipping, which is subsidized, while the Interstate Commerce Commission's chief interest is in maintaining adequate transportation facilities at home, having no responsibility for foreign-trade transportation. The Maritime Commission has a gigantic task in promoting and developing a foreign-trade fleet, mapping out routes, building new ships, granting subsidies, and, possibly, operating Government-owned lines. Domestic rate regulation is another large task, one which, in comparison with the Interstate Commerce Commission, the Maritime Commission is not geared to undertake. The whole issue reduces itself to that of choosing which of two Government agencies is to regulate domestic water rates. It is not a question of deciding whether we are to have water-rate regulation, for we already have it.

Second, the general charge that Interstate Commerce Commission regulation will of itself tend to increase domestic water rates has one of two implications: Either the Commission will unjustly allow unreasonable increases or the present rate level is too low to sustain the industry as an efficient part of our transportation system. The judicial integrity of the Commission should not be subjected to general insinuations. Its sincerity and integrity have kept the support of the public for more than 50 years. On the other hand, as present rates will not permit the replacement of older tonnage as it becomes obsolete, who in good faith can object to an increase sufficient to make necessary replacements to assure continued operation of a vital public service?

Third, the broad charge that the Interstate Commerce Commission is a "railroad" body, and therefore "biased" in favor of railroads, has little merit. The Commission is composed of honest and capable public servants, and its record warrants the assumption that it will continue to act in the public interest and as directed by Congress. Its standard of fair and impartial administration is in keeping with that of our courts, and its acts in administration of the law are reviewable by the courts.

Fourth, domestic shipowners, operating the great preponderance of tonnage in strictly common-carrier service, have urged this legislation for many years. I have represented them at congressional hearings, and their support is a matter of record. Marine interests opposing the Wheeler-Lea bill are affected little, if any, by its provisions, except inland waterways.

EDWARD P. FARLEY.

FEBRUARY 21.

### The "Altmark" Incident

#### EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

STATEMENT BY THE NORWEGIAN GOVERNMENT

Mr. WILEY. Mr. President, on February 26 the distinguished Senator from Indiana [Mr. MINTON] inserted in the

Appendix of the CONGRESSIONAL RECORD a letter from James W. Ryan, a lawyer of New York, relating to the case of the *Altmark*.

On February 26 the New York Times published the statement of the Norwegian Government on the *Altmark* situation. I ask unanimous consent that the statement of the Norwegian Government be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE NORWEGIAN GOVERNMENT'S OFFICIAL STATEMENT ON THE "ALTMARK" MATTER, BROADCAST IN OSLO OVER THE NORWEGIAN STATE RADIO SUNDAY EVENING, FEBRUARY 25, 1940

As already known, the Norwegian Government handed a protest to the British Government on the 17th of this month against the violation of Norwegian neutrality by British naval forces during the night between February 16 and 17, when they boarded the German state vessel *Altmark* in the Joessingfjord. (The *Altmark* is indicated in official list of ships belonging to the German Navy as a Tross schiff.) By this action 7 Germans lost their lives and some were wounded, while about 300 British prisoners on board the *Altmark* were transferred to the British warships and taken away. The British Foreign Minister admitted that a technical violation of Norwegian neutrality had been made and declared that the action had been undertaken with the full assent of the British Government. He pointed out that the Norwegian Government ought to have subjected the *Altmark* to a most careful search at Bergen, and that the British Government would be grateful to receive detailed information as to how the examination had been conducted and as to the facts which were discovered. He went on to say that the investigation seemed to have been very superficial and that the Norwegian Government thus had failed to fulfill her obligations as a neutral. On the 20th of February, in the afternoon, the British Minister in Oslo gave the Foreign Minister, Dr. Koht, an account of the conversation between Lord Halifax and the Norwegian Minister in London on the 17th in connection with the Norwegian protest in the case. After having collected further information in the matter, the Norwegian Government have now brought to the knowledge of the British Foreign Minister through their Minister in London that the *Altmark* was visited by a Norwegian torpedo boat in Norwegian territorial waters off Kristiansund north on the 14th, just after she had entered Norwegian waters. On questions put by the Norwegian commanding officer, the captain of the *Altmark* declared that the ship was on her way from an American port (Port Arthur, in Texas) to Germany.

The *Altmark* was armed with small antiaircraft guns for purposes of self-defense; the guns, however, had been dismounted before the ship entered Norwegian territorial waters. The ship carried the Reichsdienstflagge, indicating that she belonged to the German Government. Some distance farther southward the ship was hailed again by another Norwegian torpedo boat. Among other questions, the captain of the ship was asked whether there were any persons on board belonging to the armed forces of another belligerent or seamen resident in, or nationals of, another belligerent country. To these questions the captain answered "No." When the *Altmark* later on was hailed for a third time by a Norwegian warship north of Bergen, the captain refused to have the ship searched on the ground that she had already been visited and that she belonged to the German Government. As the *Altmark* was an auxiliary of the fleet and consequently had the same immunities as a warship, the Norwegian authorities were not, according to international law, entitled to make further investigations, nor were they entitled to prevent the ship from continuing her voyage through Norwegian territorial waters. It must be emphasized that the *Altmark* has not called at Bergen or at any other Norwegian port or anchorage as the British Government seem to have supposed. Consequently there can be no question of applying the 24-hour limit in this case. Neither the Hague Convention No. XIII nor the Norwegian Neutrality Rules of 1938 stipulate any time limit as far as passage is concerned. The transport of prisoners through neutral waters by a belligerent state's warships or prizes is not contrary to international law. This is recognized theory of international law. Norway has neither the right nor the duty to interfere and investigate whether there were prisoners on board, nor eventually to release the prisoners during the ship's passage. As the *Altmark* did not call at Norwegian ports, the Norwegian Government have had no reason to make up their mind as to what would have had to be done with the ship or the prisoners if such call had taken place. Generally speaking, it can be said that the Norwegian Government in this case would have endeavored to fulfill all international obligations.

The British Government themselves have strongly insisted upon the right of passage for belligerent warships through neutral waters. This was done, for instance, in their observations of May 23, 1939, to the Norwegian neutrality rules. The Norwegian Government have pointed out to the British Government that it was their duty to observe the rules of international law correctly to both sides, and as to these rules there can be no doubt. When it is emphasized on the British side that the prisoners were badly treated and that Norway should have taken the humanitarian aspect into consideration, the Norwegian Government would like to add that they can understand the British feelings at the thought of British

prisoners being on board. However, in the opinion of the Norwegian Government it would be necessary for a neutral state to be able to refer to a definite rule in a treaty or recognized international law if they were to take action against the belligerents or to interfere in a case between them. The Norwegian Government have further expressed the hope that the British Government, in the light of the information given, would feel convinced that the Norwegian Government strictly have observed international law in this case. If, however, the British Government should maintain their view, the Norwegian Government would propose that the differences of opinion between the two Governments should be submitted to arbitration. The form of procedure would have to be agreed upon by the two Governments. The Norwegian Government have suggested that in their opinion the questions to be put to the arbitral tribunal might be formulated as follows: Was Norway, according to international law, entitled and obliged to—

(a) Visit and search the *Altmark*, and in doing so to establish whether there were prisoners on board?

(b) Prevent the continued passage of the *Altmark* through Norwegian waters? and

(c) Demand the handing over of the British prisoners on board the *Altmark* and if necessary to release them by force?

If any of the questions (a) to (c) are answered in Norway's disfavor, did this, according to international law, entitle Great Britain to take action by using force against the *Altmark* in Norwegian territorial waters and to release the prisoners as actually happened?

## False Standards

### EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

ARTICLE BY DR. JOSEPH F. THORNING

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "False Standards," written by Dr. Joseph F. Thorning and published in the magazine *Light*.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the magazine *Light*, Brooklyn, N. Y., for February 1940]

#### FALSE STANDARDS

(By Joseph F. Thorning, Ph. D., Litt. D.)

How does the move you propose affect Hitler? In the minds of millions of people, this question is rapidly becoming the touchstone of all public morality. The Soviet Union, Mexico, and the Dies committee are judged in the light of their impact upon nazism at home or abroad. Numerous policies are no longer decided upon their own merits; the sole consideration that counts is whether their end results will be benefit or injury to Nazi Germany.

American judgments about the Soviet Union, for example, can be dated before or after August 23, 1939. As long as the Soviet Union, brutal though it was, preserved itself free of the taint of nazism, the master of Moscow was courted, flattered, and praised by the self-styled "liberals" of the United States. For 20 years little moral indignation was excited in these circles about murder, starvation, and oppression in Russia. The most ordinary comment upon the extinction of millions of souls was that of Walter Duranty: "It takes plenty of broken eggs to make an omelette." The liberals were resigned to totalitarian fury as long as they could persuade themselves and others that the Soviets were merely "going through a transition period, painful to a few kulaks and intellectuals, but on the whole justifiable by the hoped-for results." Confronted with undeniable cases of barbarity and inhumanity, the friends of the Soviet Union had a single, calm excuse: "The Soviet experiment is in its infancy. These incidents are growing pains. Rome wasn't built in a day."

#### TYRANT STALIN

These explanations, curious enough, no longer have currency. They never had any validity. Long before the Nazi-Soviet pact, it was clear that Josef Stalin was, if anything, a more unscrupulous tyrant than Adolf Hitler. The latter was bad enough, ruthless, mendacious, cunning, and overbearing. Stalin added to all this the vice of hypocrisy. The despot of the Kremlin, although exercising a dictatorship bloodier than that of Ivan the Terrible, was able, thanks to the naïveté of his friends in America, to pose as the leader of the world proletariat.

How many remember with what enthusiasm American leftists hailed Stalin's so-called constitution as the "most democratic instrument in the world"? Subsequently, the farce of elections was reported in the press, unrelieved by any substantial saving

sense of humor. With a gravity becoming a Minerva, Mrs. Vera Micheles Dean, so-called research expert of the Foreign Policy Association, discussed the terms of the Soviet charter as if it were something designed to function in the realm of reality. The discussion is diverting rather than enlightening today.

#### "LIBERALISM" RETREATS

Of course, the Friends of the Soviet Union in the United States have disbanded. This was announced by Mr. Corliss Lamont in the first week of January 1940. He was starting the new decade right. At the same time he tried to establish that his leftist organization had been "dormant" for 2 or 3 years. The fact is that the order to "abandon ship" did not ring out until sovietism had become identified with unpopular nazi-ism. It took Hitler only a few days to "smear" Stalin.

A similar transformation took place with respect to leftist public opinion and Mexico. As long as the bandits south of the Rio Grande confined themselves to attacks on religion, the ravishing of nuns, and the preaching of atheistic doctrine they were the pets and darlings of American self-styled "liberals." But a revulsion of feeling occurred when it was established that Gen. Lazaro Cardenas was willing to sell stolen oil to Nazi Germany and Fascist Italy. Even the United States Department of State became excited. A few worthless notes and protests emanated from Washington. The talk did not descend into the arena of action, but Mexico was warned that United States purchase of silver might stop unless property rights were respected. The excitement has since died out somewhat, because, due to the British blockade, it is no longer possible for Cardenas to "play ball" with Hitler. There is plenty of "hot oil," but there are no German ships available to transport it to Hamburg. Nevertheless, it was the Fuehrer who gave the Mexican dictator his first black eye.

#### APOLOGETIC "LIBERALISM"

In the meantime, the "liberals" have begun to moderate their criticism of Mussolini. Why? Because Il Duce is evidently not tied to the chariot wheel of Nazi conquest. Fascist Italy has an independent, self-contained foreign policy. Theoretically speaking, the axis policy is in a state of suspended animation. Numerous Leftists flatter themselves that they may be able to win the Italian dictator to a position of outright hostility to Hitler. As a result, Mussolini has a much more favorable press in the United States. He is now represented as a wise, farsighted, realistic ruler. Even by the cartoonists Il Duce is now pictured as a personage with some tincture of humanity.

The greater the distance, politically, between Berlin and Rome, the less the Nazi pitch defies. At the moment, Italy is probably quite as totalitarian as ever, but it is totalitarianism with a distinction. Stalin did Mussolini a big favor in helping to create the Berlin-Moscow axis.

#### THOMPSONANIA

Generalissimo Francisco Franco is another beneficiary of the new understanding between the Kremlin and the Wilhelmstrasse. Prior to the second World War, the self-styled liberals had always glibly assumed that "Franco Spain would be chained to the axis." One year ago, Dorothy Thompson was waxing hysterical about the dangerous potentialities of the "cultural pact" between Spain and Germany. Her overstrained imagination pictured German bombing planes in the Canary Islands and Nazi submarines operating from the great Spanish port of Vigo. Of course, the Italian aviators would never leave Palma de Majorca! Today, that Thompsonesque vision is exposed as the bad dream it was. The sharpest eyes have been unable to descry German submarines sneaking in and out of Cadiz, Vigo, or Bilbao. Long since, the Italian flyers returned to Italy. The Spaniards have complete and supreme jurisdiction over their territory both in the peninsula and overseas.

The neutrality of Generalissimo Franco has been perfect. Friendship has been reestablished, largely due to the generous attitude of leaders on both sides, between the French Republic and the Spanish State. The so-called cultural pact between Berlin and Madrid has lapsed. General Franco meant what he said when he claimed that his movement was a crusade against bolshevism. He hasn't changed his course. He doesn't condone the invasion of Finland by the Soviets as do the American members of the Leftist Brigade that fought for Largo Caballero and Indalecio Prieto. Franco is still anti-Marx, anti-Moscow, and anti-Stalin. If Germany ever makes any overt move to lend military assistance to the Soviet Union it is a safe prediction that Spain will be found in the opposite camp. If and when that possibility is realized, the American foreign-policy experts may discover that Franco is almost as amiable as Mussolini. All he has to do to win instant popularity is to make a stand against Hitler. It is as simple as that.

#### AMERICA AWAKENS

MARTIN DIES and his committee did not make the front page of American newspapers with his exposures of communism until Herod made friends with Pilate, that is to say, until Hitler and Stalin shook hands. To be sure, the Dies committee could always count on good space for its investigation of the pro-Nazi groups in the United States. But inquiry into the Third International was not popular until it had been tarred with the brush of nazi-ism. Every student of the problem knows that communism was just as obnoxious before as after August 23, 1939. The connection of Earl Browder and Josef Stalin was clear. The dictatorial methods of the latter were never a matter of reasonable doubt. The Kremlin's interest in world revolution, although soft-peddled as a measure of

expediency, was never really slackened. Stalin's stake in the American Communist Party was known. But there was no field day for investigators into leftist revolutionary circles until nazi-ism could be added to the charge of tyranny and dictatorship. Conspiracy was not conspiracy unless Hitlerian.

#### PASSPORT PROSECUTIONS

One or two examples throw light upon this attitude. Nicholas Dozenberg once held the position in the American Communist Party now held by Earl Browder. More than any individual he was responsible for the foundation of the Third International in the United States. He also served for many years as a member of the intelligence unit (secret service) of the Soviet Russian Army. In many of his activities he enjoyed the advantages conferred by an American passport. Prior to the Nazi-Soviet pact his immunity from prosecution seemed complete. All that is now changed. Nicholas Dozenberg is under indictment. On two counts, a grand jury has found a true bill against him, each specifying that Dozenberg entered this country with a passport that allegedly had been obtained by fraud.

Earl Browder, Communist Party secretary, was charged in a recent indictment with having used Dozenberg's name and naturalization papers as his own in obtaining a false passport in 1921. Note the date! Agents in the Department of Justice had 18 years in which to discover the alleged fraud. Why the inaction for almost two decades? Why did it require the Hitler-Stalin friendship to galvanize the forces of law and order in this country? Is it possible to detect forgers only when they are revealed to be Nazis or semi-Nazis? Is Hitler the pivot upon which justice revolves? Does immorality radiate from Berlin alone? If so, we are being treated to the spectacle of new standards of ethics. It is a curious situation to find that a criminal is not a criminal unless he can be found holding hands with Hitler.

#### COMMUNISTIC REGISTRATION

Nicholas Dozenberg is not the only case in point. On December 27, 1939, two Russian citizens, Boris Nikolsky and I. A. Ilyin, officers of Bookniga, Inc., a Soviet propaganda agency, were fined in a New York Federal district court after pleading guilty to willful omission of material information from a registration statement filed with the State Department under the Foreign Agent Registration Act. Defense counsel announced that the company would be dissolved immediately, its stocks of magazines and books disposed of as quickly as possible, and that its president, Boris Nikolsky, would return to Russia. This is swift, decisive action. It shows that the Soviets themselves realize that, however much immunity they may have enjoyed in the past, they cannot live down the link with Hitler. It will be interesting to watch the future career of Mr. Ilyin, one of the chief Soviet propagandists in America and still treasurer of the Amtorg Trading Corporation, the Soviet trading agency, which distinguished itself by efforts to secure arms and munitions for Leftist Spain.

#### FUNDAMENTAL ETHICS

One solid conclusion can be drawn from this analysis. It is that we have an obligation to judge every movement on its own merits. Soviet Russia was vicious long before it came to terms with Nazi Germany. Stalin was an autocrat, in theory and in practice, before August 1939. Joachim von Ribbentrop, for all his diabolical cunning, could not teach the Communist authorities any lessons in brutality or antidemocracy. Soviet militant atheism was bad before it appeared "in shining armor" side by side with Nazi paganism.

Soviet Russia, whether courted by London, or Paris, or Berlin, is a base, treacherous ally. Earl Browder, overshadowed by the swastika, is none the less brandishing the hammer and sickle. Communism is an inferno as wide and long and deep as the pit of nazi-ism. Human rights are swallowed up in both ideologies. The true norm of morality, for Catholic and non-Catholic, is the natural law. Those who believe in God, whether Protestant, Jew, or Catholic, will maintain the real pivot of morality, the Ten Commandments.

#### Philippine Islands

#### EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

EDITORIAL FROM THE NEW YORK TIMES OF FEBRUARY 28, 1940

Mr. GIBSON. Mr. President, I ask unanimous consent that there may be printed in the RECORD an editorial concerning the future of the Philippine Islands which appeared in the February 28 edition of the New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of February 28, 1940]

#### THE PHILIPPINE ENIGMA

The expansionist wave which reached its crest around 1900 has receded down a long stretch of beach since that time, as our Philippine High Commissioner, Francis B. Sayre, makes clear in the interview he gave in Manila on Sunday. Forty years ago we seemed to be subduing an unwilling Filipino nation. Now most of the reluctance to the consummation of Philippine independence in 1946 appears to originate in the Philippines.

It is Mr. Sayre's frankly expressed opinion that the movement toward Philippine independence has gone too far on both sides of the water to make reversal possible. The only kind of dominion status the Filipinos would accept, he believes, would be of the sort the United States could not grant. He doubts that it is longer "practicable for any nation to undertake to maintain and defend the kind of far-flung military empires which developed during the eighteenth and nineteenth centuries." Empires cost money in these latter days. Mr. Sayre doesn't believe that American taxpayers will be willing to pay the cost of the ships and men necessary to defend an empire over the Philippines.

Commissioner Sayre is in sharp disagreement with former High Commissioner Paul V. McNutt, whose proposal to reopen the Tydings-McDuffie Act, held out the possibility that the islands would be permanently retained under the American flag. It does seem that any step of this sort should wait upon the formal request of the Commonwealth government. Ultimate independence is a promise made to the Filipinos long ago. It is not for us to break the promise. Before 1946 the world situation may have changed so much that Philippine independence, like everything else, will be seen in a different light. It may have changed so much that the independence of small nations will be permanently real and secure, and not merely a fiction or a happy chance. But this we cannot anticipate. Nor can we easily reshape our policies to meet a future which is as formless as the bosom of the Pacific itself.

### Reformation of Administrative Procedure

#### EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ARTICLE BY ALFRED JARETZKI, JR.

Mr. MINTON. Mr. President, at the last session of the Senate I submitted for insertion in the RECORD an article by Mr. Alfred Jaretzki, Jr., on the administrative-law bill, which was in conflict with the rule of the Senate as to printing in the RECORD matter of a certain length without an estimate. I now have the estimate for printing made. I send the article and the estimate to the desk and ask unanimous consent that the article may be printed in the RECORD.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The article is as follows:

[From the Louisiana Law Review for January 1940]

THE ADMINISTRATIVE LAW BILL—UNSOUND AND UNWORKABLE  
(By Alfred Jaretzki, Jr., member, committee on administrative law, Association of the Bar of the City of New York)

A careful analysis of the American Bar Association bill on administrative law shows it to be fatally defective. It is poorly drafted and is fantastic in its application to many of the situations which are embraced within its scope. It is based upon an a priori approach to a problem that can be dealt with adequately only after a careful study of the actual working of the many administrative agencies whose functioning it attempts to regulate. That the bar association committee which drafted this bill was equipped to make any such study is doubtful, and there is at any rate no evidence of any such investigation having been made or attempted.<sup>1</sup>

<sup>1</sup> An interesting document prepared by F. F. Blachly of the Brookings Institution in cooperation with the bar association committee, entitled "Working Papers on Administrative Adjudication," may be considered a first step in this direction (75th Cong., 3d sess. (1938), committee print). But these working papers, far from affording any reasonable basis for the bill in question, and while not prepared for the specific purposes of the bill under discussion, upon examination will be found to indicate clearly the impossi-

The fundamental objectives of the bill are ably set forth by Col. O. R. McGuire, chairman of the American Bar Association special committee on administrative law, in an article published in the March 1939 number of the Louisiana Law Review.<sup>2</sup> Colonel McGuire has voiced the need for a reform of Federal administrative processes, while giving recognition to the importance and necessity of the administrative agencies in today's complex industrial and economic development. But there is required a careful balancing between the desire to safeguard the rights of individuals and the necessity of providing for efficiency in the unfortunately, but necessarily, ever-increasing activities of the Federal Government.

As to the general provisions of the bill, namely, public hearing before administrative rule-making, judicial review of rules, improved machinery for intradepartmental appeals and provision for more extensive judicial review of administrative decisions, the conclusion is reached in this article that it is unlikely that any single procedural machinery can be devised which will operate satisfactorily with respect to all of the many and varying activities of the numerous administrative bodies. Nor is a uniform procedure found to be desirable. Many of the matters covered by the bill call for differences in treatment, both in theory and in practice. Furthermore, it must be recognized that, while improved procedural machinery is a matter of great importance, in many aspects satisfactory relief can only be had by substantive changes in the statutes under which some of the administrative agencies operate. There is real danger that faults of substance will be overlooked if too much reliance is placed upon reform in practice and procedure.

Possibly because of the prestige of the American Bar Association the bill in question was, with some changes, reported favorably by the Senate Committee on the Judiciary without a hearing,<sup>3</sup> by the House Committee on the Judiciary after a perfunctory hearing only,<sup>4</sup> and passed by the Senate by unanimous consent without debate,<sup>5</sup> only to be recalled in like fashion upon the insistence of the administration leader of the Senate in whose absence the bill had passed in the first instance.<sup>6</sup> Testimony that this bill is opposed by all Government agencies which it affects<sup>7</sup> and telling briefs in opposition filed with the House Committee on the Judiciary by a number of the agencies<sup>8</sup> seem for the most part to have been disregarded. It can hardly be doubted that a rising tide of hostility to the acts of many administrative agencies and to the legislation under which such agencies are functioning is in no small way responsible for the uncritical acceptance of the bill.<sup>9</sup> Furthermore an affective campaign has been carried on in behalf of the bill which it seems has led many sympathetic with the general objectives of the bill to endorse it without adequate scrutiny in the belief that it is the result of careful and considered study on the part not only of the bar association committee on administrative law, but on the part also of a number of distinguished individuals whose names are loosely associated with the bill.<sup>10</sup> That this committee, as from time to time constituted, has made valuable studies

bility of applying a uniform standard of procedure to the Federal administrative agencies as a group in the manner attempted.

A subsequent analysis prepared by Professor Blachly of the bar-association bill for use of the House Committee on the Judiciary reaches this conclusion:

"This bill has very far-reaching implications which can only be appreciated by applying its provisions to some five or six hundred situations established by statute where actions of the Federal Government affect individuals. Such a detailed examination shows that many of the provisions of this bill are in opposition to principles of constitutional law as developed by the courts, to the whole system of administrative law that Congress and the courts have been developing for over a century, and are incompatible with sound administrative action." (Printed as part of the hearings before subcommittee No. 4 of the Committee on the Judiciary on H. R. 4236, H. R. 6198, and H. R. 6324, 76th Cong., 1st sess. (1939) 156.) This paper is an invaluable document in connection with any study of the subject matter of the bill.

<sup>2</sup> McGuire, the American Bar Association's administrative law bill (1939), 1 Louisiana Law Review, 550.

<sup>3</sup> S. Rept. No. 442, 76th Cong., 1st sess. (1939).

<sup>4</sup> H. Rept. No. 1149, 76th Cong., 1st sess. (1939). See also Hearings on H. R. 4236, supra, note 1. A number of the documents printed as a part of these hearings were received too late for consideration by the subcommittee.

<sup>5</sup> July 18, 1939, S. 915.

<sup>6</sup> July 19, 1939, motion to reconsider. August 1, 1939, motion agreed to and bill returned to Senate calendar.

<sup>7</sup> See statement of Chester T. Lane, Hearings on H. R. 4236, supra, note 1, at 14.

<sup>8</sup> See briefs and letters filed by Federal Trade Commission, Department of the Interior, Department of Agriculture, Department of War, Treasury Department, Federal Communications Commission, Federal Power Commission, and Veterans' Administration, all printed as part of Hearings on H. R. 4236, supra, note 1. See also Sellers, The Extent to Which S. 915 or H. R. 4236 Would Affect the Work of the Department of Agriculture (1939) (7 Geo. Wash. L. Rev. 819, 923).

<sup>9</sup> This hostility is evident in both the Senate and House committee reports.

<sup>10</sup> The report of the Senate Committee on the Judiciary, supra note 3, at 14, and the report of the House Committee on the Judiciary, supra note 4, at 8, each state, "It is doubtful if there has been legislation proposed in a century which has had more extended and careful study than that given to this bill."

on the subject of administrative law will not be questioned.<sup>11</sup> But a consideration of the ambiguities of the bill and of many of the statements made in the accompanying report,<sup>12</sup> leads to the belief that no very careful attention could have been given to the actual bill itself.

The particular draft of the bill discussed here will be that passed by the Senate.<sup>13</sup> Applying with a few exceptions to all the one hundred and thirty-odd administrative agencies of the Federal Government, the bill is procedural in that it provides (1) for public hearings upon all rules to be issued by any administrative agency, (2) for court review to test the validity of any such rule in a proceeding for a declaratory judgment, (3) procedure for intra-departmental review of decisions in all single-headed agencies, and (4) procedure for review by Federal appellate courts of all final decisions of administrative agencies. Being procedural, its sponsors seem to have thought it self-evident that uniformity among the many administrative agencies was not only desirable but feasible in respect of the matters covered by the bill. Any doubts expressed in this regard are lightly dismissed by likening those entertaining such doubts to the practitioners at early common law who insisted there should be a separate writ and procedure for each action.<sup>14</sup> No attempt seems to have been made to determine whether such uniformity was desirable or possible by study of the actual application of the bill to specific situations.

Before proceeding to a discussion of the main sections of the bill, it will be illuminating to consider briefly the exceptions to its operation and the comments on these exceptions contained in the report of the American Bar Association.<sup>15</sup> It is provided that the act shall not apply to any matter relating to the conduct of military or naval operations. In addition there are excluded trials by courts martial, the conduct of the Federal Reserve Board, the office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Federal Trade Commission, the Interstate Commerce Commission, the Department of State, the Department of Justice, and any matter concerning or relating to the internal revenue, customs, patent, trade-mark, copyright, or longshoremen and harbor workers' laws. Furthermore, the act does not apply to any case where the aggrieved party was denied a loan or may be dissatisfied with a grading service in connection with the purchase or sale of agricultural products or has failed to receive appointment or employment by any department or independent agency. It is also provided that sections 2 and 3, those applying to public hearings on the issue of rules and to the judicial review of rules, shall not apply to the General Accounting Office.

The exception as to the conduct of military or naval operations was limited to times of war or civil insurrection in the original bill sponsored by the bar association. It was apparently only upon the vigorous protest of the War Department that any such limitation would completely hamstring the operations of the Army and Navy that the exception was extended.<sup>16</sup> A plea by the Treasury Department that at least the operation of the Coast Guard be excepted from the bill was, however, rejected.<sup>17</sup> The original bill excepted matters relating to the conduct of foreign affairs, but on protest from the Department of State that the procedure of the Department, developed since the inception of the Federal Government, would in large measure be completely nullified by this bill which had no justifiable application to most of the operations of the Department of State, including such matters as the issue of passports and visas, the entire State Department was eliminated from the application of the act.<sup>18</sup> In like manner the Federal Trade Commission was not excepted from the original provisions of the bill nor from the bill as reported by the Senate Committee on the Judiciary, but the Commission was apparently able to persuade the House committee that the Federal Trade Commission was operating satisfactorily under a procedure that had been developed over a period of years and that was in many respects considered a model for administrative agencies.<sup>19</sup> The bar association bill contained an exception relating to Indian lands made out of deference to wishes of members of the Oklahoma bar, but apparently these wishes were not controlling with the Senate or House committees. The House Committee on the Judiciary further suggested the ex-

emption of all Federal lending agencies from the scope of the act instead of mere exception of cases where the aggrieved party was denied a loan.<sup>20</sup>

In explaining these exceptions<sup>21</sup> the report of the American Bar Association committee on administrative law states that the general counsels of the Federal Reserve Board, office of the Comptroller of the Currency, and Federal Deposit Insurance Corporation insisted that these agencies dealing with finances of the country should be excluded. There is no statement of the reasons for the exclusion or any indication that the functions and operations of these bodies were given any special study. In the light of this experience it would seem that other agencies of the Federal Government have cause to regret their failure to protest to the American Bar Association against the application of the act to themselves.<sup>22</sup> Internal revenue, customs, patents, trade-mark, and copyright matters apparently were excluded from the operation of the act in deference to the wishes and demands of the American Bar Association's committees on taxation, customs, patents, etc. It would appear that these committees were satisfied with existing procedure. Here again it would seem that direct or indirect contact with the actual functioning of particular agencies led to the conclusion not to interfere with existing practices. While it is true that there exists judicial review of administrative decisions on tax matters, there is no public hearing on the rules and regulations issued by the Treasury Department in respect of internal-revenue matters nor would it seem feasible that there should be. And the suspicion arises that there must be numerous other agencies of the Federal Government which in like manner are not adaptable to the provisions of the bill. One wonders whether the Coast Guard might not have qualified under the exemption granted to the conduct of military or naval operations and whether the bar association committee had in mind the particular problems of the Veterans' Bureau which operates under a statutory procedure deliberately made quite peculiar to itself, Indian land matters were excluded due to requests made on behalf of some members of the Oklahoma bar. This is stated to be a local matter excepted from the operation of the act in deference to the suggestion of those most interested who seem satisfied with the present status of such matters. Satisfaction with existing procedure would seem a reasonable basis for exception to the act were it made a principle of universal application and the result of determination reached after study. The Interstate Commerce Commission is apparently exempted from the bill, in spite of the fact that the scope of the review in its case is quite narrow, because of the possibility of some overhauling of the substantive law relating to at least some of the work of the Commission. This is a recognition not generally shown by the proponents of the act that there may be some relationship between the substantive powers and duties of an administrative agency and the appropriate procedure relating to such agency. Exceptions of the denial of a loan, dissatisfaction with a grading service, or failure to receive an appointment only emphasize the wide scope of the act not only in respect of the agencies involved, but in respect of the particular actions affected.

#### SECTION 1. "DEFINITIONS"

Section 1 of the act contains a series of definitions, most of which are not contained in the original bill of the Bar Association. To some small extent these definitions are helpful, but, unfortunately, the most important definition, that of "decision," which in turn is dependent on the definition of "controversy," is so difficult to understand that, as will be seen later, it adds only more confusion to an already ambiguous bill. The insertion of appropriate definitions would be of great assistance.

#### SECTION 2. "IMPLEMENTING ADMINISTRATIVE RULES"

Section 2 of the bill<sup>23</sup> provides that after its enactment administrative rules and all amendments of existing rules implementing or filling in the details of any statute affecting the rights of persons or property shall be issued by the head of the agency and by each independent agency charged with the administration of any statute only after publication of notice and public hearings.<sup>24</sup> "Agency" and "independent agency" are defined to mean, and will hereafter be referred to as, single-headed and multiple-headed administrative bodies, respectively; i. e., a department of the Government, as distinguished from a board or commission. All such rules are to be published in the Federal Register within 10 days after approval and are not to become effective until such publication, except when a public emergency is declared by the President. Administrative rules under all statutes thereafter

<sup>11</sup> See reports of the special committee on administrative law: (1934) 59 A. B. A. Rept. 565; (1936) 61 A. B. A. Rept. 720; (1937) 62 A. B. A. Rept. 789; and especially (1938) 63 A. B. A. Rept. 331.

<sup>12</sup> See Report and Draft of Bill of the Special Committee on Administrative Law of the American Bar Association to the Chicago meeting, January 1939. A number of the statements contained in the report and annotations to the draft bill, referred to later, do not correctly reflect the text of the bill itself. An abbreviated report together with the draft of the bill are also found in (1939) 25 A. B. A. J. 113.

<sup>13</sup> S. 915, 76th Cong., 1st sess., print of July 27, 1939, attached as an appendix to this article.

<sup>14</sup> Senate report supra, note 3, at 9. McGuire, supra note 2, at 568; also McGuire, Have We a Government of Laws or a Government of Men? (1939) 73 U. S. L. Rev. 331, 334.

<sup>15</sup> S. 915, supra, note 13, at § 7 (b); American Bar Association draft, supra, note 12, at § 6 (b).

<sup>16</sup> Hearings on H. R. 4236, supra, note 1, at 102.

<sup>17</sup> Hearings on H. R. 4236, supra, note 1, at 104.

<sup>18</sup> Hearings on H. R. 4236, supra, note 1, at 50.

<sup>19</sup> Hearings on H. R. 4236, supra, note 1, at 63. A similar amendment was proposed by Senator WHEELER and adopted by unanimous consent, 84 CONGRESSIONAL RECORD 9976 (1939).

<sup>20</sup> H. Rept. No. 1149, supra, note 4, at 1.

<sup>21</sup> American Bar Association report, supra, note 12, at 47, 48.

<sup>22</sup> In view of the fact that Colonel McGuire is counsel in the General Accounting Office it may be presumed that the exception of the General Accounting Office from the operations of secs. 2 and 3 of the act were made in the light of experience with the operations of the General Accounting Office, and such knowledge, as it is suggested, should be obtained with respect to all the agencies affected by the bill. That the balance of the bill is made applicable to Colonel McGuire's own department is certainly a tribute to his personal faith in these provisions.

<sup>23</sup> Sec. 1 of the American Bar Association's draft, supra, note 12.

<sup>24</sup> Both the Senate and House reports, supra, notes 3 and 4, at 10 and 4, respectively, state that public hearings are required only if requested. This, however, is clearly erroneous. See also American Bar Association, report, supra, note 12, at 21.

enacted are to be issued within 1 year after the date of the enactment of the statute, subject to the adoption thereafter of further rules. (In the original bar association bill the period for the enactment of rules was 90 days after the enactment of the statute.) In respect of an existing rule, any person substantially interested in its effects may petition for a reconsideration of any such rule, after which public hearings are to be held in the manner provided for the original adoption of such rule. A sound provision is included giving immunity in case of reliance in good faith upon a rule later rescinded or declared invalid.

In the original bar association bill this section contained a rather doubtful provision authorizing and requesting the Supreme Court of the United States to prescribe uniform rules of practice and procedure for the hearings of all claims and controversies within the jurisdiction of the administrative agencies. In later drafts this provision was appropriately transferred to another section of the act and it was finally eliminated in the bill as approved by the Senate and House Committees on the Judiciary and as passed by the Senate. The draftsman of the Senate committee report, however, seems to have been oblivious of this deletion as the report twice makes mention of the provision authorizing the Supreme Court to issue uniform rules of practice and procedure, in one case as one of the four basic purposes of the bill.<sup>25</sup>

It is difficult to understand just what is the scope of the provision governing the issue of rules "implementing or filling in the details of any statute affecting the rights of persons or property." The definition states that "'administrative rules' include rules, regulations, orders, and amendments thereto of general application issued by officers in the executive branch of the United States Government interpreting the statutes they are respectively charged with administering." This so-called definition is really no definition at all but an addition to the scope of the language with respect to administrative rules in section 2 of the act, and by including the words "regulations" and "orders" only adds confusion. The bar association draft of this section was substantially the same, except as to the definition and except for a provision which wisely excepted rules relating to hearing procedure from the operation of the section. Under the bill as passed, then, it would seem that many, if not all, rules relating to hearing procedure may be held to be rules implementing or filling in the details of a statute affecting the rights of persons or property and consequently to require publication of notice and public hearings before their issuance.

Must the agency issue rules determining who is entitled to be heard at any such public hearing and, whether or not the agency must issue such rules, if it does so, may it be only after publication of notice and public hearing? It is provided that "any person substantially interested in the effects of an administrative rule in force on the date of the approval of" the act may obtain a reconsideration of any such rule after publication of notice and public hearing. Is the meaning of the words a "person substantially interested" left to the reasonable discretion of the agency? If so, must it issue rules and regulations implementing or filling in the details of this provision and must it hold public hearings before issuing any rule on the question of who is entitled to require public hearings? Obviously every administrative agency must issue a host of procedural rules, both in respect of hearings and otherwise. It would hardly seem sound that the issuance of such rules should be subject to the rigid requirements of the bill in respect of notice and public hearings. Possibly some such provisions might ultimately be held not to be covered by the terms of the bill under a "reasonable" interpretation of its terms, and it might even be that the courts would leave the extent of its application to the reasonable interpretation of the administrative agencies. However that may be, it would have been distinctly helpful had the bill been more specific in this respect.

It should be noted that the exception in the case of a public emergency declared by the President relates only to the publication of rules in the Federal Register and does not permit the waiving of the requirement of notice and public hearings. However, in view of the fact that the bar association report and annotations and the reports of the Senate and House Committees on the Judiciary consistently treat this exception as relating to the necessity of notice and public hearings as well, the language of the bill may presumably be considered a mistake of draftsmanship.<sup>26</sup>

Whatever may be the meaning of the provision that "administrative rules under all statutes hereafter enacted shall be issued—within 1 year after the enactment of the statute subject to the adoption thereafter of further rules from time to time as provided in this act," the extension to 1 year from the bar association period of 90 days is certainly a great improvement. It seems to have been the intent of the framers of the bill to impose an affirmative duty on all administrative agencies to issue rules by way of explanation or otherwise under all statutes which may hereafter be enacted.<sup>27</sup> But

this is far from clear under the language of the bill. What is the meaning of the words "subject to the adoption thereafter of further rules"? Does that mean that notwithstanding the provision for the enactment of rules within a year, rules may be enacted after the expiration of a year or does it mean that the rules enacted after the expiration of the year may only be supplemental to or amendatory of rules enacted within the 1-year period? If the latter is the case, does it then mean that rules are to be declared invalid by the courts if not enacted within the scope of this provision?<sup>28</sup> If it does mean that rules enacted after the expiration of the year's period may only be supplemental or amendatory to existing rules, the absurd result would follow that if a rule were duly promulgated within a year, then at any time after the expiration of the year an amendatory rule could be promulgated providing just the opposite; whereas if no rule had been issued within the period of a year, then thereafter no rule of any kind could be issued on that subject.

A further question is presented as to whether more than one reconsideration may be demanded in respect of any rule, if requested by divergent parties. The bill is silent in that regard. Is this a subject in respect of which the administrative agency may issue rules; and, if so, the question of public hearings with respect to such rules is again raised. Probably the framers of the bill are correct in their belief that as a practical matter there will be no tendency to abuse the privilege of asking for reconsideration. Nevertheless, the effect of this provision is so sweeping, applying as it does to all rules of administrative agencies of no matter how long standing, that it would seem that there might at least be something in the nature of a statute of limitations preventing the right to demand reconsideration of rules outstanding for more than a certain period. In this connection it should be noted that there is no provision for rehearing of rules promulgated after the enactment of the bill, and accordingly it is logical to assume that it was not intended that there should be more than one rehearing on rules promulgated before the act becomes effective. If it is the purpose of the bill that there should be one public hearing with respect to every rule, then should not logically the right of reconsideration be granted only in respect of rules which have been issued without public notice and hearing? Under existing practice, in some cases voluntarily and in others by specific statutory requirement, many rules and regulations have been issued upon public notice and hearing. And, finally, what is the effect of the requirement of a reconsideration of any existing administrative rule in the manner provided upon a rule already issued under a law requiring greater procedural formalities, including, say, findings of fact on the part of the rule maker?

Even in their theoretical approach to the subject, there seems to have been no attempt on the part of the sponsors of the bill to distinguish in its application between the substantive functions of the various agencies involved. The agencies affected by this bill carry on a variety of quite distinct functions. Thus the Securities and Exchange Commission, among other things, regulates the issuance of securities, stock exchanges, over-the-counter markets, public utilities, and trust indentures as well as conduct of persons in relation to such matters, the Procurement Division of the Treasury exercises proprietary functions incident to the ownership of property on the part of the Government, the Post Office Department carries on the business of delivery of mail for remuneration, the Veterans' Bureau administers relief, and the Department of the Interior leases lands not primarily for profit but for public service. Other differences which have been pointed out by Professor Fuchs<sup>29</sup> involve the character of the parties affected, the character of the administrative determination, and the character of the enforcement which attaches to the resulting regulations. Is it to be expected as a matter of course that when issuing rules in these different types of situations the same procedure should uniformly be followed? A rule making unavailable some minor privilege under certain circumstances is quite different from one whose violation may result in a penitentiary sentence. In matters affecting health the occasional urgency of action and the technical nature of the questions arising tend to minimize the need of formality in rule-making procedure.<sup>30</sup> Rules governing the use of radio for purposes of promoting safety of life at sea and in the air must frequently be adopted in short order and cannot be made the subject of extensive public hearings.<sup>31</sup> Rules issued by the Securities and Exchange Commission providing complicated form of registration in respect of both the issuance and listing of securities are of so technical a nature as not readily to lend them-

<sup>25</sup> See sec. 3 of the bill which provides for a declaratory judgment nullifying any rule for failure to comply with sec. 2.

<sup>27</sup> *Id.* at 268.

<sup>28</sup> See letter of Federal Communications Commission to chairman, Committee on the Judiciary, House of Representatives, House hearings, supra, note 1, at 109. In this letter the Federal Communications Commission states that it has been its policy whenever such action seemed practicable and expedient to hold public hearings before the adoption of rules; that many of the Commission's technical rules are of such a character as to render of no practical value the holding of hearings in which any interested party might participate; and that in many cases the Commission has found helpful the conference method in which experts representing interested groups have cooperated with the Commission in the adoption of the best rules and regulations governing the particular matters under consideration.

<sup>29</sup> See Senate Report, supra, note 3, at 6, 13.

<sup>30</sup> American Bar Association report, supra, note 12, at 1, 2, 22, 23, 25; Senate report, supra, note 3, at 10, 11; House report, supra, note 4, at 4.

<sup>31</sup> The American Bar Association report, supra, note 12, at 1 states: "Sec. 1 [sec. 2 in the Senate bill] requires every Federal administrative agency to implement, by rules and regulations, statutes administered or enforced by it." See also pp. 21 et seq. and Senate report, supra, note 3, at 10 et seq., and House report, supra, note 4, at 3 et seq.

selves to the procedure of public hearings, even if certain other types of rules issued by that Commission, may.<sup>32</sup> On the other hand, existing statutes, as in the case of the Bituminous Coal Act of 1937<sup>33</sup> and the Food, Drug, and Cosmetic Act of 1938,<sup>34</sup> require in many instances a much greater degree of formality in connection with the issuance of rules and regulations than that provided in the bar association bill which is designed to provide minimum standards only.<sup>35</sup>

Furthermore, it should be noted that no distinction is made between rules which may be issued under statutes giving such rules to all intents and purposes the force and effect of law<sup>36</sup> and rules which have no legal force but constitute merely interpretations made by administrative agencies of the statutes under which they may be acting.<sup>37</sup>

As to general principles: While there is great force in the theoretical arguments in favor of public hearings before the promulgation of administrative rules, and undoubtedly in many instances there are great practical advantages as well, it is doubtful whether in most of the cases covered by the sweeping scope of the bill the benefits to be achieved will outweigh the disadvantages. The theory of a public hearing is that there will thereby be insured due consideration of all points of view and perhaps that the spotlight of publicity will exercise a wholesome influence on the regulatory bodies. Experience has shown that this is not always the case. On the one hand hearings are often perfunctory, on the other hand they frequently develop antagonisms which are not conducive either to sound legislation or beneficial cooperation between agency and the particular persons affected, and in either event time is often wastefully consumed. This results in a reluctance on the part of many persons whose experience might be helpful in the formulation of rules to appear at public hearings. Some administrative agencies have developed the practice of calling upon persons interested or expert in the subject matter with which they have to deal for consultation, or such consultation may result from the initiative of interested persons or groups. In informal conferences and discussions of this nature there can be a very great measure of cooperation and mutual help between Government agencies and private persons.<sup>38</sup> A conscientious administrative body can and will obtain from the individual or group subject to its jurisdiction as much cooperation and assistance as is feasible in ways more effective than any public hearing and will combine the information so obtained with its own expert knowledge and experience. Conversely, an agency which wishes to act arbitrarily cannot be compelled to exercise its rule-making discretion impartially and fairly by any requirement of the formality of a public hearing. Nothing in this bill or in any other bill could effectively require the rule-making authority to give proper weight to any evidence adduced at any hearing if that authority were determined to disregard or minimize certain evidence and to act arbitrarily. Moreover, the medium of a public hearing in the hands of arbitrary and unfair persons can effectively be used as a weapon to coerce individuals and to stifle any real opposition to proposed measures. The weapon of publicity thus given to an administrative body in connection with public hearings is an extremely powerful weapon which, if abused, can far outweigh any possible advantages from public hearings. Examples of this type, both in respect of hearings before congressional committees and administrative bodies, are too well known to require specification.

It is not suggested here that the principle of public hearings in rule-making should be completely abolished. It is merely suggested that such procedure has disadvantages which in many instances completely outbalance its advantages and that these advantages and disadvantages must be weighed in the case of each agency in relation to the objectives of the particular agencies and the actual functioning of such bodies. Nor is it to be expected that uniform procedure will be found desirable in respect of all types of rule-making within a given agency. While to some extent the development of variations between the requirements of the different acts under which the agencies function may have been on a hit-or-miss basis, it is fair to assume that in the main the subject of adaptability to the particular problems received reasonably adequate consideration in the formulation of the respective laws governing the various agencies. This does not mean that it would not be wise to review these laws and the practices established thereunder with a view to improvement of

procedure. Possibly in some cases where public hearings are not now provided for, a reconsideration will lead to the conclusion that public hearings are desirable or, on the other hand, that in some instances where public hearings are now required a reconsideration may lead to their elimination. A fair expectation would be that any such survey would conclude that in some instances public hearings should be mandatory, in other instances within the discretion of the rule-making authority and possibly in still other instances only upon request.<sup>39</sup>

### SEC. 3. "JUDICIAL REVIEW OF RULES"

Section 3 of the bill<sup>40</sup> provides that the United States Court of Appeals for the District of Columbia shall have jurisdiction, upon petition filed (it does not say by whom) within 30 days from the date of publication of any administrative rule, to hear and determine whether any such rule is in conflict with the Constitution of the United States or the statute under which it is issued and to enter a declaratory judgment to such effect. The grounds for holding any such rule invalid are violation of the Constitution, conflict with a statute, lack of authority conferred upon the agency issuing such rule, or failure to comply with section 2 of the act (which deals with the procedure for rule making.) The defense of the rule is vested in the Attorney General of the United States.<sup>41</sup> Any such petition is to receive a preference, and the court may refer such petition, and any reply, for the taking of such evidence as shall be material and relevant thereto. If the rule is held invalid it shall thereafter have no force or effect except to confer immunity for action taken thereunder in good faith. If, on the other hand, the rule is upheld, this does not prevent the redetermination of its validity or invalidity in any suit or review of an administrative decision or order in any court of the United States.

Thus the constitutionality or validity of a rule may be challenged in a proceeding in which there is no controversy in the ordinary legal sense, and a determination of this character is to be binding against the administrative agency but not against the petitioner. This probably results in giving the United States Court of Appeals for the District of Columbia the power to declare unconstitutional a rule issued by one of the Government agencies without any review by the Supreme Court of the United States. This is so because the Supreme Court has repeatedly declared that it will not take jurisdiction in a case in which no actual controversy is involved, and being a constitutional court it cannot be compelled to do so.<sup>42</sup>

Needless to say, while the challenge to the constitutionality of a given rule need not in a particular instance be a challenge to the constitutionality of the statute under which it has been issued, nevertheless in many if not most cases a determination of the constitutionality of the rule will involve a determination of the constitutionality of the statute involved.<sup>43</sup> The bill does not give the court power in a proceeding for a declaratory judgment to hold unconstitutional the statute under which a challenged rule has been issued. It is probable, therefore, that a judgment declaring a rule to be invalid will be binding only as to such rule and that the statute under which the rule has been issued will continue in full force and effect. But even if the bill does not give directly to the district court of appeals the power to declare invalid an act of Congress in a proceeding for a declaratory judgment, as a practical matter this power will in many respects exist anyway because the power to declare unconstitutional all rules issued under a given statute must, if it does not completely nullify the effect of any such statute, go a long way toward doing so. That confusion will result is obvious.

It would seem useless to speculate about the possible variation of circumstances under which there could exist (of course only until the matter was finally disposed of in some case recognized by the courts as an actual controversy) a valid act of Congress under which all regulations could successfully be challenged. A rule under a

<sup>32</sup> See also Feller, *Prospectus for the Further Study of Federal Administrative Law* (1938), 47 Yale L. J. 647, 659-661.

<sup>33</sup> 50 Stat. 72 (1937), 15 U. S. C. A. sec. 829 (a) (1939).

<sup>34</sup> 52 Stat. 1055, 21 U. S. C. A. sec. 371 (e) (Supp. 1938).

<sup>35</sup> No exception is taken to these divergencies. They are merely pointed to as examples of differences which may require divergence in treatment.

<sup>36</sup> Securities Act of 1933, secs. 3 (a, 11) and (b), 7, and 10 (d), 48 Stat. 906, 78 and 81 (1933), 15 U. S. C. A. secs. 77c (a, 11) and (b), 77g, and 77j (d) (Supp. 1938).

<sup>37</sup> *Sanford's Estate v. Commissioner of Internal Revenue*, 60 S. Ct. 51, 84 L. Ed. 53 (U. S. 1939).

<sup>38</sup> Greater flexibility is secured through this method, which is particularly desirable in the case of the newer agencies where rules must frequently be amended in the light of greater experience. Prompt changes of this kind made by the Securities and Exchange Commission at the request of individuals and groups have been of great practical value.

<sup>39</sup> In this connection it is interesting to note the conclusions stated by Professor Fuchs in his interesting article, *supra* note 29, at 280: "Certainly there will never be a time when it will be possible to assert that the details of rule-making procedure, or even the 'basic requirements of fair play' in such procedure, should be the same in all the varied circumstances that arise. Many regulations, even where private interests are affected, should continue to be issued on the basis of administrative knowledge or after merely informal investigation; others will call for systematic consultation with affected parties or regularized opportunities for such parties to be heard; still others, perhaps, will involve adversary proceedings in which parties are accorded virtually the status of litigants."

<sup>40</sup> Sec. 2 in the American Bar Association draft, *supra*, note 12.

<sup>41</sup> It would seem preferable that the agency itself, rather than the Attorney General, should defend the rule. See also note 60, *infra*.

<sup>42</sup> *Muskrat v. United States*, 219 U. S. 346, 31 S. Ct. 250, 55 L. Ed. 246 (1911); *Liberty Warehouse Co. v. Grannis*, 273 U. S. 70, 47 S. Ct. 282, 71 L. Ed. 541 (1927); *Piedmont & N. Ry. Co. v. United States*, 280 U. S. 469, 50 S. Ct. 192, 74 L. Ed. 551 (1930); *Electric Bond & Share Co. v. Securities and Exchange Commission*, 303 U. S. 419, 58 S. Ct. 678, 82 L. Ed. 419, 115 A. L. R. 105 (1939).

<sup>43</sup> Chairman WALTER of the House Subcommittee on the Judiciary seems to feel that in a proceeding under the bill there must be assumed the constitutionality of the statute under which a challenged rule has been issued (*House Hearings, supra*, note 1, at 41). But this hardly seems a tenable construction.

particular statute might be held invalid because of the unconstitutionality of the statute, while another rule under the same statute continued in full force and effect for failure of challenge within the 30-day period. To the extent that the particular provisions of a statute were to be effective only as supplemented by rules, such statutory provisions would of course be completely nullified by declaratory judgments invalidating the rules. To the extent that particular provisions were not so dependent they would not be nullified and would remain effective for all purposes except their administration by Government agencies through rule-making and processes dependent thereon.

There remains the question of the wisdom of the provision for judicial review of rules issued by administrative agencies, irrespective of the very serious objection because of constitutional limitations. The objective stated in the American Bar Association report<sup>44</sup> is to provide a means of challenging the validity of regulations that affect the public by a simplified procedure without delay and at nominal cost. To this objective little if any exception can be taken. The question, however, remains of the feasibility of the provisions made for declaratory judgments. Unfortunately little that is helpful appears in the bar association annotations to its bill. The House and Senate committee reports pass over this question, and there is no substantial comment by Colonel McGuire in his article in the *Louisiana Law Review*. Perhaps it is from lack of confidence in this procedure that recourse thereto is limited to 30 days after the publication of a rule and the expectation is expressed that such jurisdiction will be invoked only in limited instances.<sup>45</sup> It is felt by the proponents of the bill that the fact that the jurisdiction is there will be sufficient for most purposes.<sup>46</sup>

A somewhat fuller discussion of this particular proposal appears in the 1937 report of the special committee on administrative law.<sup>47</sup> If preventive justice by way of injunction against future official acts under an unconstitutional statute is expressly upheld by the Supreme Court of the United States where the individual interest is clear and immediate, why cannot this result be achieved by provision for a declaratory determination where present individual interests are threatened by exercises of administrative rule-making power? So runs the argument. But it must be remembered that the courts will only entertain proceedings for injunctions of this character where the jeopardy to the petitioner is clear and immediate and where, in consequence, a substantial controversy involving a definite state of facts is presented.<sup>48</sup> It is precisely because of the absence of a requirement of such clear and immediate interest that the doubt exists as to the advisability of the remedy by declaratory judgment. It is feared that in many cases a court attempting to act under this section would either pass upon the validity of a rule without the necessary factual background or would be led into burdensome and yet necessarily incomplete consideration of many possible factual variations. That the proposed procedure runs contrary to the long-established tradition of the common law is no adequate answer to a legitimate attempt at improvement. Testing the validity of statutes in actions for declaratory judgments is a procedure of growing acceptance in State courts, but even so it is doubtful whether there has been sufficient experience to warrant its application on so broad a scope as under the present act. Conditions under Federal laws are in many respects quite different and of much wider application than under State laws. It would certainly seem sounder to proceed cautiously with its application, in the first instance with respect only to a relatively small number of agencies or types of rules chosen with respect to their particular adaptability to such procedure.

#### SECTION 4. STATUTORY APPROVAL AND AUTHORITY FOR ADMINISTRATIVE BOARDS AND PRESCRIBING THEIR PROCEDURE

Section 4 of the bill<sup>49</sup> provides for intradepartmental appeals in respect of action taken by administrative bodies. Two categories of procedure are established, the one for single-headed agencies and the other for independent agencies.<sup>50</sup>

It is provided that there shall be established from time to time in each single-headed agency such intradepartmental boards, consisting of three members, as may be necessary and desirable. Where intra-agency boards already exist, they are to be reestablished and to function in accordance with the act. At least one employee designated for each such board shall be a lawyer and shall act as chairman of the board. No member of a board who has participated in a particular case or in the preparation, draft, or approval of any rule which may be involved shall sit in appeal of the case of application of the rule. It is then provided that when any person is aggrieved by a decision of any official or employee of any independent agency, such person is entitled to have the controversy referred for hearing and determination to an intra-agency board constituted as above provided. Whether or not a trial de novo is required before the intra-agency board, where there has already been a hearing

before an individual examiner, is not clear. If not, the relationship between the two proceedings gives rise to a host of complications not covered by the bill.

In the bar association bill the right of appeal is granted in sweeping terms to any person aggrieved by "a decision, act, or failure to act" (including any regulatory order) by any official or employee of such single-headed agency. In the bill as amended the word "decision" is defined to mean "any affirmative or negative decision, order, or act in specific controversies which determines the issue therein involved" and "controversy" is in turn defined to mean "any dispute or disagreement concerning any claim, right, or obligation for or against the United States and any refusal to grant any license, permit, or other privilege."<sup>51</sup> At the hearings before the intra-agency board a written record is to be taken, a copy of which is to be furnished to the aggrieved person upon his request. Any person having a substantial interest in the controversy has the right to intervene. Within 30 days after the evidence and arguments have closed the intra-agency board is required to make written findings of fact and a separate decision which is to be subject to the approval, disapproval, or modification of the head of the single-headed agency concerned or such person as he shall designate in writing to act for him. (Under the section of the bill following, any such decision is subject to appeal by the individual to the United States Court of Appeals for the District of Columbia or to one of the Circuit Courts of Appeals.)<sup>52</sup>

Provision is made for the issue of subpoenas and reference is made to the taking of depositions, although no provision is made therefor. No provision for stay pending appeal is provided, but redress is given when the matter in controversy is such that the delay incident to the hearing and decision would create an emergency contrary to the public interest and there is administrative action or inaction prior to or without such hearing and determination resulting in the destruction of the property or damage to the aggrieved person. Curiously enough no redress is provided in the event of injury resulting from any action or inaction where no emergency has warranted such action or inaction.

It will be noted that the bill provides in respect of intradepartmental boards created for single-headed agencies that at least one employee designated for each such board shall be a lawyer who shall act as chairman of the board. This seems too sweeping a provision. The value of having at least one lawyer, presumably familiar with legal proceedings, on most boards can be understood and perhaps no objection should be made to such a requirement on principle, even though the question arises as to whether any investigation has been made as to how many boards which may now be functioning effectively will have to be reestablished by such a provision. Has any consideration been given, for example, to the question of why there should be a lawyer on the Board of Tea Appeals,<sup>53</sup> or upon a board established by the Bureau of Marine Inspection and Navigation?<sup>54</sup> In any event, that the lawyer need be chairman of the board is quite another matter. It may well be that in many cases the qualifications of the lawyer will be such as to make him the logical contender for this post, but even lawyers should be willing to admit the possibility that one of the lay members of such a board might have superior qualifications of intellect, judgment, and leadership which would make him preferable as chairman. Surely this is a matter which might be left to the agency itself for solution. The further provision that no member of a board who has participated in the preparation, drafting, or approval of any rule which may be involved shall sit in the application of such rule seems questionable. That no member who has participated in a particular case should sit in appeal on such case will certainly be generally accepted, among lawyers at least. But why a person who has participated in the preparation of a rule should be disqualified from taking part in a determination of the application of such rule is indeed difficult to understand. Again the provision that a decision must be made within 30 days after the termination of the proceedings is drastic and unreasonable. There can be no doubt of the strong desirability of early determinations. But that a determination can be made in each case, many of which must necessarily involve complicated questions of both law and fact, within 30 days after the evidence and arguments are closed, is not to be expected. Such expedition is neither required of nor practiced by most courts.

The procedure in respect of independent agencies is different from that of single-headed agencies, but the language of the subsection dealing with this is so confused as to defy accurate analysis in many respects.<sup>55</sup> It is stated that "where any matter arises out of the activities of any independent agency, it may be provided by rule that such matter may be heard in the first instance by

<sup>51</sup> See definitions in sec. 1 of the bill. Note, however, that in the very next sentence of sec. 4, the bill refers to "receipt of a registered letter notifying \* \* \* of the decision, act, or failure to act," lapsing into the language of the original bar association draft.

<sup>52</sup> The bar association report, supra, note 12, at 3, states that the agency is given no appeal from the decision of its own board, but inasmuch as the head of the agency has the power to approve, disapprove, or modify the findings of fact and decision of the board, this comment is not understood.

<sup>53</sup> This agency passes upon the quality of tea. See 29 Stat. 606 (1897), 21 U. S. C. A. § 47 (1927).

<sup>54</sup> This agency passes upon the qualifications of pilots, masters, engineers, etc., and administers the Steamboat Inspection Laws. See 46 U. S. C. A. § 224 and §§ 391 et seq. (1923).

<sup>49</sup> Sec. 3 of the American Bar Association draft, supra, note 12.

<sup>50</sup> See definitions, p. 7, supra.

one of its trial examiners." Precisely what is meant by the words "where any matter arises out of the activities of any independent agency" is far from clear. The previous paragraphs of section 4 have dealt with intra-departmental appeals and so it might be logical to expect that the matters referred to in this sentence are actions of the independent agency calling for review. However, it is probable that the matters referred to are not limited to appeals, but include also such matters as the independent agencies may by rule<sup>46</sup> refer to trial examiners in the first instance, in line with existing practice. The bar association committee report would indicate an intent to regularize the existing practice of the appointment of trial examiners by independent agencies.<sup>47</sup> Provision for trial examiners is made purely voluntary under the bill and apparently would involve only such matters as may be covered by rules of the independent agency. Certainly no independent right of appeal such as is provided in the case of single-headed agencies is given to an aggrieved party in respect of an act of an independent agency or of one of its employees. However, where any such matter is heard, either by a trial examiner in the first instance or by the independent agency itself, there is stipulated a full and fair hearing after public notice<sup>48</sup> in the manner provided for in the earlier paragraphs of the section.

It is provided that the independent agency shall at the expiration of 30 days "enter such appropriate decision as may be proper" unless the aggrieved party either consents thereto or objects to the findings of the examiner, in which event there must first be a public hearing upon reasonable notice. This obviously does not make sense and the proviso with respect to consent of the aggrieved party, which did not appear in the original bar-association bill, must have crept in by error. But it is not clear whether the agency is bound by the findings of fact and separate decision of the trial examiner or whether it may disregard these and enter such decision as it in its discretion may deem appropriate. The provision for a public hearing before the entry of the decision by the independent agency where the aggrieved party objects to the findings of fact and decision of the trial examiner, but not where no such objection is made, would indicate that the decision entered by the agency must correspond to the decision of the examiner. But if this is so, there is no right of review or appeal whatsoever on the part of the independent agency from a decision of its own trial examiner adverse to it.

Where the independent agency has less than three members it is provided that an intra-agency board shall be constituted in the manner provided in the previous paragraphs of this section, upon which the members of the independent agency may serve at their election. But it must be remembered that there is no mandatory function for the board of the independent agency unless the agency itself voluntarily sets up a procedure of hearings before a trial examiner. By inference, hearings may in the first instance be before members of the independent agency itself or a board, if the membership is less than three. There is no provision for the taking of a written record in any proceeding before a trial examiner or members of an independent agency, for the issue of subpoenas, or for intervention. Whether or not it was expected that such and other procedural provisions would carry over from the earlier subsection of section 4 is not clear.

It should be said that the objectives of section 4 are sound. There can be no doubt as to the imperative need for improvement of the judicial process within the administrative agencies themselves. Whether, however, the act goes too far in the extent to which review is provided and whether or not it is possible or desirable to legislate so broadly in respect of so many administrative agencies without a study of the effect of such legislation on each agency is another question. This subject, together with the provisions of the bill defining the scope of administrative action subject to review, will be discussed in connection with a consideration of section 5 of the bill, which provides for judicial review of administrative decisions. Both sections are dependent upon the definition of the word "decisions" for the scope of their application.

#### SECTION 5. "JUDICIAL REVIEW OF DECISIONS OR ORDERS OF ADMINISTRATIVE AGENCIES"

Section 5 of the act<sup>49</sup> provides for judicial review of final decisions or orders of administrative agencies. Any party to a proceeding before an administrative agency as provided in section 4 of the act, who may be aggrieved by the "final decision or order" of the agency, may appeal the "decision" at his election to the United States Court of Appeals for the District of Columbia or to the circuit court of appeals within whose jurisdiction he may reside or maintain his principal place of business or in which the controversy arose. Appearance is to be made on behalf of the United States by the Attorney General.<sup>50</sup> The court may affirm or set aside the "decision" or may direct the agency to modify its "decision" or the case may be remanded for further evidence. Any "decision" of any agency "shall be set aside if it is made to

appear to the satisfaction of the court (1) that the findings of fact are clearly erroneous; or (2) that the findings of fact are not supported by substantial evidence; or (3) that the decision is not supported by the findings of fact; or (4) that the decision was issued without due notice and reasonable opportunity having been afforded the aggrieved party for a full and fair hearing; or (5) that the decision is beyond the jurisdiction of the agency or independent agency as the case may be; (6) that the decision infringes the Constitution or statutes of the United States; or (7) that the decision is otherwise contrary to law."<sup>51</sup>

There can be no doubt as to the sweeping character of the provisions of the original bar association bill which provided in respect of the single-headed agencies for an appeal to a board from any decision, act, or failure to act, including any regulatory order, of any official or employee of any such agency and for court review of any final decision or order of either single-headed or independent agencies. So sweeping, indeed, was this provision that it was necessary to provide that nothing in the act should apply to "any case where the aggrieved party was denied a loan, or may be dissatisfied with a grading service in connection with the purchase or sale of agricultural products, or has failed to receive appointment or employment by any agency or independent agency." As has been seen, the act passed by the Senate has limited the scope of permissible appeal by definition of the word "decision," but whether by accident or design the reservation above quoted still remains and for the purposes of this discussion must be considered as a part of the bill in endeavoring to interpret its language. But while the definition of decision, from which a right of appeal is given, would seem to narrow in some respects the extent to which appeal may be had from administrative acts, it cannot be said that this definition in any manner clarifies the matter. Quite the contrary. "Decision" means any affirmative or negative decision, order, or act in specific controversies which determines the issue therein involved." This by itself might be capable of analysis, even though the language itself is not very artistic. However "controversy" is in turn defined to mean "any dispute or disagreement concerning any claim, right, or obligation for or against the United States and any refusal to grant any license, permit, or other privilege." The words "refusal to grant any license, permit, or other privilege" are clear, if sweeping in their extent. Again, the expression "any claim \* \* \* against the United States" perhaps presents no difficulty of understanding, although very broad in scope. A "right \* \* \* against the United States" would presumably be the equivalent of a valid claim. The expression "any claim or right for the United States" is perhaps not good English, but if interpreted to mean "any claim or right of the United States" can also be understood. What, however, is an obligation either for or against the United States? If it means an obligation of or to the United States even this, except in an extremely narrow sense of the word "obligation," is rather difficult of application.

As has been seen, the extent to which an appeal may be had as of right to an intra-agency board established under Section 4 of the bill with respect to single-headed agencies and from such agencies to the appellate court, is measured by the definition of the word "decision." Inasmuch as it would appear that under this bill proceedings within independent agencies may only be instituted to the extent permitted under their own rules, this definition will affect independent agencies only in relation to court appeals. The right of appeal under existing statutes is not affected, but as will be seen the appeal given under the bar association bill provides for a broader review of fact on the part of the appellate court than in the normal review of actions of administrative bodies under existing statutes.<sup>52</sup>

That there should in many instances be a right of appeal from administrative action is self evident, and that there is opportunity for improvement of the administrative processes in this respect probably no practicing lawyer would deny. The question raised here is only as to the extent to which such right of appeal should be granted. Obviously administrative processes could not function satisfactorily if the right of appeal were given in respect of every minor administrative determination. It would seem that the bar association bill, even as amended by the Senate, goes too far in this direction and is altogether too indiscriminate in the nature of the acts from which an appeal may be taken. It is a difficult task to draw any satisfactory line, so difficult indeed that to some degree this should perhaps be left to administrative rule-making insofar as intradepartmental appeals are concerned. It will certainly be apparent that any departure from the general practice of permitting appeals as of right only from final orders, intended to reach the more informal determinations of administrative subordinates, can be made only after careful factual study of the particular agency in respect of which the legislation is intended to operate.

Under the bar association bill it would appear that a decision by the Procurement Division of the Treasury Department that a

<sup>46</sup> Must rules of this kind be issued only after notice and public hearing? See discussion, p. 9, supra.

<sup>47</sup> American Bar Association report, supra, note 12, at 35.

<sup>48</sup> This slip, calling for public notice instead of public hearing, can be traced back to the original bar association draft. American Bar Association report, supra, note 12, at 29.

<sup>49</sup> Sec. 4 in the American Bar Association's draft, supra, note 12.

<sup>50</sup> See note 41, supra. It is suspected that hostility to the administrative agencies is responsible for these provisions.

<sup>51</sup> It will be noted that the word "order" is used only in the headnote and in the beginning of the first sentence of the section. In the Bar Association draft the words "decision or order" are used throughout. Quite apparently, in the bill as passed by the Senate the word "decision" is intended to and would naturally be interpreted to mean a decision as previously defined, and the inclusion of the word "order" in the two places is merely a careless hold-over from the original draft.

<sup>52</sup> See discussion, p. 27 et seq., infra.

low bidder lacks the technical or financial qualifications necessary to undertake a contract would be subject to appeal.<sup>63</sup> Heretofore it seems there has been no right of court review in respect of situations involving the disposition of public lands in the nature of voluntary grants, but such class of claims might be held to come within the definition of the bill.<sup>64</sup> If it should appear wise that so substantial a change be made in existing procedure, certainly such conclusion should be reached after adequate consideration and not merely as the result of a dragnet provision in the bill.<sup>65</sup> As is stated in the brief of the Department of Agriculture:

"Under the proposed statute, an intradepartmental board would be set to work not only to review the revocation of a poultry dealer's license or the refusal of a sheep-grazing permit, but to appease a resident on a resettlement project who had been denied a renewal of his lease or a department employee who had been refused special parking privileges, and so on."<sup>66</sup>

It is indeed possible that decisions with respect to the personnel of a given agency may come under the scope of review. For, while there is excepted from the provisions of the act any case where an aggrieved party "has failed to receive an appointment or employment," no such exception applies to the discharge of any employee, the failure to receive promotion, dissatisfaction with grading, and so forth.

At the present time there is no right of court review of proceedings of the Veterans' Administration. The statute goes so far as to provide that:

"All decisions rendered by the Administrator of Veterans' Affairs under the provisions \* \* \* of this title, or the regulations issued pursuant thereto, shall be final and conclusive on all questions of law and fact, and no other official or court of the United States shall have jurisdiction to review by mandamus or otherwise any such decisions."<sup>67</sup>

Obviously major reasons of policy dictated these provisions.<sup>68</sup> But whether or not these provisions and the policy which dictated them are sound, it must be clear that the existing law was enacted with special reference to particular problems and that it should not lightly be discarded without any consideration whatsoever of these problems. Other instances where Congress has in the past apparently concluded that special circumstances required special treatment are in relation to the Civil Service Commission, dealing with matters of government personnel;<sup>69</sup> the Bureau of Marine Inspection and Navigation under the Department of Commerce, having the power to suspend or revoke licenses of pilots, masters, engineers, etc., and to administer the Steamboat Inspection Laws<sup>70</sup> and the boards of special inquiry appointed by the Commissioner of the Immigration and Naturalization Service of the Department of Labor, which deal among other things with deportation cases.<sup>71</sup> In none of these cases do direct appeals lie to the courts.<sup>72</sup> Surely an administrative determination dealing with questions of safety of life at sea does not ipso facto call for the same degree of judicial review as proceedings for the suspension of a member from a stock exchange. And while employees of the Government are entitled, through access to boards of review, to protection against the possibility of capricious acts of their superiors, there seems to be no need to involve the judiciary in the adjustment of problems of this sort. In any event, these are matters for individual consideration which cannot be dealt with soundly by blanket legislation.

On the other hand, certain matters of importance which might under existing procedure come before the board of an independent agency would probably not be appealable under the terms of the act. Thus an order of the Federal Power Commission fixing rates of depreciation<sup>73</sup> would not be reviewable under this act because it could hardly be deemed to involve a "dispute or disagreement concerning any claim, right, or obligation for or against the United States" or "any refusal to grant any license, permit or other privilege." On the other hand the refusal of the Securities and Exchange Commission to grant an exemption from the operation of

the utility act<sup>74</sup> or to permit the withholding of confidential information from a registration statement<sup>75</sup> would come within the scope of the court review granted. The distinction would seem to be the arbitrary consequence of the haphazard language of the bill, rather than the result of any deliberation in respect of the particular classifications involved.<sup>76</sup>

As has been stated, section 5 is intended to give the courts a greater scope of review than had been customary in respect of administrative agencies. The words "clearly erroneous" have been taken from rule 52 of the new Rules of Civil Procedure of the Federal District Courts, on the basis that the power of the court to review findings of fact of an administrative agency should be at least as great as its power of review in respect of findings of fact of a trial judge without a jury.<sup>77</sup> The annotations to the bar association draft in several places speak of the power of review given by section 5 as permissive, but it is difficult to interpret the language of the act as other than mandatory.<sup>78</sup> To the extent that court review or relief is sought by an individual outside the provisions of this act, the scope of court review of any administrative determination will not be as great. Such court review outside the provisions of this act may be the result of a voluntary choice of remedies on the part of the individual or because of his inability to qualify his case as an appeal from a "decision" as provided in the bill.<sup>79</sup> Instead then of accomplishing uniformity there results in this respect a serious lack of unity where uniformity would be desirable. Whether or not a court could review the factual basis of a given controversy within a particular agency, would depend upon the procedure elected by, or in some cases forced upon, the appellant.

The question of the extent to which the courts should be permitted or required to review the factual determination of administrative agencies is one as to which there is sharp divergence of opinion and on which much has been written. It will, therefore, serve no purpose at this time to more than touch upon the theoretical aspects of this subject. It should, however, be pointed out that to the extent that section 5, taken in conjunction with section 4 of the act, grants the right of appeal in respect of a large variety and vast number of administrative acts which have not heretofore been subject to review by the courts, the additional burden placed upon the courts by the provision for a more extensive review of the facts is very great. It may be pointed out again that there is here as elsewhere real occasion for a detailed examination of the many agencies covered by the scope of the act. It is quite possible that a review of the actual operation of the various agencies may disclose that the activities of some in particular lend themselves to greater court supervision than others, aside from any general view as to whether greater or less supervision is desirable. For example, some decisions of administrative bodies involve in part at least purely administrative determinations, while others are purely judicial in that they involve only such considerations as would normally come before a court. A decision of the Securities and Exchange Commission refusing approval of the acquisition of securities or utility assets under section 10 of the Public Utility Act of 1935, involving a determination, among other things, that such acquisition would either unduly complicate the capital structure of the holding-company system of the applicant or would be detrimental to the public interest or the interest of investors or consumers or the proper functioning of such holding-company systems would come within the former category,<sup>80</sup> while an order expelling an individual or firm from the Stock Exchange would probably constitute an adjudication involving no administrative determinations. Without reaching any conclusion on this subject, it may merely be suggested that there would be ground for distinction in the treatment of these two classes of cases on review.<sup>81</sup>

There would seem to be fairly general agreement that the administrative process needs improvement and that a tendency to arbitrary action on the part of many administrators must be firmly checked. Many believe that unless the power of administrative bodies is curbed by the courts this country is headed for despotism, if indeed such state of affairs does not already exist. Others conclude that unless democratic government can become more efficient through the operation of administrative agencies fascism will result. The one group emphasizes the present threat to individual liberties, while the other group, recognizing and deploring this situa-

<sup>63</sup> House Hearings, supra, note 1, at 106.

<sup>64</sup> Id. at 74.

<sup>65</sup> Under the Sugar Act of 1937 a hearing is required in connection with the making of quota allotments and not required in connection with the determination of the quota itself. House Hearings, supra, note 1, at 87. Presumably this distinction would hold under the definition of the word "decision," which in this respect is an improvement over the original bar association bill which, without consideration of the particular subject, would have permitted an appeal from the determination of the quota itself as an act by an officer or employee of a single-headed agency.

<sup>66</sup> House Hearings, supra, note 1, at 37.

<sup>75</sup> 48 Stat. 901 (1935), 15 U. S. C. A. § 78x (Supp. 1938).

<sup>76</sup> Under the language of the bill refusals are appealable in rather broad measure, but affirmative orders are only appealable if they fall within the narrow definition of the word "controversy."

<sup>77</sup> American Bar Association report, supra, note 12, at p. 42.

<sup>78</sup> Id. at 3, 42, 43.

<sup>79</sup> This latter contingency could not have arisen under the bar association draft.

<sup>80</sup> Grave questions are presented as to the wisdom of granting so broad a discretion to an administrative body without setting up adequate standards, of the feasibility of this type of regulation, etc. But these questions are not answered by providing a wide scope of judicial review of the findings of fact involved in any such determination.

<sup>81</sup> See Duffy (1937), 23 A. B. A. J. 844, for suggestions that administrative, legislative, and judicial functions should be distinguished, and full court review be allowed in the case of judicial functions only, and also Fuchs, Concepts and Policies in Anglo-American Administrative Law Theory (1938) 47 Yale L. J. 538, 553.

tion, takes a longer-range point of view in fearing an ultimately much greater threat to individual liberty if administrative processes are unduly curbed. The courts cannot shoulder the burden of protecting the individual from the acts of administrative agencies. The problem can be met only through reform within the agencies themselves. An increased rather than lessened responsibility in such agencies will contribute to this result. On the other hand, the placing of too great a burden on the courts might ultimately lead to a complete break-down of the judicial system. In this connection there must be recognized a tendency, not entirely conscious, among many of those who would curb administrative agencies by judicial process to attempt in some degree to nullify indirectly the objectives set by statute for these administrative agencies. And it may be said with justice that a large measure of support for the so-called procedural reforms of administrative process arises out of a deep-rooted antagonism to the legislation under which the administrative agencies are functioning.

#### SECTION 7. "EXCEPTIONS AND RESERVATIONS"

Subparagraph (b) of section 7, dealing with specific exceptions, has already been discussed.<sup>81</sup> The first paragraph of the section<sup>82</sup> significantly enough provides that nothing contained in the act shall operate to modify or repeal any rights or procedure as now provided by law for any person to have his controversy with the United States heard and determined in any district court or circuit court of appeals of the United States. This provision is frankly explained in the bar association report on the bill<sup>83</sup> as being due to the insistence of members of the bar association who wanted to retain all existing procedures open to individuals until such time as the procedures provided for in the new bill had been placed in operation and proven their worth. This reluctance on the part of members of the bar association to accept the provisions of this bill as substitutes for the presently existing rights of individuals can readily be understood, but does not show any great confidence in the proposed legislation. As far as the bar association members are concerned the trial and error method may be substituted for action taken only after investigation, provided only it does not affect the rights of the individual. What effect this procedure might have on the operation of the administrative agencies would appear to have been to them a more theoretical and less pressing question. Nor is it meant here to disapprove of the trial and error method within limited scope. Quite the contrary, it is believed that appropriate procedure for the accomplishment of the main objectives of the bar association bill should involve not only a thorough study of the operations of the agencies to be affected by the bill, but also a trial of certain of the resultant proposals by applying them first to particular agencies. If these provisions are then found satisfactory in operation, they can readily be extended to other agencies insofar as they may seem applicable.

#### CONCLUSION

The foregoing discussion leads to these conclusions: Whatever may have been the scope of the theoretical studies of administrative law which preceded the bar-association bill, there is no evidence of any adequate consideration of the detailed application of the proposed legislation and of its effect on the operation of the many agencies is affected. As a result the proposed bill is vitally defective. A thorough study is needed of the operations of each of the many Federal administrative agencies to determine to what extent the principles of the proposed bill may properly and effectively be made to apply. Thereafter a bill should be drafted, or the present bill redrafted, with detailed consideration given to the particular application of its provisions in each instance.

As to the general objectives of the bill, namely, public hearing before administrative rule making, judicial review of rules, improved machinery for intradepartmental appeals and provisions for more extensive judicial review of administrative decisions, it may be said that it is unlikely that any uniform procedural machinery can be devised in most of these matters which will operate satisfactorily in respect of the varying activities, both in a given agency and as between the different agencies, of the many administrative bodies. The method for public hearing before the issuance of rules has its disadvantages as well as advantages. In reference to particular applications, in some instances the one and in some instances the other predominate. Public hearing before rule making should not be universal but should only be required in the particular type of case where it is found to be advisable and, generally speaking, not in respect of minor rules. An attempt to provide for court review of rules is faced with a very serious obstacle in the probable inability as a general rule to secure a United States Supreme Court determination in this type of proceeding. At best it is a procedure which should initially have fairly limited application and should not be made applicable to rules of lesser importance. Improved procedure for intradepartmental review of administrative action and greater opportunity for appeal by aggrieved persons are generally accepted as desirable. But if the Federal administrative agencies are to be permitted to operate effectively and efficiently, great care must be exercised in the application of any such legislation to the specific activities of the various agencies. Uniformity in this respect would seem absolutely impossible. As to the extent of court review of administrative acts, it is the belief of the writer that in the main the increased scope of review provided in the bar

association bill is not desirable. This subject, however, like the others, is entitled to be considered in the light of the particular type of act which the court may be called upon to review, and it is not impossible that in relation to certain types of administrative activity a broader scope of review on the part of the courts may be found to be desirable.

## The Present Situation of Our Foreign Relations

### EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 29, 1940

#### PROGRAM OF THE AMERICAN FORUM OF THE AIR

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD a radio discussion participated in by the Senator from Nevada [Mr. PITTMAN], the Senator from Iowa [Mr. GILLETTE], the Senator from Wisconsin [Mr. WILEY], and me on February 18, 1940, on the subject of the present situation of our foreign relations.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Announcer McCORMICK. This is the American Forum of the Air. Listeners from coast to coast once more are invited to hear another forum broadcast emanating from the broadcasting studios of the Department of the Interior Building in Washington, D. C., presented by WOL in cooperation with WOR. The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational radio programs which present both sides of national problems, temperately discussed by leaders of various schools of thought.

Tonight's American Forum of the Air will be presented in two parts. Under the direction of the chairman, Theodore Granik, pioneer in educational radio discussion and newspaper columnist, you will first hear the formal presentation of opinion, followed by an extemporaneous panel discussion. And now your chairman, Theodore Granik.

Chairman GRANIK. Thank you, Mr. McCormick.

As the war of nerves throughout the world continues, amid the march of soldiers and the clang of steel, anxious Americans continue to watch developments with a mingling of fear and apprehension and hope. What, they ask, should be America's position in this drama of world events?

One need but read this morning's press to obtain a cross section of the haunting picture of horror that is modern war—armies equipped with the latest means of destruction, being unleashed to make a shambles of great civilized areas.

Headlines today report a British raid on the *Altmark*, with a German retort declaring unrestricted submarine war on all Allied shipping and on all neutral ships in Allied convoys or blockade control harbors. And we pause to wonder how this will affect American vessels.

We read also of little Finland's heroic struggle, and of her commander's appeal to his forces to hold firm to their new defenses. And while our sympathies are with this brave country, many urge caution lest we become involved in foreign entanglements.

What then is our position in this world of unrest? The week's developments made it clear that one of the great diplomatic dramas of United States history was beginning. The dispatch to Europe of President Roosevelt's trusted diplomat, Under Secretary of State Sumner Welles, brought on a thousand rumors. The reason was announced: "This visit is solely for the purpose of advising the President and the Secretary of State as to present conditions in Europe. Mr. Welles will, of course, be authorized to make no proposals or commitments." Later, Secretary Hull stated that because of the war, and its effect on neutrals, the United States had begun informal diplomatic conversations with neutral governments.

He made it clear that these conversations involved no world plan for peace. But they were preliminary inquiries looking toward the establishment of a sound international economic system, a worldwide reduction of arms. Their chief aim was to provide economic stability after the war.

And while these European moves have been taking place attention again has been focused on United States-Japanese relations. Members of the Senate Foreign Relations Committee have expressed varying views on the question of imposing embargoes on exports to Japan.

The committee is expected to discuss shortly two pending embargo proposals—one by Senator KEY PITTMAN, of Nevada, chairman of the committee, and the second by Senator LEWIS B. SCHWELLENBACH, of the State of Washington. Qualified approval of some form of embargo has come from several Senators. Others

<sup>81</sup> See pp. 4-7, supra.

<sup>82</sup> American Bar Association draft, supra, note 12, at section 6.

<sup>83</sup> Id. at 47.

are opposed, stating that it would be an unneutral action that might invite reprisals, while still others state that future developments would determine their final decision.

As these and other international problems affecting United States foreign policy continue to occupy the spotlight of attention, we present a discussion tonight on the present situation of our foreign relations.

We are privileged to present the views of four distinguished Members of the United States Senate: Senators KEY PITTMAN and SCHWELLENBACH, of whom I just spoke, and Senators GUY M. GILLETTE, of Iowa, and ALEXANDER WILEY, of Wisconsin.

The first part of tonight's program will be devoted to short presentations by each of our speakers. Immediately following they will engage in an informal panel discussion.

We invite your letters and comments on tonight's presentation. And now for our opening speaker, Senator PITTMAN.

#### ADDRESS BY SENATOR KEY PITTMAN

The European war so far has been chiefly a war in the air and upon the seas. Great Britain and France have been bending their efforts to reducing Germany's morale and power through a blockade of both her exports and imports. To the destruction by the submarine has been added destruction of merchant vessels and even warships from the air. To the horrors of this destruction have been added floating mines strewn along the coasts and throughout all shallow waters. Over 500 ships have been sunk and many lives have accompanied these sinkings. And yet not a single American vessel has been sunk and not a single American life has been lost during this vast destruction.

Even the most optimistic as to the efficaciousness of our neutrality law could not imagine the remarkable situation that exists today with regard to our shipping and our citizens traveling on the high seas.

There is no doubt that some bitterness exists in Germany and in Russia against the United States, and yet Germany has made no violent protests against our Neutrality Act. There is no doubt that she desired to receive arms, ammunition, and implements of war through Russia and other contiguous neutral countries and was deeply disappointed that the law was repealed so that Great Britain and France might equally obtain arms, ammunition, and implements of war through purchases in the United States. And yet Germany was largely compensated for being deprived of the special privileges with regard to arms, ammunition, and implements of war through the prohibition of American vessels from carrying merchandise to her enemies and the extending of credit to Great Britain and France.

Our ships are engaged in commerce in all parts of the world except with the belligerents and with those neutral countries included within the combat area. Our shipping is increasing in those areas where our vessels are permitted to engage in commerce.

We are suffering some losses and annoyances through the arbitrary action of Great Britain in carrying our vessels into her ports for search for contraband. This is one of those illegal acts that belligerents engage in by reason of intense fear and violent desire to take every advantage of their enemies. Such illegal acts invite retaliation and the commission of other illegal acts that constantly bring danger to the United States. I am sure that the British Government will abandon the illegal practice of taking American vessels into her ports. If this is done, then there will be no excuse for Germany to submarine our vessels on the high seas.

It is natural that in the heat of intense warfare the legal rights of neutrals should frequently be imposed upon. We went to war in 1917 by reason of the unlimited submarining of our vessels on the high seas. I am sure that we will not go to war again for such cause. And yet it does not follow because we are unwilling to send our soldiers abroad to fight for our rights that we will do nothing to induce belligerent countries to respect our rights. The law of retaliation and reprisal has existed since the beginning of time and does now exist. We have provided for retaliation in our tariff acts against governments who discriminate against our commerce and our citizens. We have the power of retaliation against every country in the world.

We are complaining against Great Britain now on the grounds that she is violating our rights under international law. We are protesting to Japan and have long protested against her violation of the rights of our citizens in China under the Nine Power Treaty. We have the right, and in fact, it is the duty of our Government to make such protests. It may become necessary for our Government to do more than protest. If our grounds of protest are sound, then retaliation to enforce our rights would be both legal and sound. Our Government should not be deterred in protecting the rights of its citizens by fear of a remote chance that some power may declare war upon us. No sane government today would declare war on the United States. There is no government today that can successfully bring war to the United States. Any declaration of war would simply submit such government to economic destruction and seal its fate as a belligerent. We are in as happy a position today as is conceivable while war rages in Europe and in Asia. We may have to retaliate but we know that there is no necessity of sending a single American soldier to either Europe or Asia.

Chairman GRANIK. Thank you, Senator PITTMAN. You are listening to the American Forum of the Air presenting a discussion on the present situation of our foreign relations. We now present Senator GUY M. GILLETTE, of Iowa.

#### ADDRESS BY SENATOR GUY M. GILLETTE

Ladies and gentlemen, 2 or 3 weeks ago I introduced in the Senate a concurrent resolution pursuant to section A (1) of the

Neutrality Act recently passed. It was designed as the preliminary step to the President's issuing a proclamation finding that a state of war existed in the Far East.

It was my intention tonight in the time allotted to me to discuss the reasons which impelled me to offer that proposal in lieu of the suggestions that had been made by my distinguished colleagues here tonight, the chairman of the Foreign Relations Committee and Senator SCHWELLENBACH, of Washington.

Yesterday I started to dictate a little preface to the remarks I intended to make and by the time I finished the preface, my time was used up, and I haven't the speech prepared on the subject that I intended to discuss, and the reasons, I hope, will appear in the further remarks that I will make.

It is hard to conceive of a more comprehensive subject than that chosen for tonight's forum discussion, the Present State of Our Foreign Relations.

I do not believe that there has ever been a time when the importance and even tenseness of our foreign relations had a wider field for interest and inquiry than at the present. There have been, of course, more delicate situations, fraught with greater immediate menace to our peace and security, but never a time when in so many quarters of the globe wars, actual or threatened, with their concomitant economic, financial, and political pressures involved our national interests so closely and so widely, and where the picture changed daily or even hourly with such startling kaleidoscopic effect.

There is Europe, with the great powers of Germany, France, and England engaged in a titanic struggle, the outcome of which will be determined largely by the economic strangulation of one side or the other; with the necessary curtailment of neutral shipping and trading; with the precarious position of the low countries of Belgium and Holland; and the difficult situation of Switzerland at the other flank of the so-called western front; with the tight-rope neutrality position of Italy and Spain; with the temporary destruction of Austria, Czechoslovakia, and Poland; with the pitiful situation of Finland, fighting against the overwhelmingly superior resources of the Soviet Union; with the Damocles sword of war and possible destruction hanging by so slender a thread over Sweden and the other Scandinavian constitutional monarchies; with the rapid gathering of tremendous war forces and powers in the Balkans and around the oil and grain resources of Rumania, Hungary, Turkey, and the smaller states of that region; with the rapid transportation to this danger point of the soldiers of Australia and New Zealand.

Crossing the boundary we see Asia, with the truce between Japan and the Union of Soviet Republics for the temporary cessation of their hostilities on the North China front, but with such deep-seated antagonisms of political and economic interests that cannot but insure the truce to be, indeed, a temporary one and dictated solely by immediate necessity; with the 2½-year inhumane attempt on the part of Japan to annihilate and destroy the Republic of China; with the well-known fact that Japan is insisting now, and will insist on a complete new order in the Far East; with her flagrant disregard of treaty and treaty rights, and her scores of acts of aggression against the cosignatories of her treaty engagements; with the very real impending threat against the Dutch East Indies, and the strategic Malay Straits; with the conditions existing in the Caroline Islands' mandates, and the rapid approaching time of our engagement to foster Philippine independence; with the rapid consolidation of public opinion in India behind Ghandi and his tremendous organization.

Leaving Asia and passing to Africa, we see the British interests there strongly involved in the Empire's wars, and the continuing struggle for the control of the greater reservoirs of resources of both manpower and material in north and north central Africa.

Now, turning to our own side of the Atlantic Ocean, we see the continuous threats to the safety and solidarity of the North and South American republics, with the rapidly changing conception of the Monroe Doctrine and its purpose; with the ever-present incentive for Asiatic and European powers to secure by any means possible air bases within striking distance of our vital Panama Canal; with the communistic governmental philosophy making real headway in some of our Pan American nations; and coming even nearer home, we see the people of Canada disturbed against their own will and judgment as to their possible fate should the war tide turn against their mother country of England; and with the largely undeveloped but immense strategic value of Alaska and the Aleutians always a goal to excite the cupidity of aggressor nations expanding under the powerful impelling force of economic necessity.

With all this world picture which I have tried to draw, I am very frank to say that I believe it to be unwise, unseemly, and possibly embarrassing for Members of the United States Senate, and some of us members of the Committee on Foreign Relations, to discuss publicly specific situations and policies that are before our State Department now for immediate solution and action. I do not mean to imply that there is need for curtailment, and I personally would resent any attempt at curtailment, of the full American right of reasonable knowledge of the actions of its governmental agencies, with the full right of expression of opinion; nor am I forgetting the immense value of public discussion in the forum, on the platform, over the radio, and in editorial and press columns in order that we might have the concrete conclusions of our enlightened citizenry. But we have a State Department, composed, I believe, of some of our highest and best men, and I personally am convinced that I should do or say nothing to make their tremendous problems more difficult of solution, particularly by some careless or thoughtless remark that I might make. This strong conviction on my part

has changed this little talk of mine, which I had intended to be a discussion of my own resolution, looking to the putting into effect of our neutrality law in the far eastern war, into a general delineation of the whole world picture which I have just now tried to draw.

Chairman GRANIK. Thank you, Senator GILLETTE. And now, as our third speaker in tonight's forum on the Present Situation of Our Foreign Relations, we present Senator LEWIS B. SCHWELLENBACH, of the State of Washington.

ADDRESS BY SENATOR LEWIS B. SCHWELLENBACH

What the world most needs today is simple, common honesty. The best standard by which to judge the honesty of nations as well as men is whether they keep their word. Broken promises, broken pledges, broken treaties have contributed more to the present world disaster than has any other single factor. These breaches of faith have not been limited to any single nation or group of nations. I do not deprecate the importance of economic needs in the present situation. However, if the nations of the world had kept their word during the last quarter century many of these economic factors would not today exist. Had Germany and Russia believed that England and France would keep their promises to the smaller nations, they would have never dared to plunge the world into its present condition.

What are just a few of these broken promises? England and France made their first mistake in repudiating their financial promises to us. By that act they made certain that we would not again rush to their defense. Hitler knew that. Hitler relied upon it. France made its mistake when it broke its promise to Germany to disarm after Germany had been disarmed. Hitler used that to get his power in Germany. England made its mistake when it broke its promise to China when Japan took Manchuria. England and France broke their promise to Ethiopia. Since then treaty breaking, promise breaking, and word breaking have been the rule instead of the exception. International morality reached the lowest point since the seventeenth century. The present war is the natural and logical consequence.

Our people want peace. We want peace not only for ourselves but for the entire world. We want that peace to last. We hope when the present war ends to play some part in establishing a lasting peace. To my mind that hope will be barren unless we can enter into such a peace conference with a record clear of the taint of treaty breaking on our own part. The only leadership we want to give the world is moral leadership. We must have our own hands clean if we try it.

Are our hands clean today? Unfortunately, they are not. We, too, are violating a treaty just as sacred and just as important as any ever written.

What treaty are we violating? In 1921, in an endeavor to reduce naval expenditures among the great powers, the Washington Conference was called. Its chief purpose, in the beginning, was the limitation of naval armaments. The most important accomplishment of the Conference, however, was the adoption and signing of the Nine-Power Pact. In that pact we joined with seven other nations in agreeing to respect the territorial and administrative integrity of China.

This was not the first contact our Nation had had with China. For 125 years we have been sending over missionaries to open schools, colleges, hospitals, and churches. In 1899 we intervened in China and insisted upon the open-door policy. We insisted that our rights in China be recognized and that no other nation could create a sphere of influence there. During the World War China readily complied with President Wilson's request and declared war upon the Central Powers shortly after we entered the world conflict. When that war ended, however, China profited not at all. The net result, so far as China was concerned, was that her old rival and enemy—Japan—was given all of the German rights in China. In retaliation of that, and with disappointment with the way she had been treated by her allies, the Chinese people commenced their effective boycott against Japanese goods. It was an effective boycott. Its success struck vitally at the economic structure of Japan. It must be remembered that then Japan did not have her diversified foreign trade; her merchant marine had not been built to the strength it now occupies. To Japan, Chinese trade was of vital importance. By the time of the Washington conference on Armistice Day, 1921, the Chinese boycott had reached a state of well-nigh perfection. In that conference we asked Japan to agree to a naval program which meant economy for us and also lessened the danger to us in the Pacific. In consideration of Japan's agreement in the naval side of the conference, we induced China to discontinue the boycott. In payment for this action on China's part, we wrote into article I of the Nine Power Pact the agreement "to respect the sovereignty, the independence, and the territorial and administrative integrity of China." All nine of the nations agreed to it. China, relying entirely upon her trust in us, surrendered her most effective weapon. China believed her sovereignty and independence, administrative and territorial integrity, would be respected by the nations of the world. Yet today China suffers and her territorial integrity is being destroyed. We, for the profits involved, are aiding, abetting, and cooperating in that destruction.

We today are Japan's most important ally in her war with China. Were it not for the assistance of the United States, Japan's China campaign would probably have collapsed many months ago. Japan is a nation without the necessary materials of war. Japan has no oil with which to operate her airplanes, her tanks, her trucks, her automobiles, or even her battleships. We furnish 65 percent of that which she secures from the outside world. We furnish 90 percent of the scrap iron and steel with which she manufactures

her munitions. We furnish 90 percent of the copper for her munitions. We furnish 99 percent of her other metals for alloys for munitions preparations. She must have metal-working machinery—our contribution is 67 percent of that. We furnish 64 percent of the automobiles and parts which Japan is using in China.

It is true, we furnish no soldiers—we do, however, furnish the materials for the munitions which those soldiers use. We furnish no airplane pilots, but we furnish the gasoline to propel the airplanes. We furnish no tank or truck drivers, but we furnish the tanks and the trucks, the gasoline to operate them, and the oil to lubricate them. We are in the Japanese-Chinese War right up to our necks. We are Japan's No. 1 partner. China is being destroyed. We are making the profits.

But don't for a minute think that we are not taking a chance. You mothers and fathers whose boys are coming into military age need have no false sense of security coming from the belief that we can play this game of profit-sharing permanently without risking the lives and bodies of those young men you love. Every month, every week, every day, we make possible the prolonging of the far eastern war, to that extent do we enlarge the danger of ultimate world conflict, from the ravages of which we can hardly hope to escape. Every dollar of profit enjoyed by the American oil producer, the American scrap iron and steel shipper, the American machinery manufacturer, may ultimately be paid for by the life of an American soldier, the family of whom now thinks that he is safe.

No one can deny that in this matter our duty is clear. Every substantial poll of public opinion shows that at least 75 percent of our people recognize this duty. That duty is to comply with our treaty obligations and stop our citizens from further violation of the Nine Power Pact. Common honesty, common sense, and cold-blooded logic require that we do no less.

Chairman GRANIK. Thank you, Senator SCHWELLENBACH. And now as the concluding speaker in the first half of tonight's forum presentation on The Present Situation of Our Foreign Relations, we present Senator ALEXANDER WILEY, of Wisconsin.

ADDRESS BY SENATOR ALEXANDER WILEY

Mr. Granik, my colleagues of the Senate, and ladies and gentlemen, I interpret the subject, The Present Situation of Our Foreign Relations, as an opportunity, in the few moments that I have at my disposal, to interpret or define what our foreign relations should be, having in mind our national background and particularly the foreign-relations policy laid down by the founders of this country.

It is always well in discussing any issue to seek to tie to a principle. Washington and Jefferson laid down such a principle for the guidance and direction of America. It was not simply for their generation but also for our generation. Jefferson might have phrased it this way: "Let us trade with Europe and consult with Europe, but never get mixed up politically with Europe." He said: "Peace, commerce, and honest friendship with all nations—entangling alliances with none."

Right now we have representatives on the high seas, and it is interesting to note what the President of this Republic said in 1933 when the question of cooperation with the League came up. He reaffirmed Jefferson's doctrine, and it is my prayer that he means what he said. He said: "We are giving cooperation to the League in every matter which is not primarily political."

And the previous President, President Hoover, said that he believed in selective cooperation—that is, cooperation in nonpolitical fields and in preserving freedom of action in political matters.

The situation in Europe today presents a direct challenge to this policy. Are we going to follow it? In sending Sumner Welles to Europe are we sending him as a political observer or a political meddler?

If it is as a meddler in European affairs, we are playing with fire. Fortunately, the constitutional provision that all treaties must be ratified by the Senate presents a pretty strong protective measure. It is my hope that the administration will not find itself like the ignorant poker player who sat down with poker sharks—deprived of all he possessed.

If there is anything to learn from Europe in relation to Europe's conduct of international affairs that would prove beneficial to us, let us learn; but make sure that we are not furnishing the stakes in trying to teach them how to play international poker, which they have been mixed up in for centuries.

That does not mean that we are unsympathetic, that we would not, if called upon, render "aid and assistance," but it does mean that we do not want to get mixed up with "entangling alliances," which would cripple our American values.

In our foreign relations, America has stood for international law, for the sanctity of treaties, and for international morality.

Right here is probably as good a place as any to impress upon my listeners the distinction between official or governmental action and the action of individuals or nationals of a government. This is illustrated very clearly by the international rule that when two governments are at war a neutral government cannot give credit or a loan to a belligerent without violating international law. But there is no prohibition in international law against the nationals of a nation that is at peace making donations or loaning money to a belligerent. In some instances there may be a domestic prohibition such as is contained in our neutrality law.

It is my sincere hope that those who at the present time have the leading role in looking after our international affairs will always bear in mind the principle that I have mentioned above and which Washington so cogently phrased in his farewell address to the American people.

This attitude does not make us isolationists. It does make us men with vision who do not want to mix up in foreign "deals,"

ideologies, wars, when it is to our detriment and the destruction of our heritage. It takes the position that if we are anxious to aid a righteous cause we can do so very properly within our own borders, clearing up the economic maladjustments which exist here.

Our foreign policy in the Far East is a little bit different from that which we have been discussing in relation to Europe. It is different because we have a Nine Power Treaty with eight other nations, which relates to China. Also we have insular possessions in the Pacific and have an interest in the Philippines. Yet the basic rule of conduct laid down by our fathers still can prove a guide for us in the present Chinese-Japanese situation.

How are we going to handle our differences with Japan? Are we going to think in terms of retaliation, economic, or otherwise, such as has been discussed here this evening by the Senator from Washington? Does retaliation ever get you anywhere? We can be firm and yet kind. We can take a position for principle and yet be friendly. And more than anything else, we can manifest an understanding of the fact that it never pays to act hurriedly in international affairs, especially when other nations are wounded. So I say, before we take any definite action in relation to an embargo we should think the problem through. At best, an embargo would be a measure of doubtful assistance to China, and it would arouse antagonism on the part of Japan. An embargo by us would mean a reprisal by Japan. I believe that much the same result can be effected by legislation, having in mind simply taking care of America's needs—legislation that will keep, here in American, stuff—basic materials—which we need. Legislation would then be based upon America's needs and not a challenge to Japan.

I hope that the present situation of our foreign relations means that we are going to abstain from participation in foreign quarrels; that we are determined to maintain a policy of nonintervention in the internal affairs of other nations; that we will restate to the world that we believe in international morality, international law, the sanctity of treaties, and arbitration as a method of settling international disputes.

I hope also that no one—especially our folks who have a tendency to become internationally minded—will claim that America's self-interest lies in forgetting the ancient landmarks. We must not permit our warm American sympathies or our impetuous dislikes or any hysterical tendencies to unbalance our judgment.

Chairman GRANIK. Thank you, Senator WILEY. This concludes part I of tonight's presentation.

Announcer MCCORMICK. Immediately following station identification we shall continue with the extemporaneous discussion. This is the Mutual Broadcasting System.

Announcer MCCORMICK. This is the American Forum of the Air, originating in the broadcasting studios of the Department of the Interior Building in Washington, D. C., and presented over the Mutual network by WOL in cooperation with WOR. We return you to the chairman, Mr. Granik.

Chairman GRANIK. And now, as part II of tonight's American Forum of the air on The Present Situation of Our Foreign Relations, we again present our speakers in an informal panel discussion.

They are Senator KEY PITTMAN, chairman of the Foreign Relations Committee; Senator GUY M. GILLETTE, of Iowa; Senator LEWIS B. SCHWELLENBACH, of Washington; and Senator ALEXANDER WILEY, of Wisconsin. Senator SCHWELLENBACH will open the discussion.

Senator SCHWELLENBACH. During the course of his remarks, Senator WILEY referred to the trip which is being taken now by the Under Secretary of State, Mr. Sumner Welles. I would like to submit this question to both Senator PITTMAN and Senator GILLETTE. During the time I have been in Washington I have become acquainted with Sumner Welles and have watched him work. I think, if there is one man in this country who can listen and keep his mouth shut, it is Sumner Welles, and I have no feeling of fear of Sumner Welles' going over to Europe and involving us in any European difficulties, because, in my opinion, there could be no better choice in the United States of a man who would go over and get information and give none than Sumner Welles, and I would like either Senator PITTMAN or Senator GILLETTE to discuss their idea as to whether or not there is anything we need fear as the result of Mr. Welles' trip.

Senator GILLETTE. Senator SCHWELLENBACH, speaking for myself, if I were to choose among my acquaintances throughout the United States, Sumner Welles would be my choice as an emissary for the mission on which he is engaged. I think it is scarcely right to assume that he would, or could, having the temperamental characteristics that he has, take any step, make any statement, make any visit, make any commitment, that would involve this country in difficulty. For one, I am mightily pleased that we have a man of his caliber, his ability, his astuteness, and his acumen over there as an observer to give us the benefit of anything that he may discover on his return.

Senator WILEY. Senator SCHWELLENBACH, anything that I said could not be interpreted, I hope, as any reflection on Sumner Welles. I do not know the gentleman personally. I know that he is a man of great ability and common sense, and I am sure squares with the description just given by my colleague, Senator GILLETTE. My thought, however, was simply this, and I am sure I am expressing the hope and the prayer of a large percentage of our people, that he is going simply as an observer, that there is no thought that we are going to try to suggest or interfere or meddle.

Now I would like to direct a question to Senator SCHWELLENBACH. I want to preface it, first, by saying that I think our own

Government officials have been handling this Japanese-Chinese situation very well. I think they have handled it with dignity and judgment, and they have done well to protect the rights of our people the way they have. But I would like to ask this question. If we put an embargo on, what is their interpretation of the effect of it upon the situation in the east?

Senator SCHWELLENBACH. May I ask first if you mean the effect in Japan itself or upon the war between Japan and China?

Senator WILEY. Both. You have described what you thought the economic effect would be, but what effect would it have on Japan so far as we are concerned, and what effect on China?

Senator SCHWELLENBACH. Senator WILEY, during the course of your remarks you talked about the necessity for care and the desirability that we take no action which would result in retaliation. I am in thorough accord with that position, and I certainly haven't acted hastily in the consideration of this particular subject. As a matter of fact, I had the resolution which I introduced last summer on my desk 2 months before I introduced it. I talked to everybody whom I could find who I thought knew anything about the far eastern situation. I don't think there is any substantial danger involved in taking the position for which I contend.

You suggest that we ought to pass a law which would keep out of Japan certain goods, that we keep them in this country. That is precisely what I propose. I propose it on the ground that we have a treaty responsibility not to send them. We agreed with these other nations to respect the territorial and administrative integrity of China, and all I propose is that we stop our citizens from breaking that treaty, and I don't think it is going to result in any retaliation on the part of Japan. At the same time, I think it is going to result in the stopping of the war between Japan and China and a settling of affairs in the Far East, and that it presents much less danger than continuing to furnish the major portion of Japan's war supplies.

Senator WILEY. I realize, Senator SCHWELLENBACH, that you have expressed, I believe, the attitude of a great many people in this country, but there are others who believe—and I say this so everyone will give it thought—that if we should put an embargo, it would amount to a slap in the face to a friendly nation, and Japan then would declare war on China; it wouldn't be an undeclared war such as it is now, and it being a declared war, Japan would blockade Chinese ports, shut out all imports, and apply marshal law wherever Japanese armies are, and Japan would then see that foreigners were excluded from China, would see that all foreign settlements were taken over.

Japan would do to China what we did to the South when we blockaded it. As it is now, we haven't that blockade.

To me such a situation would not help China; it would not be conducive to friendly relations between our country and Japan, and it would be putting fuel on a fire that we want to put out.

Mr. GRANIK. Senator PITTMAN, would you care to comment?

Senator PITTMAN. I do not feel that it would make any difference whether Japan were to declare war or not. As far as China is concerned, all exports to China, except by way of Burma, are blockaded now, without the responsibility of declaring a blockade. It would make it totally immaterial whether they declared war or did not declare it, as far as China is concerned. However, a nation when it declares war, assumes certain responsibilities which Japan does not want to assume.

Belligerents haven't any natural rights over neutrals in war any more than they have in peace, except that the customs through years have recognized that they are in a harder position than the neutrals, and therefore we give them certain privileges over the neutrals.

Japan can't search our ships on the high seas today. If she declared war against China, she could, and we would have to suffer that privilege to Japan. Japan can't blockade a port of China today because she hasn't given notice to the world that she is at war with China. Whether you use a subterfuge to keep scrap iron from going to Japan or not is totally immaterial, except that I don't like the method of subterfuge.

I agree with Senator SCHWELLENBACH that the establishment and maintenance of honesty in the world today among governments is essential to our evolution. I don't think you can do it through fear. I don't think you can accomplish it by ducking the responsibility of protesting against the wrong. Much as I fear war, I think there are some things worse than war. I think life in China today is worse than war. I think life in Russia today is worse than war.

Mr. GRANIK. Senator GILLETTE?

Senator GILLETTE. Mr. Granik, I think that 99 percent of the American people feel just as Senator PITTMAN and Senator SCHWELLENBACH have clearly expressed themselves tonight in the abhorrence of the situation in which we are placed as partners in the nefarious enterprise in which Japan is engaged. But I would like to ask either of these Senators this question: Having in mind that, so far as the record is concerned, Japan and China are friendly neutral nations, so far as we view the matter at the present time, do either of you have in mind any historical case in which one nation has passed legislation of a distinctly punitive nature against a friendly power?

Senator SCHWELLENBACH. I will answer that, Senator GILLETTE, in this way. I am not willing to recognize that a resolution such as I proposed could properly be classified as distinctly punitive. All I am contending for, and all I am arguing for, is that we keep our word. For a definite consideration which I described in the opening remarks I made, we entered into an agreement with China, and that

was that we would respect her territorial and administrative integrity. That is being destroyed and we are furnishing the materials with which it is being destroyed, and all I am proposing is that we pass legislation which would stop our citizens here from participating in a war and continuing a practice which results in the Nation itself breaking an agreement which was solemnly made with China, and I don't consider it punitive as against Japan at all.

I haven't any feeling one way or the other at all with reference to China or Japan. It is simply a matter that we made a promise, and I think the time has come when some nation in the world has to stand up and say, "We at least are willing to keep our agreements," and "We at least are willing to keep our word."

Senator PITTMAN. May I ask the Senator from Iowa a question? He has asked me one. I assume that the Senator from Iowa knows from general information, as all of us know, that the Secretary of State has been for many months protesting to Japan against discriminations against our citizens in China; isn't that true?

Senator GILLETTE. Undoubtedly.

Senator PITTMAN. Do you support those protests?

Senator GILLETTE. Unquestionably.

Senator PITTMAN. Then isn't the logical proposition that if the protests are not obeyed to bring some pressure to bear?

Senator GILLETTE. Without a doubt.

Senator PITTMAN. That is all I have to say.

Senator GILLETTE. Now, I will ask the distinguished chairman a question along the same lines. I think there could be no doubt that you and I are in complete agreement with the attitude that the State Department has taken. In fact, you know it to be a fact, and I know it to be a fact, that our Secretary of State has maintained a uniform series of protests on every incident that has occurred in the Far East to maintain our position and demand our rights.

Now, the Senator just referred briefly a moment ago to the fact that a nation at peace, a nonbelligerent, could not under international law impose a blockade, and yet the Senator himself just previous to that stated that the blockade of China was so effective that there it would have no effect even if it was imposed at the same time. And doesn't the Senator know that every Chinese port, with the exception of a small portion of Hong Kong, is blockaded at the present time, as a matter of fact, by Japanese armies and Japanese diversion of all imports to her own use?

Senator PITTMAN. It is not a legal blockade under belligerence, because our ships go and land there. The only difference is our ships land at Hong Kong and they take the stuff away after it gets into Hong Kong.

Senator GILLETTE. It is a blockade in effect.

Senator PITTMAN. It is not a legal blockade.

Senator WILEY. It is a subterfuge blockade, but we are not in favor of subterfuges.

I think we have reached the crux of this argument. I want to ask Senator PITTMAN now what he thinks America should do. If we protest it, what further should we do?

Senator PITTMAN. I have stated in this little brief statement here that I think the maintenance of treaty rights is absolutely essential to morality in the world and the prevention of chaos. If you haven't got treaty rights, then you have nothing except force, which is going on in the world today. To what extent you should jeopardize your own people in a fight to maintain treaty rights is a matter that will always be submitted to the sound discretion of the people who are responsible for our citizens. I don't agree that every step is a step to war. I don't think the protest against the wrongs of the Japanese has taken us to war. I don't think that the use of our tariff acts which we have against Germany on account of their discriminations has brought us into war with Germany. I think there are certain things that a dignified, courageous man can do to show that he does not believe in dishonesty. Just how far that can go, I am human, you are human, I don't know. The responsibility of a legislator, of course, is very much greater than that of the individual, and I recognize that responsibility.

Senator WILEY. Senator PITTMAN, I believe that you have partially answered my question, but I am sure our listeners still would like to know what in your mind would be the specific step that America should take. Here we have a number of protests. Here we have a situation in the Far East where Japan is fighting for empire, fighting for a place to get raw material, to get open markets. Now, she is an island empire like England. I suggested in a talk I gave in the Senate of the United States back on January 23 certain things that I thought could be done in relation to this matter. Personally, I feel that America around the table could use more force than by the blind force of the "big-stick" method. I still think that Japan has statesmen who will reason and think, and I would suggest that.

I suggest also that if Japan is in need of these basic materials—and we are told that America needs them—we don't have to violate what Senator GILLETTE has suggested might be a violation, the rule that obtains with friendly nations. We could simply restrict those shipments because of our own personal need. But I am satisfied that there is no sentiment in America that even if Japan violated the Nine Power Treaty rights of China in this country, that that would be the basis for putting our 130,000,000 people into war.

Senator SCHWELLENBACH. Senator GILLETTE started out in his main discussion by saying that he had intended to write a speech

and he only got the preface written yesterday afternoon. I suggest we give him half a minute to give the speech he intended to write yesterday afternoon.

Senator GILLETTE. Senator SCHWELLENBACH, that generosity affects me deeply. The offer of a half minute shows the conclusion on the Senator's part, having heard me in the Senate a number of times, that a half minute will cover all of the speech that I have to deliver.

In return for that kindness, I am going to ask Senator SCHWELLENBACH one more question. Senator, during the last special session, we put on the statute books the so-called Peace Act of 1939, generally known as the neutrality law. In that law we notified the world of our position on various matters, shipments, and transshipments, extension of credit, and so on, in the event that a state of war exists. Do you see any reason why we should not take the steps necessary to define that a state of war exists in the Far East, as everyone knows that it does, and put into effect that neutrality law which we have served on the world as notice of what our attitude will be when belligerency exists? Is there any reason why that shouldn't be done?

Senator SCHWELLENBACH. Yes; there are two reasons. In the first place, it isn't necessary under the neutrality law to put it into effect. You remember that there are two provisions under which either the President or Congress shall declare the neutrality law effective, one that a state of war exists between two or more nations; and, second, that the peace and security of the United States is affected by commerce therewith. There isn't anything to indicate that our peace and our security have been affected by the war in China. As Senator PITTMAN said, our ships actually go in there today, and they unload, and with one exception there hasn't been any difficulty so far as the shipping part of it is concerned. The treatment comes after the cargoes are unloaded.

The second reason is that it certainly would be of no benefit to China, and probably would be a very positive benefit to Japan, to make the neutrality law effective; that is, Japan has the money and the ships with which to come and get the things they want to get in this country, as they could do under the cash-and-carry provisions of the law. It would simply deprive us of sending that small amount of assistance we now send to China and would hurt China and help Japan.

Senator GILLETTE. May I add in answer to the very able presentation of the Senator that that situation existed undoubtedly up until recently, but the situation as presented so forcefully by Chairman PITTMAN just a moment ago, that there is an actual, effective blockade at the present time, is proof to me that the impact of the imposition of the neutrality law on China at the present time would not be as disastrous as you anticipate.

Senator WILEY. Mr. Granik, I would like just to read at this time a statement from Washington's Farewell Address which was taken out of the Saturday Evening Post today. He said as follows: "Excessive partiality for one foreign nation, and excessive dislike for another, cause those whom they actuate to see danger only on one side, and serve to veil, and even second, the arts of influence on the other."

Senator SCHWELLENBACH. Didn't George Washington also advocate the keeping of agreements and the respect for commitments and obligations?

Senator WILEY. He did, but in 1798, after we had signed an agreement with France, he also stated that we should not keep that agreement because it would get us into war. You remember that, and as the result we didn't make a loan to France from 1798 which we should have done in accordance with our agreement. He recognized that the safety of America was the big thing.

Chairman GRANIK. Thank you, gentlemen.

You have been listening to the American Forum of the Air, presenting a discussion on The Present Situation of Our Foreign Relations.

Our speakers were Senator KEY PITTMAN, of Nevada; Senator LEWIS SCHWELLENBACH, of Washington; Senator GUY M. GILLETTE, of Iowa; and Senator ALEXANDER WILEY, of Wisconsin.

And now for a final word from Mr. McCormick.

Announcer MCCORMICK. Another broadcast in this season's series of the American Forum of the Air comes to a close. These programs emanate from the studios of the Department of the Interior Building in the Nation's Capital.

The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational broadcasts which present both sides of national problems.

In the interest of education, there are printed and distributed, free of charge, the entire proceedings of this broadcast. When requesting copies by mail, kindly enclose 5 cents to cover postage and mailing. Address your requests to station WOL, Washington, D. C.

This program was arranged and directed by Theodore Granik, radio and newspaper commentator, who presided as chairman. Next Sunday at this same time Mutual will bring you another forum, which you are invited to attend. Address your comments to Mr. Granik, in care of radio station WOL, Washington, D. C.

Stephen McCormick speaking.

This is the Mutual Broadcasting System.

Senator George W. Norris  
EXTENSION OF REMARKS  
OF  
HON. JOHN E. RANKIN  
OF MISSISSIPPI  
IN THE HOUSE OF REPRESENTATIVES  
Wednesday, February 28, 1940

SPEECH OF HON. JOHN M. CARMODY

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I insert an address delivered by Hon. John M. Carmody, Administrator, Federal Works Agency, before the Nebraska State Water Conservation Congress at Hastings, Nebr., on November 27, 1939, in which he pays a just tribute to Senator GEORGE W. NORRIS.

The matter referred to follows:

Ever since the Colonies freed themselves from monarchical control, the fundamental struggle has been to determine whether the elected representatives of the people should represent all of the people, or just property. Nowhere in the United States is that distinction more clearly understood than right here in the heart of the Middle West. For almost a hundred years legislative and social progress has had its roots in the liberal thinking of the settlers of these broad plains.

Men will come and men will go, but history will record that no man has stood more steadfastly for these ideals than your own Senator GEORGE W. NORRIS. He has been above party; he has been above every influence that in any way would detract from bringing to the people those benefits of government to which they themselves are so clearly entitled. He has been a Senator in the finest sense, because not only has he served his own State, but he has included in his thinking the people of the whole country. It is inconceivable that any type of government but a democracy could have achieved the distinction of having such a man as GEORGE W. NORRIS among its leaders for 40 years.

A leader in a democratic country does not and cannot stand alone. The fact that Nebraskans have chosen for so long a period to be represented in the highest councils of the country by such a progressive man is not only a tribute to Senator NORRIS but is a token of the intelligence and foresight of the people of Nebraska themselves. I am sure that Senator NORRIS would be the first to agree that his achievement is not only of his own making; it is based on the integrity and liberalism of his supporters here in this State. The light which he sheds for the Nation through his work in the Senate is more than his own; he is the lens which magnifies the collective idealism of his constituents in this State. In the democratic form of government, political leaders give the people their only means of getting a proper reflection of their spirit into the councils of the land. Even such a fine constituency as you have here in Nebraska seldom finds a beacon so luminous as Senator NORRIS; but you have certainly proved to the people of the country that once such a man is discovered, his hand will be upheld and his prophecy accepted, even in his own State.

Truly Senator NORRIS may be called one of America's greatest prophets of liberalism; for the test of any prophet is the extent to which the ideas he pioneers become accepted generally. It is rare indeed that a prophet is also a man of action who can lead the fight for his ideas; but in Senator NORRIS we have that combination.

It is hard for us to realize that just 10 years ago the fight which Senator NORRIS was leading to make available to the people of the country the magnificent resources of the Tennessee Valley was for the second time being thwarted by a President of the United States. It is hard for us now to imagine the difficulties under which that fight had to be made before Senator NORRIS had the opportunity to work with a President who shares his liberalism and his ideals.

While the Nation as a whole is more familiar with the achievements of Senator NORRIS in the Tennessee Valley, you who have been participants in the battle here in Nebraska know that nearest to his heart has been the best development and use of the waters of this State for the people of this State. As a dramatic proof of the wisdom of the program for which Senator NORRIS has been fighting, the droughts of the last few years have come just at the time when the irrigation projects were under construction. This fall there are few of your citizens who have not been convinced, either by Senator NORRIS or by Nature, of the necessity for the proper conservation and use of your waters. Let us not forget that his was the foresight.

You remember the slow disillusionment of the ardent pioneer who followed the railroad and settled on your great plains. The spirit that was bold against the Indian, persevering in the erection of sod houses, gradually broke in the fight for water. The research

of your scientists at your great university told you that crops should be diversified; but you learned through sad experience that there was not enough water for that necessary diversification. Corn and wheat, wheat and corn were planted year in and year out, but little or no alfalfa. And always, to use Senator NORRIS' expression, you were "on the ragged edge, waiting for rain."

In 1914, under President Wilson's administration, Senator NORRIS secured a congressional appropriation of \$10,000 for a study of the water resources in Nebraska. The people of Nebraska themselves raised money to help in this study. You probably remember that the first report was discouraging; but Senator NORRIS was unflagging in his drive. In 1922 he introduced into the Senate a resolution calling for an appropriation of \$5,000 for a reinvestigation. By the time it got through the House of Representatives and became a law, however, it merely authorized the Bureau of Reclamation to make an additional investigation if money was provided from other sources. Once more the people of Nebraska raised from their own funds the necessary money for the report.

In June 1924 Senator NORRIS introduced a resolution and got it passed through the Senate, appropriating \$300 for expenses of a visit to Nebraska of the Committee on Irrigation and Reclamation of the Senate. After the visit, hearings were held on Senator NORRIS' bill providing for irrigation in Nebraska. Many of you here probably remember the testimony of Mr. McConaughy and Mr. George P. Kingsley, as well as that of Senator NORRIS, back in 1925. Senator NORRIS' bill proposed to have the Treasury lend some forty million dollars for the purpose of building reservoirs and canals necessary for this irrigation. His bill was passed by the Senate, but the cooperation which he received from the House of Representatives was insufficient to get the bill passed there. Nebraskans probably know this story better than I do.

The plan at that time, as many of you know, was to build the Plum Creek reservoirs and irrigate from them as well as directly from the river at flood stages. The hitch came when it was found that the reservoirs would produce power; and here the liberalism of Senator NORRIS was once more put to the test. There is little doubt that he could have got the passage of the bill by the House if he had been willing to do away with the power aspects of the project, or to turn over the power practically free to the private power companies. In other words, if he had been willing to deprive the people of Nebraska of the power which the water generated, the Electric Trust, as he called it in those days, would have allowed the people the privilege of irrigating their own farms; but Senator NORRIS would not make such a compromise at the people's expense.

As the fight developed, the opposition of the private power companies became more and more an obstacle, rearing its head in many different forms. Even local railroads, which stood to benefit by the prospering agriculture the project would develop, were forced to reflect the opposition of the eastern money interests that controlled them and the power companies, too.

When it was proposed in Congress to appropriate \$10,000,000 for levees to check the Mississippi River, Senator NORRIS pioneered in a proposal that the Federal Government pay half the cost of dams on the tributaries of the Mississippi which would hold back the floods.

From President Hoover on down, however, the Government engineers were still wedded to the levee system and refused to be guided by that foresight of his that is now the accepted way of handling our great river systems—by combining the use of tributary storage dams with levees. His experience with Republican Presidents during the twenties led him finally to write: "Before we can get things of this kind enacted into law, we have got to have an administration—I mean a President—who has some sympathy with such things. With a President who believes in big business, who does not want to do anything contrary to the wishes of big business, I do not see how we can get this project started."

So it was not until President Franklin D. Roosevelt was elected that this great irrigation project could go forward. And it was not too soon. Crop failures were becoming more frequent, landowners were becoming fewer, and it was more and more difficult to hold young people on the farm. In 1933 your State legislature passed senate file 310, allowing for the creation of irrigation and power districts. Many districts were created, and most of them applied immediately to Washington for financial assistance.

As you will probably remember, Senator NORRIS urged from the beginning that the applications from the two chief districts taking water from the Platte River be considered together. In the rush of the early days, this did not seem feasible; but I think there are few now who do not realize that Senator NORRIS' suggestions were wise, and if they had been followed would have led to a more economical solution. As it was, the projects which were not opposed by the power companies were the first to get allotments, and it was only after many trips and much persuasion on the part of the friends of Tricounty that their allotment was finally made in 1935.

With the approval of Tricounty's application, and the growing realization, both here and in Washington, that the several districts should be treated as aspects of the same problem of water conservation, steps were taken for a cooperative and unified solution. Immediately the power companies went to the courts and attempted to enjoin such a solution. You are familiar with the long, hard fight, the delays and costs resulting from the court fight;

but in the end the people's right to borrow money from the Government and to build for their own protection was upheld.

Then came the fight on the diversion of water from the Platte River and the resulting decision in your State supreme court that certain parts of the Tricounty project could not be served with water from the Platte.

Although the Sutherland district went to New York and employed what it thought, and what P. W. A. thought at the time, was one of the best engineering firms in the country, costly engineering mistakes were made and time was lost. But now, to a large extent, those mistakes have been corrected and the Sutherland project is ready for operation. The Loup, Middle Loup, and North Loup districts are now in operation. The farmers in the valleys of the Middle Loup and North Loup already this year have received benefits from their projects. The people here in Hastings are already receiving hydropower. It is coming now from the Loup district, but with the completion of the Kingsley Dam will come from Tricounty.

I have taken the trouble to recall to you the long struggle over a quarter of a century for these projects so that you may not forget them in the joys of the harvest. The fight has been hard, the victory great; but the fight still goes on. If the trustees of these projects were to consider them merely as private businesses, then half the victory is lost. Of course, the first objective was water; but just as Senator Norris was unwilling to sacrifice the incidental power which belonged to the people, so now the trustees should be unwilling to sacrifice any of the incidental benefits which naturally come from such large public undertakings.

It is not enough to consider these projects as providers of water or even as providers of power. They should be considered as a basis for a better life for the people of Nebraska. They should be a means whereby you extend progressive and humane principles. Not only should they provide for the conservation of water to add to the farmers' wealth, but the power they produce should be made available to the maximum number of people in your State. It should be made available to them at prices they can afford to pay, and it should be their insurance against private monopoly and private greed. Moreover, the Nebraska projects should set a standard of public administration that will itself be a yardstick for administrative policy, efficient public operation, proper relations with employees, and recognition of their right to bargain collectively and to deal with management.

It is important for all of us to bear in mind that if these projects are to be called successful, and open the way for other such projects here and elsewhere, they must pay back the loan which they have secured from the Public Works Administration. It is to everyone's advantage that these projects be so managed as to pay back every cent they have borrowed.

If you are to go on now in the spirit of Senator Norris, the leader who made these projects possible, you must show a true responsiveness to the people, to the irrigator, to the power consumer, to labor, and to all the many interests that have a stake, or should have a stake, in your development, so that it will serve all its purposes well. My suggestion is that you cannot be progressive, you cannot be liberal in water conservation unless you are liberal and progressive in your power policy and in your labor policy, and in all the relationships with the people in Nebraska in the conduct of your enterprise. In this you have only to follow the lead of Senator GEORGE NORRIS. You have only to look at his record to find that he is not merely a power liberal nor labor liberal nor conservation liberal nor relief liberal. GEORGE NORRIS believes in the continued progressive extension of democratic principles—that is, in the continued effort to make this country a better place for all of us.

### Railroaders Will Lose Jobs

#### REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. VAN ZANDT. Mr. Speaker, more railroad men are to lose their jobs if the projected St. Lawrence waterway treaty with Canada is confirmed by the Senate of the United States.

This project, if ever completed, will transfer from the American owned and operated railroads millions of tons of cargo to foreign-owned ships. Now this cargo is handled from our great inland Lake ports to sea ports by our own railroads. At present this business requires thousands of railroad employees, yet it is proposed that under this treaty foreign-owned ships, flying foreign flags and manned by foreign crews, will supplant our own American citizens now engaged in the great railroad industry.

The many thousands of railroad employees in my district, the home of the largest railroad shops in the world, speak to

you today through the medium of the accompanying resolution, in which they unalterably oppose the approval of the St. Lawrence waterway project.

BROTHERHOOD OF RAILROAD SHOP CRAFTS OF AMERICA,

ALTOONA WORKS LOCAL NO. 42,  
Altoona, Pa., February 27, 1940.

DEAR SIR: The members of the Altoona Works Local No. 42 of the Brotherhood of Railroad Shop Crafts of America are opposed to any subsidized projects, where the taxpayers furnish the money for some private concern to reap a harvest. Therefore we are opposed to the bill which was introduced in the House and Senate reviving the St. Lawrence waterway project.

Whereas there has been a recent revival of the St. Lawrence waterway project; and

Whereas a more inappropriate time could not have been chosen for renewing the proposal, which the United States Senate has already turned down, in view of another staggering Budget that has been just presented to Congress; and

Whereas the Brookings Institution, after an impartial and scientific examination of the scheme in all its bearings, could find no possible benefits to this country from an outlay that might exceed half a billion dollars; and

Whereas, under the guise of a public-works project designed to prime the pump of business, it is extravagant in conception and foredoomed to constitute an annual drain upon the resources of this country and would result in the placing of an additional burden of taxes on the taxpayers; and

Whereas the passage of this project would be at the expense of two basic American industries, bituminous coal, in which Pennsylvania is so much interested, and the railroads, which transport it; and

Whereas the loss of revenue to the railroads would entail permanent unemployment to thousands of railroad workers and, consequently, to thousands of coal miners and other workers in this district who are taxpayers and citizens of the State of Pennsylvania; and

Whereas the citizens of these areas affected would be taxed to support a new competitor: Therefore be it

Resolved, That the Brotherhood of Railroad Shop Crafts of America Local No. 42, Altoona, Pa., go on record condemning the St. Lawrence waterway project.

Very truly yours,

G. H. AKERS, General Secretary.

### Bituminous Coal Act, 1937

#### EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

ARTICLE BY ARNOLD GERSTELL

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Arnold Gerstell, of Philadelphia. Mr. Gerstell is thoroughly familiar with the iniquities of the Bituminous Coal Act. In the following article he forcefully disclosed one abuse practiced by the Bituminous Coal Division of the Department of the Interior, of which the Congress should be aware. Here is another illustration of the dangers of bureaucracy and of government by edict instead of by law:

TARIFF AS YOU GO

(By Arnold Gerstell)

As everyone knows, the power to impose a tariff is, at one and the same time, the power to tax, to inflict penalty, to levy tribute, or to confer favor capriciously.

Wittingly or otherwise, Congress, in passing the Guffey Act of 1937, granted a tariff prerogative to the Bituminous Coal Commission. Then, in 1939, when the President scrapped the Coal Commission under the aegis of the Reorganization Act, he passed this power singly into the hands of Mr. Ickes. The latter lost no time in setting up in his Department of the Interior a Coal Division through which to put into execution the authority thus fortuitously received second-handly from Congress.

Now he is about to exercise the tariff power he found capsuled in the act. He hopes to begin in April. It is possible, of course, that he may be delayed by the courts, but lacking downright mutiny on the part of the public, it is most probable that Congress alone can stop him.

But however that may be, the thing which is at the moment beginning to kick up a public interest is exactly how and where Mr.

Ickes comes by a tariff power under a mandate to regulate the coal industry. The query is, Just where does the rabbit set?

First, it must be borne in mind that the real price paid for coal by the consumer is made up of two parts: (1) The f. o. b. mine price, plus (2) its cost of transportation from pit mouth to point of consumption—the freight rate.

Every user of coal, except possibly those who employ it only for calefaction, knows a freight rate when he sees one. It is something he has to pay willy-nilly. Except in the case of water-borne coal or coal trucked, it is nothing over which he can either bargain or dicker. He has to pay the rate per ton specified in the bill of lading. Any railroad that tampers or trifles with a freight rate, lacking formal authority of the Interstate Commerce Commission, is subject to criminal prosecution.

In the archives of the I. C. C. are listed hundreds of thousands of freight rates. When compiled, grouped, filed, and duly issued they become tariffs applicable, publicly and openly, to all traffic moving over common carriers.

And it does not merely happen that they are called tariffs. As a matter of precise fact, that is exactly what they are—tariffs, groups of rates, charges, tolls, and fees applied on the movement of goods from one point to another.

In this connection, however, it is to be remembered that these particular tariffs are imposed as a system and thus are different in scope from tariffs which, in a wider sense, may be arbitrarily imposed with a lack of uniform system such, for instance, as tariffs to foster trade, coercive tariffs, retaliatory tariffs, and tariffs intended to compel obedience. It is rather the tariff power as it falls in the latter category that has been entrusted to the tender mercies of Mr. Ickes.

The rabbit in the woodpile is to be found in part 2, sections (a) and (b) of the Guffey Act.

Listen carefully:

"All minimum prices \* \* \* on coal for shipment into a consuming market area shall be just and equitable as between producers within the district \* \* \*. The district boards shall, under rules and regulations established by the Commission, coordinate [prices] in common consuming market areas upon a fair [as between the producing districts] competitive basis. \* \* \* Such coordination, among other factors, but without limitation, shall take into account the various kinds, qualities, and sizes of coal and the transportation charges upon coal."

Now what is the design worked into this verbal crocheting? To get at that in a reasonably intelligent fashion it is necessary to know something of the framework in which all these things are to take place.

The base of the edifice as set up in the act rests upon the establishment of 23 coal-producing districts, each circumscribed by metes and bounds. Next, these 23 districts are shuffled and grouped geographically into 10 minimum-price areas, 2 or 3 of which latter lap over even into Canada.

Next, it is required that within each of these price areas, such prices shall be established as will yield to the mines of the several producing districts embraced in the price area, a minimum return which shall not be less than the weighted average cost of production in the area.

So far, so good. But wait a minute. After all that is done, something else takes place. And here, if your interest still holds, watch your step. The deck, so to speak, is again reshuffled and the United States—certain parts of Canada included—is once more split up into 187 destination market districts. Be careful now. Don't slip off the trail. "Producing districts," "price areas," and "destination market districts" you understand.

All right, in each of the market districts the prices of coal to the consumer at destination; that is to say, the f. o. b. mine prices, plus the transportation charges, are to be "coordinated" so that each of the producing districts in the price area shall receive, not only a price not lower than the weighted average cost in the producing districts of the area, but also a fair share of the business available in all destination-market districts.

Well, how is that to be done when coal shipped, perhaps, from a dozen producing districts moves into a single-destination district under maybe a dozen different freight rates?

There is, of course, but one answer. Obviously, the transportation charges must be manipulated. But how is that to be done when it is a crime to monkey with a freight rate? Easy. Don't touch the freight rate, but instead, either fictitiously jack up the f. o. b. mine price on coal in the producing district which goes to market on a low freight rate and then artificially submerge the f. o. b. mine price on coal originating in the producing district which reaches the destination market district of a high freight rate, all to the end, nevertheless, that the required average mine price be maintained.

And that, if you please, is "coordination" under the Guffey Act. In short, rob Peter to pay Paul and confer always upon the consumer the honor of holding the bag. But before proceeding further and getting down to the real meat in the case, it may be well to go back a bit so as to finish on the line.

In 1927, in the famous Lake Cargo case, the Interstate Commerce Commission reduced the freight rate on coal from the Pittsburgh district to lower Lake ports from \$1.66 to \$1.46, thereby widening the freight differential as between coal produced in the Pittsburgh field and that produced in the southern field by 20 cents a ton.

For many years preceding 1927 the freight rate to lower Lake ports on southern coal was 25 cents higher than on coal from the Pittsburgh district to the same ports. When the I. C. C. reduced

the Pittsburgh rate from \$1.66 to \$1.46 and at the same time denied to the southern carriers the right to meet the cut, the total differential as between Pittsburgh and the southern coal to lower Lake ports became 45 cents.

This reduction in the freight rate on Pittsburgh coal had nothing whatever to do with derivative revenues of the railroads. It was based on an entirely different concept. In justifying its action the I. C. C. said: "Considering the economic conditions prevailing in the Pittsburgh district, we therefore rule \* \* \*." Thus, solely to adjust an economic condition, the I. C. C. arrogated to itself the right to lay tariff against the southern section of the country in order to depress the economic conditions prevailing therein to a level of those prevailing in the northern fields.

In short, the I. C. C. then attempted to assume the power to legislate prosperity to one part of the country and adversity to another by the imposition of a tariff on intersectional traffic.

Immediately the courts granted the southern carriers an injunction, and the 20-cent rate reduction granted to coal producers in the Pittsburgh district was suspended. However, before the case reached the Supreme Court, the I. C. C. issued an interim tariff whereby the total differential as between the Pittsburgh district and the southern field was compromised at 35 cents.

The coal shippers, having no alternative, used the rates so fixed, and when the case came up for final hearing the Supreme Court refused to rule on its broader aspect, holding that the shippers had prejudiced their case by accepting the interim rates as established. The Court accordingly held that the question involved was moot, and the case went out the window.

And now, down the same alley, comes Mr. Ickes, of the Department of the Interior, panoplied under the Guffey Act with the empurpled power to manipulate coal freight rates; in other words, to lay a tariff, isolated in such manner as he may list, on 187 sub-regal sections into which he has chopped up what we fondly imagine to be the United States of America.

Will he get away with it? Congress alone can supply the answer.

## Omnibus Transportation Bill

### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

LETTER FROM THE BUREAU OF TRANSPORTATION AND PUBLIC SERVICE OF THE NEW BEDFORD BOARD OF COMMERCE, NEW BEDFORD, MASS.

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter from the bureau of transportation and public service of the New Bedford Board of Commerce, New Bedford, Mass., to Hon. BURTON K. WHEELER, chairman of the Senate Committee on Interstate Commerce, on the Wheeler-Lea transportation bill.

The letter is as follows:

BUREAU OF TRANSPORTATION AND PUBLIC SERVICE  
OF THE NEW BEDFORD BOARD OF COMMERCE,  
New Bedford, Mass., February 19, 1940.

Re omnibus transportation bill, S. 2009.

Hon. BURTON K. WHEELER,

Chairman, Senate Committee on Interstate Commerce,  
Senate Office Building, Washington, D. C.

MY DEAR CHAIRMAN: In behalf of the business, commercial, and port interests of New Bedford, Mass., the New Bedford Board of Commerce and the general port development committee of the New Bedford-Fairhaven harbor district, bring to the attention of the joint House and Senate conferees now considering the pending omnibus transportation legislation passed by the House and Senate at their last session, bill S. 2009, their views regarding the following proposal:

#### REGULATION OF WATER CARRIERS

These parties are opposed to the inflexible or rigid regulation of the coastwise and intercoastal steamship lines, and in particular the port-to-port rates thereof, by the Interstate Commerce Commission, unless specific provisions are made for their regulation by experienced men in water transportation, and the arbitrary fixation of such port-to-port rates on any rail-rate basis is prohibited.

With respect to the regulation of either contract or private water carriers, these parties record their strong opposition thereto, believing that such restrictive legislation for those special types of water carriers is wholly unnecessary and would only result in substantially increasing the cost of important necessities of life, such as coal and petroleum and its products, which now constitute a

large proportion of the water-borne commerce of the port of New Bedford. Such commodities move in special types of equipment, independently owned or chartered, and do not involve that degree of competition with common water carriers which would make necessary the restrictive regulation thereof that is proposed by the legislation now under consideration. Moreover, any restrictive regulation of contract or private carriers by water would only prove harmful to the New England ports and shipping interests.

Of the two legislative measures now before the House and Senate conferees, these parties favor that passed by the House, excluding, however, those portions to which these parties have expressed their objections as stated above.

Very truly yours,

A. H. FERGUSON, *Manager.*

### Stream Pollution

#### EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. ALLEN of Pennsylvania. Mr. Speaker, under consent granted me by the House to extend my remarks in the RECORD, I include two articles regarding water pollution in the United States and the legislation covering this problem which is before us today.

One of these articles is by J. N. "Ding" Darling and Mr. Phil Platt, secretary of the Izaak Walton League of America, in defense of the league, and the other contains similar statements in support of the Izaak Walton League by such eminent Americans as Calvin Coolidge, Herbert Hoover, Dr. Henry Van Dyke, and President Franklin D. Roosevelt.

In connection with the water-pollution issue now before Congress, it has been brought to my attention that spokesmen for the Barkley bill, S. 685, who appear to be more concerned over the welfare of entrenched bureaucracy and those who use public waters as their private sewers than they are in consummation of a plan to redeem these waters, have publicly denounced the Izaak Walton League of America as "obstructionists" and have at various times referred to this worthy organization as "a minority group of highly vocal fishermen." In contradiction to such inferences, either implied or publicly stated, it is my conviction that the league acts as spokesman for that overwhelming unorganized majority of public sentiment which believes in an orderly program of conservation of the Nation's natural resources as the fundamental basis of our future prosperity and well-being.

In support of this contention, I submit herewith a recent statement made to the Izaak Walton League by that eminent and highly revered conservationist, J. N. Darling, former Chief, United States Biological Survey:

#### MY CREED

The Izaak Walton League is my church.

Its creed is my creed.

I believe in it sincerely.

I have no more doubt about the permanent existence of the Izaak Walton League as the backbone of conservation than I have that the Church of God will live.

It will take work.

The more work you put into it, the stronger the Izaak Walton League will be.

J. N. ("DING") DARLING.

#### WHAT OTHERS SAY ABOUT THE IZAAK WALTON LEAGUE

Calvin Coolidge: President Coolidge was greatly pleased with the work of the Izaak Walton League. He wrote the following letter of commendation in which he said, among other things:

The Izaak Walton League, appealing to every lover of the out-of-doors, has proved itself an effective educational force for intelligent conservation in this country. \* \* \* I take pleasure in endorsing the efforts of your organization to stimulate a wider appreciation of, and participation in, the unexampled opportunities for outdoor recreation afforded by our country.

Herbert Hoover: When Secretary of Commerce, Herbert Hoover said of the league:

The Izaak Walton League has become the greatest force in the country for the protection and development of opportunities for outdoor life. As our people increase in numbers and in leisure we must have stimulation to health, and above all the moral value that comes from association with nature. Every member of the league is a further soldier in our ranks fighting an organized battle for this vital thing in the Nation.

Franklin D. Roosevelt:

The campaign for the conservation of our renewable natural resources, particularly our wildlife, must be based upon a dedication to unselfishness. The individual who expends his efforts to assure the perpetuation of our forests, our natural scenic inheritance, and our fish and game, cannot hope to retain these privileges for himself alone. He must of necessity share them with others. \* \* \* All who love forested heights populated with game, clean streams and lakes stocked with fish, and magnificent vistas of unspoiled natural beauty, must inevitably wish the Izaak Walton League of America well in its self-appointed task of guarding these treasures.

Dr. Henry Van Dyke:

It stands for a great idea—something large and fine and generous and strong—the united and unselfish effort of American men and women, lovers of nature and outdoor sport, to conserve our country's heritage of natural beauty and to protect her native birds and beasts and fishes from wanton, wasteful extermination. This is a patriotic, humane, and it seems to me, religious purpose. God gave us this glorious land not to despoil and ruin, but to love and cherish, to keep beautiful and fruitful and full of attraction and opportunity for that open-air life which will help us and our children to ward off the dangers and diseases of modern civilization. That is the object of the league, and that is why it must live.

### Flood Control

#### EXTENSION OF REMARKS

OF

HON. JOE B. BATES

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. BATES of Kentucky. Mr. Speaker and Members of the House, I realize that there is an economy wave that is pretty hard to overcome in this body at this time, and I for one have no desire to get in the way of that drive for economy. I think it is necessary and I think we should practice it, but I just wonder if, out of anxiety to economize, it might not be possible to forget the essentials and maybe make our acts destructive rather than economical. I am thinking now of the great Ohio Valley from Pittsburgh to Cairo, and the numerous towns on both sides of the river, and of the fear the citizens of these towns have of "Old Man River" swooping down on them in the nighttime and destroying their property, their health, and, in many instances, their lives.

I speak of the Ohio because I am more familiar with it than with any of the other rivers of the United States and because I am more partial to that section than any other section of the United States. To my way of thinking, it would be good business economy to preserve the people in this valley and their industries to the exclusion of all other governmental activities. I may be biased in my thinking along this line because I live on the bank of this river myself and it borders my district for a distance of more than 100 miles. However, I invite you to consider this from the viewpoint of national defense, for which we all seem to have a craze at this time. Imagine a state of war existing and during that war the visitation of one of these destructive floods down this great river with Pittsburgh and vicinity having all its steel and other industries put out of commission; the same thing happening to the mills at Wheeling, W. Va.; Ashland, Ky.; Portsmouth, Ohio; Newport, Ky.; and all the other towns along the river. Then add to that the various chemical plants, powder plants, and other industries that would be put out of commission for 30 to 60 days because of one of these floods; and, in addition

to that, the trunk lines of the C. & O., B. & O., and N. & W. railways being put out of commission by this same flood. What more could happen to paralyze this whole United States than for a thing like this to happen?

I do not think you could do a thing more destructive to the citizens of the United States or to the national defense of the United States than to fail to supply funds in an amount that can be wisely spent by the War Department. Their engineers estimate that they can spend \$63,000,000 profitably in the Ohio Valley alone this year, and the Appropriations Committee has fixed the total for the United States at \$70,000,000—just \$7,000,000 more than the amount the engineers figure they can spend wisely in the Ohio Valley alone.

It is my firm conviction that the Congress of the United States will not be economizing when, through their failure to appropriate money, they retard a program designed to protect millions of American citizens.

### Wheeler-Lea Bill

#### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

LETTER FROM THE MERCHANTS' ASSOCIATION OF NEW YORK

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter from the Merchants' Association of New York to members of the joint Senate and House conference committee considering the Wheeler-Lea transportation regulation bill:

THE MERCHANTS' ASSOCIATION OF NEW YORK.

New York, February 7, 1940.

Senators: BURTON K. WHEELER, HARRY S. TRUMAN, VIC DONAHUE, WALLACE H. WHITE, JR., CLYDE M. REED.

Representatives: CLARENCE F. LEA, ALFRED L. BULWINKLE, ROBERT CROSSER, WILLIAM P. COLE, JR., CHARLES A. WOLVERTON, CHARLES A. HALLECK, PETER G. HOLMES.

DEAR SIRS: The Merchants' Association of New York desires at this time to reiterate its strong opposition to those provisions of the Wheeler-Lea bill (S. 2009) which would regulate water carriers in domestic commerce by placing them under the supervision of the Interstate Commerce Commission. We urge that no conference report be made on the bill, but that if one is made, no action be taken on it by the Congress for a period of at least 30 days, to permit the Congress to have the benefit of an expression of views from producers, shippers, and the public on its very technical and far-reaching provisions.

In a previous communication under date of July 20, 1939, we stated the reasons for our opposition to this legislation. Our conclusions in this respect are, if anything, more firmly established, as the intervening time has further proven them to be correct. We stated then and repeat now that this legislation appears to represent largely the viewpoint of the railroads, and that it has been prepared without adequate study and consideration of the needs of the coastwise and inland maritime interests of the country or of the general public. No opportunity for such a study has been afforded.

The association in its protest of July 20 last stated:

"No adequate, comprehensive, and impartial investigation of the transportation system and problems of the United States has been made. We strongly urge, therefore, that Congress do not enact the Lea bill or S. 2009, but instead that the House act favorably on House Resolution 226, which provides for a House committee to investigate and report on the transportation systems of the country involving all forms of transportation, the effect of existing transportation laws and the methods of their administration. Following such a thorough investigation and subsequent report Congress can proceed, on a fact basis, to establish regulations applicable to all forms of transportation with the assurance that such regulations are adequate, fair to all transportation interests involved, and also are in the interests of industry and the public generally.

"We oppose the enactment of the Wheeler or the Lea bill or any compromise legislation regulating water carriers at this session of Congress, because it is the conviction of this association that placing domestic water-borne commerce under the regulation of the Interstate Commerce Commission is unwise and illogical, and will inevitably tend to increase rates on domestic water-borne traffic, with a corresponding adverse effect on various national in-

dustries which require, to compete with foreign suppliers, the availability of inexpensive forms of transportation. In this connection it should be noted that since the enactment of the Intercoastal Shipping Act, intercoastal freight rates have increased approximately 30 percent, a large part of which increase can be directly ascribed to governmental control of intercoastal shipping."

These criticisms are supported by the letter issued under date of January 29 last, by the legislative committee of the Interstate Commerce Commission, submitted to the joint Senate and House conference committee now drafting a report on the Wheeler-Lea bill. The Commission criticizes the Wheeler bill, stating in effect that while codification of the Interstate Commerce Act is desirable there is need for so many changes in the Wheeler bill as to justify the making of another effort in that direction at some future time. The Commission explains that the Wheeler bill was produced "under difficulties" and was necessarily a "forced and hurried" job. It expresses the belief that if sufficient time and attention could be given to the preparation of the Wheeler bill, a better product would result.

The letter of the legislative committee of the Commission indicates clearly that, at least so far as the Wheeler bill is concerned, without any public demand and, in fact, without any public need, admittedly imperfect, compromise legislation changing drastically the basis of rate making for both water and inland transportation is being rushed through Congress.

Domestic water-borne transportation is a subject of such vital importance to the port and to the business of New York that we respectfully urge you to oppose this unnecessary legislation which can only result in increasing transportation costs to all the people.

Yours sincerely,

THE MERCHANTS' ASSOCIATION  
OF NEW YORK,  
By S. C. MEAD, Secretary.

### Third-Term Resolution?

#### EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

EDITORIAL FROM THE WASHINGTON POST

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's edition of the Washington Post:

[From The Washington Post of February 29, 1940]

#### THIRD-TERM RESOLUTION?

It may be impossible to restrain political-minded legislators who are determined to raise the third-term issue in the Senate. But responsible Members of that body might at least reflect upon the futility and impropriety of passing an anti-third-term resolution.

The business of Congress is to enact national legislation and not to nominate or to prevent the nomination of candidates for the Presidency. One may search the Constitution in vain for any grant of power to either the Senate or House to prescribe the number of terms that a President may serve. In the absence of any such power the Senate can best preserve its dignity and prestige by leaving the question of a third term for President Roosevelt to the President himself, the Democratic Party, and the American people.

In 1928 the Senate went out of its way to pass a resolution aimed at President Coolidge, even though he probably had no intention of seeking a second Presidential nomination. That move was obviously inspired by politics. It drew support only from Democrats and insurgent Republicans. Now the support for an anti-third-term resolution is coming from Republicans and dissident Democrats.

If such a resolution is pushed to a vote, its chief effect will be to stultify the veteran Senators who recorded their votes 12 years ago. Everyone knows that such a resolution would be an expression of partisanship rather than principle. It would not necessarily mean that its supporters favor adherence to the two-term tradition under any and all circumstances, but only that they do not want President Roosevelt in the White House for 4 additional years.

Of course, a Senate resolution does not become a law. It is merely an expression of sentiment on the part of individuals who happen to be serving as national legislators. There seems to be no question that the Senate lowers its prestige when it chooses this method of entering into a strictly political controversy.

No doubt some Members of the Senate are sincerely convinced that no President under any circumstances should be allowed to remain in the White House more than 8 years. The logical course

for them to take is to sponsor a constitutional amendment forbidding third terms. Much can be said both for and against such an amendment, but discussion of the issue on this basis would at least have a ring of sincerity that is lacking in anti-third-term resolution movement.

The two-term tradition appears to have a strong hold upon the American people. It rests on the sound belief that no individual is indispensable in a democracy. Leaders who covet continued popular esteem and goodwill in this country must not even create a suspicion that they would like to perpetuate their power indefinitely. They have an obligation to abide by the spirit as well as the letter of American democracy. If any leader forgets this obligation, he exposes himself to severe discipline at the hands of the electorate.

Congress would do well to recognize, however, that this is a question for the people to decide. Opponents of the administration have complained bitterly when the President has encroached upon the powers of Congress. That in itself should induce them to think twice when they are tempted to indulge in legislative interference with the free choice of a Chief Executive.

### Migratory Farm Families—What Can Be Done for Them

#### EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. LEAVY. Mr. Speaker, Mark Twain has been quoted as saying that everybody complained about the weather but nobody did anything about it.

Today, after 6 years of discussions and reports of conditions in and growing out of recurring droughts in the Great Plains area, we are just about where we were when dust from the seared acres was blown more than a thousand miles eastward and dimmed the skies over the National Capital. Certainly so far as effectively combatting the effects of the gross waste of the meager water supplies of the Great Plains, we have made but little, if any, progress.

#### SECRETARY ICKES SUGGESTS SOUND POLICY

It is true that in 1939 the Congress appropriated \$5,000,000 for a water-conservation program in the Great Plains, but that was a mere drop in the bucket for effective conservation in an area that extends from the Canadian border to the Rio Grande. It was barely enough to start a few projects for which plans were ready in the northern Great Plains, and I most heartily concur with the view expressed by Secretary of the Interior Ickes in a letter to Senator HAYDEN, of Arizona, dated January 18, 1940, that at least \$5,000,000 annually should be appropriated for continuation of the Great Plains program. Likewise I favor the Secretary's suggestions that not less than \$50,000,000 to \$60,000,000 a year in reimbursable funds shall be provided for construction of Federal reclamation projects.

You may ask why a Member of the Congress from a Pacific Coast State should be so concerned with water conservation in the Great Plains. Aside from the interest I have as the Representative of a district in an arid region in the problems of States similarly affected, I can assure you that the States among and west of the Rocky Mountains can testify to at least one outstanding effect of the droughts on their social and economic well-being. And that revolves around the westward migration of farm and other families who have fled the Great Plains region and are seeking irrigated land on which to make a fresh start in life.

#### WESTERN MIGRATION

My attention has been called to an article in the Washington Post of February 27, in which a migratory labor problem on the Atlantic seaboard is described. The Farm Security Administration estimates that from 10,000 to 20,000 migrant families will progress northward from Florida this spring in search of employment. Multiply this number 5 to 10 times and you will be able to picture the problem that confronts the far Western States.

While the movement of farm families from the Cotton Belt has been due in a large extent to agricultural readjustments resulting from power farming, the records show that westward migrations have been largely keyed to the intensity of the droughts in the last decade. At my request, Commissioner John C. Page, of the Bureau of Reclamation, has provided me with certain facts with respect to the droughts and the effect on westward migrations, which are summarized thus:

The United States Weather Bureau describes the recurrence last year as "the most severe autumn drought in history," following what experts of Nebraska and Kansas colleges assert was the worst "summer drought damage since 1934."

For the July–November period, 1939, the number of persons in need of manual employment from the Great Plains States entering California was 50 percent greater than the total during the first half of the year.

For the entire year 1939, the number of such migrants entering California exceeded the total for 1938.

Based on school enrollment statistics, specialists of the Department of Agriculture have made preliminary estimates that approximately 155,000 migrant families entered the 3 Pacific Coast States and Idaho from January 1, 1930 through May, 1939.

Available data show that the greater number of these families were directly from the Great Plains States, and that many more from that area stopped temporarily in other States en route.

By States the migrant families enumerated as arriving during the first 9 years of the decade were apportioned somewhat as follows:

California: 110,000 with 98.7 percent of schools reporting.

Washington: 18,900 with 87.5 percent of schools reporting.

Oregon: 19,400 with 81.3 percent of schools reporting.

Idaho: 6,790 with 55.1 percent of schools reporting.

Later figures reveal that in the Pacific Northwest the school-survey families represent only 63 percent of the total and that 460,000 persons all told moved into the Pacific Northwest in 9 years. Idaho alone reports a net gain of 80,000 men, women, and children through migrations.

Allowing for an undetermined number who have moved out of the area, who have been settled on farms or who have secured gainful employment, it is estimated that there are now on the Pacific coast around half a million homeless men, women, and children.

#### MUST EXPAND FEDERAL RECLAMATION

The Federal reclamation program has been advanced with all the vigor available funds would permit. Yet the area of newly irrigated land available for settlement has been woefully inadequate to meet the demands of the normal increase in agricultural population of the West without consideration for the vast number of newcomers.

It is not suggested that all of the migrants reaching the coast could be settled on irrigated land, even if a sufficient area were available. However, the record shows that in the cities and towns that have grown up in the wake of reclamation developments, the population supported is three times that of the farms. Here would have been opportunities for the employment of mechanics and other skilled and unskilled labor who have moved westward and whose plight has swelled the relief burdens.

Lack of water-conservation facilities in the dry areas of the Great Plains has resulted in continued losses of population, with consequent depreciation of tax values that have affected the economy of States and counties.

The Great Plains water-conservation program inaugurated in 1939 was a start toward reducing the necessity for further extensive migrations from the States most disastrously affected by the droughts. Appropriations, however, were sufficient to start projects in only three States to the northward. Without further funds, relief cannot be given areas most seriously affected by the 1939 recurrences.

While westward migrations are not a phenomena, the movement in recent years of distressed families, following the droughts, has presented a most pressing problem for the

States that have felt the impact of the new arrivals. Federal relief expenditures have soared and the burden on the States and localities has been greatly increased.

The number of new arrivals in the West from 1930 to 1934 approximated the totals that had come in during the early twenties, but following the severe damage of 1934 there was a substantial upsurge. This continued until 1937 after which there was a slight recession. But with the low precipitation of 1939, the flight from the Great Plains was renewed.

#### THERE IS A DRY CYCLE

Dr. J. E. Weaver, University of Nebraska, in December 1939, predicted "the most ruinous drought in the history of the midwestern Dust Bowl next summer," asserting that even with good rains year after year it would take 50 years to restore the Great Plains area by "normal means."

More recent reports of the Weather Bureau are that while recent snows have been helpful, the moisture received has not been sufficient to replenish the sadly depleted supplies for the subsoil.

Winter wheat on December 1, 1939, was 59.4 percent of normal, compared with a previous low on that date of 68.9 percent in 1932. Pasture was seared, requiring extensive feeding readjustments, gardens and truck crops were destroyed, and there was a serious shortage of domestic and stock water, the Weather Bureau reported.

In the States of the Great Plains area, the rainfall in the fall months of 1939 was from 25 to 50 percent of normal, with the drought most severe in southwestern Nebraska, eastern Colorado, western Kansas, and the Panhandles of Oklahoma and Texas. Actual precipitation in the six States almost wholly in the Great Plains, compared with the normal record and the deficit for September, October, and November was as follows:

State	Normal	Actual	Moisture deficit
	Inches	Inches	Inches
Kansas.....	6.09	1.75	4.34
North Dakota.....	3.26	1.46	1.80
South Dakota.....	3.63	2.16	1.47
Oklahoma.....	8.12	3.36	4.76
Nebraska.....	4.53	1.15	3.38
Texas.....	7.83	4.59	3.24

Except for southern California, Utah, Arizona, Nevada, and western New Mexico, the West and the Great Plains had the driest fall months on record. Generally in the West, the precipitation averaged 50 percent of normal. In the eastern Washington area it was 25 percent.

#### RELIEF COSTS ARE STAGGERING

A review of available information as to the costs to the United States Treasury as a result of the droughts reveals:

In 285 counties which lost most heavily in population from 1930 to 1935, Federal aid from 1933 to 1936 was from \$119 to \$175 per capita.

In 119 counties where the drought appeared less severe in its effects, the Federal aid was only \$58 per capita.

In the 11 Mountain and Pacific States, which have borne the brunt of migrations of distressed farm families, Federal relief expenditures by the Work Projects Administration and its predecessor agencies was 20 to 25 percent more than the normal population would require.

In the Federal reclamation areas of the West, the relief costs have been one-third of the load in the nonirrigated areas.

There is a striking unanimity in estimates of the number of farm families from the Great Plains area who have fled the droughts and sought a chance to root themselves to the soil farther west.

Farm Administrator Will W. Alexander, in the spring of 1938, placed the number of families that had moved into the 7 far Western States from 1934 through 1937 at 58,400.

Representative Dewey Short, of Missouri, president of the National Rivers and Harbors Congress, speaking before the National Reclamation Association at Denver in November

1939, quoted the Department of Agriculture as estimating that—

From 1934 to 1939, 75,000 farm families immigrated into the 7 far Western States—few have been able to settle permanently and the rest had to depend on seasonal agriculture and relief.

#### SOME FIGURES FOR CALIFORNIA

Taking these figures, substantiated by detailed reports of the border patrol of the California Bureau of Plant Quarantine, as shown by the accompanying table for the period from July 1, 1935, to November 30, 1939, it is a safe estimate that more than 100,000 farm families, or approximately half a million men, women, and children, from the Great Plains area have come into the Western States in the last decade.

Persons "in need of manual employment" entering California by motor vehicle from Great Plains States, July 1, 1935, to Nov. 30, 1939<sup>1</sup>

State	Total, 4 years 5 months	July-December 1935	1936	1937	1938	January-June 1939	July-November 1939	Total, 11 months, 1939
Oklahoma.....	79,810	7,561	22,989	21,709	13,212	5,386	8,953	14,339
Texas.....	36,563	3,631	8,304	8,723	8,684	3,508	3,713	7,221
Kansas.....	15,209	2,238	3,900	4,484	2,209	858	1,520	2,378
Colorado.....	12,121	1,584	2,249	3,702	2,428	895	1,263	2,158

North Dakota.....	2,965	532	912	834	387	83	181	264
Wyoming.....	2,764	337	738	659	491	139	400	539
Total <sup>2</sup> .....	178,923	20,021	46,587	48,081	32,655	12,619	18,924	31,543

<sup>1</sup> Data collected by border inspectors of bureau of plant quarantine, California Department of Agriculture.

<sup>2</sup> For 4 years (July 1, 1935, to June 30, 1939) total from Great Plains States was 51.3 percent of persons checked at border stations from all sections of the country.

<sup>3</sup> Total, including December 1939, 20,930; for 12 months, 1939, 33,549. Figures by individual States for December 1939 not available.

#### FEDERAL GOVERNMENT MUST AID WESTERN STATES IN MIGRATION PROBLEM

That the Western States have been unable to absorb all of these newcomers and place them where they would have an opportunity to rehabilitate themselves is beyond dispute. Similarly, it is a fact that without opportunities for employment, they have swelled the relief rolls and contributed materially to increasing drains on Federal, State, and local resources.

To meet the problems that has been thrust upon the Great Plains and Western States by droughts and migrations, there appears this threefold solution:

First. Expansion of the Great Plains water conservation program to halt further migrations from the farms of the region and aid in combatting effects of the continuing droughts.

Second. More adequate appropriations to expedite completion of Federal reclamation projects under construction that will provide irrigated land for settlement of migrant farm families already in the West.

Third. Speeding of construction of facilities to provide supplemental water for established agricultural areas that will be able to absorb some of the newly arrived families.

PRESIDENT ROOSEVELT SHOWS HOW COULEE DAM AND COLUMBIA BASIN WILL CARE FOR 500,000 PEOPLE

The urgency of action is attested by the remarks of President Roosevelt in a radio address on the night of January 19, 1940, in connection with the White House Conference on Children in a Democracy. Apropos of the subject I have been presenting, the President said:

Last April \* \* \* I referred to our concern for the children of the migratory families who have no settled place of abode. I spoke casually to the press today about a study I am making. Up in the State of Washington we are spending a great many millions to harness the Columbia River, to put a great dam up there which will pump the water up onto a huge area of land capable of providing a living for 500,000 people—irrigated land, today a desert—which can be made a garden with the process of modern science. Who ought to go there? Are we going to treat that 2 years from now just as we treat the average irrigation project? Will it be a contract with the Government to pay out the loan over a period of years on the basis first come first served?

I have read a book; it is called *Grapes of Wrath*; and there are 500,000 Americans that live in the covers of that book. I would

like to see the Columbia Basin devoted to the care of 500,000 people represented in Grapes of Wrath.

Migratory families, the situation of their children—children who have no homes—families who can put down no roots, cannot live in a community—that calls for special consideration. But I am being practical. I am trying to find a place for them to go. This means, in its simplest terms, a program for the permanent resettlement of at least 1,000,000 people in the Columbia Basin and a lot of other places. And remember that the money spent on it, after careful planning, is going to be returned to the United States Government many times over in a relatively short time.

### Blundering With Gold

#### EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. CRAWFORD. Mr. Speaker, permit me to approach the subject of gold once more from a hard-boiled, business point of view. I see in our 20,000-ton golden calf and its shrine in Kentucky, an expensive idolatry, not a business proposition. I am as anxious as anyone to see some business use found for the metal; but I do not want to see this Congress or Nation laboring under any illusions as to what can be done with it. Let us stop blundering our way through these money problems, perpetuating generation after generation the paradoxes and illusions which blighted the work of the old British recoinage commission and for which civilization is still paying through the nose. Nothing can be gained, much can be lost, by procrastinating to a time in the not distant future the careful and thorough consideration of the whole policy which the distinguished gentleman from Missouri [Mr. WILLIAMS] has very tentatively suggested might be undertaken.

I certainly do not see how anyone, in the light of either theory or experience, can justify this gold policy as needed to help encourage and expand our export trade. There is too much opinion afloat that our domestic prosperity hinges on dumping our soil fertility and resources abroad. If that be true we are a helpless colossus indeed. But it is not true. In the United States, at least, it is foreign trade that does the hinging, while domestic trade furnishes the fulcrum. Or, to shift our metaphor, the domestic hen lays a foreign egg, not the foreign egg a domestic hen. Foreign trade, Mr. Speaker, is the tail, not the dog.

There are few, if any, authorities who have given as careful study to this subject of foreign exchange as have Professors Graham and Whittlesey, whose treatise on our Golden Avalanche has just come off the Princeton Press. I submit that there is certainly no support for our present policy in this book. Its contents are a trenchant challenge to attempts to justify any further purchase of foreign gold, and it certainly appears that we are involving ourselves in an increasingly serious dilemma by continuing our present metal-buying policy, particularly as respects gold.

An adequate consideration of the principles and outstanding lessons of experience in metallic coinage would take more time than I can give it here. But since the Senate Banking and Currency Committee is at long last launching an investigation of these matters, it seems of some importance to place in the Record a refutation of certain fallacies, as they appear to me, which are current in discussion, and certain points which have recently been made by the most careful and informed students of the problem of metallic standards.

I hope the Senate investigators will give particular consideration to the recent work of Dr. Murad, professor of banking and finance at the University of Southern California. This little book, *The Paradox of a Metal Standard*, may not be the last word on the relation of coinage to prices and values. To me, certainly, the author's conclusion that there can be no such thing as a standard of economic value seems

a quite unacceptable defeatism. But Dr. Murad has rendered a yeoman service in pointing to the paradox in current theories of coinage as related to a standard of value.

#### A STANDARD OF VALUE

Let me try to indicate the basis for my belief that this paradox can be traced to confusion between the very words "price" and "value." By this confusion, it appears, we are unwittingly assuming what is by no means established, viz, that price and value are identical. Indeed, it will be generally conceded that price and value have seldom proved to be identical in practice, for we are continually experiencing what is being termed "disparity" in prices. With reference to what does this "disparity," as between farm and factory prices, for example, exist? Were prices in no way "disparate" in the pre-war period, 1909-14? Or in 1926? By what standard has it been determined that they were at "parity" in any particular year, month, day, or instant? Other standards of physical measurement are changeless in time. What possible rational justification is there, then, for the idea that price relations should or can remain at the same "parity," yet without reference to any fixed standard of value?

It has seemed almost impossible for the human mind to shake off what has been called the "money illusion" to the effect that the value of money is a constant, unchanging standard so that price and value are identical. From this fallacy of circular reasoning, or using our conclusion as a premise, we have been assuming that the market price of some particular commodity—or even of several or all commodities—can be arbitrarily selected and pegged—or averaged, if an index is used—as representing a "standard" in economic value; whereupon the effect, upon price, of money supply on the one hand and of the commodity market on the other hand, is abrogated for that "standard" commodity—or commodities—and it is enthroned as a "standard of value" upon which, by virtue of mere fiat, all other economic values become contingent and are correctly priced quite as if they were being bartered.

If there is some peculiar logical basis which does not apply to other commodities for applying this exceptional reasoning to gold or silver, the test of time has failed to reveal it. Merely coining or arbitrarily defining gold as money or as a standard of value—"monetizing" it by law—does not transform it into either a standard of value or a suitable medium of exchange. If there is any one lesson to be drawn from economic history, it is that the fixing of prices by law is impossible in the long run; and we are at long last discovering that the notion that precious metals are an exception to this rule only leads to a paradox.

The fallacy of this money illusion has arisen, it seems to me, in a false analogy between standards in weights and measures on the one hand and the so-called standard we have attempted to employ for economic values on the other. For example, we do not in fact, as is the case in selecting the gold standard for economic values, take some natural class of objects, such, for example, as the feet of men, attribute to them some intrinsic value as to length, and proceed to assume that the average, or the greatest common divisor, of all existing lengths in human feet is the standard foot value for all measurements of length. There could be no possible useful system of measurement based on such a shifting standard. Even more absurd would be the idea that the standard of length could be similarly arrived at by averaging the lengths of everything with which the community happened to be concerned at any particular period of time. Yet that is the vague and indefinable idea of a standard in economic value which our price system is alleged to represent according to the concept of a so-called general price level as representing the value of money.

But if physical standards of measurement are not an arbitrary selection of a natural entity of any kind, by what process are they selected? Measurable physical properties do not, of course, exist apart from concrete things. While our understanding of the things about us is thus subject to the limitations of our senses, we are nevertheless continually attempt-

ing appraisals and comparisons in order to orient and conduct ourselves relative, for example, to the special characteristics of concrete things in our environment. Doing this in a way which will enable us to remember and compare our experiences relative to different times and places, so that we may anticipate the future and act accordingly, that is, act rationally, requires that spatial dimension be set up as an abstraction and a wholly arbitrary portion of it be fixed upon as a spatial standard.

Thus we are compelled to define what we mean by a straight line before we can begin to divide it up into parts of significant size for our purposes as in considering length in concrete objects. This definition of a straight line cannot be arbitrary. It must correspond to reality to be significant and useful. But its division can only be arbitrary because that division is merely for the purpose of creating a universal basis for numerical comparisons which have only a psychological significance. Reality in environment is not numerical; not finite. It is universal and continuous. It is infinite. Its enumeration is a peculiarly human device which exists nowhere else in nature.

When making these physical, measurable comparisons—say, for example, of length—we have to settle first on the physical things we are comparing both in time and in space. We may, perhaps, be considering merely those things within our range of vision at some moment. For purposes of the intended comparison, this is our so-called universe. The simplest unit of length by which comparisons within this universe may be expressed numerically, would obviously be the greatest common divisor of all the lengths we are comparing. Literally, of course, such a divisor would become small as the number of things measured and compared became large; because it is not possible for numerous concrete things to correspond naturally to any precise unit as a common divisor. But our needs and abilities in measurement have practical limitations and we, therefore, fix for use as a permanent, general standard to cover all times and places, an arbitrary quantity of such size that it need not be either divided or multiplied by any excessively large number in order to come within our ordinary needs for a standard common divisor. This does not avoid error. It only reduces error to negligible proportions for our purposes.

As to economic values, however, it is painfully apparent that in our price system we have not attained a standard of accuracy such that its error in representing something we are calling value is of negligible proportions. Length values have been brought to the point of negligible error, but economic values have not. We have discovered what a straight line is, and can measure length, but we have not yet discovered what economics is so as to define it clearly, and we certainly cannot measure economic values consistently until we do. Nor can we, when this discovery has been attained and defined, measure such values by prices on the bland assumption that money, or gold, is a standard of value; nor can we set up a money control system on the theory that the needed price standard is merely a common divisor of the price figures concerned in any given period of time. Precisely as we have not defined the standard of length value as the greatest common divisor—or the mode, or median, or harmonic, arithmetic, or geometric mean, if I may run the gamut of statistical methodology—of all lengths in existing bovine animals, or in gold nuggets, so we cannot arbitrarily define the standard of economic value as in any way dependent upon the particular economic characteristics of cattle or of gold.

We cannot and do not standardize the whole simply by a part thereof. We are compelled to abstract its qualities in order to measure them. Length is a pure abstraction. So must economic value be defined, abstractly, before it can be standardized correctly for numerical measurement by prices. Qualitatively, a standard must check with reality; but quantitatively it must be wholly arbitrary in order to be universally applicable; and it can be useful only if it is thus applicable.

Standards of value for use in enumerations or calculations of any kind must conform to the same mathematical rules

for all systems of quantitative measurement. Prices are no exception; and I shall hope that the brief explanation here attempted will make it possible to comprehend the false and the true analogy between the expression of economic values by prices and the numerical expression of values in all other systems of measurement such as those based on ordinary weights and measures.

#### GOLD IN MONETARY CONTROL

In attempting to apply these principles to our monetary problems, let me say that while I do not feel that coinage can be neglected in any monetary program it is today very much subordinated in importance to the problem of banking and fiscal reorganization, with which I shall not attempt to deal in this discussion. I would, however, like to contrast the statement of the gentleman from Missouri with that of the Reserve Board itself as to its powers of control. Said he, in his statement of February 1 in the Record, if inflation "should develop to any alarming extent, the Federal Reserve bank, through its open-market operations, its control over discount rates, and reserve requirements, could check such a tendency."

Said the Board, in its annual report for 1938:

The ability of the banks greatly to expand the volume of their credit without resort to the Federal Reserve banks would make it possible for a speculative situation to get under way that would be beyond the power of the System to check or control. The Reserve System would, therefore, be unable to discharge the responsibility placed upon it by Congress or to perform the service that the country rightly expects from it.

We must, of course, agree with the gentleman that "a liberal expansion of credit"—that is, of money supply in the form of demand deposits for use in private industry—"would stimulate industrial activity, increase employment, and lead to general improvement and progress." But, except by the dead-center mechanics of public debt which has served chiefly to create an annual interest charge greater than the whole Budget when the last Democratic administration took office, we are not getting that expansion, and I should like the gentleman, as administration spokesman in the House on this matter, to offer us a statement of the administration's way out of this dilemma. Under our present banking laws, for which the Democratic Party is chiefly responsible, the very conditions which the expansion of bank credit "would stimulate" are prerequisite for its expansion. Are we not using treadmill reasoning in our analysis of cause and effect under existing financial organization?

Let me ask the distinguished gentleman from Missouri to tell us also how we are to reconcile his assertion that this administration has "placed title to all gold"—it is rapidly nearing that goal—"in the United States Treasury," with his contention that "if these gold certificates, which represent \$15,500,000,000 of their assets, were withdrawn from the Federal Reserve banks without anything to take their place, it, of course, would completely and absolutely destroy their solvency and result in disaster." Does not this set up a legalistic duplicity in ownership?

To me this duplicity is matched in our fiscal history only by that of the present administration's whole system of accounting, by which it has contrived, with the device of guaranteeing obligations of certain Government accounts camouflaged as corporations, to evade the restrictions which Congress has placed on the public debt. A government which condemns holding-company camouflage for the purpose of evading taxes, sanctifies it for the purpose of spending taxes, it seems.

It should require no profound understanding of this allegedly mysterious subject to realize that these bank "assets"—gold certificates—must either be a legal fiction or else the gold itself is not the Treasury asset which the gentleman's statement as to title is calculated to make the public believe it is. To me it seems quite plain that the ostensible dependence of our banking, that is, of our money system, on this golden calf in the Treasury, which is rapidly taking on the character of a white elephant, is purely a legal fiction which can be changed at any time by a change in law. This seems perfectly obvious from the fact that, under the law as it is

now, the Executive, in both the Federal Reserve System and the Treasury, can manipulate and change that relation in several ways, specifically, for example, by changing reserve requirements. The basis of the solvency or insolvency of the whole system is therefore a pure legal fiat and not really a matter of gold at all.

Let us ask the distinguished Member to join us in examining his Missouri bubble in the control of credit by central banking. Our Federal Reserve notes tell us, on their face, that they are "legal tender redeemable in lawful money." As the fiat now stands they may be issued in the sum of \$40,000,000,000, which is two and one-half times the present holdings of virtually \$16,000,000,000 in gold certificates by the 12 Federal Reserve banks. Now the courts have held repeatedly that legal tender is lawful money (*Bronson v. Rodes*, 74 U. S. 229; *Perry v. State*, 61 Southern 400; *Vicks v. Howard*, 116 S. E. 465). Were member banks to expand their deposits with the Reserve banks to the legal limit, and the latter came to hold all of this \$40,000,000,000 in lawful money in the legal reserve of 35 percent against such member-bank deposits, those deposits could probably reach the sum of \$114,000,000,000. This sum in turn, representing the reserve, averaging about 17 percent, which must be held by member banks against their demand liabilities to their depositors. Those liabilities, which are our money supply against which checks may be drawn, are, it would appear, potentially restricted to the modest sum of not quite \$700,000,000,000. As business needs expanded the ratio could then be legally reduced to 10 percent by Executive decree and this restriction—to a mere \$700,000,000,000—be raised to \$140,000,000,000 more than a trillion dollars. This, Mr. Speaker, is the limitation, so-called, imposed by the law on the executive administration of our money system—if we lean wholly on those banks within the Federal Reserve System and acquire no more gold.

Outside the law it is interesting to note the astronomical possibilities of national income. Even at a mere  $2\frac{1}{2}$  to 1 ratio to the above legally possible deposits, representing the velocity of money, our income would approach \$3,000,000,000,000 annually. Under these conditions even the New Deal might balance the Budget; but meanwhile what becomes of the theory that gold serves to make our money "sound"? The possession of gold is, as laws now stand, an actual threat to the stability of the purchasing power of the dollar.

There can scarcely be any material disagreement with the distinguished gentleman from Missouri in his statement regarding foreign exchange as he presents the facts in the Record for February 1. But, Mr. Speaker, "I'm from Missouri" as to the interpretations he offers for these facts. And let it be noted, in passing, that policies and legislation will be guided by these interpretations.

The gentleman, indeed, disclaims, as do the rest of us, any profound understanding of this matter; but he admits that our policy has, in fact, been followed by a "rather alarming increase" in our gold holdings. He then proceeds to offer an interpretation of the market for gold which, in view of our price-pegging operations, certainly inspires me with wonderment and awe at what must be a much more profound understanding than I have as to the forces which determine price in a market. To me, if Uncle Sam is arbitrarily offering to buy an unessential, high-priced, easily transportable commodity, without limit at from two to six times its cost of production, it could not be expected that anyone else could buy that commodity anywhere at substantially less than your Uncle is paying; and Uncle will get all of the production and most of the existing supply except the insignificant proportion which is actually needed even at that fictitious price.

The dream of governments, says our distinguished friend from Missouri, has been to acquire gold. But the dream of all other governments today seems to be to let the United States Government do the acquiring as rapidly as the gold can be fed into its Kentucky mausoleum without arousing public suspicion of our gullibility. Witness the South African control of production by an excess-profits tax which forces

the richer veins to lie in the mines unworked—we might say, earmarked for exploitation when we have recovered from our dream and left the market free to decline to a price at which the metal can be coined.

Mr. Speaker, it takes more profundity of understanding than I have to see why this gold would be less valuable to us if we simply bought title to the lodes in Russian and South African mines and left the metal, earmarked there, to stimulate our shipment abroad of the fertility of our farms and our other products and resources along with the munitions necessary to destroy them and restimulate this so-called trade. Indeed, the metal might be much more valuable to us if thus earmarked in the mine, because it would be more difficult subsequently to earmark it into the coffers of the bankrupt nations of Europe as a war loan or for rehabilitation after the war; and we would—to judge from past experience—be just that much better off.

As a "hoss" trader, I have always thought that if the other fellows figured I was willing to pay an excessive price for a "nag," none of them would part with him for less than that price while waiting for my final purchase. So it now seems to me a strange illusion that brings anyone to assert that the price we are paying for gold is not bringing the metal to our shores, to be interred as an economic corpus delicti, or that this so-called trade is not a burden on the American people which cannot be ameliorated by any future manipulations. The publication of the story of our golden avalanche by Professors Graham and Whittlesey appeals to me as a convincing presentation of this situation, and I offer additional reasons for thinking that this gold can never be of any real use unless and until its price is much lower.

Why is it, Mr. Speaker, that neither this Nation nor any other is coining platinum? I submit that a primary reason is that, like gold at \$35 an ounce (domestic, bullion price), the price of platinum is too high. Personally, my "longing" for platinum is more intense than for gold, and I will warrant that if the gentleman from Missouri were offered an ounce of it he would prefer it to the same measure of the yellow metal even at the latter's fictitious, pegged price. But that does not validate platinum as a standard of value or make it coinable. It seems certain that we will continue to encounter the same old difficulties with circulation of gold coinage as long as we insist on "free" coinage; i. e., on "monetizing" the metal at par or putting as much metal in the coin as we can obtain for the coin when used as money. As we do with all our small denominations, so we must clip or debase the gold coin to start with; and its metal must not be so high-priced as to invite further clipping after coinage. Thus, at present levels in agricultural prices, if the market for gold bullion were allowed to fall to \$10 per ounce, then a dollar could be coined at near the size of a dime and still be materially below par in its gold content. Obviously, too, the old size for a half eagle—\$5—would contain less gold than it would buy. These conditions would afford a reasonably safe coinage.

Let me say, however, that even at a lower price—unless it became so low as materially to displace silver in coinage—gold can be used only in limited quantity; for as modern communication and transport is perfected it becomes increasingly inconvenient and relatively expensive to trade with coins of high value as against the use of checking accounts. I think it an obvious implication of the banking developments outlined in the article by Mr. Vest, assistant general counsel to the Reserve Board, in the Federal Reserve Bulletin for February, that the money of the future is destined to be, even more than it is now, nothing but a transferable credit on the books of a national system of depositories and clearing houses. The present administration worked in accord with this trend when it sequestered our gold; but then, by characteristically undoing with its left hand what it had done with its right, it pegged the price of gold at a high level when it should have been lowered as near as feasible to the then current production cost so that the metal might be recoinced and put back into use.

There is nothing incomprehensibly profound, then, about the proposition that coinage is today suitable for use only in small denominations. The basic reason for this lies in the

fact that a coin has upper and lower limits as to the physical size which makes it a useful implement in trade. If the metal in bullion form is priced on the open market so high relative to agricultural prices that a coin of convenient size—not smaller than a dime—can only be used in transactions involving a relatively large real value, then the margin of safety in coinage—that is, the spread between the market price of the bullion and the standard weight for minting—becomes too small relative to the value of the coin. Because of the necessity for this narrow spread to prevent counterfeiting—or the equally unsound alternative of free coinage—every fluctuation in the price of the bullion makes its coinage likely to encounter serious circulation difficulties, on the one hand from private attempts to obtain seignorage—which may force free coinage—or, on the other hand, as the market price of the metal comes to exceed the face value of the coin, by melting or by hoarding or by removal to communities where it will bring more as money than as metal.

These difficulties are complicated by the fact that fluctuations in the market for a rare metal are excessively related to and affected by the very use which requires a reasonably stable price, namely, use for coinage. Except for metals of relative abundance and wide commercial use with an open market price suitable for change coins, the bullion market cannot but be controlled by the effect of the rate of buying for coinage by a great organization such as the United States Government. If the metal be bought up at a rate greater than that at which it is actually circulated as money, its price must become unsettled and highly speculative in the long run.

Coinage difficulties are further enhanced manifold, and coinage of precious metals often rendered wholly impracticable, at a high price for the bullion, by the violent fluctuations in the value of all money; that is, in prices generally that go with the boom-bust business cycle. Here the problem of price levels, as affected by extensions of bank credit, enters. This seems to me the critical problem of our economic and political dilemma, but I cannot attempt to discuss it here. The point simply is that it is not solved by fixing a standard in metal at a high price or, indeed, at any price.

Even in foreign exchange, trade in gold, if it be extended beyond the significance of mere small change, as it were, in strictly current accounts, only postpones the evil day of reckoning with those shifts in relative money values arising from shifting trade conditions. This makes any disturbance in exchange rates only worse when it does arrive. To me this seems the obvious lesson to be drawn from repeated breaks in the standard at which gold is used in international trade, with its devaluations and exchange controls. Assuredly, there can be no controllable international monetary stability in the face of domestic instabilities and disparities in the several rigid and flexible price levels. The effectiveness of stabilization funds, such as it has been, has not been established by the use of gold as a backing for them. The one great American use for gold is for burial purposes in Kentucky. The metal, as a matter of legal fiction, preserves the perquisite of the banks to issue credit in the very operations which unsettle prices, and therefore foreign exchange rates, rather than render them stable. Let me repeat, this chaos in exchange arises in the law and not in any intrinsic property of gold if, as, and when properly used in coinage.

All that glitters, in "hoss tradin'," is not gold. Even the gold miner, Mr. Speaker, is grubstaked with grub; and it is around the price of grub, not that of gold, that human life is organized to conduct its greatest industry, its production of the end product of all industry, the human life cycle of birth, growth, reproduction, and death. Let us make no mistake about that.

We are faced, then, with one or more of several difficulties if we attempt to coin gold while its bullion price is high relative to agricultural prices: First, an impossible inflationary advance in agricultural price levels—ultimately involving all prices—so as to cheapen gold bullion in terms of real values; or, second, a constantly recurring series of difficulties, as the price of gold bullion fluctuates on a free market, with melting

to sell as gold or counterfeiting, or free coinage, to get seignorage; or, third, a pegged market with necessity for continuous purchase and hoarding by the Government of a much larger supply of gold than can be used in coinage that is actually circulating; or fourth, if used in its various fictions in foreign trade, gold can only serve to continue present troubles with "hot money," and so forth, by distracting attention from the real remedies for these difficulties.

#### DEMOCRATIC DILLY-DALLYING

I have undertaken here to challenge the administration to produce these real remedies for our dilemma instead of attempting to pass the buck to the Republican opposition which is not in office. As to my own ideas, I have only indicated that our real problem lies in the field of banking as it affects money supply. In this connection I am at a loss to understand why those in office, and therefore responsible for our fiscal policies, have not heeded the words of Woodrow Wilson respecting currency problems as quoted in the Federal Reserve Bulletin for January. Let me here repeat those words in part:

There is a sense in which a democratic country forces statesmanship upon every man of initiative, every man capable of leading. \* \* \* We cannot shut ourselves in as experts to our own business. We must open our thoughts to the country at large and serve the general intelligence as well as the general welfare.

Mr. Speaker, if this is a sound standard for democratic statesmanship, why has the administration allowed months to elapse before lifting a finger to develop the investigation for which funds were given the Senate Committee on Banking and Currency last summer? Can it be that that investigation is a mere camouflage for procrastination in "seeking the best solution for our currency difficulties"? I again use President Wilson's words. Does the administration seek to delay "giving the discussion of such matters such publicity" as might "enable men of every kind and calling," specifically, Mr. Speaker, the voters in next fall's election, to "take an intelligent part in the discussion" and so use their franchise to control the wisdom or folly of existing policies?

If there be no attempt thus to "frame" public opinion for the coming election in favor of gold buying, public debt, and trade agreements as an economic panacea, then why, pray, does the President shut up, in the passionate anonymity of the White House, such an expert on our monetary problems as Dr. Lauchlin Currie? Why are we not only giving no heed to his published work on the Supply and Control of Money in the United States, but also proscribing any public consideration thereof? Is not the obvious reason for this conspiracy of silence simply that the policy of pump priming by formation of public debt as a source of money supply, flies directly in the face of the counsels of this student? Let me quote what Dr. Currie wrote in his monograph as published by Harvard University before he fell among the money changers:

The most perfect control could be achieved by direct Government issue of all money, both notes and deposits subject to check. The merit of this proposal lies in the fact that it divorces the supply of money from the loaning of money.

This, Mr. Speaker, is a proposal which can well be compared with the principles of the Legal Tender Decisions which were so bitterly opposed by the Democratic Party. Do they still oppose this proposal? Does it not, indeed, harmonize rather with the ideals and ideas of Jefferson and Lincoln than with those of the New Deal?

There were statesmen in those days to whom public debt—the "loaning of money" to the Government—was anathema. Jefferson even went so far as to advocate a constitutional amendment to prohibit all public debt under all circumstances. Where would our present policies be if that rule had been written into the Constitution? Would they not be following the clearly conceived public interests as Abraham Lincoln administered them in the hour of the Nation's travail, rather than the muddled concepts of free coinage and fractional reserves built up by the Democratic Party since the Civil War as it has fallen under control of Tammany and

other metropolitan party politics in the overstuffed cities of the North?

Whenever we have been furnished a fetish—

Said Mark Twain—

and have been taught to believe in it and love it and worship it and refrain from examining it, there is little evidence, however clear and strong, that can persuade us to withdraw from it our loyalty and devotion.

What, Mr. Speaker, is the fetish that has brought confusion even into the most expertly trained minds in economics? What is it that justified Dr. Jacob Viner, close counselor to the Treasury, in his recent address as retiring president of the American Economic Association, to refer to the "vague and imperfectly communicable processes of thought" and the "traditional unintelligibility" of the discussions by which "economists repeatedly expose their divided counsels"?

Let me quote you, in closing, the words of Mr. John Maynard Keynes, now counseling the British Empire, to the use of forced saving in its death struggle with the fetishes of autocracy. Addressing a distinguished committee of the League of Nations, including Mr. W. W. Reiffler, who is also a trusted expert of our Treasury Department, Mr. Keynes said, in dealing with a report on Statistics Relating to Capital Formation—I quote from the Economic Journal of September 1939, page 574:

We have been, all of us, brought up, like the members of this committee, in deep confusion of mind between the demand and supply of savings and, until we rid ourselves of it, we cannot think correctly.

Verily, Mr. Speaker and fellow Members of this august body, the blind are struggling with the blind for the privilege of leading humanity, not to its destiny but to its fate.

### Reciprocal-Trade Treaties

#### EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING PUBLIC LEDGER

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Public Ledger:

[From the Philadelphia Evening Public Ledger of February 26, 1940]

#### MISBEGETTEN POLITICS

Opponents in Congress of the Roosevelt administration's reciprocal trade policy are about ready to concede that they cannot do much about it. Party lines were drawn as tight as possible on the issue in the House of Representatives. Amendments to the number of a couple of dozen were put up and duly knocked down. Then the House voted by 216 to 168 to extend for 3 years the law under which reciprocity treaties have been concluded with 22 nations.

The Senate acts next. The antiadministration forces still hope at least to weaken the policy by passage of one or more of the same amendments as were proposed in the House. But, though party politics will be played in the Senate as they have been in the House, there is no sign that the policy will be substantially weakened, much less defeated.

The first mistake the opposition made on this issue was to base the controversy on partisan politics pure and simple. The interests which have a stake in the foreign trade of the country had reason to resent this attitude—since obviously foreign trade cannot easily be labeled Republican or Democratic. The second mistake has been the failure to produce a substitute for the administration's policy. Senator VANDENBERG made a good try, but his program clearly could not be shaped up and adequately discussed during the present session of Congress.

There are many who will regret that the administration and New Deal forces were permitted to make a political issue of trade policy during this political session. It is an issue on which they are least vulnerable, for the policy has had consistent support even in conservative and (yes, say it, Tory) quarters. Thoughtful and in-

formed observers—politics aside—will shed few tears over the defeat of the misguided opposition, even though it gives "that man" an opportunity to claim a victory.

### American Democracy and Free Enterprise

#### EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

ADDRESS BY H. W. PRENTIS, JR.

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address at annual dinner meeting of Chambersburg Chamber of Commerce, Chambersburg, Pa., February 28, 1940, by H. W. Prentis, Jr., president, Armstrong Cork Co., Lancaster, Pa.; president, National Association of Manufacturers; and director, Chamber of Commerce of the United States:

Before launching into my subject, it seems to me that a bit of prefatory comment is in order. Like many other Americans, my mind has been numbed by recent events abroad. The portentous implications of the present conflagration leave me shaken and sick at heart. I am indeed thankful, therefore, that in this crisis American industry has taken a clear and positive stand: It opposes all war. It opposes any step that would involve us in conflict. It opposes profiteering. It agrees that partisanship ends at the water's edge. It will continue to work for national unity, no matter how sadly that unity may have been clouded in recent years by the sinister specter of rising class consciousness.

So with wars and rumors of wars all about us, it seems well to turn our attention tonight to some of the critical domestic problems that are now being crowded out of the public mind by spectacular news from the battle fronts. As a matter of fact, America is in far more danger today from disintegrating influences within than it is from any foreign enemy. Hence, the responsibility of business leadership in respect to domestic affairs is just as pressing as our patriotic duty to support every reasonable step in behalf of adequate national defense. With a world at war it is doubly imperative that constitutional representative democracy, private enterprise, and religious freedom—the inseparable foundations of personal liberty—be kept vital and unimpaired in an America at peace.

I plead guilty to the indictment that I think lies against most American business and professional men, namely, that we have taken for granted now for two or three generations the ineffable blessings of personal freedom that presumably were guaranteed us by the Constitution, and have done little or nothing to try to re-enforce and maintain them. We have been so busy making money, so busy exploiting the resources of the country, that we have just assumed that we could let political affairs take their own course, and have washed our hands, to a large degree, of what went on in Harrisburg or Washington. Then when I read and study—far more carefully in these last 5 years than ever before—how your ancestors and mine fought and struggled to set up this Nation of ours one-hundred-and-sixty-odd years ago, I stand abashed and ashamed at the very small segment of my time that I have given to the service of my country.

Do not misunderstand me. I am not fatuous enough to think that any single individual can accomplish much, if anything. I do know, however, that if a million businessmen were willing to devote a definite amount of their time to the study of our governmental and economic problems, and then get up on their feet and express their opinions to the same extent that most of us have applied ourselves to our businesses and to our recreations, there would be a real change of sentiment in this country very quickly.

As one reads the early history of the United States, he finds that practically every one of the men who helped establish our Nation would be termed today an "economic royalist," a man engaged in some business or profession. Most of those leaders were educated either by old Dr. Small at William and Mary College in Williamsburg, Va., or else at the Boston Latin School in Boston. They all were steeped in the philosophy of our representative democratic government and were prepared to defend it with their minds and lives if necessary. How many of us have been similarly educated? How many present-day American businessmen really have any political philosophy? We have been trying to live without one for two generations, and now we are finding out that we cannot do so successfully.

The principles on which our Government was based were summarized with exceptional clarity by John Locke. His conclusions directly guided the founding fathers of this Republic. The Lockian philosophy of government simmers down to three propositions: First, that all just powers of government are derived from the consent of the governed; second, that the function of government is

to make possible the greatest degree of individual responsibility and initiative; and, third, that the State may properly function only for the protection of life, property, peace, and freedom.

Opposed to this, the Anglo-American concept of government, is the collectivistic philosophy of Rousseau, developed and popularized in its more radical form by Marx, Engels, and Lenin. In America its basic ideas are fostered by many estimable but misguided persons under the banner of the "New Liberalism." Such people want planned economy, but do not wish to go the whole distance on the road to Moscow. Their philosophy is the very opposite of the philosophy under which our Government and economic system were established. They hold that it is the responsibility of the state to remove every obstacle that prevents any individual's development and opportunity for living an abundant life. The collective social will of the people acting as a mass is the dominant power at all times under the collectivistic philosophy. Hence the individual is the servant of the state—not the state the servant of the individual as maintained under the Anglo-American idea of government.

Of all current delusions the present tendency to place unbounded faith in the mystical power of government to cure our economic ills and bring about a heaven on earth, is the delusion that has the least foundation in human experience and history. When one considers the age-long struggle of the human race and of the Anglo-Saxon peoples in particular, to achieve personal freedom as we have known it hitherto in America, it is hard to understand why the man in the street is so willing nowadays to deify the state and look to government for help at every turn in his existence. There are undoubtedly many reasons for the marked change in this respect that has come over the American people since the Civil War. The dizzy advance of science, the rapid introduction of new processes and new products, better means of communication, preoccupation with material things rather than with the ideas and principles that underlie the facts of human existence, and the weakening of religious faith—all have tended to make men feel insecure and seek safety in the bosom of the deified state. Politicians being always willing to help the taxpayer with his own money have naturally welcomed this tendency.

Yet, after all, what is government? Simply mortal men no better and no worse on the average than the rest of us. These men get together from time to time in offices and halls, make speeches and confer with each other, study papers and memoranda, receive suggestions and give orders, hear complaints and answer them. Clerical assistants handle a lot of papers and file letters. Sheriffs and marshals, tax collectors and policemen, sailors and soldiers, constitute the rest of the official entourage. The men that make up government eat and drink, have aches and indigestion like everybody else. Some of them work hard, some do not; most of them, like the average citizen, would rather play golf, fish, or go to a ball game than work. Yet, as Walter Lippmann says:

"In the prevailing view they are the agents of destiny. . . . They are to understand, to forecast, and to administer human purposes and to provide a design of living for the unborn. Surely, greater love could no man have for the wisdom of his rulers than this, that he should put his life entirely in their hands."

Few Americans know anything about the foundations of freedom. Our heritage has indeed a long and honorable history behind it. In the early fourteenth century—200 years before the German Reformation—John Wycliffe, whose bones were later burned as those of the first British heretic, rendered three outstanding services to the English-speaking people: First, he organized the great middle class—the farmers, laborers, peasants, and yeomen—into conventicles or congregations to discuss religious questions. Out of these conventicles came the Englishman's passion for the right of free assembly. The town meeting of New England, which played such an important part in the establishment of representative democracy in America, was one of the ultimate fruits of Wycliffe's work. And even you and I, as we assemble here tonight, owe that privilege in large measure to what he did among the humble people of Great Britain 600 years ago.

Wycliffe's second great service was to translate portions of the New Testament and to circulate those translations throughout the length and breadth of England. In this day and age, you and I can have no idea of the thrill that the English peasant experienced as he pored over the Word of God in his own tongue and felt for the first time that he could hear the voice of the Lord Himself speaking. From this religious experience there came the conviction to the ordinary Englishman that no intermediary, no human being, no government, can stand between a man and his spiritual responsibility; that there are some things that every human soul must think out for itself. Thus Englishmen came to believe that the Bible was really their charter of liberty. They grasped and asserted the right of free interpretation of the Scriptures. Transferred later to the political arena, the consciousness of that right led directly to the great doctrine of the right of private judgment, which, in turn, abolished persecution and censorship, set the human mind free, and made the individual citizen, with his consent to be governed, the foundation stone of modern representative democracy.

In the third place, Wycliffe asserted that the sacraments of the church mean nothing unless the individual who accepts them knows what he is doing and what they signify. In other words, man is a free individual with personal moral responsibility in matters of faith. This was one of the outstanding characteristics of the early settlers in America. They came to the shores of a new continent impregnated with the principles of personal moral re-

sponsibility, the right of private judgment, and the right of free assembly, which, together, filled them with a fervent passion and unshakable belief in the inward spirituality of the individual. They based their political philosophy and their economic system on the religious concept that there is something about the human spirit that is sacred; that there is a place in the human soul that no government and no man may justly enter, where reside those inalienable rights that the Declaration of Independence later thundered so eloquently to the world. Thus, in a very real sense, our republican type of government is the political expression of Christianity.

In our educational institutions in the last 30 years, we have given up, to a large degree, the study of political philosophy and classical history, where we find recounted again and again the same experiences that we are going through today. If you read the speeches reported by Sallust, for example, made during the Catiline Rebellion in ancient Rome, about the plight of the poor farmer, about the crushing power of the rich, and how wealth should be redistributed, you will find the forerunners of the very same ideas that you and I have heard advanced on so many occasions during the last 5 or 6 years in this country.

Few Americans realize the very intimate relationship that exists between our business system and representative democracy. Our governmental system is not a pure democracy and never has been a pure democracy. The founding fathers knew that a pure democracy had never been successful anywhere. Hence they set up a republic instead—in other words, a representative democracy with a written constitution. Their system included free private enterprise and religious liberty. Those three factors together constitute the tripod on which our freedom in America depends. History proves incontrovertibly that if any one leg of that tripod is undermined, the whole structure of liberty soon crashes to earth.

We all know what happens when representative democracy is destroyed. Dictatorship—the totalitarian state—takes its place. But many of us do not realize what happens if private free enterprise is undermined. The only alternative to free enterprise is state socialism or the same thing, under the more innocuous designation of "national economic planning." That phrase makes a strong appeal to many shallow-thinking Americans, because we are an industrial nation, and have long been accustomed to plan ahead as individuals and corporations in respect to our business problems.

But let us follow through that national economic planning idea: If the Government begins to plan our economic affairs, sooner or later it must tell every one of us where we can work, how much we can produce, what wages we shall pay, what we can purchase, when we can buy, and at what price. That result is inevitable, because once you begin to interfere with the natural functioning of free enterprise and concentrate the responsibility for our national economy in the hands of government, one control will necessarily lead to another control, and the final outcome is inevitably state ownership of the means of production. Stalin admitted frankly in 1934 that without abolishing private ownership of the means of production a country cannot have planned economy.

Now, once you set up state socialism, what becomes of political democracy and particularly religious freedom, civil liberty in general? Naturally, if a small group of people, no wiser or better than the rest of us, calling themselves "government," were planning as they saw it for the greatest good of the greatest number, they could not for one moment tolerate the throwing of a monkey wrench into their carefully laid program by any citizen, no matter how well intentioned he might be. Otherwise their well-laid plans would soon be brought to naught. Consequently, they could not tolerate the interference of any opinion-forming agency, whether it were school, press, radio, or church. Hence, under national economic planning you would have eventually just what you see in the dictator-controlled countries of Europe today—the suppression of all teaching, except that which is in line with the ideas of government officials, censorship of the press, the end of freedom of expression, and the destruction of religious liberty. And so, once you knock the props out from under any one of the three legs of the tripod of human freedom, you inevitably destroy human liberty.

For many years those who would bring about State socialism by peaceable means have advocated this formula: Select a time of great political and social unrest; then discredit in every possible way those in power during the preceding era of prosperity; blame the ensuing depression on those leaders; then under guise of emergency, enact legislation that prevents confidence from returning. Finally, having destroyed the only basis on which private free enterprise can flourish, say to the unthinking public: "We are extremely sorry to do it, but inasmuch as private individuals will not create prosperity, the State, greatly to its regret, must step in and do so through active intervention in agriculture, in industry, in banking, and in commerce."

Now just go over the history of events of the past 5 or 6 years and see how closely that pattern has been followed. I am not for 1 minute asserting or implying that those in charge of the public administration of affairs in this country are Socialists or Communists. But I do believe very firmly that the pattern of events that has been followed, if continued to its logical conclusion, will lead inexorably to State socialism.

And that is why I, just an ordinary businessman like all the rest of you, have become so deeply concerned as to where present tendencies in government are leading us. For 9 years now we have

been incurring heavy Federal deficits. Our national debt has increased almost \$25,000,000,000. Concurrently we have had much interference with free private enterprise, much restrictive and experimental legislation that has tended to hamper confidence and create public fear.

On the other side of the ledger, I think it is only fair to say that we have also experienced an awakened sense of social stewardship on the part of industrial and professional men generally. We have been led to see and realize that we are to a very real degree our brother's keeper in industry; that we must raise our eyes beyond our immediate daily business problems and think about the social implications of the decisions that we reach in respect to our specific businesses, if we want our system of representative democracy, free private enterprise, and civil liberty to continue.

While I do not agree with the methods employed in many instances, I do think we have made real progress in respect to old-age pensions, unemployment compensation, slum clearance, labor relations, and the elimination of certain abuses in the marketing of securities. But, inevitably, as in most movements of this sort, the pendulum has swung very far to the left; and our problem today is, without the sacrifice of such progress as has been made, to see to it that as excesses are corrected the pendulum does not swing again too far to the right and produce serious reactions in the future.

One of the most deplorable results of the last 5 or 6 years is the development of class consciousness and class hatred on a scale never before witnessed in this country. That should be a matter of the gravest concern to every good American. One of the reasons why the publicity campaigns of the United States Chamber of Commerce and affiliated organizations make such a tremendous appeal to me is that they are designed to check the growth of class consciousness. No representative democracy can long endure in the face of acute class cleavage. For representative democracy is a way of life, a pattern of thinking, a mode of conduct, a willingness to play ball with the other fellow even when his ideas prevail at the ballot box rather than your own. It is something that has taken hundreds of years for the Anglo-Saxon people to acquire. The chief reason why a republican form of government in Spain, in Italy, and Germany has not been successful is that those nations have not had the background of training we have had. If class consciousness continues to increase in this country, sooner or later pressure groups, each trying to secure for itself certain specific benefits from the Public Treasury, will destroy representative democracy and personal freedom by creating financial and social chaos.

Now, over and against the point of view that holds that the only solution of our economic difficulties lies in a heightened degree of state control, which, as I have tried to point out, will ultimately lead to state socialism and the destruction of human freedom, let me quote Dr. Harold G. Moulton, head of the Brookings Institution in Washington: "The restoration of the free flow of money through the capital markets into the expansion of productive plants and equipment is the central problem in economic reconstruction; the expansion of capital required to replace depreciated and obsolete equipment and to raise standards of living even back to the 1929 level is sufficient not only to provide outlets for available money savings but also to absorb all our unemployment."

This is the opinion of a nonpartisan, dispassionate economic authority, and to that statement I personally subscribe most heartily. When you stop to realize that in the years 1926, 1927, and 1928 an average of \$4,600,000,000 per annum was poured into new corporate enterprises in this country, and at the peak of such prosperity as we enjoyed in 1937 the amount so invested was only \$1,200,000,000—a little more than one-fourth of what it averaged in the 3 years I have just mentioned—it shows to what extent fear, lack of confidence, whatever you choose to call it, has hampered and crippled the old American spirit of initiative, courage, and resourcefulness. American citizens, for the first time, so far as I know, for any extended period in our history have tended to keep close to shore and think more about the security of principal than about the willingness to risk that principal in the formation of new enterprises and the expansion of existing enterprises, thereby creating more employment. If the American people through the efforts of chambers of commerce and business organizations in this country, can only be made to realize the fact that restored confidence will set the wheels of industry turning once more, then, barring war, we can look forward to an era, I believe, of unusual prosperity.

On the other hand, we are faced with the fact that last year \$107,000,000 of taxpayers' money was spent by various governmental departments for the spreading of the particular ideas of those presently in power in reference to our national problems. As we all know, there has never before been such an expenditure of public funds for propaganda purposes. I was appalled to note the other day that this was being done in spite of a law passed in 1913, which, to the best of my knowledge, still stands on the statute books, in which it was distinctly stipulated that no part of any appropriation should be used for publicity purposes unless by specific authority of Congress. Faced with that situation, all patriotic citizens, and particularly businessmen, are doubly called to apply themselves intelligently to the development of any and all legitimate means by which this tremendous propaganda of government can be effectively countered, and the thinking of the American people guided into sound channels.

Fortunately, I believe that the time has now come when all of the educational effort that can be put forth in behalf of a sound philosophy of government, in behalf of a sound system of eco-

nomic enterprise, and in behalf of the maintenance of civil liberties, will fall on more fertile ground than has been available at any time since 1930. The ears of millions of American people have been unstopped, and the eyes, apparently, of millions of voters that have been clouded by propaganda in recent years, have been opened. It seems to me we can only interpret the vote of the electorate in 1938 as indicating that the American people desire business baiting and industrial strife to cease; that they desire government and industry and labor to join hands in order to get our 10,000,000 unemployed back to work. Today public opinion is in a state of more favorable flux toward business than it has been for a decade. But by that very fact you and I, if we are wise, will guard well against overconfidence, laziness, complacency, and stupid reaction.

We must admit that economic and social conditions have changed substantially in the past 50 years. As machines have grown more complex, individual skills have had to become more highly specialized. Obviously it is more difficult for a worker to pass from one sort of employment now than it was 50 years ago. Today multitudes of men are qualified for one type of industrial job and no other. The substantial investments required for the complicated machinery of mass production have resulted in increased concentration of industry geographically. Access to the land has become physically more difficult for the factory wage earner. The corporate form of organization with the high liquidity of its securities has probably aggravated to some extent the peaks and valleys of business cycles.

Hence, businessmen, if they are to fulfill their historic mission as preservers of human freedom, have a peculiar burden of responsibility. Research must be fostered; production methods must be steadily improved; the fruits of such effort must be passed along in the form of higher wages and reduced prices not merely under stress of competition but as a matter of enlightened self-interest. Markets must be kept free; fair methods of competition must replace unfair procedures. Unethical practices must be eradicated by voluntary effort, for businessmen must always come into the court of public opinion with clean hands. Collective bargaining—when desired by workers—must be willingly carried forward.

Industry and business must be so organized as to provide opportunity for budding ability, wherever it may be found. Men in supervisory positions from the humblest assistant foreman to the highest executive must be trained to lead rather than to drive. Every worker must be thoroughly educated in the technique of his job. Constant effort must be made to disclose and explain the economic problems of the individual enterprise to its workers. Suggestions from every employee of high or low degree must be encouraged. The hazards of accident and occupational disease must be eliminated so far as it is humanly possible to do so. Constant consideration must be given to improving every factor that makes for comfort, happiness, and peace of mind, not only for the man in overalls but for the white-collared office worker as well. Thus if contented and capable individuals are developed at every level in the organization, there will be management from the bottom up, not merely from the top down. Such procedure, in my opinion, is the essence of industrial democracy under the American system of private free enterprise.

So, as an American citizen, I do hope that all who are charged with the responsibility of guiding the affairs of industry in this country, will be farsighted enough not to try to turn the hands of the clock back in respect to those social and economic questions which we would have been well advised to have dealt with years ago, and which I believe we would have dealt with had we been reared and educated in a different atmosphere. We have never had to fight for freedom. For two or three generations we have not known what it means not to be able to get up and talk as we please, to think as we please, to worship as we please. We have grown smug and soft and complacent. That is why we did not pay attention to many of these worthy social objectives which you and I know, not only as businessmen but as decent, patriotic Americans, are desirable and proper.

In a book by Owen Wister that recounted his long friendship with Theodore Roosevelt, the author recounts this incident which took place in 1895: "How long do you give the Government at Washington to last?" I asked Roosevelt and Henry Cabot Lodge as we sat lunching. Those two students and writers and makers of history, well versed in the causes that have led to the downfall of the empires, kingdoms, and republics that have had their day and gone into the night, were both silent for a moment. Then one of them said, "About 50 years." Which of the two set this limit, I do not recall. I remember only that the other did not contradict him.

That took place in the year 1895. Forty-four of those fifty years have elapsed. No one can tell now what these next 6 fateful years hold. I know this, however, that if you and I and millions of other American citizens will accept our individual responsibility in respect to the conduct of public affairs in this country; if you and I will accept the responsibilities of social stewardship in our own business enterprises; if you and I will try to think soundly and then have the courage to express our ideas publicly without fear, then I believe that this Government of ours will exist not only for 6 years but for generation after generation. But if you and I do not accept our responsibility; if we just let things drift as they have drifted for many years gone by; if we fail to take a deep and abiding personal interest in our country's social, political, and economic problems, then ultimately our system of government and private enterprise will disappear along with our personal freedom.

As you leave this gathering tonight, I hope you may go with these words of Herbert Spencer's ringing in your ears: "How infinitesimal is the importance of anything I can do, but how infinitely important it is that I should do it!"

### Wisconsin's Cheese Industry

#### EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

ADDRESS BY COL. ALFRED J. LA GRANDEUR

Mr. BOLLES. Mr. Speaker, the precarious situation of the farmers in the State of Wisconsin is very clearly stated in the following address of Col. Alfred J. La Grandeur, of Somerset, Wis., on Wisconsin's cheese industry:

MINNEAPOLIS.—"Practically speaking, it is high time that sedatives now being administered to the farmers be discontinued and practical and logical means to improve their financial condition be applied," bankers were told at the luncheon meeting of district 1, Wisconsin Bankers Association by Col. Alfred J. La Grandeur, of Somerset, Wis.

"As bankers and businessmen we are vitally interested in any rational plan that will increase the income of the farmers in general and the dairy farmer in particular. We know that it is impossible to continuously operate at a loss, and remain in business. It should be our duty to help promote a rational plan that will keep the American cheese-dollar at parity," explained Colonel La Grandeur.

"Since 1921 the Wisconsin dairy farmer has not been able to exchange his American cheese dollar at par. The nearest he came to parity was in 1928, when his cheese dollar brought 82 cents for farm-family maintenance and 95 cents for farm-production materials. Even with what are considered good prices, on December 1, 1939, his American cheese dollar was worth only 74 cents in exchange for commodities bought for farm-family maintenance, and 63 cents for materials used in farm production.

"We should not overlook the fact that over 50 percent of the farm income in Wisconsin is derived from milk. In 1938 the milk produced in Wisconsin was 11,598,000,000 pounds."

Proposing a price increase as a solution to the dairy-farmer problem, Colonel La Grandeur said, "One cent a hundred pounds added to the present price of milk would mean \$1,159,800 additional income to Wisconsin dairy farmers. If they receive a price for milk that would enable them to purchase commodities for home use and farm production at a par value, then farmers selling milk to the factory manufacturing American cheese would receive an additional \$7,500,000 annually, and the dairy farmers of Wisconsin as a whole would receive \$28,995,000 additional income annually. They could greatly reduce their mortgages and purchase the goods and materials they need so badly. This would tend to increase local business, jobbers and manufacturers would benefit more labor would be needed, and the great army of unemployed would be reduced," asserted the speaker.

In explaining by what means the Wisconsin dairy farmers' income could be increased, Colonel La Grandeur said, "We must begin by giving the consuming public a natural cheese, which was taken away from them some 20 years ago, when a Federal ruling was passed prohibiting the interstate shipment of natural American cheese containing more than 39 percent moisture. This reduction cut the remuneration to the dairy farmer because the price of cheese did not advance sufficiently to compensate for the additional amount of milk necessary to produce it. The reduction in the moisture content made this natural cheese dry, tough, and crumbly in its fresh stage. Because the majority of the consuming public prefers and demands a mild, soft, creamy cheese, the consumer sales dropped off sharply. A decrease in retail sales followed and the jobbers' market for natural American cheese was practically closed. The only large buyers left were the ones interested principally in the manufacture of processed cheese and cheese foods. They took this dry cheese, ground it, blended it, seasoned it, and added emulsifying agents in order to produce a mild, soft, palatable cheese somewhat similar to the natural American cheese prior to the reduction of moisture law. They could do this because this regulation does not apply to process-cheese foods, which contain more than 39 percent moisture. The public was practically forced to purchase this processed cheese and cheese foods as the nearest substitute to the type of natural American cheese they desired."

"In 1920, when the law became effective, Wisconsin produced 70.4 percent of the cheese manufactured in the United States; in 1937 only 29.9 percent, a loss of over 20 percent in natural cheese. In 1929 the processors used 13.9 percent of all the natural American

cheese produced in the United States; in 1937, 51.6 percent; an increase of over 300 percent in 8 years. In 1933 Wisconsin passed a law permitting the manufacture and sale of natural American cheese with a higher moisture content. During the latter part of 1938 and the early part of 1939 the Federal Government sent agents to the various States to purchase samples of cheese for analysis. Samples containing more than the 39 percent permitted for interstate commerce were purchased in Arizona, Colorado, Illinois, Kansas, Nebraska, New Mexico, New York, Ohio, Oklahoma, Texas, and Utah. Most of these States formerly looked to Wisconsin for the finest quality soft, moist palatable natural American cheese. Wisconsin is left with the process manufacturer as the principal buyer of natural American cheese."

Quoting Ralph D. Ammon, director of the Wisconsin Department of Agriculture, in his report to the assembly committee on agriculture on March 29, 1939, Colonel La Grandeur said:

"No. 2 problem for the industry is that competitive buying seems to be disappearing. About 75 percent of the cheese is bought by five large concerns. In some cases it is suspected that these concerns have agreed not to bid for each other's factories. If this is true, a factory is forced to continue to sell to one buyer, because the others do not compete for the product of that factory. Competitive selling of natural cheese is also somewhat limited because most of the large distributors have a processed product the sale of which appears to be more lucrative."

Colonel La Grandeur urged those present to discuss the problem with farmers and merchants to help get a square deal for the Wisconsin dairy farmer.

### Private Industry Does Not Use the Unemployed— America Must End Private Dictatorship

#### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

ARTICLE BY BENJAMIN MARSH

Mr. COFFEE of Washington. Mr. Speaker, by permission of the House, I am inserting in the Appendix of the CONGRESSIONAL RECORD an interesting article. The article was written by Mr. Benjamin Marsh, director of the Peoples' Lobby, and contains much factual material on the basis of which the Peoples' Lobby is supporting several bills pending in Congress designed to overcome or alter the conditions against which that organization has been heatedly inveighing. I commend its reading to those who are interested in economics.

### PRIVATE INDUSTRY DOES NOT USE THE UNEMPLOYED—AMERICA MUST END PRIVATE MONOPOLY DICTATORSHIP

(By Benjamin Marsh, director of People's Lobby)

Secretary of Agriculture Wallace in December last year stated:

"With full use of mechanical power we can produce our present supplies of farm products with 5,000,000 fewer people living on the land and our present supplies of city products with 20,000,000 fewer people living in the cities.

"With matters as they are the 7,000,000 breadwinners among the 25,000,000 people with marginal opportunities are earning not more than 10 to 15 cents per hour of employable time. Most of these people are anxious to work and if given an ordinarily decent opportunity could turn out several times as much per hour as is now the case."

Mr. A. F. Hinrichs, chief economist of the United States Bureau of Labor Statistics, in January this year asserted:

"One may say with certainty that the unemployed cannot be absorbed immediately.

"There is no evidence to suggest that business is passing up orders because of its unwillingness to hire workers. \* \* \*

"It is almost equally certain that private enterprise cannot employ the vast majority of the unemployed workers within the next year.

"Only once in American history have we put as many as 4,000,000 people to work within a period of 1 year."

### LARGEST REEMPLOYMENT THIS YEAR WILL BE ONE AND A HALF MILLION

"Even disregarding the doubts of many business analysts as to whether the volume of productive activity in the closing months of 1939 can be carried forward in the first half of 1940, the most optimistic forecast of gains of employment for this next year (1940) would be in the order of one and one-half million people."

This means that a year from now there will be at least 8,000,000 people able and nearly all willing to work who won't be able to work producing the things they need because the private owners of

factories and those who have the funds to start factories and the private owners of banks, of mines, of transportation, and of distributing agencies will not employ them, except on their own terms as to capitalization and profits.

#### SIXTY BILLIONS SPENT IN 7 YEARS

The Temporary National Economic Committee recently reported: "The American economic machine is stalled on dead center." That is where the Old Guard Republicans often brought it.

During the past 7 years, however, the Federal Government has spent about \$60,000,000,000, of which nearly half has been borrowed. Mr. Corrington Gill, Assistant Commissioner, Work Projects Administration, in his recent book, *Wasted Man Power*, says: "More than \$12,000,000,000 have been appropriated by Congress for unemployment relief over the last 7 years."

"Four more billions of dollars have been appropriated for public works to stimulate private employment," but he quotes the figures of the committee on economic security that the average number of people unemployed in 1938 was 12,138,000.

Mr. Gill holds:

"Most of the 11,000,000 unemployed are jobless because the economic system has entered a period of chronic underemployment due to the deficiency of private investment opportunities."

"The Federal Works Agency must be geared to meet this situation, to provide two to four million jobs, which in an earlier period were provided by private enterprise. \* \* \*

"Such a program serves two purposes—it puts surplus labor and capital to work, and it sustains and stimulates private enterprise."

#### DO FARMERS OR OTHER WORKERS BENEFIT BY PUMP PRIMING?

A large part of the Federal Government's expenditures during the past 7 years, have gone to "prime the pump" of private industry, to protect money lenders, and to enrich landowners, chiefly in cities.

The 11,000,000 unemployed clearly do not benefit from pump priming under private ownership of the pumps.

Despite the many billions of dollars spent on pump priming and relief, from 1933 to 1938, the average number of people unemployed in 1938 was only 1,037,000 less than the average number in 1933—13,175,000.

The one and a half million farm families needing relief, clearly do not get any benefit from priming the pump for the private owners, but do most independent farmers?

The Secretary of Agriculture reports:

"The average farmer who before the war had about 60 percent as great an income as the nonfarm person, today has less than one-half as much income per capita as the nonfarm population."

"In saying this, I am counting as part of the farmer's income the living which he gets off the farm, as well as the soil-conservation and parity payments."

Dr. M. L. Wilson, Under Secretary of Agriculture, last December stated:

"Even in relatively prosperous times the less productive half of our farms produces only about a tenth of the marketed crops," also "there are counties in which whole communities subsist on a per capita cash income of less than \$25 per year, much of which is provided by public assistance of one kind or another."

Of the 3,657,496 farmers receiving net payments under the 1937 agricultural conservation program, over half got less than \$40, and over nine-tenths got less than \$200, while the average payment in continental United States was \$82.62.

Ninety-four persons in continental United States (exclusive of sugar growers) received over \$10,000 apiece, including the King Ranch, of Texas, which was paid \$112,140.

About half the farmers in the United States didn't get any payment; and if all of these had gotten something, the average for all farmers would have been much less.

There has been improvement under 1933 and 1939 amendments to the law, but no vital changes.

#### PROPERTY OWNERS GET BENEFIT OF PUMP PRIMING

The Bureau of Domestic and Foreign Commerce of the United States Department of Commerce published in 1938 a report, *Income in the United States, 1929-37*, which shows that property owners got the major benefits from priming the pump.

It reports the income of different classes in the United States, and we take the figures for 1933 and 1937 for comparison.

Agriculture, \$3,316,000,000 and \$6,223,000,000.

Income received from ownership or control of property—that is, as dividends, interest, net rents and royalties, and profits from private business, but not including bonuses and quarter-of-a-million-dollar salaries the big shots voted or paid themselves in 1937.

The amounts for the 2 years are \$15,720,000,000 and \$22,603,000,000. Total compensation of employees, wages, and salaries (including the quarter million salaries), \$29,596,000,000 and \$46,728,000,000.

Dividends, \$2,209,000,000 and \$5,010,000,000.

In 1933 the income of all farmers was 7.1 percent of the national income paid out, and although it nearly doubled in the 4 years, it was only just under 9 percent of this national income in 1937.

Farmers' income increased during this 4-year period by \$2,907,000,000, while dividends increased by \$2,801,000,000, almost as much.

There is a big difference, however, that some 20,000 stockholders got about one-third of all dividends paid, and the equal increased income of agriculture, was divided among millions of farmers.

In 1933 wages paid in mining, manufacturing, construction, steam railroads, Pullman, railway express, and water transportation, were \$7,271,000,000, and in 1937, \$14,037,000,000.

There were about 11,600,000 people working in these 7 occupations.

A comparison of the increase in income of stockholders, farmers, and workers in these seven occupations from 1933 to 1937 shows it pays to own the pump that is primed.

	Percent
Stockholders.....	127
Farmers.....	87.6
Labor.....	93

Stockholders' share in the increase of national income from 1933 to 1937 was nearly one-half larger than farmers' share, and more than a third larger than the share of labor in these seven occupations.

Stockholders got a much bigger cut of the national income in 1937 also.

In 1933 they got 4.9 percent, and in 1937, 7.2 percent.

Stockholders' share of the national income in 1937 was 47 percent, nearly half, larger than it was in 1933.

#### WHO OWNS THE PUMP WE PRIME?

Mr. E. D. Kennedy, writer of the business and finance section of *Time*, and later on the editorial staff of *Fortune*, wrote a book last year, *Dividends to Pay*, which gives a pretty good answer to the question, "Who Owns the Pump We Prime?" He says:

"In 1929, 1,349 corporations made 80 percent of the net income of all corporations. There were 456,000 corporations that year."

That is, less than one-third of 1 percent of all corporations got four-fifths of the net income of all corporations.

Mr. Kennedy reports that 24 top-notch corporations, each of which had in 1929 a net income of \$30,000,000, or over, had that year a total net income of \$1,745,000,000, and in 1937 of \$1,516,000,000—nearly nine-tenths as much.

Here is his boiled-down statement of ownership of the pump we prime:

"Invariably around 20,000 big stockholders, some of whom collect annual dividends of \$1,000,000 or more, collect more than one-third of all the dividends."

"Business in this country has become a question of the survival of the least competitive."

The big owners and the controllers of these corporations are the real dictators of America.

They determine how much shall be produced, regardless of what Americans need.

Last year industrial production was only a little over two-thirds of what it should have been to maintain even the inadequate average of 1923-25.

This year it will be about the same—possibly a little better, but not much.

A large part of the capitalization of nearly every major corporation—railroads, steel corporations, motor companies, chemical concerns, flour mills, packing establishments, textile mills, telephone companies, and banks—is watered stock, or represents the capitalization of past profligate profits.

Big dividends, hundreds of millions of dollars every year, are paid to the owners of this watered and unjustified stock.

Some years they pay smaller dividends than others, but the few people who control all these corporations determine how much shall be produced, and what the standard of living of the American people shall be, and not only what shall be produced, but usually what wages shall be paid.

This is inevitable under private ownership, for government can't compel the owner of a factory, or of any other enterprise, to keep on producing if he doesn't see a profit.

We must end private monopoly, dictatorship, under which the standard of living of tens of millions of Americans is gradually sinking, squeeze the water out of water-logged enterprises by heavily taxing speculative land values, repeal profiteering tariffs, and end the patent racket. The Government should insure the operation of basic industries to meet the needs of all the American people.

The only way to raise the standard of living of all Americans is to increase production, and to pay wages or prices so producers can buy what they produce out of current income.

Farmers must receive costs of production at least on the domestic consumption, but that domestic consumption will be continuously reduced if we continue maintaining eight to nine million potential producers in idleness.

War loses some of its horrors for those, and there are millions in America, facing a life of subsidy enough only to prevent starvation.

Every major mechanized nation in the world today, except America, is operating its economy under vigorous Government control.

We are the only such nation subsidizing private owners of industry, of banking, of land, and of other natural resources, and of transportation, to maintain false values, pile up profits and restrict production at the expense of the world's largest army—the army of Americans unemployed—and of those who are permitted to produce by the grace of the relatively few owners.

That is the essence of private monopolistic ownership as operated now in the United States.

Since private industry doesn't use the unemployed, America must end exploiting private-monopoly dictatorship.

## The N. Y. A. Proves Itself

## EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. ALEXANDER. Mr. Speaker, yesterday at the University of Minnesota a rally of 1,000 Federal-aid students and others gathered to support protests against the proposed cut in our appropriation for the National Youth Administration.

On last Saturday the Student Daily in commenting on this meeting carried an editorial which presents some points which it seems to me we must admit as being not only timely and logical, but also irrefutable. I wish especially to call attention to the statement in the last sentences of both paragraphs 2 and 3.

And then do not overlook the forward-looking expression contained in the next paragraph. In fact, I suggest that you cut that paragraph out and carry it with you to be referred to on frequent and varied occasions, because in how well we support and promote that viewpoint, is bound up the story and the answer to the question of how well we will protect and promote in the final analysis the existence of not only our great free educational institutions, but also what is more important, the question of the very future of freedom and liberty themselves as incorporated in democratic, constitutional, representative government such as we all cherish; and it further involves what is also somewhat important to most of us, and that is our peace and security now and in future years and for that matter the peace of our fellowmen throughout the entire world. Indeed, whether you realize it or not, education and its widespread encouragement and promotion in this and other practical forms is one of four cornerstones which must be laid if we are ever to enjoy peace and the fruits thereof.

Herewith I submit the University of Minnesota editorial, supplemented by a news item from the same periodical under date of February 6:

[From the Minnesota Daily of February 24, 1940]

## UNITED STATES YOUTH PROGRAM AT STAKE

At the student rally next Wednesday afternoon 1,000 Federal-aid students will gather to support protests against the proposed \$15,000,000 cut in congressional appropriations for the National Youth Administration. They will be there partly because if the measures now before Congress are not stopped one-third of the university's 1,000 N. Y. A. students stand to lose their monthly checks, and so would be forced to quit school, since only students unable to finance themselves in any other way are accepted on N. Y. A.

Partly, however, these students will gather to reaffirm their belief in a youth program—a program that sponsors education as the way out. Other nations operating under different ideologies have met their youth problems by sending their unemployed young people into labor camps or their young men into the army.

Much has been said of the scholastic records made by N. Y. A. students. If educational values are to be accepted as standards of accomplishments, as Americans have long believed, the records speak well for the present youth program. According to a study made recently by Malcolm M. Willey, university dean and assistant to the president, and Miss Dorothy Johnson, director of the employment bureau, the scholastic average of the 991 N. Y. A. students at the university in 1938-39 was 1.973 in comparison with a 1.3111 average for all students during the same period.

It must be borne in mind that N. Y. A. students work for their checks. Whether or not these students are entitled to the privilege of making their way through college by tax-paid jobs is a social question. Two centuries ago only idealists dreamed of free public grade schools. When those came high schools were still only for the well-born. Few people would advocate free college for all students today, but many are beginning to see the social value of making college possible for capable young people from all classes of society. Supplying these young men and women with ideas today will make less likely the need for supplying them with food tomorrow out of public funds.

When the N. Y. A. student rally is held next week N. Y. A. students will not be alone in their protests of appropriation cuts, but will be supported by thinking young people and by eminent educational and social leaders throughout the Nation.

[From the Minnesota Daily of February 6, 1940]

## CAMPUS FIGHT AGAINST N. Y. A. CUTS CONTINUES—DISSENTERS POINT TO HIGH AVERAGES OF STUDENT WORKERS

The rising tide of protest against cuts in Federal N. Y. A. appropriations gained force yesterday with release of a report showing N. Y. A. students ranking just under a straight B average and well above the average of the student body as a whole.

The study was made by Malcolm M. Willey, university dean and assistant to the president, and Mrs. Dorothy Johnson, director of the employment bureau, with the assistance of Rodney M. West, registrar.

It shows the scholastic average of the 991 students receiving N. Y. A. assistance during the 1938-39 school year was 1.973. The scholastic average of all students for the same period was 1.311. Non-N. Y. A. students were slightly below the all-university average with an honor point ratio of 1.263.

"It is thus evident," Dean Willey said, "that the outstanding scholastic achievement of the N. Y. A. group is one factor in lifting the scholastic average of the student body as a whole."

"And," he added, "very few, if any, of these students can remain in school without N. Y. A. financial assistance."

A detailed check of the records shows that during the spring quarter of 1938-39 only 10 N. Y. A. students out of 991 had minus honor point ratios—that is, with less than a D average.

"Unless, in spite of their poor record for the spring, these 10 achieved a C average for the year, they were not reappointed," Dean Willey said. "A C average is a requirement for continued appointment to the N. Y. A. program."

## The Mundt Amendment to S. 685 in the Form Approved by Committee Members

## EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. MUNDT. Mr. Speaker, in yesterday's RECORD I announced my intention of offering an amendment to the committee version of S. 685 when it came before us for amendment under the 5-minute rule. The purpose of my amendment was to give strength to the Barkley bill by providing legislation to prevent the introduction of new sources of pollution into the navigable waters of America and thereby put S. 685 in such form that the conservationists of this body and of this country could support it with full knowledge that at long last they were taking a definite, forward step in the correction of the pollution evil.

After conferring with members of the Rivers and Harbors Committee, including the gentleman from New York, Mr. GAVAGAN, the gentleman from Illinois, Mr. PARSONS, the gentleman from Iowa, Mr. HARRINGTON, the gentleman from New York, Mr. CULKIN, the gentleman from Oregon, Mr. ANGELL, and others, they advised me that they would offer no objections to my amendment provided certain changes were made in its wording. I am happy to announce that such a compromise was effected and based upon it and following the adoption of my amendment I am urging all Members of the House to vote for S. 685 as it will then be constituted.

So that all Members may know the exact language of my proposed amendment in the form in which it was agreed upon by the Members above referred to and by others interested in promoting conservation legislation, I am herewith inserting the full text of my amendment in the form in which I shall offer it on Friday, as S. 685 is read for amendment. I hope that this amendment will have the ready support of the great majority of this body and that it will be adopted so that we may all join in voting for S. 685 in its then amended form.

Amendment by Mr. MUNDT to committee substitute to S. 685: Immediately after subsection "c" of section 2 of the committee amendment, add the following subsection:

"(d) (1) After date of enactment of this act, no new sources of pollution, either by sewage or industrial waste, shall be permitted to be discharged into the navigable waters of the United States and streams tributary thereto until and unless approved by the Division; and

"(2) The discharge of new sources of water pollution without review and approval of the Division as required under the foregoing provisions is hereby declared to be against the public policy of the United States and to be a public and common nuisance. An action to prevent or abate any such nuisance may be brought in the name of the United States by any United States attorney, and it shall be the duty of such attorney to bring such an action when requested to do so by the Division, the Surgeon General, any duly constituted interstate agency dealing with control of water pollution, any State agency dealing with control of water pollution, any State health authority, or any incorporated municipality. Such action shall be brought as an action in equity and may be brought in any court of the United States having jurisdiction to hear and determine equity cases."

### Assistance for the Polish People

#### EXTENSION OF REMARKS

OF

HON. PIUS L. SCHWERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

ADDRESS BY DR. FRANCIS E. FRONCZAK

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address before the Committee on Foreign Affairs of Dr. Francis E. Fronczak, health commissioner of the city of Buffalo, N. Y.

Mr. Chairman and members of the Committee on Foreign Affairs, there is no substitute for experience. For the past 2 days we have been listening to witnesses giving testimony on the conditions in Poland and the countries where the Poles, exiled from their native land, are living today. You have heard the description of the historic past of this country, of its present pitiful martyrdom; and no doubt all of you were sympathetic to this country and in your minds you had a prophetic vision of its joyful restoration. Poland, to the knowledge of the many here present in this very room, is considered to be a young country, existing since 1918, when, as a matter of fact, it is one of the oldest countries on the continent of Europe. Already the historian, Jordannes, wrote of the country in the second century, for Sarmatia, described by him, was the origin of the country inhabited by the Poles of the present day.

We have listened here today during the remarks on the condition of Poland, that it is a country of discoverers, inventors, men of science, and men of art, but we are not interested in these phases at this moment. We are interested in saving the 35,000,000 men, women, and children who lived in Poland as recently as September 1, 1939, who have occupied an area of 150,000 square miles. We have heard from eyewitnesses what has been happening since that unhappy and uncalled-for September 1. In order to know, one must study, and one who studies can understand, and only he who understands can judge, and I shall endeavor to present to you in the few moments at my disposal the condition of this country today, and the future of that country and, more than that, the future of Europe and of the entire civilized world, what within a short time will happen unless conditions are immediately ameliorated and corrected.

I have been asked what are my connections with Poland. My forefathers came from Poland almost 70 years ago. I was born in Buffalo. During the World War I was a high officer in the United States Army and, by special orders of the President of the United States, Woodrow Wilson, Secretary of State Lansing, and Secretary of War Baker, I was directed to report to the Polish National Committee in Paris in 1918. At that time I was president of the Polish Central Relief Committee of the United States. As a member of the Polish National Committee (of which committee Ignace J. Paderewski was also a member—Paderewski the patriot, the humanitarian, the statesman, the artist—a man beloved by the entire cultured world), I worked as the director of physical, mental, moral, and material welfare. This Polish National Committee, located in Paris, was the provisional government of Poland recognized by the Allied Powers, and my position was equivalent to that of a minister or secretary of a social welfare department. I was in charge of the medical service of the Polish Army in France and wherever they were distributed outside of Poland. I was in charge of the expatriates and of the prisoners of war captured by the Allies from the Central Powers. At the end of the war, by order of Mr. Davidson, the executive chairman of the American Red Cross, and Colonel Olds, the European representative of the American Red Cross, I was appointed the high commissioner of the Red Cross to Poland and eastern Europe and the medical consultant of this great organization.

I saw Poland at that time from the western frontiers to beyond the marshes of Pinsk in the east, and from the Baltic Sea to the southeastern corners of that country at the Rumanian boundaries. The conditions I saw at that time were heartrending, and

yet today, we see the same country in a manifoldly worse condition than it was in 1918, 1919, and 1920. The people of this country of 35,000,000 population have been dispersed throughout Europe. Men, women, and children have been torn away from the bosoms of their families, have been separated, and today they may be found in Rumania, in Hungary, in Bulgaria, Yugoslavia, Italy, France, Denmark, Lithuania, Estonia, Latvia, and the Scandinavian countries—taken away from their homes, which have been destroyed—permitted to take only the clothing they had on their backs at the time they were ordered to leave their homes, with a minimum amount of food, no warm protection against cold. They are today exposed to climate which at times is as low as 20° below zero. As a matter of fact, the winter of 1939 and 1940 is said to be the most severe in the century, by result of which these people are dying from all kinds of respiratory diseases, tuberculosis, typhus, typhoid fever, and various types of dysenteries, scurvy, rickets, communicable diseases of all kinds. These people dispersed throughout Europe are not only "one-third unhoused, unfed, and unclothed," but almost the entire 100 percent are dying from malnutrition, from lack of food, from lack of medical supplies, from lack of fats (including cod liver and halibut oil). They are without any medical supplies or hospitals to take care of them, for the hospitals have been destroyed. I have full information of conditions from physicians, surgeons, and superintendents of Polish hospitals distributed through that unfortunate country. There are no immunizing agents such as serum or vaccine to prevent certain diseases or to cure them. In other words, in a few months you will hear of the greatest morbidity and mortality existing amongst civilized people that the world has ever seen. The potable waters are contaminated, these people are bound not only to suffer with the various diseases and conditions I have mentioned, but the death rate will be terrific.

As one who is interested in public-health work from many angles, I can speak from experience and from results which always follow such conditions. Being a colonel in the United States Army and being for a short time retired, I was again recently reappointed by the order of the President, under the defense act, to the Reserves in the Army, subject to call to active service. As I said before, I have been connected with the American Red Cross here and abroad. I am a member of the faculty on preventive medicine of the University of Buffalo, and health commissioner of a city of 600,000, namely, Buffalo, and I know what is bound to come after the conditions prevailing in Poland today. Unless the American people, through the Congress of the United States, come to the aid of this country at once, these people are doomed to extermination. Many of them are killed today by mass executions, thousands die by being incarcerated in concentration camps, and millions exposed to the weather, to lack of food, are dying today. The greatest force you have in your hands is public opinion, and the United States Congress and the American people can force those so responsible for these conditions to stop them. Within the last few days I have spoken with former members of the Polish Parliament, and men who were in the Polish Army, physicians who served in both civil and military work, and their stories are all alike. Help now—or if you delay there will be no one to bring help to.

I have read the several bills introduced before the House, and I believe that one consolidated bill should be introduced by the chairman of this committee, Congressman BLOOM. This bill should not only include appropriations sufficient to take care of the immediate needs of these people but of their needs for several months; and this bill should also contain a provision for appointment by the President of the United States of a commission, which will coordinate the activities of the various organizations which are bringing some help in certain parts of Europe at the present time. There are several organizations working in Europe today or endeavoring to work: The American Red Cross, the Polish Relief Committee under former President Hoover, the Colonel Donovan-Paderewski Committee, the Polish-American Council, and the hundreds of smaller organizations, clubs, and parishes, which are collecting funds, but have so far been unable to coordinate their activities. Only a coordinating committee can do this thing. I have discussed this matter with the American Red Cross; I have discussed this matter with members of these various organizations; and last Saturday the Polish-American Council, of which I am the director, all have agreed that only such a commission appointed by the President and with the force of expression and influence of this country will be able to bring about a stop to conditions which never before have existed in the history of the world.

May I say this: My attitude is not, Do I love Poland, the country of my fathers, and that I would hate very much to see these things come to this unfortunate country? Do I have a great interest in Europe and the countries of Europe, who are bound to become victims of the diseases, especially epidemic diseases, and of the political and economic conditions which will follow what is now existing in Poland? I am interested in the United States as much as I am interested in conditions in Poland and Europe. Remember that diseases and germs of diseases know no boundaries. Disease germs jump any frontier; and beginning in Poland and the countries north, east, and south of Poland, they will cross to the United States; and we must also remember that we are now having an invasion of serious epidemics of diseases in the United States. As an American citizen, I appeal not only for help for Poland and the countries which have been raped by certain nations of Europe, but I am appealing for this our beloved country, which is exposed to a very, very serious danger from epidemic diseases.

## Continuation of Civilian Conservation Corps Camps

## EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 29, 1940*

## RESOLUTION OF THE EXECUTIVE COUNCIL OF THE WISCONSIN CONSERVATION CONGRESS

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution adopted by the executive council of the Wisconsin Conservation Congress on February 4, 1940, for continuation of C. C. C. camps:

Whereas it has been called to the attention of the executive council of the Wisconsin Conservation Congress that on or before July 1, 1940, 3 of the 12 C. C. C. camps delegated to the Wisconsin Conservation Commission as work agencies and under the custodianship of the Federal Forest Service for the promotion and development of conservation work in Wisconsin are to be discontinued; and

Whereas this council believes that the C. C. C. camps have been one of the greatest Federal adjuncts in assisting the conservation commission and the people of Wisconsin in furthering their present conservation program in fire suppression, fire prevention, fisheries work, game management, and kindred conservation activities; and

Whereas it is the consensus of opinion that the allotments to the Federal Forest Service for game management, which is a State function, and the continued building of fire lanes and roads on national forests, which, under the present policy of unrestricted travel has worked undue hardships on the State from the standpoint of law enforcement and game management, be reallocated and used for the purpose of continuing the C. C. C. camps and, further, that the wage scale of the supervisory help in the camps be commensurate and in keeping with the wage scale paid by State and private industry for the same type of work; and

Whereas under the present system it has been impossible for the State to locate small units of C. C. C. help at strategic positions for fire suppression, and other necessary conservation work: Now, therefore,

We, the executive council, representing the Wisconsin Conservation Congress of the 71 counties, at a meeting duly called and held in the city of Madison this 4th day of February 1940, do hereby petition the Congressmen and Senators of the State of Wisconsin to protest the discontinuance of any C. C. C. camps; to support the reallocation of funds to insure their continuation; and recommend the drafting of broader administrative policies for greater utilization, efficiency, and mobility of these camps.

## Victory for Reciprocity

## EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 29, 1940*

## EDITORIAL FROM THE PHILADELPHIA EVENING BULLETIN OF FEBRUARY 26, 1940

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin of Monday, February 26, 1940:

[From the Philadelphia Evening Bulletin of February 26, 1940.]

## VICTORY FOR RECIPROCITY

Reciprocity in trade scored a substantial victory in the House of Representatives with the passage of the measure extending Secretary Hull's power to continue his policy.

Administration forces were able to defeat amendments which would have crippled the State Department's authority to make pacts with foreign countries, and Secretary Hull can continue to press forward along the road he has been traveling for years.

The defeated amendment to have the pacts subject to ratification by the Senate would in effect have destroyed the Hull policy. The same logrolling which disgraced so many tariff bills in the past

would again have been started and the reciprocity pacts would have emerged from the Senate, if at all, in well-nigh useless, distorted form.

Restrictions in the present act guard against the protective system being broken down by simple decree of the State Department. No article which was not free of import duty when the Trade Agreements Act was passed can be made free by the Secretary of State. He is further not permitted to lower tariffs more than 50 percent.

Even if some of the optimistic claims put forward by the supporters of the reciprocity pacts be discounted, these agreements can still be credited with facing the realities of our foreign trade. The United States cannot, if it wishes to promote its exports, completely disregard the necessity under which outside nations lie of sending us their produce and manufactures. International trade implies exchange of products, not simply giving outside nations goods and receiving only gold.

The passage of the bill renewing the authority of the administration to continue its reciprocity policy will have a heartening effect on efforts elsewhere to liberalize international trade relations. It will be evidence that we are ready to cooperate in restoring an orderly and stable world at the end of the war. It will be an indication that when Europe is ready to promote economic peace, we, the most powerful economic unit in the world, will not refuse our encouragement.

## Parity and Parity Payments of Agricultural Products

## EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 1, 1940*

Mr. MURRAY. Mr. Speaker, Webster says "parity" means equality, equivalent position, or equal value. When now used in connection with agriculture it means the relationship between the price which the farmer receives for the products he sells and the price he pays for the products he purchases as compared with the relationship between these prices for the basic period from July 1909 to July 1914. These years were selected as the years when agriculture, industry, and labor were operating under more normal conditions than have ever prevailed since that time.

The crops and products named to come under the act were corn, wheat, cotton, tobacco, and rice. Dairy farmers or their spokesmen, beef-cattle farmers or their spokesmen, and other agricultural groups did not choose to include their products in this list, which has since been termed the "basic commodities."

From the time of their inception it has been very evident that if the handling of basic commodities was to give a general improvement to agriculture it would be necessary to include a very high percentage of the farm products produced in the country. The fact that the present five basic commodities represent only between one-third and one-half of the value of the national agricultural production is, no doubt, one reason that the present program has not achieved the results which could have been expected of the program if producers of all crops and products had been willing to subscribe to the program. If a larger number of crops and farm products had been included as basic commodities, there would never have been the changes and sectional adjustments in crops we have witnessed. We would not have seen the new crops and new systems of farming spring up as we have. For example, Texas has had at least a 500-percent increase in cheese production, and this on farms that had many times been under crop control as a result of the basic commodity set-up in the State. In other words, there are very few benefits to be secured for general agriculture of this country unless a larger percentage of the farm crops and farm products are included in the program. Nor is there, in all fairness, grounds for complete disapproval of this part of the program by an individual or a group not willing to cooperate in making his crop or product one of the basic commodities.

There was a general feeling among the dairymen of my district in 1934 that milk should be included as a basic commodity. A general meeting was held, and the farmers felt

that if other products and crops were to be listed as basic commodities for parity payments they should, in fairness, vote to make milk a basic commodity and in return become eligible to parity payments for their product. In keeping with this sentiment expressed in 1934, and since at subsequent meetings and by subsequent resolutions, a bill (H. R. 6500) has been introduced by my distinguished colleague the gentleman from Wisconsin [Mr. MERLIN HULL]. I have lent my support to this bill, and while, up to this time, the bill has not had the consideration of the agricultural leaders in Washington which I feel that it deserves, I still feel it should meet with favorable consideration.

I am including a table which will give the people of this country an opportunity to see where the parity funds, appropriated since 1935, have been disbursed. After studying this table one must come to the conclusion that we cannot keep voting funds for only three crops of consequential national proportions. We find cotton, for example, which represents about one-tenth of our national agricultural values, receiving \$96,389,000, or 45 percent of the total disbursements of \$211,997,000.

We find \$60,190,000, or 28 percent, distributed to corn, grown in what is termed the richest, most productive land in the world. We find \$1,795,000 distributed to rice, a rather insignificant crop as far as national average production of only \$35,000,000 is concerned. Tobacco prices have made the allocation of funds for this crop unnecessary.

#### IF THE PROGRAM IS TO SUCCEED

This program can never accomplish any great results until a larger percentage of the agricultural products and crops are included, and if this is not accomplished, public sentiment will destroy the program.

In the meantime, it is well for every Member of Congress to realize that according to the present law Congress can appropriate funds for full parity to producers of corn, wheat, cotton, tobacco, and rice.

The States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut are not included in the list, and it seems that these States did not receive any parity payments whatsoever for any of the years.

#### FACTS SHOWN IN THE TABLE

There are other significant facts shown in this table. It shows very clearly that some States seem to know well where the United States Treasury is located and have a key to fit the door. For example, Texas alone in 1935 received 24 percent of the parity-payment funds, 27 percent in 1937, and \$28,615,000, or over 13 percent, in 1939, or one-sixth of all parity payments disbursed. Why the farmers of the rock-ribbed coast of New England should be called upon to pay taxes to furnish funds in such abundance to a rich State like Texas might be difficult to explain. In fact, it is difficult for me to realize that all the Congressmen from Texas—except the gentleman from Texas [Mr. KILDAY]—could give their stamp of approval to the reciprocal-trade treaties which have reduced the income of Wisconsin farmers by millions with the 42-percent reduction in the tariff on cheese, when their State has had such a large percentage of the public money during these years. It is significant also to note that 10 States received over one-half of this total money. Also note that the States which have been getting the largest amounts of money from this source did not feel the pinch of the free-trade approach of the New Deal reciprocal-trade treaties and voted in favor of the continuation of this ruinous program. However, we did observe that many Members of Congress were very desirous of dragging oil and other products of their districts out of the clutches of these same reciprocal-trade treaties.

In other words, it is easier—while it lasts—to extract money from the Public Treasury than it is to give the farmers of this country all the same consideration among their own group and equal consideration with the nonagricultural groups of our country.

## Procedural Rules Governing Indian Claims in the Court of Claims

### EXTENSION OF REMARKS

OF

HON. WILL ROGERS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

STATEMENT BY HON. JOHN COLLIER

Mr. ROGERS of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. John Collier, Commissioner of Indian Af-

fairs, before the subcommittee of the Senate Committee on the Judiciary, in re S. 3083, a bill to amend the judicial code in certain cases:

#### GENERAL ESTIMATE OF THE BILL

##### 1. Background of the bill

S. 3083 is an amended version of S. 2164, a bill introduced in the first session of the Seventy-sixth Congress which proposed new substantive and procedural rules to govern pending and future Indian claims in the Court of Claims. In his report on this bill the Secretary of the Interior stated that parts of the bill were very undesirable and other parts obscure and debatable. To eliminate some of the more objectionable features of the bill he proposed certain amendments, some of which have been incorporated in S. 3083. Even though amended, the bill remains, in the opinion of the Interior Department, an undesirable treatment of the troublesome question of Indian claims.

##### 2. Need for Indian claims legislation

The Interior Department has long recognized that legislation was necessary to provide a satisfactory method of disposing of Indian claims. The present method of securing separate jurisdictional bills for particular claims, followed by litigation in the Court of Claims, is expensive to the Government and to the Indians and does not insure either a fair or final solution even of such cases as do reach fruition in this process.

Any general legislation on Indian claims should be directed toward (1) improving the efficiency of the process of disposing of Indian claims and (2) insuring just and final settlement of Indian claims. Toward this end this Department has from time to time made various proposals to Congress.

##### 3. Effect of S. 3083

The enactment of S. 3083 would hinder rather than aid the accomplishment of the purpose of achieving an efficient, fair, and final disposition of Indian claims. It is admitted that the bill was provoked by the recent sizable judgments obtained by the Shoshone and Klamath Indians and seeks to avoid a repetition of such judgments in the case of other Indian tribes. In order to do so, the bill proposed (1) a broad requirement for the set-off of gratuities; (2) a denial of the just compensation for the taking of property defined by the Supreme Court; and (3) a denial of the intent and effect of certain jurisdictional acts. Far from disposing of the claims, the enactment of this bill will undoubtedly mean the return to Congress of the aggrieved claimants for special legislation to exempt them from the application of the act. And their demands, especially for just compensation under the United States Constitution, will have merit.

##### 4. Figures on Indian recoveries

The fear of large recoveries against the United States, which prompted the proposal of S. 3083, is not justified by the history of Indian recoveries. Of the 126 tribal claims against the United States decided by the Court of Claims over nearly 60 years, 84 have been dismissed, and in only 30 have there been money judgments for the Indians. These judgments have totaled only \$28,506,223.97, although the total amounts claimed by the tribes amounted to billions of dollars. The total amounts claimed by Indians should never be a determining factor in Indian claims legislation, as these amounts have no relation to ultimate recoveries.

This is due not only to lack of legal merit in many of the claims but to the offset of gratuities spent by the Government for the claimants. In an estimate made in 1935 of the claims of 24 tribes, the gratuities amounted to half the total amount claimed. (Hearings before the subcommittee of the House Committee on Appropriations on the second deficiency appropriation bill for 1935, at page 678.) In the period between 1929 and 1935 in every case but two where the jurisdictional act provided for offset of gratuities and where a recovery was won, the case was dismissed because the recovery was exceeded by the set-offs.

#### SECTION 145-A

Section 145A provides that in pending and future Indian claims (a) there shall be offset all gratuity expenditures except (1) expenditures prior to the events upon which the cause of action is based; (2) expenditures under the act of June 12, 1934 (48 Stat. 984); and (3) expenditures under emergency relief appropriation acts, and (b) these gratuity expenditures shall be treated as payments on the claim as of the date they were made.

##### 1. The set-off of gratuities

The set-off against a claimant of gifts made to him by the defendant is found nowhere else in the law outside of Indian claims. It has been adopted there not because of any legal justification but as a practical device to reduce the obligations of the United States to Indian claimants. Gratuities are funds expended by the United States to carry out its governmental function of administering Indian affairs and civilizing the Indians. The expenditures may or may not have been actually beneficial to the Indians; sometimes they were hurtful; in most cases they were made without the Indians' consent. It usually is fiction to call them payments upon a claim, as they were not made as such and were often made before any claim was formulated. Moreover, treating them as payments upon a claim means that tribes injured by the Government are called upon to pay for Government expenditures rendered without cost to tribes who escaped injury. Therefore section 145-A must not be

considered as establishing a right to which the Government is entitled but must be recognized simply as providing a shield to protect it from paying full compensation for wrongs inflicted.

However, the policy of providing for the offset of gratuities has been heretofore established in individual jurisdictional acts and in section 2 of title 1 of the act of August 12, 1935 (49 Stat. 571). The present section has two advantages over past legislation. It provides a uniform rule for all cases and it liberalizes to some extent previous law by virtue of the three limitations on gratuity expenditures suggested by the Interior Department and now included in the section. Accordingly, I do not object to so much of section 145-A as defines the expenditures which may be considered as offsets in Indian claims.

##### 2. Application of expenditures as of date made

The provision that gratuity expenditures shall be applied as of the date they were made, to be applied first to the payment of accrued interest and then to the principal, introduces a new rule in the set-off of gratuities. The provision would have effect only where interest is required on the principal sum due the Indians. In the absence of interest the date of reducing the principal is immaterial. There are only two situations in which interest may be added to the principal sums due in Indian claims. These are (1) where the treaty or agreement calls for interest, and (2) where the court finds that to render just compensation for property appropriation an increment must be added to the value of the property to produce the full equivalent of that value paid contemporaneously with the taking.

From the statements made in justification for this provision, it appears that it is intended as a device to reduce the recovery where an award of just compensation would call for interest over a period of years and that it is not aimed at the cases where interest is required by treaty or agreement. I believe the provision should not apply to the latter cases, for if it did, it would in effect alter the terms of payment required in the agreement. Moreover, in these cases the amounts involved are ordinarily not so large as in the property appropriation cases and there is not, therefore, the same practical compulsion to reduce the recovery. As a device to reduce recoveries in the property appropriation cases the provision should be considered in connection with section 145-B, which deals with reducing recoveries in these cases, and I believe it belongs, if anywhere, in that section.

In view of these considerations I urge the omission from section 145-A of the provision dealing with the application of gratuities and its consideration only as part of 145-B. To accomplish this the following amendments should be made in section 145-A:

1. Strike out all the words beginning "and, in computing the amount" in line 6, page 2, of the bill and ending with the word "principal" in line 11, page 2.
2. Strike out the words "together with the dates of expenditures" in lines 18 and 19 of page 2.

#### SECTION 145-B

Section 145-B provides that in any pending or future Indian claims in the Court of Claims for the appropriation of property by the Government, the Court of Claims shall have jurisdiction under the claimant's jurisdictional act to render judgment only for the value of the property at the time of the taking and shall include no increment to the value except for a maximum period of 6 years prior to the commencement of the action.

##### 1. Effect of section 145-B

The effect of section 145-B is to deprive Indian tribes of just compensation under the fifth amendment of the Constitution of the United States for their property appropriated by the Government. The United States Supreme Court has repeatedly held that where the Government takes property by an exercise of eminent domain the just compensation required by the Constitution is the value of the property at the time of the taking plus an amount sufficient to produce the full equivalent of that value paid contemporaneously with the taking. *Jacobs v. United States*, 290 U. S. 13; *Phelps v. United States*, 274 U. S. 341; *Seaboard Air Line Co. v. United States*, 261 U. S. 299.

This rule was applied to the taking by the Government of the land of the Shoshone Tribe for settlement thereon of Arapaho Indians in the case of *Shoshone Tribe v. United States* (299 U. S. 476), where Justice Cardozo wrote:

"\* \* \* Finally the fact is unimportant, there having been an appropriation of property within the meaning of the fifth amendment that the jurisdictional act is silent as to an award of interest or any substitute therefor (*United States v. Creek Nation*, supra, pp. 110, 111). Cf. *Yankton Sioux Tribe v. United States* (272 U. S. 351, 359). Given such a taking, the right to interest, or a fair equivalent, attaches itself automatically to the right to an award of damages" (at 497).

The same rule was applied in the case of *United States v. Klamath Indians* (304 U. S. 119) to provide just compensation for the taking of tribal land for an exchange of lands with a railroad company. As the necessary additional amount to be added to the value of the land at the time of taking the court allowed interest on the value from the time of taking to the date of judgment.

##### 2. Position of the Interior Department

The Interior Department cannot endorse legislation denying to the Indian tribes their constitutional right as defined by the Supreme Court. Such legislation invites controversy and challenge,

and would in the end net the Government nothing but delay and annoyance.

This legislation would violate two basic constitutional rules: The first, that the determination of just compensation is a judicial function which cannot be exercised by Congress; the second, that just compensation for the taking of property under eminent domain is the value of the property at the time of the taking contemporaneously paid in money. Unless Indian claims are litigated in accordance with these constitutional rules, the litigation can reach no conclusive nor respected outcome. When the United States seeks to protect itself from an adverse judicial decision by legislating to prevent its wards from suing in accordance with constitutional principles, it not only fails in its duty of good faith but postpones the time of reckoning. Until the Supreme Court itself determines that the claim of an Indian tribe does not come within the eminent-domain rule of compensation, it is certain that the tribe will not cease to seek the measure of compensation due it.

The bill itself recognizes that section 145-B is open to challenge on grounds of its constitutionality by its provision that if the section is declared invalid the consent of the United States to suit is withdrawn and the jurisdictional act is repealed. This means that if the Court of Claims or the Supreme Court finds that the just compensation due under the Constitution exceeds the restrictions of section 145-B the court must abrogate its judicial function of determining just compensation without legislative interference (*Monongahela Navigation Co. v. United States* (148 U. S. 312)) and must deny the claimant just compensation or have its decision a nullity.

Since the Interior Department is opposed to denial to the Indian tribes of such compensation as the Supreme Court may determine to be just compensation under the Constitution, it cannot endorse section 145-B simply because it has been amended to permit interest for a 6-year period. Although this was one of the proposals for amendment of the section referred to in the Department's report on S. 2164, it was not favored. It does not remove the constitutional objection and it introduces a purely arbitrary limitation on the recovery of just compensation. It was suggested, no doubt, by the 6-year statute of limitations on the presentation of private claims to the Court of Claims (28 U. S. C. A., sec. 262). But there is no proper analogy between a statute limiting the time within which private suits can be brought and a statute limiting a recovery of just compensation by Indian tribes. An Indian tribe is not privileged to sue in the Court of Claims on its treaty rights unless Congress passes a jurisdictional act. Delay in passage of such an act is not attributable to the tribes; many of them have agitated their claims before Congress for many years before the act is passed. When passed, the acts contain their own limitations on the time within which suit can be filed. In this respect the Indian tribes are on a similar footing to that of married women, infants, and lunatics who are exempted from the 6-year limitation, but who must sue within a prescribed period after their disability ceases (28 U. S. C. A., sec. 262).

The furthest this Department can go to meet the practical consideration that arises from the fact that Indian property was appropriated in most cases many years ago, with possible interest recoveries resulting large, is to accede to the proposal, referred to in this Department's report on S. 2164, that interest be charged on gratuities from the date expended wherever interest may be allowed as part of just compensation in appropriation cases. This proposal is the equivalent of a provision authorizing the application of gratuity expenditures as of the date made to the principal sum due. If it were adopted in substitution for the present section 145-B, it would supersede the provisions governing application of gratuity expenditures in section 145-A, which could then be omitted, as previously recommended. It should be noted that since interest on gratuities amounts to a deduction from the principal sum itself of the expenditure when made, such a provision would go further than the provision now in section 145-A which calls for the deduction of gratuities first against accrued interest. I know of no legal objection to provision by Congress for the set-off of gratuities in such manner as it deems best.

#### SECTION 145-C

##### 1. Clauses (a) and (b)

This department recommended in its report on S. 2164 that clauses (a) and (b) of section 145-C be eliminated. These clauses remain in S. 3083. They provide that no jurisdictional act shall be construed "(a) to prejudice the nature or merits of the claim in any respect, or (b) as a recognition of liability of any kind, nature, or character."

The reason advanced by the Department of Justice to justify these clauses is that Congress does not intend by the passage of a jurisdictional act to affect the merits of the claim but intends only to provide a forum. This is, of course, normally true. The Supreme Court has stated that the function of a jurisdictional act is to provide a forum and that the act in question did not recognize a liability in the Government (*Shohone Tribe v. United States*, 299 U. S. 476, 493; *United States v. Mille Lac Band*, 229 U. S. 498, 500).

However, it is appropriate and essential in some types of claims for Congress to recognize a liability by the passage of a jurisdictional act. These types of claims are those not based on the violation of any law, treaty, or agreement of the United States but based upon that sort of injury which the Court of Claims has described as political rather than judicial in nature. Among such claims

are: (a) Claims based on the taking without compensation of the aboriginal right of use and occupancy of land, the ownership of which by the Indians was never formally recognized by the Government; (b) claims based on wrongs more comprehensive, including massacre, starvation, and wholesale appropriation carried out upon Indians by or with the active or passive consent of the Government; and (c) claims for the reformation of treaties on the ground of fraud, duress, or mistake of fact.

There are, at the present time, a number of such claims outstanding which Congress has referred to the Court of Claims for determination. Jurisdictional acts submitting such claims include the acts for the California Indians (May 18, 1928, 45 Stat. 602); Alaskan Indians (June 19, 1935, 49 Stat. 388); Nez Perce Indians (Feb. 20, 1929, 45 Stat. 1249); Ute Indians (June 28, 1938, 52 Stat. 1209); Warm Springs Indians (Dec. 23, 1930, 46 Stat. 1030); and Western Oregon Indians (Aug. 26, 1935, 49 Stat. 801), and possibly acts for the Pillager Indians (Mar. 30, 1931, 46 Stat. 1487); and the Saginaw-Chippewa Indians (June 25, 1910, 36 Stat. 829). The effect of clauses (a) and (b) in section 145C may be to render useless the foregoing acts upon the argument that unless these acts constitute some recognition of liability by the United States there is no basis for judicial decision by the Court of Claims.

In addition to the foregoing types of cases, clauses (a) and (b) of section 145C may adversely affect such an act as the jurisdictional act for the Menominee Indians (Sept. 3, 1935, 49 Stat. 1085), which establishes a measure of damages in the event the court finds mismanagement of the property of the Indians or other injurious action of the part of the United States. It may be argued that the statement of the measure of damages constitutes a recognition of liability in view of the fact that damages might otherwise not be provable or recoverable because of their speculative nature in such a case as the Menominee claim presents.

All the jurisdictional acts and the claims thereunder which may be adversely affected or made inoperative by clauses (a) and (b) of section 145C cannot be pointed to with assurances in view of the uncertainty as to the proper scope and application of these clauses. However, this Department is convinced that these clauses will undo much of the progress so far made in many Indian claims after the expenditure of considerable time and effort in the passage of the jurisdictional acts and the preparation of the claims thereunder. The result may well be the return of the claimant to Congress for the necessary legislation.

The provisions of the jurisdictional acts which would be seriously affected by this section are often the result of careful study by Congress of the legal and moral merits of the claims. The legislative history of the California jurisdictional bill indicates that Congress was repeatedly advised of the lack of a strictly legal or equitable basis for the claims and that recovery for the claims, morally compelling, must depend on the exercise by Congress of its political function of recognizing liability for such claims.

##### 2. Recommendation of Interior Department

In view of their adverse effect, the Interior Department recommends that clauses (a) and (b) of section 145-C be not enacted and that it be left to the Court of Claims to determine whether and when Congress has intended to recognize a liability in the United States for wrongs inflicted. The Court of Claims, being a legislative and not a constitutional court, may pass upon a political, as distinct from a legal or equitable, claim when it is clear Congress intended to authorize it so to do by the terms of the jurisdictional act (*Iowa Tribe of Indians v. United States*, 68 Ct. Cls. 585).

This Department raises no objection to the remainder of section 145-C.

#### SECTION 145-D

This section is intended to limit review of pending and future Indian claims in the Court of Claims to review by certiorari only. Historically jurisdictional acts for Indian claims consistently provided for appeal as of right to the Supreme Court. After the passage of the act of February 15, 1925 (43 Stat. 939, 28 U. S. C. A., sec. 288), which provided for review of Court of Claims cases only by certiorari, Congress amended various jurisdictional acts to restore to the Indian tribes the privilege of appeal as of right to the Supreme Court. Examples of these amendments are the Crow amendment (act of August 15, 1935, 49 Stat. 655), the Klamath amendment (act of May 15, 1936, 49 Stat. 1276), and the Chippewas in Minnesota amendment (act of June 22, 1936, 49 Stat. 1826). In various subsequent Indian jurisdictional acts Congress also provided specifically for appeal as of right to the Supreme Court notwithstanding the provisions of the 1925 act. Such provisions are found in the Wisconsin Chippewas Act of August 30, 1935 (49 Stat. 1049), the Menominee Act of September 3, 1935 (49 Stat. 1085), and the Red Lake Act of June 28, 1938 (52 Stat. 1212). Therefore, in those cases where Indian tribes now possess the privilege of appeal as of right it is the result of the deliberate and considered judgment of Congress.

The provisions for appeal as of right are the result of considerable experience with Indian claims and are not without good reason. Indian claimants have no other appellate review. Decision by the Supreme Court alone gives finality to a claim long agitated and involving large governmental and tribal interests. Appeal to the Supreme Court has proven a guarantee of fair dealing with the Indians and of authoritative statement of the legal obligations of the Government. The advantages of such an appeal appear to this Department to outweigh any disadvantages and, therefore, the Department recommends that section 145-D be eliminated.

# Who Pays the Supertax for Extra National-Defense Expenditures?

## EXTENSION OF REMARKS OF HON. JAMES E. VAN ZANDT OF PENNSYLVANIA IN THE HOUSE OF REPRESENTATIVES Friday, March 1, 1940

Mr. VAN ZANDT. Mr. Speaker, the supertax of 10 percent on income "informally" suggested by President Roosevelt as a means of raising the additional \$460,000,000 to cover the cost of extra national-defense expenditures will reach into the pockets of the already overburdened taxpayers represented by the great middle class of the country if the President's idea is adopted.

This "soak the middle class tax" will necessitate each individual, after figuring his net income tax, to add 10 percent for extra national-defense expenditures.

The first question that arises in the minds of all of us interested in adequate national defense is whether or not the responsibility of financing national defense belongs to the great middle class or should be borne equally by all classes of citizens.

National defense is for the benefit of all citizens, and therefore it is only just and proper that this obligation should be shared equally by all classes.

The second question that confronts us is the necessity for this supertax, which in reality is class legislation.

The situation, to my mind, demands a thorough and comprehensive analysis of our national-defense needs, and the thought has had my careful attention for many months.

Under our present national-defense program, there is conflicting authority, waste of money in purchases, and duplication of efforts, all of which results in an enormous cost to the taxpayers of our Nation.

On January 10, 1940, I introduced House Joint Resolution 417, providing for the establishment of a National Defense Commission, for the purpose of surveying the national-defense resources and requirements of the United States, including the advisability of adopting a permanent, progressive national-defense policy, the establishment of a Department of National Defense, a National Defense Planning Board, and for other purposes.

This resolution has been referred to the House Committee on Rules, whom, to my way of thinking, could make a contribution to the common defense, general welfare, and domestic tranquility of the United States of America by favorably reporting this resolution to the House at an early date.

In support of House Joint Resolution 417 and in defense of the great middle class of this country, the following table is offered, which contains information based on the 1930 census and the income-tax year of 1934. This table discloses the various groups making up the great middle class, and upon the shoulders of whom will fall this supertax.

	Total number of re- turns	Under \$5,000 group	Over \$5,000 group	\$1,000 to \$1,500 group	\$1,500 to \$2,000 group	Popula- tion

### As Ye Sow, So Shall Ye Reap

#### EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. STYLES BRIDGES, of New Hampshire, at the Lincoln Day banquet under the auspices of the Garfield County, Okla., Republican Committee, Enid, Okla., February 13, 1940:

There is a Biblical saying, "As ye sow, so shall ye reap." No one realizes the truth of the saying better than the farmer. Obviously, he does not plant wheat and look for potatoes. He does not plant weeds and then expect corn. He knows what crops to expect from the seed he has planted.

It should also be obvious that the same truth applies to nearly everything in life. You cannot spend like the proverbial drunken sailor and long remain solvent. You cannot have more by creating less. You cannot sow the seeds of hatred and dissension and reap confidence, cooperation, and harmony.

Republicans this week are throughout the country observing the anniversary of the birth of the Great Emancipator. I should like to contrast his struggle to keep the Nation together with the accomplishment of the New Deal of dividing it—of its stirring up of class hatred.

In his Jackson Day speech Mr. Roosevelt gave a lecture on how to be a great man. What mockery it is that the new dealers should profess their admiration for a man who gave his life for national unity—when national disunity has been the achievement of the New Deal.

Recently I read a startling comparison of the last 7 years, 1933 through 1939, during which the New Deal has been in office, with the same period of the previous decade, 1923 through 1929.

In 1933-39 Government revenues from taxation averaged 21 percent more than in 1923-29, while expenditures rose more than 250 percent. By the end of 1939 the national debt was nearly 300 percent higher than in 1929. Are you one of a family of four? If so, your family's share of the debt has increased from \$502 to \$1,703 in the last 10 years. There is one other startling increase—the number of strikers, which rose from less than four and one-half thousand to over a million.

But debt and taxes and strife are practically all that has increased with the population during the last 10 years. Here are a few of the decreases: Wholesale prices, down 21 percent; factory pay rolls, down 24 percent; industrial production per capita, down 21 percent; national income per capita, down 33 percent; new construction per capita, down 57 percent; and new corporate financing, down 84 percent.

Such, my friends, are the pluses and minuses we must check up, not to the world-wide depression, but to the years of the New Deal as compared with the corresponding years of the 1920's. Such are the inescapable facts.

I am well aware that the President, only a few days ago, cited figures to show that the over-all governmental debt—that of the Federal Government, State, city, and county—totaled no more than the over-all debt when he assumed office. The new dealers have been bandying this story around Washington for 2 or 3 years and I am surprised that the President is just now getting hold of it.

We know, of course, that the Federal Government in the past 7 years, has absorbed a lot of the debt of other governmental units and particularly, has absorbed a lot of their functions. But that the over-all debt is the same—that it has simply been a case of transferring the debt from one governmental unit to another, is not a fact. The statisticians can make figures perform miracles but you and I know of the many instances in which a State, county, or municipal government, after having their debt eased by the

Federal Government, have gone out to run their local debt up again. We know they have been pressed on to more and more spending by the New Deal.

But there was still another question which the President touched upon but did not develop. That is the contention that the country's total debt, private and governmental, is even less today than when the New Deal came in. In this contention you have the philosophy of the New Deal—to move in and absorb private industry and private credit. That private debt has gone down means that private industry has gone down. To the extent that private debt has gone down and governmental debt has gone up the Government has moved into the field of private business. I have long contended that our danger is not one of the country going bankrupt as we understand the word. Our danger is that the expanding governmental debt will lead the Government into complete control of our credit structure. This means a socialized state.

I will agree with the President that business is now on the upgrade. But this improvement began when the Congress checked the New Deal rampage last year.

The recession of 1937 was not due to decreased Federal spending, as Mr. Roosevelt insists. It was due to the disorder in the country which the New Deal promoted—such as the sit-down strikes and attempts to pack the Supreme Court.

We have sown the seeds of reckless extravagance and we have reaped the harvest of the greatest debt in history. For the fiscal year 1940 alone Congress appropriated nearly half a billion more than for the 20 years of 1890 through 1909. For this 1 year alone it appropriated over three times more than for the years 1862 to 1866, which represented the cost of the Civil War, the greatest war in our history until 1917.

Today as Europe rocks with another war, the American people are one in their determination to not become involved. We would do well to remember that our entry into the war—which, pray God, will never come—would bring about the economic and financial ruin of the Nation, to say nothing of the cost in human suffering.

Today Federal expenditures are 13 times what they were in 1916. Today the Federal debt is approximately 40 times what it was in 1916.

Over and above the management of fiscal affairs, new dealers have several mathematical weaknesses. One is their tendency to subtract rather than to add to our national wealth.

The whole New Deal program seems to be based on a philosophy of work less, manufacture less, plant and harvest less. This is the philosophy behind the theory of overproduction and surpluses. Thus the attempts to limit production both in industry and agriculture to our present capacity to pay out of our present national income, instead of seeking to increase the purchasing power of our national income and to raise our ability to pay and to consume to our ability to produce. And, strange to say, this program of scarcity has been put forth in the name of the more abundant life. The result, my friends, is the fact that the one-third of the Nation of whom the President spoke so eloquently as ill-fed, ill-housed, and ill-clad are still underfed, underhoused, and underclad. The result is the fact that we still have some 10,000,000 unemployed. The result is that we are not producing anything to achieve a higher standard of living for all of our people. How could it be otherwise?

Another mathematical weakness of the New Deal is a fondness for division, but an inability to multiply. Having restricted our national income in almost every conceivable way, new dealers then set out to divide what remained.

Vast sums for relief and subsidies—begun as temporary emergency measures—threaten to become a permanent policy, because nothing is done to remedy conditions which make it necessary to continue these vast expenditures indefinitely. Taxes have been imposed, not for the purpose of revenue but to achieve a redistribution of the national income in keeping with the theories of New Deal planners. The Government has adopted the theory that if it taxed money away from one group, thus decreasing their purchasing power, and gave it to another group, to increase their buying power, it could raise the total purchasing power of the Nation. Too often we have been satisfied to divide work, rather than seek to create more of it.

As the result, we have spent billions on relief and subsidies, without providing a decent standard of living for those who received these meager benefits. We have taxed away money that would otherwise go to putting men to work and to raising wages in private industry. We have redistributed the national income to a certain extent, but have added little to it. Thousands of workers are subsisting on part-time jobs instead of enjoying full-time employment.

Obviously, my friends, there must be enough to go around before it can be divided. The truth, of course, is that we haven't enough national income, enough purchasing power, or enough work at the present time to furnish sufficient jobs, sufficient income, and sufficient buying power for all of our people. Our national income at present is still under \$70,000,000,000. On the basis of our population of 130,000,000, this is less than \$538 per person. That, my friends, is not enough. But it can only be raised through the creation of new wealth through new jobs. There is no other way, the mathematical formulas of New Deal planners to the contrary.

Probably the most vicious feature of this philosophy of taking from some and giving to others has been the division of our people into those who have and those who have not. The United States Government has led the ill-clad, ill-housed, and ill-fed to blame their plight upon the so-called economic royalists. They have been led to believe that those who hold office will remedy matters, not by helping them to clothe and house and feed themselves, but by taking from the selfish "princes of privilege" and giving to them. Thus

we have sown the seeds of jealousy and hatred and have reaped a harvest of suspicion and dissension.

One of the most curious phenomena of this policy has been the New Deal campaign against business and businessmen as a group. I was talking recently to an ardent new dealer. When he began his tirade against industrialists in general I replied with several specific examples of prominent businessmen who did none of the vicious things he ascribed to them as a class. Oh, yes; he conceded, there were individual businessmen who were socially minded and just in all their dealings; but they were the exceptions that proved his rule. As a group they were a bad lot. They might lead model private lives, they might be leaders in their communities, but in their business lives it was a different matter. I gathered from his argument that he believed that most businessmen lead a Dr. Jekyll and Mr. Hyde existence; that they may never beat their wives; they may be kind to children and dumb animals; they may even be generous in giving to philanthropic causes; but the moment they walk through the door marked "private" to their offices in the morning they suddenly become ruthless Simon Legrees. From 9 in the morning to 5 or 5:30 in the afternoon they are different men.

But the inconsistency of this gentleman was revealed a few minutes later, when he remarked, "What this country needs is a good businesslike administration." I asked him how it was, if the nouns "business" and "businessmen" stood for everything evil, that the adjective "businesslike" could possibly be one of praise. He mumbled something about it applying to the admirable qualities of business such as efficiency and changed the subject.

Added to a fundamental policy of scarcity, this hostility toward business has served further to retard investment, reemployment, and expansion in industry. It has helped to restrict purchasing power, and thus to keep farm prices down.

The New Deal philosophy of scarcity goes against the grain of the average American farmer. He does not mind hard work, for he is accustomed to labor from sunrise to sunset. He loves the beauty of the rich field on which the ripened grain waves in the breeze. He enjoys the satisfaction of reaping a successful harvest as the reward for all his labor. He asks not to be paid for not producing, but merely a fair price for his products.

Such a philosophy should go especially against the grain of you in Oklahoma, in a State whose motto is "Labor Ever Conquers." One of the last States to be settled, one of the youngest in the Union, many of your early settlers, many of those who helped build unsettled territory into this great State in such a short time, are still alive today. In selecting this motto, they demonstrated that they knew that labor is the source of progress. By their accomplishments, they demonstrated what ideals dedicated to this principle can achieve. If we have but the courage and the will to labor diligently today, we shall conquer the difficulties which now beset us.

This promotion of scarcity is part of the New Deal plan to control all production, to regulate supply and demand, prices and wages in industry and agriculture alike. The charts of New Deal planners call not for freeing the farmer, the worker, or the businessman, but for molding his life according to what the new dealers think is best for him. The result has been the erection of a great supergovernment of bureaucratic boards and bureaus. They are responsible to no one, but vested with vast powers to make rules and regulations which may mean failure to a businessman, destruction to a labor union, and ruin to the farmer.

In no field has this government by bureaucracy been a more dismal failure than in the case of agriculture. Any farmer—even a poor one—could have told the new dealers that crops are not grown or harvested according to blueprints. Almost any farmer in Oklahoma knows local conditions better than the swivel-chair farmers of the Department of Agriculture in Washington. Secretary of Agriculture Wallace is one of the numerous new dealers whose ideas have undergone a radical change since they came into power. In 1920, he wrote in his farm paper: "If it cannot be stopped in any other way, Congress should enact a law imposing very severe penalties upon any Government official who undertakes to influence either crop production or crop prices. The business of the Government employee should be administrative."

Such a program is bad enough in itself, but taken together with the encouragement of agricultural imports from foreign countries, it has been disastrous. We set out to be a good neighbor, and indeed we have been—to the farmer of other lands, but at the expense of our own farmers at home.

One of the best examples is furnished by wheat. In 1939 the American crop was over one hundred and twelve and one-half million bushels less than in 1938. Our exportation of wheat to foreign countries fell over 16,000,000 bushels, and we imported over 9,000,000 bushels from other nations.

Just before the first of the year, the Department of Agriculture announced that due to serious drought the Department of Agriculture had been forced to suspend its wheat and flour export program to all countries except the Philippine Islands. It added that if drought continued appreciably longer, the crop this year would be millions of bushels below that of 1939.

For years we have been taught by the Department of Agriculture to think in terms of wheat surpluses. And yet, at the same time that this announcement was made, it was stated, "There is no burdensome surplus of wheat in the United States at the present time." What is the outcome of all this? More of our foreign markets for American wheat lost to Canada and the Argentine. More millions of bushels of wheat coming into the United States from these countries that should be raised at home.

And yet try to tell Secretary Wallace that his program of restriction is a failure.

Another example. American production of corn in 1939 was nearly 10,000,000 bushels below the 1938 level. Our exports sank over 112,000,000 bushels, a loss of approximately seventy-three and one-half million dollars to the corn farmer in this country. Argentina was the chief gainer, for she has increased her production accordingly.

In 1938 we exported over 7,000,000 more bushels of oats to foreign nations than came into this country. Imports were negligible. In 1939 our production of oats was reduced by over 9 percent. At the same time we imported nearly two and one-half million more bushels of oats than we sent to other nations. It was our exports which became negligible.

Is it any wonder that the President is said to be contemplating a trip through the Grain Belt to bolster up support in an election year?

The farmer raising cattle has not fared much better. In 1939 we imported over 87,000,000 pounds of beef and veal, an increase of approximately 12,000,000 pounds over 1938, while some 665,000,000 head of live cattle were imported, an increase of over 100 percent over 1938 and an all-time record. Most of these came from Mexico, and the best that can be said for them is that they consumed some American corn that might otherwise have gone to waste. But who can deny that this corn might have been sold abroad had it not been for the New Deal policy? Who can deny that the corn might have been eaten by American cattle, had they been raised, as well as by cattle from Mexico?

Thus, the American farmer is today caught between two fires. The Secretary of State, as well as the Secretary of Agriculture, holds the power of life or death over American agriculture.

Here is another example of broken promises and reversal of attitude on the part of new dealers.

In October 1932 President Roosevelt, in a campaign speech in Baltimore, declared:

"I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived."

And yet 126 duties have been reduced on agricultural imports, in many cases to the full limit allowed by law of 50 percent.

In 1930, when much less drastic powers were proposed, Secretary Hull, then a member of the Ways and Means Committee, declared:

"The proposed enlargement and broad expansion of the provisions and functions of the flexible-tariff clause is undoubtedly unconstitutional and is violative of the functions of the American Congress. Not since the Commons wrenched from an English King the power and authority to control taxation has there been a transfer of the taxing power back to the head of a government on a basis so broad and unlimited. \* \* \* As was said on a former occasion, 'This is too much power for a bad man to have or for a good man to want.'"

And Chairman DOUGHTON, of the Ways and Means Committee, who is now bending every effort to secure the renewal of the reciprocal-trade powers of the State Department, declared:

"We have gone a long way too far already in the centralization of power in the Executive head of the Government. \* \* \* And if this bill is enacted into law he will have the power of life and death over industry, of manufacturing enterprises, and complete autocratic power affecting agriculture. My friends, this is too dangerous and alarming to contemplate. With all this power vested in the President of the United States, he becomes a colossus. It is too much power and authority to lodge in any man who ever has been, is now, or ever will be President of the United States. In fact, with all this unrestricted and unlimited power, he would be in a better position to overthrow our form of government and proclaim himself king than was the First Consul of France, the great Napoleon, when he overthrew the French Government and proclaimed himself Emperor."

One can only wonder what Secretary Hull and Representative DOUGHTON would have said in 1930 had the Republicans proposed such a wholesale delegation of power as the administration now asks to have renewed.

We sowed the seeds of what Secretary Hull termed in 1929 "bureaucracy gone mad," and we have reaped the harvest of dwindling agricultural exports and steadily increasing competitive farm imports.

The Republican Party will not attempt to outpromise the New Deal during the campaign. We will not offer tempting panaceas of riches without work or short cuts to utopia. But we can and will offer them the opportunity to work, to reap the fruits of their labor, and to rise through their initiative and ability. This is all that Americans have asked in the past, and this is all that the vast majority of them ask today.

We can and will offer them an administration that will, by drastic economy, ease the burden of taxation which is now retarding recovery by lowering purchasing power, and by preventing higher wages and expansion in industry. It will be an administration that devours as little as possible of their earnings in the name of helping them.

We can and will offer then a government dedicated to an economy of plenty, one which will seek to raise the national income in the only way it can be raised, by making possible the creation of new wealth; one which will seek to aid the underprivileged not by robbing the successful but by providing them with the opportunity to be successful in their own right.

We can and will offer them a government that will release the brakes which have held back recovery, not only oppressive taxation but all unnecessary restrictive regulations, all attempts at dictation and coercion, and the hostility of those who hold public office.

We can and will offer a friendly administration which will seek, not to regulate the lives of its citizens but to free them that they may go forward in any honest endeavor.

We can and will offer an administration that will protect the standard of living which Americans have achieved and will yet achieve by the sweat of their brow from the unfair competition of cheap foreign labor abroad by submitting any and all treaties to ratification by the United States Senate as provided in the Constitution, and by seeing to it that foreign goods are not sold in this country below the American cost of production. We can and will offer them an administration that will encourage the American farmer to win a fair share of the markets of the world.

Under such an administration, my friends, the American people will not need to seek to have prosperity bestowed upon them by the Government. They, like the hardy folk who settled Oklahoma, like previous generations of Americans who have gone before them, will conquer by their labors far more than we today would dare to hope or dream.

### Federal Reclamation Program in the State of Washington Should Include Cut-over Lands

#### EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON, BEFORE THE COMMITTEE ON APPROPRIATIONS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement made by me February 14, 1940, before the Committee on Appropriations:

STATEMENT OF HON. MARTIN F. SMITH, REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. JOHNSON of Oklahoma. I see your point, and I am very sympathetic with your project, and also all reclamation projects in the West, and I did not know what water meant to the West until I visited many of those reclamation projects. It is the lifeblood of the West.

Mr. SMITH of Washington. Out in the West our people all appreciate the value of the assistance which has been rendered by the gentleman from Oklahoma.

As a Representative from the State of Washington whose district does not include a Federal reclamation project, I feel that I can present a detached view as to the importance of more rapid advancement of the Federal reclamation program.

Your committee is doubtless familiar with some phases of the situation that has been precipitated in the Pacific Northwest by the heavy migrations of distressed farm families from the Great Plains and other sections. Despite warnings broadcast by Federal and State officials that there was no irrigated or other productive land available for settlement and no employment, the wave of migrations has continued. Although the peak appears to have been reached in 1937, reports indicate that droughts in the Great Plains in 1939 are again spurring the westward movement.

In a letter to Senator CARL HAYDEN dated March 25, 1939, the Secretary of Agriculture reported that only 6,000 of 21,000 farm families arriving in the Pacific Northwest between 1930 and 1935 had been able to settle on going or subdivided farms. He suggested that "no great percentage of the migrants will be entirely self-supporting in the immediate future." Since 1935 the number of migrant families has exceeded the volume arriving in the first half of the decade. As the limited areas available for settlement were largely taken up by the early arrivals, the latecomers have tried their best to make a living in seasonal agriculture, but have been dependent principally on relief.

The rural sections of western Washington, as well as its cities and towns, have felt the burdens incident to the migrant problem and have looked to the very early completion of such undertakings as the Roza Division of the Yakima project and opening of the first units on the Grand Coulee as a means of providing relief.

There does not appear any other early solution of the difficulty, and when we appeal to the Federal Government for more rapid progress in advancing reclamation construction we are seeking an assured way of lifting the relief burden now resting on the Federal Treasury.

According to tabulations prepared by the National Emergency Council and Office of Government Reports, the Works Progress Administration and its predecessors—the Federal Emergency Relief and Civil Works Administrations—have expended in the State of Washington a total of \$168,115,000 since July 1, 1933. In the last fiscal year the Work Projects Administration, as it is now designated, expended \$35,240,000 in the State.

Concrete information is not available as to what proportion of these expenditures were due to the migrant farm families unable to find land on which to settle and become self-sustaining, but there is no question but that they added materially to the load. The Farm Security Administration, in direct expenditures and in loans principally to newly arrived families, expended more than \$2,000,000 in the fiscal year ending June 30, 1939.

In my district we are interested in expansion of the Federal reclamation program to include the reclamation of cut-over lands. It is felt that the clearing of these areas will offer opportunity for settling many of the families from the Great Plains area.

I hope to see authority given the Bureau of Reclamation to investigate the possibilities of reclaiming the cut-over areas. There are many thousands of acres in western Washington and other sections of the Pacific Northwest that can be made available for settlement at relatively low cost, but the job is too extensive for private initiative.

With the normal increase in our population, plus the migrations that are continuing, we will need all the land planned for development under the current Federal reclamation program and more. In fact, the Government will find it advantageous to expand the water-conservation program in the Great Plains area to lessen the necessity for migrations from the drought sections.

### Report on the Farm Security Administration's Program in the Fifth Congressional District of Kansas

#### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

REPORT BY MR. C. B. BALDWIN, ACTING ADMINISTRATOR OF THE FARM SECURITY ADMINISTRATION

Mr. HOUSTON. Mr. Speaker, permission having been granted, I am inserting a copy of a report made by the Honorable C. B. Baldwin, Acting Administrator of the Farm Security Administration, on that agency's program in the Fifth Congressional District of Kansas.

This report is an encouraging one from the standpoint of the loaning agency and the statement that the Kansas borrowers are making satisfactory progress in the repayment of their loans speaks well for the resourcefulness and business acumen of our people.

The report is as follows:

DEPARTMENT OF AGRICULTURE,  
FARM SECURITY ADMINISTRATION,  
Washington, February 28, 1940.

Hon. JOHN M. HOUSTON,  
House of Representatives.

DEAR Mr. HOUSTON: We have just completed a Nation-wide survey of the progress being made by Farm Security Administration borrowers, and I felt that you might be interested in the figures for the Fifth District in Kansas.

We are proud to report that F. S. A. borrowers not only have increased their net worth and annual income but also are making satisfactory progress in the repayment of their loans.

The survey showed that the 336 standard rehabilitation borrowers in your district had an average net income last year of \$672.31 per family, as compared with \$482.84 in the year before they came to F. S. A. for help. This represents an increase of 39 percent.

Moreover, these families increased their average net worth, over and above all debts, from \$707.46 before they came into the F. S. A. program to \$1,224.79 at the end of the 1939 crop-year, a gain of 73 percent.

In other words, these families not only have added \$189,342 to the wealth of their communities but they also have increased their annual incomes by a total of \$69,348. This expanding purchasing power has, of course, been a considerable benefit to the merchants and other businessmen of the district.

At the same time, the survey showed that the borrowers in your district already have repaid \$69,119 into the Federal Treasury as

installments on loans totaling \$375,131. The typical rehabilitation family in your district has borrowed \$1,024.95 and already has repaid \$188.85. Since much of the money loaned does not fall due for 4 or 5 years, there is every reason to expect that the great bulk of it will be repaid.

We feel that this collection record is particularly significant because, according to normal business standards, our borrowers would certainly not be considered good credit risks. Rehabilitation loans are made only to families which cannot get adequate credit anywhere else, and nearly all of them either had been on relief or were approaching the relief level.

Although the rehabilitation program is intended to meet long-range problems which have been growing steadily worse for more than a generation, it is financed out of relief appropriations; and it takes the place of direct relief in rural areas. It is designed to help needy farm families to become permanently self-supporting, instead of remaining indefinitely dependent on relief.

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods, to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it, few of the families would have been able to make much progress or to repay their loans.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make its first crop. They have averaged \$112.52 per family, or a total of \$41,182 over a 4-year period. Several years of severe drought in Kansas have made the need for grants particularly urgent in this State.

Often it has been necessary to work out an adjustment of the family's old debts before rehabilitation could be successful. Local farm-debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts.

This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether, debt reductions totaling \$238,658 have been negotiated for the farmers in your district. This represents a scale-down of 28.8 percent. As a direct result of these adjustments, \$8,589 in back taxes has been paid to local governmental agencies.

In helping rehabilitation borrowers to plan their farm operations we always urge them to get away from one-crop farming and to raise as much as possible of their food and feed supplies. The progress they are making is indicated by the fact that the borrowers in your district produced \$74,554 worth of goods for home consumption last year, as compared with only \$44,652 worth before they came into the F. S. A. program.

These families canned 50,406 quarts of fruits and vegetables last year, or an average of 138 quarts per family. They also produced 169,140 gallons of milk for home consumption, an average of 462 gallons, and 15,361 tons of forage, an average of 42 tons. This kind of diversified farming has meant a higher standard of living, a better diet, and usually a marked improvement in health.

One of the most common reasons for past failure among the families which come to F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start, we have made every effort to assist them in getting adequate-size farms. Consequently, the borrowers in your district are now operating an average of 201 acres, or an increase of 29.75 acres since they came on the program. This increased acreage has not added materially to the production of commercial crops, however, since virtually everything raised on it is consumed on the farm. It simply means a better diet and a better standard of living for these families.

Another main objective of F. S. A. is to help tenants and sharecroppers get more secure land-tenure arrangements, so they can plan ahead for crop rotations, soil conservation, and other sound farming practices. The survey indicated that 228 tenants in your district have obtained written leases in place of verbal agreements.

In making the survey, our field workers found that there are 242 families in your district which are eligible and in need of rehabilitation loans, but have been unable to get them because of our limited funds.

Aside from the rehabilitation program, the Farm Security Administration's most important job is to make loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable him to purchase family size farms of their own.

While it has been necessary to confine loans to certain counties, because of the limited funds available, we had made 10 such loans in your district, totaling \$96,415, up to the end of the last fiscal year. This year we are expecting to make about 10 Bankhead-Jones loans in your district, totaling approximately \$90,000.

This has been a rather detailed report, but I felt that the information might be useful to you. If you would like to have any further details about our program, I hope you will let me know.

Sincerely,

C. B. BALDWIN,  
Acting Administrator.

## Republican House a National Need

### EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. HALLECK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. JOSEPH W. MARTIN, JR., of Massachusetts, at the annual beefsteak dinner of the Columbia Club at Indianapolis, Ind., on February 19, 1940:

It is a great pleasure to be here with this historic and honored Columbia Club at its dinner. It is doubly a privilege because I am aware of the fine services you have rendered the Republican Party in the past, and of your great importance in the coming Indiana campaign.

There is another reason why this opportunity to attend the Columbia Club banquet is an event of special significance to me. The Hoosier State has a place of paramount importance in the Union as a Commonwealth whose decisions have great political significance. Down through the years it has been a political axiom that the party that carries Indiana in a national election is half way along the road to success.

My own feeling is, the Republican Party is already far along the road to victory. Indiana will have a prominent place in that victory procession next November.

You have heard about the "three empty chairs" at the recent Jackson Day banquet in Washington. That was the hundred-dollar-plate banquet. No common folks like us were there, of course, because we can't afford that much for a single meal, even with a "plateside chat" thrown in. On that occasion a certain distinguished gentleman, who may or may not be a Presidential candidate in the next campaign, had a lot of fun making wisecracks at the expense of the three Republicans invited to that Lucullian feast but who didn't go, one of the three being me.

The famous fisherman to whom I refer had his banquet companions in stitches by declaring that apparently the three absent Republicans didn't want to go to heaven with the Jackson Day dinner bunch. Of course, he was mistaken. As I mentioned recently in Kansas, I should be delighted to get to heaven with any crowd; I think, however, the gentleman was quite correct in his assumption of an impending expiration of his administration. Of course, all ordinary mortals do have to expire before they go to heaven. Apparently the New Deal administration believes that such is to be its early fate. We have no objection, of course, to the New Deal administration hoping that when it expires next January it will be heaven-bound.

I have noticed in looking over your club magazine, the Columbian, for January, that this organization is affiliated with a large number of other clubs of a similar character throughout the United States.

It is clubs of just this sort, carrying on from year to year, while State and National administrations come and go, that are a great political power in this Nation. They exercise a very helpful and important influence upon our political and social life.

We need no mystic seer to gaze into a crystal ball to foretell that the Republican Party is well on its way in, and that the New Deal is well on its way out. The indications all point to that result. Seven years of contradictions, of broken promises, of inconsistency, of futile economic experimentation, of waste, extravagance, and corruption, have had their effect on the people of this Nation. The voters do not want another 4 years of the sort of administration that has torn this country from end to end with sectional and class dissensions and hatreds, that has doubled the Federal debt, that has had an unbroken chain of annual deficits, that has continually increased taxes, and that has no plan by which to rescue the Nation from the depression, except the old, futile, discredited formula of tax and squander, spend and elect.

America is sick and tired of being told that white is black and that black is white, only to find out later they are both in the red.

You have been hearing a great deal in the last few months about Government debts being "investments"; about Government losses being gains; and when facts and figures refute the "befuddled" and befuddled Hyde Park mathematician, you are then told that the public debt has not increased, because it has now been hooked up by White House calculators with the private debt. As some newspaper recently said—

"Our governmental cash position is strong, due to a new system of loose-leaf, loose-thinking, and loose-figuring bookkeeping, which is just a lot of good clean fun until we change auditors," and have to pay the bills.

But now let's look at this private debt, which the White House tries to hook up with the public debt in an attempt to prove that

the New Deal administration has been one long march toward thrift, economy, and prosperity.

I could give you many quotations from speeches made by a certain optimistic gentleman back in 1932 when he was a candidate for the Presidency. He then had some very pointed and positive things to say about checking a growing Federal debt, reducing deficits, lowering taxes, and achieving economy in government. But what he said in 1932 when he was a candidate apparently ceased to mean anything after he was elected. I shall not bore you by repeating promises and platitudes which apparently were merely a part of the stage props for campaign performances only to be discarded and forgotten as soon as the election had been won.

After facts and figures had been brought out to demolish the strange calculations evolved at Hyde Park, the administration came back with a long explanation that the private debt was meant to be included in these funny figures in order to make the result appear that the debt had not increased since the New Deal went into power in 1933.

Of course, our private debt is lower than it was in 1932 because investment is stagnant. It is because businessmen, frightened by the hostility and the punitive policies of the administration, have been afraid to venture into the field of industry and commerce. It is because businessmen have been browbeaten and bullied by political bureaucrats into ceasing or curtailing operations and because high taxes are eating up the purchasing power of the people.

In the years before 1938 there were a few of us in the Congress who carried on in the hope and the faith that the country would return to a common-sense basis of government; that the New Deal experimenters and misty-eyed theorists would finally fade from the scene; and that the Republican Party, as usual, would come back into power and have to pick up the broken pieces of the Federal finances, repair the damage that had been done, and set the Nation back on a sound foundation once more.

Let me say to you tonight that the faith of that little band of Republicans in the Congress was justified in 1938 and will be fully confirmed next November.

We have been filled with courage and hope, we Republicans, since the elections in 1938, and it is my opinion, just between you and me, that the result of those elections is what started the new dealers to thinking about going to Heaven.

In 1938 we almost doubled the Republican membership in the House of Representatives. Having done that, we have been able to check somewhat the Nation's speed down the road to ruin with the New Deal. In many instances we have prevented the administration from getting legislation further to centralize the Government in the hands of the executive department in Washington.

The Republican Party can claim much credit for this. It required a Republican balance of power to tip the scales in favor of good government on many of the measures that came before the Congress.

In the last Congress, my very close personal friend the gentleman from Indiana, CHARLIE HALLECK, was the lone Republican from Indiana. His fine judgment and forceful oratory, combined with his courage, made him outstanding in our little army. In 1938 you sent to join him ROBERT A. GRANT, of South Bend; GEORGE W. GILLIE, of Fort Wayne; FOREST A. HARNES, of Kokomo; NOBLE JOHNSON, of Terre Haute; GERALD LANDIS, of Linton; and RAYMOND SPRINGER, of Connersville. This was as fine a delegation as represented any State, and all contributed in the writing of a record which has given the Republican Party and the country a new hope. Upon their record these men should be reelected, and I trust they will be.

I come tonight, my good friends of the Columbia Club, particularly to urge your cooperation in the election of a Republican House.

Without minimizing in the least the need for a Republican Chief Executive, I do not hesitate to say to you that I think it is fully as important to control the House of Representatives as to elect a President. It is in the House of Representatives the Republican record will be written. There will be unfolded the political philosophy which will bring back sanity to Government; which will give private enterprise a chance to function again; which will bring order into our financial affairs; which will give to the American people a new confidence that will result in a resumption of our normal activities; which will bring jobs to our 9,000,000 of unemployed and an opportunity to the boys and girls who, at present, after leaving school face a bewildered world which offers them no future.

As I said a while ago, in the elections of 1938, by a gain of 80 additional Republican Members, we restored to this country the two-party system and gave it the benefit of an effective opposition.

I believe it is universally admitted by men and women of all shades of political opinion that these Republican gains of 1938 have been a genuine benefit to this Nation. As leader of this minority group, I am grateful for Indiana's contribution.

The Republican minority in the House has stuck to the policy of constructive action. We have not hesitated to favor any administration proposal we believed right, and we have not hesitated to oppose most vigorously proposals which we were convinced would harm rather than help the country.

We have constantly kept in mind the millions of unemployed. We fully realize that if we are to preserve real Americanism, if we are to prevent the seeds of communism and other evil doctrines from sprouting and flourishing among our people, we must put our unemployed back to work at decent American wages; we must give our youth their fair chance; we must find a practical way in which to relieve the farmers of their distress; we must restore unity and harmony between different sections of our country and different classes of our people.

We have not been content with simply passing judgment on administration proposals. We have outlined and vigorously fought for a definite set of principles which we believe will restore real Americanism and real prosperity.

This program set forth May 22, 1939, answers completely the chorus of the administration propagandists that the Republican Party has no definite objectives. I want now, with your indulgence, to read this 12-point plan, and to ask you if it is not a program of principles which deserves the support of the American people:

1. Keep the United States out of war.
2. Move immediately to curb unnecessary, wasteful, and reckless spending.
3. Repeal the repressive tax on undistributed corporate earnings, which has proved so harassing and dangerous to business, large and small.
4. Revise the remainder of the Federal-tax structure to eliminate or modify provisions retarding business recovery.
5. Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.
6. Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer, and the duties of both toward the public in order to end present paralyzing discord.
7. Define specifically the area of governmental competition with private enterprise so that business may be able to create jobs with some certainty as to the future.
8. Restore American markets to the American farmer and wage earner, and develop new markets for agricultural products.
9. Adopt immediate legislation to rehabilitate the railroads to make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.
10. Create a special committee of Congress to inquire into the effect of the reciprocal trade agreement policy on American industry and agriculture.
11. Clarify Federal rules and regulations so industry and business may know what to expect.
12. Reject all experimental legislation not clearly helpful in promoting recovery or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.

Some of these objectives have already been achieved. As a talented young Indiana writer, Charles Baird, recently wrote in one of his newspaper columns, the Republican strategists are counting heavily on Indiana's 14 electoral votes in the Presidential election next fall. As he said, we are predicting that Hoosier voters will elect Republicans to the State house and to the United States Senate, and that once again the State of Indiana will have a solid Republican delegation in the House of Representatives.

I think it is worth while to point out that in 1938 when you revolted against the New Deal and retired six Democratic Congressmen, you also elected a secretary of state and a majority of State representatives on the Republican ticket, and restored scores of court houses and city halls to G. O. P. control.

The genuinely remarkable nature of the 1938 Republican gains becomes most apparent when we analyze the election by counties. If it is true that the party strength can best be measured by the number of court houses under its control, the outlook is, indeed, bright for us.

There have been some remarkable changes in the voting results in Indiana since 1932 and 1936. On the basis of the State-wide congressional vote in the 1936 election, the Republican candidates carried only 27 of Indiana's 92 counties—about 30 percent.

In 1938, however, the Republican candidates had majorities in 59 counties. This represented a gain of 32 counties, and gave the Republican Party control of 64 percent of the counties in this State.

The same spectacular gains are revealed by a study of the mayoralty vote in the various Indiana cities.

The Republican tide which gave us our great national victory in 1938 still is flowing. Our recent special elections, as well as widely scattered local elections, show that this Republican tide will continue to rise throughout the coming campaign.

All Republicans, antinew dealers, and others who believe a change is vital to the preservation of our constitutional Republic can face the 1940 campaign with intelligent optimism.

As I have said, in 1938 we increased our representation in the House from 89 to 169, and gained 8 seats in the Senate.

We elected Governors in 18 out of 27 contests, recapturing such important States as Massachusetts, Connecticut, Rhode Island, Pennsylvania, Ohio, Michigan, Wisconsin, Iowa, Kansas, Minnesota, Colorado, Idaho, South Dakota, and Oregon.

In New York State, in the race for Governor, we polled more than 49 percent of the total vote officially counted and reported.

While electing eight new Senators, we retained three Republican seats we already had in the Senate. We missed two more seats with 49.8 percent of the total vote in both Indiana and Iowa; and a third, with 48.4 percent of the total vote, in Illinois.

In our special elections since 1938 we have not lost a single Republican district.

In 1938 the popular vote for Congress in 38 States, not including the solid South, was—Republican, 16,970,928; Democratic, 16,500,612.

Compare these figures with the 1936 results in the same congressional contests. In that year the Republicans got 16,529,047 and the Democrats 21,312,490.

In other words, we turned a Democratic majority of 4,783,000 into a Republican majority of 470,000 in 2 years. That tide, as I have said, still is moving our way.

We can win in 1940, and we will win, if there is a real intention to do so on the part of those who are in the front lines of the county and congressional campaigns in the States.

The prospects for a Republican House are bright. We need 50 more seats to carry control. When it is remembered that 43 of our candidates who were defeated in 1938 polled more than 47 percent of the total vote, and that 22 others polled between 45 to 47 percent of the total vote, you can realize that here are 65 districts to be carried with an increase of only 5 percent in the Republican vote.

On top of this an increase of 10 percent in the Republican congressional vote would give us 29 additional seats, over and above the 65 which are within the 5-percent group.

This is the outlook. The important figure to keep in mind is that an increase of 10 percent in the Republican congressional vote over 1938 will give us 94 additional seats in the House.

From these figures you can readily see how small an upward surge would be needed to give the country a real working majority of Republicans in the House.

If we will get out and work from now until the polls close; if we will put the best we have into that work; if we will realize that we are working to save constitutional government, to save ourselves, and those who come after us, from a ruinous burden of Federal debt, from inflation or repudiation; if we realize that we are fighting to preserve Lincoln's "government of the people, by the people, and for the people"; if we go forth determined to take the iron heel of a bloated political bureaucracy off the neck of this Nation, we will win.

And so, then, let me give you this closing word. Let us set our eyes on the goal of next November. Inspired by the righteousness of our cause, nerved by the necessity of saving this Nation from ruin, encouraged by the gains we made in '38, let us put everything we have on the ball and turn in next November a smashing victory at the polls. Let us take high resolve to put this country back on firm foundations, to restore prosperity to this constitutional Republic. Let's turn out of power and out of office those who would use the plight of their Nation for purposes of political expediency and who are willing to fatten on the substance of the people.

On to November and victory!

### War-Propaganda Resolution

#### EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

Mr. THILL. Mr. Speaker, I have today introduced in the House of Representatives a resolution to appoint a special committee to investigate war propaganda in the United States. The resolution proposes an investigation of, first, the extent, character, and objects of war-propaganda activities in the United States; second, the dissemination, written or oral, from foreign countries or from within this country, of propaganda or news items, radio broadcasts, motion pictures, or other media which is calculated or intended to draw the United States into a foreign war or to create internal strife; third, any and all activities of belligerents, individuals, groups, organizations, or corporations which have for their purpose, direct or indirect, to involve this Nation in war; and, fourth, all other questions in relation to war propaganda that would aid Congress in any necessary remedial legislation to protect and preserve the neutrality of the United States and to keep this Nation at peace.

The proposed committee is to consist of seven members, who will be appointed by the Speaker of the House of Representatives. A report of the committee, representing the result of study and investigation, is to be submitted to Congress before January 3, 1941.

The seriousness of the situation resulting from the dissemination of war propaganda in the United States cannot be overemphasized. Much propaganda material appears in the newspapers; it is heard over the radio; it is mailed to the office and the home; it comes to the desks of Members of Congress every day. How much of this information is false cannot be gaged by the average person. Needless to say, much of this propaganda is a skillful misrepresentation of facts; some of it has an element of deceit in it; some of it is a deliberate statement of untruth, and most of it can be characterized as a vicious and vile fraud upon the American people. We, as Members of Congress, should take immediate steps to eradicate this evil.

The minds of American citizens are being warped by propaganda emanating from foreign sources. There is a sly invitation to enter into war, hidden beneath every sympathetic call to give belligerent nations assistance in one form or another.

No one knows how many agents of belligerents are posing as lecturers and journalists for the purpose of shaping American foreign policy. Russia alone has spent millions of dollars in its campaign to spread its doctrine of communism in the United States, thereby infusing false doctrines, creating distrust, and producing a spirit of unrest in this country.

Under an act of Congress approved June 8, 1938, Public Law No. 583, Seventy-fifth Congress, third session, all agents of foreign governments, companies, or individuals are required to register with the State Department and give full information as to their activities and remuneration. As of July 12, 1939, 351 such agents had registered. Tremendous damage to our desire for peace can be done by such paid propagandists. Malicious propaganda, like a deadly poison, slowly infuses into the blood stream of our national life. It warps our judgment and paralyzes our thinking. If American thought ever needed an antitoxin, it needs it now. Americans in general are unaware of the insidious nature of such propaganda and the deleterious effect it has upon them. Only in the future will all Americans realize how they are again being drawn into an international game of war which costs us tremendous amounts in lives, dollars, and human suffering.

Even now our determined spirit of neutrality is being scoffed at and questioned by certain Europeans. Our sympathies are appealed to. Our great and rich Nation is applauded by those who a few years ago called us Uncle Shylock. If we are ever to act against such insidious propaganda, that time is here today. False and corrupt information must be brought to light and be fought with truth. We need an exposé of deceptive propaganda, which perpetrates the lowest type of fraud upon an unsuspecting and peace-loving people.

The American citizens suffered severely during the last war, and the sick and ailing veterans show us stronger than words, that we are still suffering from the effects of that war. One of the chief factors that led us into the World War was propaganda. Let us avoid a repetition of that mistake. Today the American people, through the medium of the radio, stand as spectators before the horrible fighting waged across the waters. As Americans, we are asked to contribute to this hateful spectacle in order to save a principle. What principle? "To make the world safe for democracy?" No stirring slogan has yet been devised which appeals to Americans sufficiently to again get them aroused sufficiently so they will take up arms and go to war. But the propagandists will try by fair means or foul to induce this Nation to wage war for some high-sounding cause. This is the very thing American citizens must guard against.

War propaganda aims to have organizations and individuals condone the necessity and desirability of war on the part of one belligerent. We Americans must vigorously counteract this propaganda. We want no part of war and its hateful consequences. We must fight with all our hearts to remain neutral and at peace.

### The American Spirit—Black-out or Revival?

#### EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon.

STYLES BRIDGES, of New Hampshire, at a banquet under the auspices of the Wyoming Republican State Central Committee, in Casper, Wyo., Saturday evening, February 17, 1940:

Once upon a time—I have it from no less an authority than the President that this is how every good story should begin—once upon a time there were a people who had left the Old World or were the descendants of those who had crossed the seas to build a new nation in a New World. To many today they must seem a strange people, for they had the courage to brave unknown dangers in the wilderness. They had faith in themselves to conquer whatever difficulties they might meet through their initiative, their energy, their hard work, and their thrift. They asked only the chance to work and to rise as high as they were able through their own abilities and labor so long as they did not interfere with the same right and opportunities of others. They fought a revolution and established a government of their own to assure them this right and opportunity. But from bitter experience they were afraid of too much government. And so, instead of permitting the government to limit their rights and powers, it was they who limited the powers and functions of the government. To assure that no man or group of men in public office should become too powerful they established a system of checks and balances between the three great branches of the Government. The powers which they did not bestow upon the Chief Executive or the Supreme Court they reserved for themselves to exercise through their representatives in Congress—among these the power to write legislation, to levy taxes, to control their currency, and to negotiate treaties with other nations. They had faith in themselves to go forward under a free government and a free economy, to create abundance where there had been scarcity, and to achieve a higher standard of living for all. What they demanded of government was to make it possible for them to go forward by their own abilities.

So successful were these people that within 150 years they had built the greatest nation on earth and had achieved the highest standard of living in the world. They now have a telephone for every 7 persons in the country, an automobile for every 4, and a radio for every 4.9 persons. Great Britain ranks second with a telephone for every 17 people and an automobile for every 18.

All over Europe tonight, cities are blacked out. We in America do not fear an air raid, we may turn on electric lights at will without fear that it will attract a foreign invader. And yet we cannot sit back complacently and thank a merciful Providence that we are not as other men. For the last 7 years have seen the attempted blackout of much that America and her people have symbolized in the past. For 7 years they have been encouraged to depend upon the Government instead of themselves. Instead of being encouraged to save they have been told that debt is the way to prosperity. Instead of encouraging them to work more and produce more, the Government has subsidized idleness and forced them to create less.

Nor have our civil liberties failed to fall under the shadow of New Deal bureaucracy. Free speech has been blacked out for employers, by the National Labor Relations Board. The right of collective bargaining for many workers and the right to a fair trial, under accepted rules of evidence and procedure has been blacked out by most of the New Deal agencies. The right of appeal to the courts has in many cases been denied.

Instead of a limited government of laws responsible only to the people they have had an irresponsible Government by decree from the President and countless officeholders who were never elected at the polls. Everyone lives in apprehension and uncertainty, because these political bureaucrats hold the power of life or death over our farms, our factories, and our industries. They may devalue our currency, make rulings with the force of law, and conclude trade treaties with other nations whenever it suits their fancy. Our people have been restricted, harassed, and coerced by officials, many of whom are hostile to entire classes of our people.

For 7 years we have lived in an atmosphere of bitterness and dissension. The have-nots have been pitted against those who have, class has been arrayed against class, one section of our country has been urged to go into competition with other sections.

In reply to the President when he suggested that the South declare its economic independence from the rest of the Nation, the Charleston News and Courier printed a significant editorial. Now, there is no State in the Union more loyal to the Democratic Party than South Carolina. Yet this stanchly Democratic paper voices the feeling of Americans all over the country, regardless of party. I quote:

"The South can build factories. Why does it not? The people are afraid of his government. They are afraid of him, afraid of his laws, in terror of his new, his strange, his multifarious forms of taxation, of the competition of his government with concerns in which they might invest. They see Government building houses and renting them. Why should they put their money into houses and lots? They see Government developing electric power. They steer away from purchase of bonds and shares in private corporations selling electric current.

"They are afraid to take a mortgage on a farm, for they are not sure how long Government will permit it to be tiled. For the same reason they hesitate to buy lands. They cannot lend money at 6 percent, for Government, as a lender, underbids them. They behold Government borrowing billions and practically compelling many of the banks to lend it. They interpret him as an advocate of currency inflation, and that means debt repudiation.

"Before their eyes is the evidence every day that if they buy shares in any industry, they who have sweated, sacrificed, and

saved, Government may destroy its values. Yes, Mr. President; thousands of our people have thousands of dollars lying idle in banks. There was never before a plethora of the stuff. Our people, those who have money, are not only without faith in government but are rapidly coming to believe that government is their enemy, and that they prefer to have their properties in hock than under the club your Government swings over them."

There, eloquently but simply stated, is the result of 7 years of New Deal attempts to spend us, reform us, and regulate us into the more abundant life; industries blacked-out because of punitive taxation for reform instead of revenue; opportunities for investment blacked-out because of the competition of Government spending and lending; the values of property, savings, and investment all under the threat of a black-out if Government spending leads to bankruptcy and inflation, or even if the President decides to use his powers to devalue our currency further and to print more money, thus bringing about inflation by Executive decree.

All this in itself would be enough to stifle the energies of our people, to prevent a revival of our economy. But add to it the feeling of entire groups of our people that those who hold office are hostile to them, that the administration in power is their enemy, and you have blacked out one of the first essentials of a democracy—the trust of the people in their government. For no people are free to go forward without confidence in those who hold public office. That is one of the purposes of representative government, whereby the people choose their officials at the polls.

There has been a black-out of savings and profits that might have gone into expanding business and absorbing the unemployed, caused by the New Deal taxes levied to finance its extravagance. New Dealers would have you think that this has gone to relieve human suffering. But in January 1933 the Federal Government had 563,000 employees. For the fiscal year ending that June it collected a little over \$2,000,000,000 in revenue. In 1940 there are 933,000 Federal Government employees. The Government is now collecting well over five billions a year in revenue. Approximately \$800,000,000 goes to support the alphabetical boards, bureaus, agencies, and commissions which the New Deal has created. They also account for some 100,000 of the 370,000 additional Federal employees. But the regular departments of the Government have also purged themselves—including the White House. In 1933, when President Roosevelt took office, White House costs were \$369,000. For the fiscal year 1941 the President requested over three and a half million—an increase of nearly 1,000 percent. The President, in making out his Budget, cut the estimates for farm and relief appropriations. But he asked for an increase of over \$600,000 in his own department over this year. This may not seem like much, but the increases in White House expenses each year since Mr. Roosevelt has been in office over the cost in 1933 add up to nearly five million. Such an amount is, of course, lost in the shuffle of the billions that the New Deal has spent. But five million would keep 5,000 families on relief at \$1,000 a year. Moreover, despite the cuts he made in the 1941 Budget, President Roosevelt asked for between fourteen and fifteen hundred new jobs in Washington.

When the Republican Party goes into office, it will begin to economize by starting cutting at the top. A Republican administration will black-out some of the soft jobs held by political bureaucrats at your expense, with money paid in hidden taxes by the man who is unemployed, worker and the farmer, as well as from the so-called economic royalists.

There has been a black-out of the right of the businessman to run his business as he sees fit, provided that he does not interfere with the rights of others, a black-out of the right of the farmer to run his farm as he thinks best.

The New Deal has attempted to black-out even the most elementary and obvious rules of economics. It has tried to spend its way to recovery; to achieve the more abundant life by producing less; to raise the national income by redistributing it instead of adding to it; to regulate the economic lives of 130,000,000 people from Washington. As a result, it has nearly succeeded in blacking out our system of free economy.

Such are the powers of the bureaucracy to dictate at home. However, its sway extends no less over our foreign trade. In 1934, the reciprocal trade treaty program was approved as a part of an amendment to the Tariff Act of 1930. It was inaugurated, the law reads, "for the purpose of expanding foreign markets for the products of the United States, \* \* \* of assisting in \* \* \* restoring the American standard of living, in overcoming domestic unemployment and the present economic depression, in increasing the purchasing power of the American public \* \* \*." After 6 years, the reciprocal-trade program is subject to renewal once more; and an honest evaluation of its results must conclude that, far from accomplishing all that was promised for it, the treaties have cut down our markets, both at home and abroad, thus reducing our purchasing power and prolonging unemployment and depression.

These noble purposes of the program were to be achieved "by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production." So far so good. But here is the catch: "so that foreign markets will be made available \* \* \* by affording corresponding market opportunities for foreign products in the United States." Here is the theory that we cannot expect to export unless we are willing to import an equal amount. It proposes, therefore, to open the American markets deliberately to foreign nations, on the theory that we will thereby enable other countries to buy more from us and thus promote world trade. It is all very beautiful and idealistic in theory. But it presumes

that we will get back, in foreign purchases in this country, the money that we spend on their commodities. It completely ignores the fact that the United States has the highest standards of living in the world, her prices are higher, and that foreign nations, having taken our money, will buy elsewhere if they can get the same thing more cheaply. The United States is unexcelled in industrial development. Therefore other nations are willing to pay a higher price for industrial products in many cases the best in the world. They can buy agricultural products elsewhere. On the other hand, many countries have little but farm products to export. Therefore, if we are to adopt a policy of importing as much from these countries as we export, the increase is bound to come in agricultural imports. At the same time, by restricting production at home, as we have done under the various New Deal agricultural programs, we cut off our opportunities for the exportation of agricultural products and encourage foreign production. After other nations have seized these formerly American markets, it is difficult indeed to recapture them.

These facts are revealed by a comparison of our agricultural export and import figures in 1938 and 1939. In 1938, our agricultural exports were over eight hundred and twenty-seven and one-half million dollars, and were over 27 percent of our total exports. In 1939, they fell to six hundred and fifty-five and one-half million, and constituted only 21 percent of our total exports. This was a drop of one hundred and seventy-two million in a year, or a decrease of nearly 21 percent in agricultural exports. At the same time, agricultural imports increased from nine hundred and fifty-five and one-half million in 1938 to be nearly one billion, one hundred and eighteen million in 1939, an increase of over one hundred and fifty-five million and a quarter, or more than 16 percent. Although agricultural products constituted less than one-quarter of our exports, they were nearly half of our imports. Thus, the farmer has received the worst of these so-called reciprocal-trade bargains, particularly in the West.

You in Wyoming raise cattle. In the treaty with Canada the duty on cattle was reduced. In 1939, 754,000 head of cattle were imported into this country—an increase of 330,000, or nearly 78 percent, over 1938. In 1939 the amount of hides and skins imported jumped to almost two hundred and twenty-three and one-half million pounds—an increase of well over 200,000 pounds, or nearly 172 percent, over the year before. In 1939 we imported nearly 151,000,000 pounds of meat products—an increase over 1938 of more than two and one-half million pounds.

You in Wyoming raise sheep. The duty on wool was reduced in the treaty with England, although two-thirds of our imports of wool come in duty-free. Last year we brought into the country nearly 246,000,000 pounds of wool, an increase of more than 138 percent over 1938.

An example of the one-sided philanthropy with which these trade agreements are negotiated is furnished by the treaty with Great Britain which became effective January 9, 1939. We reduced 444 rates. The United Kingdom reduced 156. We made a reduction of 50 percent—the limit allowed by law—on 121 rates. They reduced 9. We made a reduction of between 40 and 49 percent on 68 rates. They reduced 6. We made a reduction of between 30 and 39 percent on 92 rates. They reduced 15. And so on down the line. The result? In the first 5 months alone after the agreement went into effect our imports from Britain had increased \$17,000,000, while our exports to Britain had dropped by thirty-two million. Since then increased armaments and the outbreak of war have entered into the picture.

Call such a policy a Good Samaritan program if you will, or call it a sucker program, whichever you like, but do not call it reciprocity.

Such a policy cannot be trusted to protect the American standard of living. It is diametrically opposed to all attempts to raise wages. The Democratic New York Times, despite its support of the trade treaties, actually recognized the truth of this when it declared editorially:

"A law that attempts to fix minimum wages even in the healthy industries, to cover even relatively skilled and organized workers by fiat (law) on a broad scale, logically requires a regulation of imports as the next step to keep it from breaking down."

The same applies equally to agricultural prices. If we are to protect the standard of living of American farmers and workers, we must protect the way in which they earn their daily bread from the competition of cheap foreign products sold in this country below the cost of American production. If the farmer is to be given an opportunity to compete with those of foreign lands, restrictions which prevent his producing and exporting for foreign consumption must be removed.

If the reciprocal-trade program is to be continued, our first consideration is the protection of the American farmer and worker, and not a policy of economic internationalism aimed at world free trade. We cannot assure the American people this protection if we are to continue to make concessions to all the world in each treaty while receiving concessions from only one, which is what we are now doing under the most-favored-nation clause. Adequate hearings before the negotiation of treaties and the right of appeal at all times must be assured by law. Hearings are now entirely at the discretion of the President and the State Department, and the right of the citizen to appeal if he has been injured was abolished altogether. And, finally, the people should have the opportunity to approve these treaties through their representatives in Congress, who are charged with the responsibility of negotiating treaties by the Constitution.

The Republican Party stands for the release rather than the restriction of the initiative, the energies, and the abilities of the American people. Through their toil and their talents, the American people have built the greatest nation on earth. Through them they will not fail to achieve even higher attainments in the future.

The Republican Party stands for the reestablishment of representative government; government by cooperation rather than by coercion and repression. We will restrict not the rights of the people but the powers of political bureaucrats over the rights of our citizens. Freedom of speech and press will not be denied to any individual. Those who exercise these inalienable rights will not be reviled, smeared, and accused of base motives by those who hold public office merely because they dare to criticize the administration. We stand for a government responsible only to the people rather than by arbitrary regulation of irresponsible bureaucrats who never stood for election, and we propose to reorganize Government agencies to establish rules of evidence and procedure comparable to those of the courts, in order that the citizens may be assured of justice and a fair trial. We pledge ourselves to return those powers which have been surrendered or delegated away, such as the control over our currency, to the people through their representatives in Congress.

The Republican Party pledges itself to the revival of our system of free economy through the removal of every obstacle to recovery. When Harry Hopkins became Secretary of Commerce he had a series of cards printed and distributed with words, "Does it help recovery?" But somehow this slogan aroused the anger of sensitive new dealers, who regarded it as a personal insult and who saw to it that the cards were gradually removed. No one has heard anything about them for some time. But we Republicans will not need to have such cards before our eyes to serve as a reminder. We propose to gage all legislation, both present and future, by this test of recovery. By doing away with Federal extravagance we will reduce the burden of taxation which is crushing the backs of all our people. We will use the Wagner Act, the Wages and Hours Act, and the Securities and Exchange Commission for the purposes for which they were intended and not for the purpose of regulating all hours and wages, of coercing employer and employee alike into our own pet social and economic patterns, and controlling all investment. We will encourage an economy of plenty for industry and agriculture alike for the present economy of enforced scarcity, knowing that there is no other way to achieve a more abundant life.

In short, the Republican Party will assure the people of an administration whose purpose is to serve them rather than to regulate their lives, an administration to which they can look with confidence as their friend. There will be no blitzkriegs against any group of our people or their form of government, no black-outs of the way in which they earn their daily bread.

Never before has there been a difference of fundamental philosophy between the two major political parties in the United States. Never before have they differed on the underlying principles of a free government and a free economy. Never before has one political party been able to claim that it was the champion of the American way of life. And yet that is the issue today. That will be the issue when the American people go to the polls this fall.

Let us humbly dedicate ourselves to this great cause, and united in the spirit of a crusade, achieve the victory not merely of a political party but of the American people and the American way of life.

## Omnibus Transportation Bill

### EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

LETTER FROM THE CHAMBER OF COMMERCE OF FALL RIVER, MASS.

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter written by the Chamber of Commerce of Fall River, Mass., to the Senators and Representatives of Massachusetts, protesting against the Wheeler-Lea transportation bill.

The letter is as follows:

CHAMBER OF COMMERCE,  
Fall River, Mass., February 21, 1940.

HON. JOSEPH W. MARTIN, JR.,  
Washington, D. C.

DEAR CONGRESSMAN: Believing that Senate bill 2009, known as the Wheeler-Lea omnibus transportation bill, if passed in its present form, will probably result in materially higher transportation costs via the water routes, the curtailment or possible abandonment of these water routes, which are available to us and to which we are

entitled as a port city; and would further probably result in increased consumer costs on such necessary commodities as coal, fuel oil, gasoline, other petroleum products, lumber, and general cargo, the directors of the Fall River Chamber of Commerce desire to be recorded in the CONGRESSIONAL RECORD as opposed to this measure.

We urge the use of your influence with the conference committee, now considering this bill, to postpone any action for at least 30 days, to permit producers, shippers, the interested public, and Congress itself to study the bill's far-reaching effects.

Yours truly,

FRANK W. DUNHAM, *Manager.*

### The Victory March of '40

### EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, at the Republican rally in Chicago, Ill., on Tuesday, February 20, 1940:

No one can come to a Republican meeting in Illinois without a deep appreciation of the part your great State had in the founding and development of our real American party. You not only gave us our immortal leader, Abraham Lincoln, but through the years you have rallied loyal and aggressive support for the steadfast Americanism of Republican policies.

Tonight we assemble to inaugurate a new campaign—a campaign fully as important to our country as the one led by Lincoln.

Lincoln saved the Union and dedicated the country to free labor and free opportunity. In 1940 the Republicans will save the country from financial bankruptcy, chaos, and despair.

#### NEW DEAL FAILURES

We find today 9,000,000 unemployed men and women—4,000,000 of our young people between the ages of 18 and 24, who never have had a regular job; the national debt fast approaching the limit of \$45,000,000,000 set by law; taxes higher than they have been since the World War; and, worst of all, no one has any confidence our situation will improve so long as present national policies prevail.

These are the "accomplishments" of 7 years of New Deal spending and reckless experimenting. No party with such a record can go before the American people and expect to get a mandate to continue. The American people are aroused for the safety of their form of government. They will not be fooled again.

These are the reasons we can confidently expect this year the election of a Republican President and a Republican House in Washington, and I am sure Illinois will contribute magnificently toward these historic achievements.

#### URGES REPUBLICAN HOUSE

May I plead especially tonight for the election of a Republican Congress. While I do not minimize the importance of a Republican in the White House, I say it is fully as important that we have a Republican House of Representatives. Elect a Republican House and this Nation will at once surge forward with new confidence and security.

In 1936 you elected six Republican Representatives; the distinguished and able LEO ALLEN, who is toastmaster of this fine party and a member of the powerful Rules Committee of the House; EVERETT DIRKSEN, an aggressive, eloquent, and brilliant member of the Appropriations Committee; LES ARENDS, who ranks high on the important Military Affairs Committee; RALPH CHURCH, who is second on the powerful Naval Affairs Committee; CHAUNCEY REED, who is an influential member of the Judiciary Committee; and NOAH MASON, who lately has performed a great patriotic service as a member of the Dies committee investigating un-American activities.

In the 1938 elections you increased your Republican delegation to 10, adding 3 men and 1 woman. All have won high rank and prestige in these 2 busy years. JESSIE SUMNER has had a great work to do on the Banking and Currency Committee, which handles many pressing monetary issues; ANTON JOHNSON is a hard-working and very effective member of the Committee on Agriculture; ROBERT B. CHIPERFIELD is on the highly important Foreign Affairs Committee; and WILLIAM H. WHEAT has made a fine impression upon his colleagues through his excellent judgment and keen mind and is headed for an important and responsible assignment.

This delegation is splendidly situated and is well equipped to represent the interests of Illinois in the new order of common-sense government which will be in evidence after January 1941.

I urge you to keep all of these districts Republican, and I am sure Illinois will make a substantial contribution to the additional 50 seats which we need to insure a Republican House.

#### RECALLS 1938 GAINS

I need not remind you that in the 1938 congressional elections the Republican Party once more became the majority party in the 38 States outside of the deep South.

In that great landslide we elected Republican Governors in 18 out of 27 contests.

In total popular vote for Congress, we beat the opposition by almost 500,000, after wiping out a Democratic majority of 5,000,000 in 1936.

We turned out bungling and extravagant New Deal administrations in such important States as Massachusetts, Connecticut, Rhode Island, Pennsylvania, Ohio, Michigan, Wisconsin, Iowa, Kansas, Minnesota, Colorado, Idaho, South Dakota, and Oregon.

The mere roll call of these States recaptured in 1938 gives you the measure of the tidal wave of Republicanism which today is sweeping over this country.

In the 1938 congressional vote we carried 1,123 counties in this vast two-party area, as against only 885 counties carried by the Democrats.

Thus, Republican workers already are in actual majority control of 3 out of every 5 counties in the 38 States outside of the deep South. And you people here in Illinois know how even this sweeping tide of Republicanism was augmented in your own local and judicial elections during 1939.

But there is an obscure fact of even greater significance in the 1938 election returns—the fact that 43 Republican seats in the House were lost by a margin of less than 3 percent of the total vote, and that 22 other congressional districts were lost by a margin of 5 percent or less.

This means that if we had put in only a little more effort to increase the total Republican vote by 5 percent, we would have gained 65 more congressional seats 2 years ago.

Does anybody in touch with the thought of America today question that we will carry all these districts next November?

Since the 1938 elections we have had two more New Deal Budgets, and two more stupendous deficits. We have had more administrative bungling, more official temporizing with destructive communism, and with other groups who oppose the whole American scheme of life and government.

#### ENDED RUBBER-STAMP CONGRESS

America took new hope, and business registered a strong upward surge of confidence when the full sweep of the Republican landslide was realized in November 1938.

That election ended the New Deal's irresponsible scheme of rubber-stamp legislation. A vigorous and united opposition in Congress since has demanded that every piece of legislation be examined carefully. Since January 3, 1939, there has been no more "must" legislation from the White House.

And a new spirit of prudence was manifest almost immediately in the enactment of spending bills. We were not strong enough to eliminate all waste, extravagance, and reckless experiment; but we were strong enough to head off many new follies. And after the 1940 returns are in, we will be strong enough to command a dollar's worth of honest public service for every dollar of Federal expenditure.

We will be able to root out waste, favoritism, and disgraceful political racketeering in Federal spending.

We will be in a position to stop squandering on vast socialistic experimental schemes. As Lincoln said, "this Nation could not endure permanently half slave and half free," so do I say tonight, that this Nation cannot endure permanently with the Federal Government running half the business in competition with the other half.

These collectivist experiments have cost our people dearly during the last 7 years, and to pay for them the New Deal has mortgaged our whole national wealth and production for generations to come.

But the American people now are all through with failure and futility. They are determined to get back to work.

#### A CONSTRUCTIVE PROGRAM

However proud Republicans may feel over these strong and immediate checks upon the more reckless phases of new dealism during the 1939 session, there are still other accomplishments on the positive and constructive side of our party's ledger.

Early in the 1939 session of Congress, we set forth a 12-point program for solid American progress, and many of those 12 points already have been achieved.

We forced repeal of the destructive taxes on undistributed profits, and to that extent freed private enterprise from at least one set of demoralizing shackles.

We appointed a special committee of House Republicans to weigh our real needs in national defense; and that committee's report of last February is now the accepted standard of American popular judgment as regards defense needs. The report insisted that national-defense programs must be consistent with our traditional

policy of noninvolvement in the endless wars and bitter intrigues of Europe.

The first plank in our platform in Washington today is "Keep the United States out of war." We deny that our first line of defense is on the Rhine, or anywhere else in Europe. I repeat, on the contrary, that our first line of defense is at the farm gate and the factory door.

Our domestic problems must be solved; every energy of government must be directed to domestic economic recovery so our 9,000,000 unemployed can get real jobs in private industry at honest American wages. Unemployment in the cities and distress on the farms are the real dangers before us. Let us face them like red-blooded Americans.

#### POLITICAL RACKETEERING IN RELIEF

In cooperation with a group of sincere and patriotic Democrats, we were able to expose to the full view of the American people the shameful corruption and disgraceful political racketeering in the administration of Federal relief. We insist that the relief dollar must go to the needy, not half of it to political "pay rollers" and the precinct henchmen of greedy bosses and machines in the larger cities.

A decent standard of public assistance, faithfully administered and honestly supervised for the general welfare rather than for narrow partisan advantage, would not carry with it the daily threat of national insolvency and bankruptcy.

#### SUPPORTED HATCH BILL

Republicans in the House gave decisive support to the enactment of the Hatch bill last session. This law makes it illegal for Federal officeholders to take active part in any political campaign. It marks a long step away from the corrupt spoils system which has so widely degraded public administration in America since 1933.

We already have seen the Hatch Act made the object of New Deal sneers and jeers at the Jackson Day dinner in Washington several weeks ago. But I assure you we have not yet heard the last of this great moral force for clean, decent, and businesslike Federal administration.

#### PUMP PRIMING A FAILURE

We joined forces with the constructive Democrats to defeat the gigantic \$3,800,000,000 spend-lend program, which was only another gamble in Alice-in-Wonderland pump priming.

In the so-called Government reorganization bill we fought for, and we won, adherence to the time-tested constitutional principle of checks and balances in government. We eliminated many proposals for dangerous powers of dictatorship and one-man rule over the quasi-judicial agencies.

#### AN INSTANCE OF ROOSEVELT "ECONOMY"

Incidentally, I may point out that this New Deal reorganization scheme, which was offered to the country in the name of efficiency and economy, has not produced any economy.

Since the first reorganization order was issued by the President last April, the Federal pay roll has increased by more than \$100,000,000 per year.

#### RESISTED COMMUNISM

With our augmented forces, we have been able to turn back the persistent New Deal campaign of propaganda against the Dies committee. Twice we have rallied decisive Republican votes to continue this truly patriotic investigation of destructive un-American activities.

As a result of disclosures before the Dies committee, Congress already has strengthened our legal curbs against hateful alien communism and fascism. It has tightened up the compulsory deportation laws, and removed much discretionary authority in this field from the confused and coddling administration of the Labor Department.

When the 1940 elections are over Communist agitators and their fellow travelers will no longer be pampered pets in the Nation's Capital.

There is room in this land for only one "ism," and that is true-blue Americanism.

#### A CONSTRUCTIVE FARM PROGRAM

We have recently appointed a special committee of House Republicans to survey the failure of the New Deal farm programs, and to map a long-range course of agricultural reconstruction.

In this work our first principle is that farm programs can never succeed save when they are in harmony with the deep traditions of American independence and freedom.

Our second principle is that solid business recovery never can be achieved so long as American agriculture lingers on the brink of bankruptcy. We must give the farmer a larger part of the national income.

Our committee of inquiry is composed of members from every principal farm section, and Illinois is well represented on that committee.

Open hearings have been held in the various States. By this method we have asked the farmers themselves to participate directly in the vital work of program making; and in this effort we have received a most encouraging response and a wholehearted cooperation.

We believe that the American farmers in the field know better the problems of agriculture than the starry-eyed collectivists of the White House inner circle.

#### AGRICULTURAL IMPORTS

The American farmer has been the first victim of the New Deal's misguided internationalism. Meats, grains, dairy products, fruits, vegetables, and fats are all under great pressure from abroad—with every American farmer compelled to offer his products in his own home market in direct competition with the low living standards of Europe and Latin America, or with the rice-and-water peasants of the Orient.

During the first 10 months of 1939—the latest figures available—the United States imported 664,339 head of live cattle. Isn't that a fine record for the greatest meat-producing country in the world?

During the same 10 months we imported 136,552,000 pounds of dressed and canned meats.

This figure includes 78,000,000 pounds of canned beef, which, you will recall, President Roosevelt himself insisted was "infinitely better" than the home product.

He regarded it as so far superior that he insisted the Navy purchase the foreign beef for all the United States Fleet, and ordered the Navy to reject all offers of United States beef in competition with the "superior" foreign importation. You can guess how such policies in the White House help American agriculture.

But that is not all. During those same 10 months of 1939 we imported from other lands no less than 9,310,000 bushels of wheat and 17,000,000 pounds of wheat flour.

We also imported 2,612,000 bushels of oats, 48,000,000 pounds of potatoes, 47,000,000 pounds of canned tomatoes, and 197,000,000 pounds of unmanufactured wool.

Why, with huge surpluses and inadequate prices at home, should such mountains of competitive farm products be imported from abroad?

It would require a whole hour here merely to read the complete list of competitive farm imports last year. But these few items will indicate to what extent our rich American market has been given over to imported agricultural products.

Our farmers deserve better treatment from their Government at Washington, and I have seen many evidences during the last year that they are prepared to demand it at the polls next November. No real recovery can come to American agriculture until this crushing flood of cheap foreign imports is checked.

And here is another amazing story of interest to our farmers:

During the last 2 fiscal years the Federal Government spent \$30,000,000 for a list of some 20 different surplus farm products for free distribution, but during those same 2 years this country has imported these same 20 products to the value of \$92,298,000.

How long do you guess it will take at this rate to clean up our domestic surpluses? Every time we distribute a dollar's worth of these surplus commodities from the home market we import more than \$3 worth of the same items from some foreign land.

That is a typical example of the contradictory policies of the New Deal.

#### A CHALLENGE TO PATRIOTISM

Business recovery has been retarded all along the line by the failures and blunders of new dealism.

The people of the United States want to get back to work. They want honest bookkeeping, honest budgets, and honest Americanism once more.

They are convinced that this country can be put on the high road to real prosperity only by the constructive policies of the Republican Party.

Representative government cannot function properly so long as all decisions rest with the Chief Executive.

Nor can this mighty land, with its widely varied interests, be operated successfully by an army of bureaucrats manning a battery of mimeographs in Washington.

We must turn away from the ruinous philosophy of scarcity and recall to the national service the sound Republican doctrine of plenty. Only in this way may we assert anew our abiding faith in the fundamentals of our American life—in thrift and prudence in government; in the security and bounty of private enterprise; in the regular constitutional order of progress under law.

This is the great job of reconstruction before us. America cries out for vigorous, intelligent leadership toward common sense in government.

America wants to be American again.

Our people want real jobs at real American wages—not a perpetual dole.

We have the resources and the manpower necessary for a great and sustained prosperity. All we need is an administration in Washington in harmony with our deepest American ideals of freedom, security, progress, and peace.

These are the lights of our Republican faith today. Let us hold them high and men and women of all parties will rally to our standards.

So long as we hold Abraham Lincoln's boundless faith in the common people we may go forward in supreme confidence that in such a crusade of patriotism our legions cannot fail.

Forward to the victory for Americanism.

# Bonneville Project—Rapid Marketing of Power Due to New Rural and Industrial Development in Southwest Washington

## EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

STATEMENTS BY HON. MARTIN F. SMITH, OF WASHINGTON,  
BEFORE THE COMMITTEE ON APPROPRIATIONS

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements made by me February 14, 1940, before the Committee on Appropriations:

STATEMENTS BY HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS  
FROM THE STATE OF WASHINGTON

Mr. SNYDER. Mr. SMITH, the committee will be very glad to hear such statement as you desire to make in reference to the projects in which you are interested.

Mr. SMITH of Washington. Mr. Chairman and gentlemen of the committee—War Department for civil functions—I am grateful for this opportunity to make a brief statement in behalf of the request for \$100,000 for the construction of two new turbines at the Bonneville Dam project. The project on the Washington side of the Columbia River is located in my district, and it is an enterprise in which I have had a very keen interest from its very inception.

When we initiated the project originally there was a doubt in the minds of some Members of Congress and citizens outside of Congress in regard to the marketing of the power which would be generated at the Bonneville Dam.

I am highly gratified, as I know you gentlemen are, at the very satisfactory progress that has been made in finding a market for that power which is being developed on the Columbia River. In fact, the success we are having has far exceeded our expectations.

Mr. SNYDER. How many units have been completed?

Mr. SMITH. We have two units completed and contracts have already been signed for the sale of that power. In addition we have contracts which would consume the entire output of two additional generators.

Mr. SNYDER. There will be four generators, all told?

Mr. SMITH. When those four are completed. Of course the project as a whole contemplates 10 generators.

Dr. Paul J. Raver, Administrator of the Bonneville Project, has already called attention to the fact, I believe, that if the construction of two additional turbines could be expedited 3 or 4 months it would result in revenues to the Government of \$500,000 which we will otherwise lose if the construction is not expedited.

In other words, by providing an additional \$100,000 to the Secretary of War, which he has asked for, to speed up construction, by the investing of \$100,000 sooner than was intended, we will make a saving of a large amount of revenue to the extent of \$500,000. I would consider that that would be a very wise investment to make and I hope you will give it very careful consideration.

Mr. SNYDER. That would be paying a dividend larger than the average bank pays?

Mr. SMITH. It certainly would. That is about all I want to stress at this hearing, Mr. Chairman, because I am scheduled to appear before the Interior Department subcommittee on appropriations, which has jurisdiction of the entire Bonneville project. I expect to make a rather extended statement there this afternoon in behalf of estimates for the construction of the additional transmission lines and the project as a whole.

Mr. SNYDER. Do you have any idea, when this project is completed, say, in 3 years, how many years it would be before it would be liquidated as a whole?

Mr. SMITH. It is going to be much sooner than the 40 years during which we expected to amortize the entire project.

Already we have applications on file totaling 614,000 kilowatt-hours. The ultimate capacity of Bonneville is 518,000 kilowatt-hours.

The contracts already entered into will yield a million-dollar revenue for the fiscal year 1940 and a revenue of \$2,200,000 for the fiscal year 1941. If we construct these two additional turbines, that will increase the amount to \$9,000,000 gross when we shall have completed the entire project, and it is expected that out of that there would be a net revenue of between three and four million dollars annually, which would make it economically one of the soundest projects in the entire country.

Mr. TERRY. The committee realizes the fine work you have done in behalf of this project, and we listen with great respect to what you have to say about it.

Mr. SMITH. I want to thank the distinguished gentleman from Arkansas, who has been very helpful in regard to this project.

This is a project in which I am deeply interested, because nearly all of the transmission lines will cover my district. In fact, the people of southwest Washington, whom I represent here in Congress, will be the direct beneficiaries of the Bonneville Dam project, and already every one of the nine counties in my district has formed public-utility districts under the State law and are applying for Bonneville power.

I can truthfully say that the people in my district are very public-power minded, and this will mean a great deal, especially to the residents of the rural districts, and also it is bound to result in a great industrial development. As you are aware, the plant of the Aluminum Corporation of America has entered into a contract at Bonneville for 20 years, yielding a revenue to the Government of \$10,000,000, and that plant is located 2 miles west of Vancouver, one of the principal cities in my district. The Sierra Iron Co. has signed a similar contract to yield approximately \$10,000,000, its plant to be located near the municipal terminal No. 2 at the edge of the city of Vancouver. These are going to furnish wonderful pay rolls for the people of southwest Washington.

I thank you very much, Mr. Chairman, for giving me the opportunity of presenting the matter to you this afternoon.

Mr. SMITH. Earlier this afternoon I appeared before the Subcommittee on Appropriations for the War Department for the civil establishment and urged that \$100,000 additional above the Budget estimate be provided to expedite the construction of units 3 and 4 at the Bonneville Dam project on the Columbia River in my district, which would result in increased revenues if that is done of \$500,000, as I pointed out to the committee, because the contracts have been applied for and entered into for the purchase of that power.

REQUESTS BY THE ADMINISTRATION OF THE BONNEVILLE PROJECT—  
INTERIOR DEPARTMENT

I now want to present to your committee facts in support of the Budget estimates and the sums which have been requested by the administrator of the project. Quite a number of years ago when the Bonneville project was first initiated I had the privilege of introducing the original bill which came before the Rivers and Harbors Committee, of which I am a member, and of which one of the members of this committee, the gentleman from California [Mr. CARTER], is a member, and was at that time. The fear was expressed by some members of the committee when we authorized the project that we might not be able to market the power. I am very gratified, as I know the members of this committee are, after the amounts of money that we have expended in constructing the dam and the progress we have made to date, that those fears have proven to be unfounded.

Those of us who believed that there would be a market for the power have had our judgment vindicated, because the applications to date at this early time, when we only have two generators completed, exceed the entire capacity output of the project after completion of the 10 generators. The present applications on file, we are informed by Dr. Raver, total 614,000 kilowatt-hours, while the ultimate capacity of Bonneville is only 518,000 kilowatt-hours.

The project is located on the Columbia River, on the Washington side, in my congressional district, and my district is going to benefit very materially from this project. Our people who have not been served by the private companies, particularly those residing in rural communities, are very eager and anxious to utilize the power from Bonneville.

Consequently, in the nine counties of my district, public-utility districts have been established, and in five of these counties we have Rural Electrification projects, in Grays Harbor, Cowlitz, Lewis, Skamania, and Mason Counties.

With more than 2,000 men employed on the project in six southwest Washington counties, more than 55 percent of the clearing for the Bonneville transmission lines right-of-ways has been done, Work Projects Administration officials have announced.

A new W. P. A. allocation of \$919,000 has been made to continue the project for another 6 months. Matching the W. P. A. allocation will be a Bonneville project allocation of \$271,000.

If the present working schedules can be maintained under employment quota restrictions, clearing of the Bonneville transmission lines right-of-ways will be completed this year, W. P. A. officials have predicted. The completed project will comprise a clearing totaling 7,200 acres over an area 242 miles long.

Heading the list of W. P. A. workmen now employed on the clearing project are 668 in Cowlitz County, followed by 465 in Lewis County, 209 in Pacific County, 204 in Skamania County, and 214 in Clark County.

The Bonneville power administration joined Pacific and Wahkiakum County public-utility districts this week in the purchase of the electric system of the West Coast Power Co. in the southwestern corner of the State. The acquisition will become effective March 1. In the interim, the purchase must be approved by the Federal Power Commission.

Acquisition of the \$565,000 utility property involves four steps: First. Purchase by Bonneville of approximately 80 miles of high-voltage transmission lines, more than a mile of submarine cable across the Columbia River, four substations right-of-way easements, franchises, and other property for slightly more than \$150,000.

Second. Purchase by Pacific County public-utility district, for \$300,000 of three West Coast's generating plants and its low-voltage power-distribution lines serving retail customers in and around Naselle Junction, Ilwaco, South Bend, and Long Beach in the southern portion of the county.

Third. Purchase by Wahkiakum County public-utility district, for \$120,000, of one generating plant and distribution lines serving the communities of Skamokawa, Cathlamet, Puget Island, and surrounding areas.

Fourth. Agreement by Bonneville to resell for \$33,750 a portion of the high-voltage lines purchased from West Coast to the Pacific public-utility district, the transaction to be contingent upon final approval of plans for construction of a heavier circuit along the same right-of-way.

Mr. LEAVY. In every one of those rural-electrification projects, that is absolutely a new market?

Mr. SMITH. An entirely new market, developed as a result of the Federal program.

Mr. LEAVY. Consumers that never had electricity before?

Mr. SMITH. That is true, Judge LEAVY.

Mr. LEAVY. So that it could not be a case that it was charged that it was taking away from private utilities that operated in that territory any customers?

Mr. SMITH. Not at all. It is not in any case a duplication, but an entirely new market that has been opened up and will be served by Bonneville.

Mr. LEAVY. And then you have a substantial municipal plant in your district, too, do you not, at Centralia?

Mr. SMITH. We have one at Centralia and now we have one at Aberdeen, two very large and substantial projects, and we are acquiring several smaller projects.

Mr. LEAVY. And is there not a real activity there now, particularly since the European war, in the pulp industry, and the pulp industry is a substantial power user?

Mr. SMITH. That is very true; and the pulp industry is in the most prosperous condition for many years, partially due to war conditions, as you say.

Mr. RICH. Is that because we are not eager to import pulpwood from Finland and Russia?

Mr. SMITH. That is one of the reasons.

Mr. RICH. Do you not think that since that has been a great help to you in Washington, to aid and assist in the pulpwood industry, and I have listened to men from the State of Washington say that you could grow pulpwood enough from the States of Washington and Oregon to supply this country with paper—

Mr. SMITH. I believe that the latter is probably true.

Mr. RICH. If that is the case, do you not believe that you should support a tariff on pulpwood, coming into this country, that would protect the industries of the States of Washington and Oregon?

Mr. SMITH. I would say to the gentleman from Pennsylvania that as he well knows, and as I know also, the fact is that we have had no tariff on pulp and paper for many years—a quarter of a century.

Mr. RICH. Do you not think we ought to put it on?

Mr. SMITH. It has been duty free, and I have introduced myself, a bill, an antidumping bill, to amend the Antidumping Act of 1921, and to restrict the importations into this country, and to tighten up and plug up the loopholes in the Antidumping Act of 1921.

Mr. RICH. Why do you not just say that we will put a tariff on so that our American producers can compete with all foreign competition, and then that in the same way, if they do bring anything in here, why we will get something to help defray these expenses that you want to build Bonneville, and other things that you are interested in?

Mr. SMITH. I would be very glad to consider that subject with the gentleman from Pennsylvania, and have it come before the House for consideration, but Bonneville is self-liquidating and will pay its own way.

Mr. LEAVY. Mr. Smith, are you generally familiar with the projects that the Bonneville administration has in line for the fiscal year 1941, and of course you know your district, you know your territory very well, as well as the south end of Oregon.

Mr. SMITH. I do.

Mr. LEAVY. And into Washington and eastern Oregon?

Mr. SMITH. I would be very glad to testify in regard to that.

Mr. LEAVY. And in your own judgment, with your years of experience out there, there is no doubt but what there is a real need for the construction of these transmission lines?

Mr. SMITH. There is a real present need, and which has existed for some time, for each and every one of these projects.

Mr. LEAVY. And the private lines in all of that territory that you have mentioned are not such continuous lines, of such capacity, as to be able to carry this load that would be generated at Bonneville?

Mr. SMITH. They are not. For instance, there is the line that goes from Chehalis, in Lewis County in my district, to Puget Sound, which accounts for \$2,100,000 of the estimate by the Bureau of the Budget, and that would connect up with the Bremerton Navy Yard, as a part of our national-defense program.

There is an item of \$1,700,000 for substation addition at Vancouver and Bonneville on account of the added industrial load.

I might say, incidentally, that the new plants of the Aluminum Corporation of America and the Sierra Iron Co., each of which will yield revenue to the Government of \$10,000,000 over the 20-year terms of the contracts, are located at Vancouver, in my congressional district.

Mr. LEAVY. These are entirely new industries?

Mr. SMITH. Entirely new industries, which will furnish two of the largest industrial pay rolls in southwest Washington.

Then we have the line from Chehalis to Raymond, within my district, \$350,000; and a substation extension, \$1,320,000, of which \$600,000 is to defray the cost of building the substation to serve the Aluminum Corporation of America. We have subtransmission

low-voltage lines to serve cooperatives, of which, as I say, we have five in my district—R. E. A. projects—a total of \$2,000,000, of which \$1,000,000 is to be expended within my district.

Then we have the line running from Pasco to Colfax, an item of \$2,652,000, which is not in my district but is in Congressman HILL's district. I note the presence of Congressman HILL, so will not go into that except to say that you have in that district the same conditions prevailing that you have within my district so far as the outlying communities, the rural communities, are concerned.

Mr. LEAVY. I happen to be familiar with it in general, with the large extensions in rural electrification there.

Mr. SMITH. The installed hydro capacity, just as in western Washington, is far below that of the rest of the State, and, in fact, it is only about one-quarter of the remainder of the State. You have that much greater capacity already installed in other parts of the State to serve the rural communities, and, of course, the saving will be substantial to those farmers. They will be able to buy wholesale from Bonneville for 5 mills per kilowatt-hour, and the payment to the private companies now is 1.4 cents—nearly three times. It has been estimated that that would mean a saving on about 100 kilowatt-hours used per month, \$1 per month, \$12 a year, and, if they cook with electricity, \$24 per year, which I contend the wife of the farmer is just as much entitled to enjoy as the wife of your urban resident; and that will result, probably, in a saving of \$24 per year.

Mr. LEAVY. And again here it is a matter of not taking away existing customers, but caring for the needs of new customers.

Mr. SMITH. That is very true, as these rural-electrification projects are to serve new users, who have been neglected by and not served in the past by the private companies. Now, Mr. Chairman and members of the committee, I want to urge very strongly that there be no reduction in the Budget estimates, and that the committee seriously consider providing the additional sum which was requested by Dr. Raver, the Administrator.

Mr. JOHNSON of Oklahoma. How much was that?

Mr. SMITH. I think the entire sum is approximately \$9,000,000.

Mr. LEAVY. He submitted Budget estimates of \$9,000,000.

Mr. SMITH. The more we can expedite and speed up the completion of this project, and the building of these transmission lines, the sooner the Government is going to get its money back. It is all coming back into the Treasury, because it is absolutely self-liquidating, and this is one project for which we have to make no apology. This is a sound, economically feasible business proposition, and nobody can find any flaws in it.

Mr. JOHNSON of Oklahoma. I realize that that is true, but every witness who has come before this committee today and in the past has asked for additional appropriation above the Bureau of the Budget estimate. If this committee should grant all of the requests made by Members of Congress we would be probably twenty-five to fifty million dollars above the Bureau of the Budget estimate in this bill, and we cannot do it. The fact is that the Appropriations Committee has passed a resolution that every subcommittee must bring their bill in within the Budget.

Now, if you can make any suggestions where we can make cuts in some places and help with this project, I would be glad to hear that suggestion.

Mr. SMITH. That is very difficult to do, I will say to the distinguished gentleman from Oklahoma, whose sympathy we appreciate very much, and the assistance you have rendered in the past to our entire western region, but we do say that there is a distinction because in this case the money which we invest comes back to us with interest, and comes back into the United States Treasury with interest, and therefore I think that it is different from some of the other projects where Members are asking for increases where there is no immediate or remote return to the Treasury of the United States Government.

Mr. JOHNSON of Oklahoma. I see your point, and I am very sympathetic with your project, and also all reclamation projects in the West, and I did not know what water meant to the West until I visited many of those reclamation projects. It is the lifeblood of the West.

Mr. SMITH. Out in the West our people all appreciate the value of the assistance which has been rendered by the gentleman from Oklahoma. Thank you, gentlemen, for your courtesy.

## Water Pollution

### EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

Mr. HARTER of Ohio. Mr. Speaker, all of us realize that there is a crying need for legislation upon the subject of water pollution. Moreover, from the discussion that has occurred yesterday and today and through long consideration of a proper bill in the committees, both in the House and in the Senate, we know that it is a highly controversial matter.

Nearly all legislation is the result of compromise, and while this bill does not go as far as I would like to see it, if the proposed Mundt amendment is accepted, I shall support the bill.

All of us know that many of the natural resources of this country were defiled and wasted in the generations that are passed. Most of us are eager to right those wrongs as far as we can. Doubtless it is too much to expect that we could at one fell swoop eliminate all industrial and municipal waste and sources of pollution in this country, but at least we can, as the Mundt amendment proposes, prevent new sources of pollution being created, whether by industry or political subdivisions of government.

I repeat that while this bill is not the legislation that many of us would like to see enacted, it is a great step in the right direction.

### Have We Gone Forward or Backward?

#### EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY ROBERT C. BASSETT

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Robert C. Bassett delivered at La Crosse, Wis., on February 19, 1940, entitled "Have We Gone Forward or Backward?"

About 5 years ago the United States Supreme Court discarded its dignity, buried its Blackstone, sold out to Wall Street, thumbed its nose at the White House high command, ignored our dictator's daily instructions which it found on its desk that morning—and declared the N. R. A. unconstitutional. Immediately the great White Father, minus his customary fireside composure but speaking still as the Nation's oracle, issued the horrible pronouncement which we use to this day when we seek to frighten our grandchildren—that this Nation had gone back to the "horse and buggy" days! And the famous Presidential grin faded before the thought of this hideous fate.

Today, just 1 week after our celebration of the one hundred and thirty-first birthday of our first Republican President, and our last great war President—it is fitting that we meditate upon the terrors of this fate from which we are being saved—fitting that we discover what manner of men were these who put the horse before the buggy instead of the cart before the horse, a seemingly lost art.

Today, as we face the great decision of 1940, it is fitting that we contrast the new motorized deal with the ideals and administration of that great "horse and buggy" President, Abraham Lincoln!

First and foremost, you must choose between the personal dictatorship of our Hyde Park fuehrer and Lincoln's devotion to the American constitution. You must choose between Roosevelt's mandate to Congress to pass laws regardless of their constitutionality and Lincoln's government of the people, by the people, and for the people. Choose between the inverted pyramid of centralization and bureaucracy and the "horse and buggy" theory of States' rights and unity. Contrast the New Deal's pastime of taking the Government apart to see what makes the wheels go round, contrast the New Deal's brand of state socialism and the New Deal's spreading wings which foster the grip of communism upon the imagination of our American youth, with Lincoln's fundamental philosophy that that government governs best which governs least. Contrast the muck and mire of the sale of public jobs and the prostitution of the unfortunate W. P. A. worker and the political army of over 1,000,000 job hunters built by these modern mechanized Messiahs against the original honesty of civil service as established by "horse and buggy" Republicans of Lincoln's character. It is a long step from the life tenure given to United States district judges by Republicans under Lincoln's successor, President Grant; a long step from the independence and freedom and dignity of the United States Supreme Court to the more modern method of packing the Supreme Court bench, either by congressional authority or by personal choice; a long step to this newest rape of justice, to this newest attempt to hire a wet nurse for the pet projects of the White House; a long step to this devastating and deplorable attempt to place nine Charlie McCarthys upon the bench of the most important judicial tribunal in the annals of modern history. Such is the stuff of which dictators are made.

Do you want state socialism or do you want the American constitutional right to own and hold property? Do you respect the "brain trust" theory of restricting output or the freedom and right

to work and to earn? Do you prefer scarcity or do you prefer plenty? Do you choose the permanent depression of this new era of regulation or the prosperity of the "horse and buggy" era of free enterprise? Do you want the blessings of the Federal whip hand of T. V. A., A. A. A., and N. R. A., or do you want the privately owned grocery and sawmill and buggy factory of Lincoln's day. Is it possible that the farmer would choose Roosevelt's reciprocal-trade agreements, inviting farm imports, selling both the manufacturer and the dairy farmer "down the river," in place of the steady advancement of the American farm and factory under the protection of the Republican tariff? Do you prefer the modern villified businessman, the modern government which wants to rule, or, if it cannot rule, to ruin; do you prefer the New Deal philosophy of working less, manufacturing less, planting and harvesting less, or do you prefer that free enterprise which for 150 years has given to America the highest standard of living known to any nation on earth? In contrast to Lincoln's two big feet, which have always been planted solidly on the ground, I ask you to dream a while over the modern mentality of our New Deal masters, who first gave the farmer seed to plant, then paid him for planting it, then paid him for plowing up what he planted, then paid him for killing little pigs that were to eat what he had been planting if it hadn't been plowed up, then permitted prices to go to a bottomless pit, then enacted reciprocal-trade treaties so that farm imports could put 40,000,000 acres of American farm land out of production, and then, finally, in a great culminating stroke spent millions of dollars to irrigate the western prairies so that more farm land could be put into cultivation? No one in the "horse and buggy" days could have been that crazy.

Today we have learned the motorized madness of mass and class hatred in place of Lincoln's homely philosophy that a house divided against itself cannot stand. We have learned the struggle of capital and labor; we have learned of strikes, of bloodshed, fostered, increased, promoted for votes by our New Deal friends, unfair to honest labor and unfair to employer alike, in place of industrial peace and quiet. We have learned of such great statesmen as Secretary Ickes and his venomous hatred of the Nation's 40 first families, and the trail of blind poison which he has left all over the Nation, in place of Lincoln's love for his fellow man and for a union of government. We are now taught a new theory of bleeding the employer to his financial death, of hatred by the employee for his employer and his fellow employees, in place of the "horse and buggy" theory of saving a little and putting it aside for a rainy day. Today we are offered the hymns of hate of a Russian or a German in which the Bible has itself become horse and buggy in place of the second commandment and the brotherly love of Christ. From Lincoln we have heard:

"Let us have faith that right makes might. And in that faith let us to the end dare to do our duty as we understand it."

From the modern leader in Washington we have learned the meaning of that mob robbery known as the sit-down strike, and the unfortunate weakness of Mme. Fannie Perkins for that irresistible Communist Harry Bridges; we have learned that we cannot have confidence and faith in our Government; no longer wish to do our duty as we see it.

But we cannot stop here. We must take time out to laugh at the old-fashioned accounting system of a balanced Budget, in place of which we are offered waste, "boondoggling," debt, and taxation. How quaint was Lincoln's idea that he must pay for the war as he went along when we contrast it with Roosevelt's system of Houdini finance—of "putting it on the cuff." How quaint to think of Lincoln in the same class with that great boondoggler who has spent more than all his "horse and buggy" predecessors put together, that great man who laughs at the fact that it took 27 Presidents 130 years to spend what he has spent in 8. Against the "horse and buggy" Clayton-Bulwer Treaty on the Panama Canal we have the Passamaquoddy and the Florida ship canal, where \$9,000,000 is to be spent only to prove to the engineering experts in the White House that the water is going to run backward after the canal is built. Where is our sense of humor? Why don't we laugh at the sad mouth and the furrowed brow of the Civil War President, laugh at his concern and thought over the welfare of his own people, when all we have to do is forget the past and watch our own new dealers working night and day to solve the problems of Europe and Asia, with nothing at all to do in our own country? Confucius say: "The eyes of the fool are on the ends of the earth."

But rejoice, for those eyes have given us today a permanent emergency. In place of the split-log cabins of Lincoln's forests, we now look at \$10,000 of nice dog houses down in Mississippi built by W. P. A. money, with an individual shower bath in each house for each dog. Lincoln walked miles to return a penny to a storekeeper; Roosevelt is now spending nearly \$10,000,000,000 a year, each year enough to meet all needs of Government for 87 years of our past "horse and buggy" history, to cover the cost of national expansion, cost of the War of 1812, the Indian wars, the Mexican War, and the Civil War. Roosevelt is spending \$1,500 a minute, a figure which, I must admit, is an error today, in view of the fact that he has just announced a tremendous saving in one of his departments which reduces the \$1,500 to \$1,499.92 per minute. Today we are building \$300,000 bear houses in Pittsburgh, so that the bears can enjoy the more abundant life, while men and women and children are ill-clad, ill-fed, ill-housed. We are building \$10,000 lily ponds in California with W. P. A. money, so that the frogs can jump from lily to lily, and back to lily again.

In New York, Illinois, Connecticut, Massachusetts, Rhode Island, New Jersey, and Delaware we have employed 10,788 men in

December of 1936 on mosquito-control projects under ice and snow—like looking for the little man upon the stair, who after all, just wasn't there. Lincoln split rails and built houses so that the frontier could keep moving; Roosevelt thinks it is a great job to play at work today, to rake leaves across the street and the sidewalk and then rake them back again, so that the leaves can keep moving. To think that the first "horse and buggy" Jackson Day dinner was held to celebrate the extinction of the national debt, while the last modernized Jackson Day dinner (at which a few Republicans were mouthed over for dessert), celebrated the reaching of the legal maximum of a \$45,000,000,000 debt, and prepared to ask for five billion more.

And while the poor man of Lincoln's day saved his pennies, the poor man of today pays taxes to the Government; taxes for the medicine given to his pregnant wife; to a sales tax on the coffin of a beloved one; taxes before birth and after death; taxes which take one-quarter of every man's earnings, every year, and give them to the Government to squander; taxes for rich and poor to pay 25 cents of every dollar for rent; hidden taxes, 53 of them in a loaf of bread; 63 of them in an overcoat; 148 hidden in every pair of overalls. Under Lincoln you worked 6 days a week for yourself and gave the Sabbath to God; under the New Deal, you work 2 days for Roosevelt, 3½ days for yourself, and you give the Sabbath to Charlie McCarthy and Jack Benny; confidentially, however, they tell me Roosevelt is considering an order cutting Benny and McCarthy off the air; there seems to be some dispute as to who should take God's place on Sunday. We raise our hands in horror because Spain forces every able-bodied man to work 15 days a year for the government on government projects, yet today Roosevelt's system of taxes forces every able-bodied man to work 75 days to produce enough earnings to pay his annual tax bill to the Government. We must not forget candidate Roosevelt's oft-quoted statement of October 19, 1932, at Pittsburgh, when he said:

"Taxes are paid in the sweat of every man who labors, because they are a burden on production and can be paid only by production. If excessive, they are reflected in idle factories, tax-sold farms, and hence in hordes of the hungry tramping the streets and seeking jobs in vain."

We cannot forget it, because the man who made it has forgotten it. We cannot forget it, because the farmer and the small-business man and the laboring man must realize that if the Government confiscated every man's income over \$5,000 for the first 7 years of Roosevelt's administration, the total amount would pay only 44 percent of his 7 years' expenditures. We can't forget it, because we realize that the New Deal and its extravagance, its waste, its "boondoggling," is sucking the livelihood of every American man and woman, poor and rich, unto the next and to the next and to the next generation. Lincoln left the children of his generation a united Nation; we are leaving the children of our generation an unpaid mortgage.

We cannot stop here. We cannot forget that Lincoln gave us a government to live under; the New Deal has given us a government to live on. Jobs and homes were part of the "horse and buggy" era; unemployment and relief are part of today. Horse sense gave us employment, the New Deal has given us mass pauperism, the tragedy of unemployment, the destruction of the individual self-respect of these vast multitudes of men and women who are forced to play at working. We are told that we must be ashamed to remember the "horse and buggy" struggle of the pioneer in the fields and the forests; but aren't we more ashamed to remember that in 1933 Roosevelt took office with 12,000,000 unemployed, and in 1939, after spending \$45,000,000,000 to put these men back to work, he wound up with 15,000,000 unemployed, and millions more on relief than in 1933? It certainly cost a lot of money to put 3,000,000 men out of work. Lincoln prayed to the Almighty; Roosevelt planned it that way, although, for some unaccountable reason, we don't hear so much any more about planning it that way. And to complete the job of creating tragedy, Roosevelt has gone further afield from the sound Republican "horse and buggy" system of pensions and bonuses to the aged and veterans and established that great farce of an insolvent social security, which only robs the old and the unemployed and fills a "boodle barrel," into which the Government can dip for frequent overdrafts. Today the future of this Nation lies in hands which can continue to rule only so long as they can keep the hearts of America's unfortunate men and women heavy with the fear of starvation, with the fear of the present and the future, with jealousies and rivalries suckled from the breasts of untruth.

And then I give to you to accept or reject the "horse and buggy" doctrine that America should enter no entangling alliances with foreign lands, against the bursting pride of our Roosevelt who declared that the eastern frontier of this Nation lies on the western boundary of France, against his shame-faced underhanded selling of arms and war secrets to allied nations, against his desire for the plumes and pride and prancing that become the possessions of a war dictator.

Do we choose suppression, or do we choose free speech? Do we choose persecution or a free press? Do we choose the life of a man devoted to the shackling of free business enterprise, devoted to whipping at the post the American man and woman who has had the courage and independence to stand on his own two feet, rather than to feed at the public trough for livelihood and sustenance, or do we choose the life of a man devoted to the freeing of the slave? Do we choose restrictions and personal hatred or the right of assemblage guaranteed to us by the Constitution? Do we choose tyranny, or do we choose merciless publicity which has always kept us free?

I offer you contrast, patience against purge, tolerance against tyranny, charity against venom, gentleness against hate, old-fashioned virtues against motorized madness. I offer you Lincoln's great thought, "Malice toward none," against the vote-getting New Deal machine which has pitted father against son, neighbor against neighbor, worker against employer. Shall we forget that the Republicans gave the seventeenth amendment to the Nation and the senatorial vote to the people, and remember only the leadership of the great white father who conducted his unsuccessful senatorial purge throughout the elections of 1939? My friends, we have come a long way from the "horse and buggy" days of reconstruction and forgiveness and of extending the hand of friendship to friend and foe alike.

Lincoln stands before us, guided by the right; Roosevelt stands before us guided by his daydreaming imagination of a personal mandate from the people. In the one hand, humility; in the other, colossal conceit. We look, on the one hand, upon the philosophy that you can only fool some of the people some of the time, to the new fireside policy of fiddle, fiddle, and fool 'em forever. In Lincoln we had confidence; with Roosevelt we started with faith, slid down to hope, and now are being run on charity. In Lincoln we remember that sober, worried face, with the suffering of humanity weighting him down, never a smile; our motorized President we remember with a grin, a flip of his chin, the devil may care, believing that he alone is qualified for leadership in this Nation. Lincoln has become part of America; of the other, who has tried to make America part of him, we are inclined to recall the words of Sir Walter Scott:

"Breathes there the man, with soul so dead,  
Who never to himself hath said,  
This is my own, my native land?  
Whose heart hath ne'er within him burned,  
As home his footsteps he hath turned  
From wandering on a foreign strand?  
If such there breathe, go, mark him well;  
For him no minstrel raptures swell:  
High though his titles, proud his name,  
Boundless his wealth as wish can claim,—  
Despite those titles, power, and pelf,  
The wretch, concentred all in self,  
Living, shall forfeit fair renown,  
And, doubly dying, shall go down  
To the vile dust from whence he sprang,  
Unwept, unhonored, and unsung."

And so, rather than revile, let us thank our motorized "gas and oil" President and his thought—that there had been a "horse and buggy" era when things were done differently—a great and valuable lesson to modern Americans, and one which has been learned in a way which we have every reason to believe the President did not intend. Let us thank Roosevelt for the few fine deeds he has accomplished—all by "horse and buggy" methods.

Modern America, under the Republican Party, is learning its lesson as did the Kansas wit who gave us this parody on the Gettysburg Address:

"Six years and 7 months ago F. D. R. brought forth on this continent the New Deal, conceived by the brain trust, and dedicated to the principles of communism.

"Now we are engulfed by a huge public debt and are taxed and regimented more than this Nation or any nation so deceived and so desecrated should long endure. We are opposed by parasites who would continue this raw deal.

"We have paused to contemplate the remains of our once sound prosperity and to give our best efforts that the spark of liberty might live. It is altogether fitting and proper that we should do this.

"But in our natural lives we cannot expatiate, we cannot liquidate, we will not repudiate this debt. Our children, infants, and yet unborn will struggle here far beyond our time attempting to win back their heritage we neglected to defend.

"The world will little note or long remember what we say here, but our future and theirs depends on what we do here.

"It is rather for us, as citizens, to end this undeclared war upon our free institutions which these termites are now waging. We must dedicate ourselves to the great task before us, the task of relieving so far as possible the debt burden being placed upon our children by the New Deal gang, and see to it that this gang shall not hold office again, that this Nation in 1940 shall have a new birth of freedom and that government of the people, by the people, and for the people shall not perish from the earth."

We have the courage to take America into our hands. We have the courage to travel back from the depression into sanity and solvency. We have the intestinal fortitude to want to balance the Budget and then to go out and balance it. We have the ability to take the Government out of business. We can give back to the farmer his natural market. We can restore industrial peace and decent collective bargaining by showing capital and labor that they need each other. We have the courage to grant reasonable relief to those who are still victimized by the depression and yet the courage to insist that those who are sound in mind and body care for themselves. We believe that the Constitution of the United States has not been outgrown. We have the men who are unselfish enough to keep us out of European and Asiatic wars. We have enough sense of humor to make America laugh and kick the New Deal jackass out of the country. We can again restore the American people's faith in government based upon soundness

and not intrigue and logrolling. We will take over this job of repeal, of hands off, of letting America follow her own natural free choice.

If we can, and if we have the courage, then we are offering to America a program for 1940.

We must maintain the Constitution, the balance of power, financial sanity, personal liberties, the job of this Republic for which great lives have been sacrificed, both on and off the battlefield. We must not permit them to condemn young America to the salt mines of Communist Siberia, or to an abject subservience to the lashing whip of some tyrant's tax collectors.

Where is the red blood of young America which flowed too freely in 1776 to give us freedom and the Constitution—which poured upon the battlefield of 1865 to preserve freedom—and which drenched foreign soil in 1898 and 1917 to make democracy safe for posterity? That blood is coursing in your veins and mine, calling upon us to fight, put there by Lincoln at Gettysburg, when he said:

"The world will little note nor long remember what we say here; but it can never forget what we did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us; that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, and for the people, shall not perish from the earth."

### Reciprocity Vote

#### EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

EDITORIAL FROM THE MINNEAPOLIS TIMES-TRIBUNE

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks, I present an editorial entitled "Reciprocity Vote," which recently appeared in the Minneapolis Times-Tribune, which speaks for itself:

[From the Minneapolis Times-Tribune of February 26, 1940]

#### RECIPROCITY VOTE

The resolution extending the reciprocal-trade policy for 3 years passed the House and now is before the Senate. The House vote, 216 to 168, was much closer than the party line, and a number of Democrats from the farm States voted "no." The States of Minnesota, Wisconsin, North and South Dakota, and Montana cast 1 vote for the resolution and 23 against it, including 1 pair. That vote is fairly indicative of sentiment in the Northwest. These are farming States. The trade pacts too often have traded off the farmer, and continuation of the policy threatens him with still more serious injury. The interests of the cities are tied up closely with those of the farm.

The House vote for the 5 States mentioned included 18 Republicans, 2 Democrats, 2 Progressives, and 1 Farmer-Laborite. The lone vote for the trade pacts was cast by a Republican, Mr. ALEXANDER, of Minneapolis.

Votes against the resolution should not be interpreted as disapproval of reciprocity in principle. They were cast after the House had rejected safeguarding amendments. The present law, which is to be extended, gives absolute power to the State Department to change any of our import duties by bargains with foreign powers. Congress has yielded its constitutional power over treaties and tariffs.

When the flexible tariff law was passed in 1930, Secretary Hull, then in Congress, said it was undoubtedly unconstitutional, and quoted the phrase that it was "too much power for a bad man to have, or for a good man to want." Yet that law put limits on the President's power to raise or lower duties. It made a yardstick rule. Congress to that extent retained control.

As the resolution goes before the Senate, one of the gantlets it will run is an amendment to provide a yardstick, thus denying power to the State Department to reduce duties on competitive farm products. The need for that already has been seen. One illustration offered by Mr. KNUTSON, of Minnesota, was that of starch. Since the pact with the Netherlands in 1935, 500,000,000 pounds of starches from the Dutch West Indies have been brought in, each 34 pounds of it displacing a bushel of corn that otherwise would be used by our own starch factories. Another amendment is aimed at the most-favored-nation feature. In the pacts so far concluded, each concession we make to one nation is automatically extended to all other nations with which we have that type of trade treaties. The amendment would make each pact bilateral, a bargain between the United States and one other power,

not a world-wide concession. A third amendment to be offered would subject each pact to ratification by the Senate. That is a constitutional right of the Senate when treaties are made, and the pacts are in fact treaties, no matter what they are called.

The Senate is more heavily Democratic than the House, but some of the western Democrats there will stand on the side of the farmer, as in the House. There is a chance that some of the qualifying amendments asked for by the farm organizations will be adopted. The farm States have a right to expect their Senators to stand and fight for them.

### Wheeler-Lea Transportation Bill

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

LETTER FROM THE MINNEAPOLIS JUNIOR ASSOCIATION OF COMMERCE AND RESOLUTION OF THE CITY COUNCIL OF MINNEAPOLIS

Mr. ALEXANDER. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein a letter which I have received from the Minneapolis Junior Association of Commerce regarding the report of the conferees on the Wheeler-Lea bill, and also a resolution from the city of Minneapolis opposing the Wheeler-Lea bill, and asking 30 days' time in which to consider the conference report when it is brought up:

MINNEAPOLIS JUNIOR ASSOCIATION OF COMMERCE,  
Minneapolis, Minn., February 27, 1940.

Congressman JOHN G. ALEXANDER,  
House Office Building, Washington, D. C.

DEAR JOHN: I am advised that the conferees on the Wheeler-Lea bill will submit their revised transportation bill to both Houses within the next few days. It has also been brought to our attention that an attempt will be made to pass this amended bill within 24 hours after it is brought out of the committee.

I am writing to reaffirm the position of our organization in relation to this bill; first, that we are opposed to any measure that will tend to raise transportation rates in this section of the country; second, we are opposed to any measure that will curtail the advantages of waterway transportation; third, since we believe this matter of transportation cost to be one of public interest, we would request that at least 30 days be given to study the conferees' report so that the full effect of the proposed legislation can be studied and analyzed. There is no reasonable excuse for trying to rush through legislation of this type that is so apt to affect a basic economic principle to the detriment of the Middle West.

Extending you my best personal regards, I am,

Very truly yours,

TOM W. VON KUSTER, *President.*

CITY OF MINNEAPOLIS,  
OFFICE OF CITY CLERK,  
February 27, 1940.

HON. JOHN G. ALEXANDER,  
House of Representatives, Washington, D. C.

DEAR SIR: Attached you will find copy of action of the City Council of the city of Minneapolis, Minn., at a meeting held February 23, 1940, protesting passage of the so-called Wheeler-Lea bill.

Very truly yours,

CHAS. C. SWANSON, *City Clerk.*

(Resolution protesting passage of the so-called Wheeler-Lea bill)

Resolved by the City Council of the city of Minneapolis, That whereas the proposed so-called Wheeler-Lea bill contains many controversial provisions, we consider it unwise to pass it without giving the public and legislators an opportunity to thoroughly study it;

That whereas this bill in effect would increase freight rates to shippers and consumers, and would be of questionable aid to those transportation agencies which it seeks to aid;

That whereas the bill was introduced as and is generally known as a "railway-aid measure";

That whereas there is no public demand for this legislation; in fact, there is widespread public opposition to it, as evidenced by scores of resolutions passed by agricultural, business, and other organizations since the legislation was first proposed;

That whereas this legislation, if enacted, it is claimed, would eventually put more than 200,000 railway employees out of work;

That whereas to approach this type of legislation by way of codification at this time is a job that cannot adequately be handled without study and consideration—it is too big a job to be disposed of quickly;

That whereas the proposed legislation, in its present form, presents an extremely difficult problem in that it presents a situation in which a Senate bill is superseded by a brand new bill passed by the House which strikes out everything in the Senate bill but the enacting clause, in view of the wide divergencies that exist as a result of this procedure, it is recommended that no action be taken by Congress at this time but that sufficient time be given to the proposed legislation to assure that there will be no misunderstanding of its effect and that it is designed to accomplish the results sought;

That the city council hereby petitions its Senators and Representatives to delay consideration of the Wheeler-Lea bill, S. 2009, sufficiently to give the people of Minneapolis opportunity to appear before them to present their case.

## Regulation of the Bituminous Coal Industry

### EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

EDITORIAL FROM THE PHILADELPHIA INQUIRER OF FEBRUARY 28, 1940

Mr. JOHNSON of Illinois. Mr. Speaker, on February 23, 1940, on leave to extend my remarks in the RECORD, I commented upon the protestations via a petition of over 5,000 consumers of coal in the Rock Island-Moline-Davenport area against the application of the Bituminous Coal Division of the Department of the Interior.

Also was included an editorial from the Moline Dispatch which vigorously opposes this new governmental regulation. It appears that western Illinois is not the only section that is voicing the protests over this new imposition upon the people.

I therefore submit an editorial from the Philadelphia Inquirer of February 28, 1940. This editorial certainly speaks volumes in itself:

[From the Philadelphia Inquirer of February 28, 1940]  
GUFFEY COAL ACT MAKES ICKES CZAR

As Secretary Ickes prepares to exercise his enormous powers as czar of the soft-coal industry under the Guffey Act, supporters of the movement to repeal that dangerous law are redoubling their efforts.

Much more than the fate of this single great industry, so important to Pennsylvania, is involved. The autocratic control of coal authorized by the Guffey Act points straight to eventual Government ownership and operation of that industry.

Should this unfortunately take place, other huge natural resources would face, first, similar regimentation of their operations and then the threat of being taken over by the Government. Tendencies in that direction are only too easily developed.

As Representative ALLEN of Pennsylvania puts it: "If coal surrenders, the path is cleared for encroachments in other fields. In the fight now being waged against the Guffey Coal Act, the time-tested American system of free business enterprise is at stake. One has only to read the speeches of Mr. Ickes to verify the truth of this statement."

The fact is, of course, that administration of this oppressive law could not possibly have been placed in worse hands.

In Mr. Ickes' first public statement after becoming head of the Bituminous Coal Division, mine owners perceived indications of a coming further extension of bureaucracy, with an ironclad control of production, under which buyers would lose their freedom to select the types of coal most suitable for their uses.

The Guffey Act directs the Government to eliminate unfair trade practices, prevent wasteful competition, and virtually to insure a profit to the soft-coal industry by fixing prices.

The first two objects are wholly proper and within governmental powers. But Government price-fixing has never worked yet. Wherever attempted it has invited a long train of evils. Agriculture provides one of the sad object lessons.

When it is considered that hundreds of thousands of different price schedules have already been filed, the magnitude of such a task is realized.

Secretary Ickes is empowered to establish prices in 187 different marketing districts, taking into account the varying freight rates and the costs of the different kinds of transportation, by the railroads, motor trucks, and waterways.

The Interstate Commerce Commission is supposed to have exclusive jurisdiction over freight rates and the imposing of differentials as between one section of the country and another.

But, as Arnold Gerstell points out in the current issue of the Black Diamond, Mr. Ickes, under cover of his blanket powers conferred by the Guffey Act, can exercise the authority to manipulate transportation charges; indirectly, it is true, but just as effectively and as oppressively, if he sees fit, as if he were the actual dictator of freight rates.

If coal from a certain producing district is moving to market on a low freight rate, there is nothing to hinder Czar Ickes from jacking up the price at the mine. Or he can arbitrarily lower the mine price on coal which reaches its market district bearing heavier freight charges than apply elsewhere.

This, well observes Mr. Gerstell, is "coordination" under the Guffey Act. "In short, rob Peter to pay Paul, and confer always on the consumer the honor of holding the bag."

When the I. C. C. some years ago attempted to enforce prosperity for one section of the country and adversity for another by imposing what amounted to a tariff on intersectional coal freight traffic, it was brought into court.

Southern railroads obtained an injunction against a 20-cent reduction that had been given to coal producers in the Pittsburgh district.

Later the southern parties at interest accepted a compromise, so the main issue was never decided by the Supreme Court. But now, as Mr. Gerstell remarks, "comes Mr. Ickes, of the Department of the Interior, down the same alley, panoplied under the Guffey Act with the power to manipulate coal freight rates; in other words, to lay a tariff, isolated in such manner as he may list, on 187 sub-regal sections into which he has chopped up what we fondly imagine to be the United States of America."

Here is the nub of the whole matter: Hitherto Congress has been particularly careful to safeguard the rights of each freight shipper as best it could. But "coordination" of coal prices, under the provisions of the Guffey Act, will inevitably have the effect of wiping out all the I. C. C. elaborate differential relationships that now apply to the shipment of soft coal.

The Guffey Act should be junked and serious consideration be given to the bill introduced by Representative ALLEN to restore initiation of prices to the mine owners, but with adequate safeguards of the public interest. The Guffey Act is unfair to all concerned, besides embodying a vicious principle.

It should be replaced by a law that would give the soft-coal industry a chance to work out its own salvation, without official compulsion and bungling interference but with due regard for the consumers' welfare.

## Des Moines River a "Dead Sea"—Fish Dying

### EXTENSION OF REMARKS

OF

HON. KARL M. LECOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ARTICLE FROM THE DES MOINES (IOWA) REGISTER OF FEBRUARY 28, 1940

Mr. LECOMPTE. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following article from the Des Moines Register of February 28, 1940, entitled "Des Moines River a 'Dead Sea'—Fish Dying":

[From the Des Moines (Iowa) Register of February 28, 1940]

#### DES MOINES RIVER A "DEAD SEA"—FISH DYING

The Des Moines River from Des Moines to Keokuk, Iowa, has become an elongated "dead sea," and the only hope that any fish have survived lies in the possibility that some may have retreated from polluted river areas into small tributaries.

A. H. Wieters, Iowa State sanitary engineer, Tuesday said that recent tests made along the river revealed the areas tested did not contain sufficient oxygen to support fish life.

Because of low water, pollution, and an ice sheet of 2 months' duration, thousands of fish have died in the stream between Des Moines and Keokuk, he said.

"Fish are smart enough to get out of the polluted areas if they possibly can do so," Mr. Wieters said. "Some may have gone up the river's small tributaries, where the situation is not so bad."

Charles D. Reed, United States meteorologist, declared he doubted that there would be a break-up in the smothering layer of ice now covering the river until about March 10.

The ice break-up in the northern part of the river, he added, would not come until much later.

Recent thaws, Mr. Reed said, have been of little help to fish in the river, because most of the water has passed downstream on top of the ice sheets, opening the ice in but very few places.

Only good spring rains and a thaw can bring much change in the Des Moines River, health and conservation officials said.

Erie County Council of Republican Women,  
Buffalo, N. Y.

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY HON. STEPHEN BOLLES, OF WISCONSIN

Mr. HARTER of New York. Mr. Speaker and Members of the House, our colleague the gentleman from Wisconsin the Honorable STEPHEN BOLLES, addressed a luncheon sponsored by the Erie County Council of Republican Women. Congressman BOLLES' speech was timely and to the point. His message to the hundreds gathered at the Hotel Statler in Buffalo last Saturday follows:

Madam Chairman and members of the Erie County Committee of Women's Clubs, I thank you and Congressman HARTER for inviting me here today to speak a few brief minutes in a city which, for a few years, I called home. For those years and their seething activities as a newspaper editor, I have the most pleasant memories.

We no longer question woman's place in politics. She is no longer the victim of the learned, pompous, superior lecturer, who so czaristically said, "Her place was in the home," admitting her only into the realm of expert dishwashers and diaper changers.

I am here in New York State, the home of that little wisp of a woman Susan B. Anthony, and her partner, the pleasingly plump Elizabeth Cady Stanton, who did more than any other two women of this world to make it possible for you to meet here today as a part of our body politic, eager to do things for Government and participate as citizens of these United States.

The mystery of human life is almost as great as it ever was. Why we have girls has never been answered yet, and, again, no man, nor woman, for that matter, has ever proposed anything better for the scheme of the human race. But no matter what the attitude, we cannot escape her. She is more than half of the population, and when we say "there's a woman at the bottom of it," we are sure we must be right, because the very nature of things makes it so. She accepts man and takes all his worldly goods that go with him.

Up to within the last half century, all the literature of the world wherein women figured was of love and hate, of courtship and marriage, struggles, and perils to Bertha the beautiful sewing-machine girl; of knights fighting for jeweled hands of scullery maids; of women of the streets and the town; of a Molly Pitcher with her brother soldiers; of women of the court and weeping Cornelias and queens and intrigue and sometimes of a Medici and assassination. She taught music, was a governess, played as servant maid, taught school, and sometimes sold stamps in the post office or was a great social hostess.

She had not emerged into business. Fifty years ago there was scarcely a woman employed in a bank and few were on newspapers. There were no women real-estate agents, no operators of a business except in a few isolated cases where stern and husky widows succeeded to a dead husband's affairs. No Presidents' wives wrote newspaper columns.

She had been in poetry; she was supposed to be a tender thing twining herself around a husband or waiting in hope, sometimes in despair, for a husband. She does that yet but she is not restricted to that channel alone for an outlet to her activities. There was no boss then. When she married the job of boss immediately changed location.

She has not fundamentally changed. She is the same creature of poetry now that she was a hundred years ago, better looking and better equipped. The banks are full of her; the scriveners with trousers have given way to skirts—as much as there are left—at typewriters. She is everywhere. She is the boss as often as she is the bossed. She has transformed offices into neat places once disorderly and jumbled. She is loyal. She fights for her boss as a mother fights for her children. Most of the time the girl knows more about the boss and his worries and work than the wife. She, the girl, the professional and business woman, is the keeper of secrets, and I have never known one to betray an employer. In my own business, the first women were employed to set type. She was a mechanic then. We understood women had to have light work. Light work—when she had been a pioneer—carried her half of the yoke of the team in a new country and lugged babies around for centuries. Now she fills and overflows the newspaper offices.

So, therefore, recognizing as I do your keen understanding of political economy, of your responsibility, and of your knowledge of transpiring events, I shall arrogate to myself no attitude of a

teacher in what I have to say. This is America. We must preserve it. It isn't perfect. Confucius says:

"The illustrious ancients, when they wished to make clear and propagate the highest virtues in the world, put their states in order. Before putting their states in order, they regulated their own families. Before regulating their own families, they cultivated their own selves. Before cultivating their own selves, they perfected their souls. Before perfecting their souls, they tried to be sincere in their thoughts. Before trying to be sincere in their thoughts, they extended to the utmost their knowledge. Such extension of knowledge lay in the investigation of things and seeing them as they really were. When things were thus investigated, knowledge became complete. When knowledge became complete their thoughts became sincere. When their thoughts were sincere, their souls were perfect. When their souls were perfect, their own selves became cultivated. When their selves were cultivated, their own families became regulated. When their families became regulated, their states were put in order. When their states were in proper order, the whole world became peaceful and happy."

Can we make such a land as this of Confucius?

We have a great task. We must abolish war. Before we can abolish war, we must abolish greed. Before we abolish war, we must put away hate. Before all you mothers and sisters can tell me as a Member of Congress, "Keep us out of war," you must purify your own souls from prejudice. You must be really neutral. Congress passed a neutrality act. It isn't neutrality. It will not work. I voted against that act.

I do not want war. It has never settled the world's troubles. We as a people are determined to keep out of war. Fifty thousand overseas headstones, whitening the hillsides of France, thousands in veterans' hospitals here at home, graves of service men in every city, village and town cemetery, cry out either in voice or by example against this Nation ever going again into war to save a world for democracy or for any other excuse. On Armistice Day I stood at the ceremonies at the Tomb of the Unknown Soldier in Arlington—the soldier whose name is known only to God. In the fogging morning I could see the ghostly faces of a multitude of mothers, faces uplifted, wondering if that boy who went to war and never came back, was their son, a member of that great phantom army whose parade shall never be returned. We shall not repeat this scene.

One of our troubles is that we have adopted a new vocabulary. The old one is discarded by the uncombed-haired, crack-brained economists of our time. They speak mostly of democracy. I wonder if any of them know what is a democracy. The United States never was a democracy; is not now. It is fast getting to be a bureaucracy. Neither George Washington nor Abraham Lincoln ever spoke of America as a democracy. This appellation is of comparatively recent origin here. The word is not in the Declaration of Independence. It is not in the Articles of Confederation nor the Ordinance of 1787. It does not appear in the Constitution. The word is not used at all in any of the famous State papers. It does not appear in the speeches of Webster nor of Charles Sumner.

The Constitution, in section 4 of article 4 of the Federal Constitution, expressly provided that the United States "shall guarantee to each of the several States a republican form of government." This is a republic with a republican representative government, and not, nor ever has been, a democracy, as the term democracy is so glibly and so misunderstandingly applied. Not even Jefferson, founder of the Democratic Party under the name of "Republican," used the term "democracy."

The best example at this moment of bureaucracy is the extra-curricular census with the series of inquisitorial questions where a government attempts to discover for itself the intimate personal affairs of an individual citizen. But, more than that, the Government pretends to impose a penalty. It is a direct violation of the Bill of Rights. Away back yonder William Pitt, in his great speech on excise, said:

"The poorest man may in his cottage bid defiance to all the force of the Crown. It may fall; its roof may shake; the wind may blow through it; the storms may enter; the rain may enter—but the King of England cannot enter. All his forces dare not cross the threshold of the ruined tenement."

But under the census law the agents of the New Deal Government may demand entrance to put upon the people an inquisition of questions.

A great jurist, Justice Matthews, of the Supreme Court, said: "Arbitrary power enforcing its edicts to the person and property of its subjects is not law, whether manifested as the decree of a personal monarch or of an impersonal multitude."

I hope there will be a rebellious attitude against these census questions and that the courts shall have the opportunity to settle this question of our rights.

Now, my friends, while we are shedding tears for Finland and are thrilled by this new epic being written by a little people against a monster of tyranny, let me tell you that airplanes flying over Finnish cities are made in America; the bombs they drop are made here; other munitions and guns in tanks made here, and all of them paid for by the American Government and the American people.

We have bought a billion dollars of Russian gold. It is buried out in the ground at Fort Knox. Russians can mine gold under the cheap labor at around \$12 an ounce. We pay \$35. The profit has been about \$23 an ounce to Russia or near \$500,000,000, and

with that money to the credit of the Soviet. With that cash here, Stalin buys airplanes, bullets, guns, and can shoot Finland into a slaughterhouse.

Are you proud of that? Do you like that? Do you want this to go on? Well, that's a part of the New Deal idea. If you do not like it, kill the New Deal by organizing to make a clean-up in November.

You are the hope of America. Do not get yourself bewildered just because you live in an age of radio waves, scientific investigation of everything from the ant to dinosaur eggs; Harold Ickes; an age of nuts and bolts and monkey wrenches; tangled electric wires and T. V. A. power; Jimmie Roosevelt; long-distance music, trucks, and busses; jitterbugs, slot machines, and roadhouses; Jim Farley and adding machines, tabloids, clipper airplanes, soil erosion; W. P. A.; Chinese bandits; Soviet Russia; quick divorce; My Day; moving-picture actors; traffic signals; rotogravures; racketeers; bureaucrats; foreign debts; advice to the lovelorn; farm mortgages; Hitler; Stalin; Ma Perkins; Mussolini; Finland, Argentine beef; and Canadian cheese and furs; and the Ten Commandments waiting to be repealed.

My friends, America is safe from without. No conquerors of the United States have yet been born. The temple of liberty here erected by Washington, preserved by Lincoln, is not to be destroyed from a totalitarian Europe or by an Asiatic horde. If that temple is destroyed, if its facade is marred, it will be from enemies nurtured and suckled from within our gates, nurtured by spineless officials and a Congress with angworm backbones.

America should be careful, watchful, determined. We should now be even more emphatically committed than here in America, groups preaching war or attempting to use America as a propaganda field for any foreign nation or alien doctrines, should be summarily submerged. America must not be used as a breeding ground for poisonous snakes of communism.

We are doing some work in Congress to combat this subversive activity. There is no room here for these groups. We need the room for American citizens.

You can keep all your ideals and yet be practical. Your great task is to keep American in the American way. We made that way. It is ours. It does not need repairing and patching with discarded European notions.

That American way is:

1. To recognize the individual as against collectivism.
2. To continue the profit system which built up our industry. (It is a profit-and-loss system now.)
3. By natural laws of business and production put the 10,000,000 unemployed into profitable jobs and see that both employer and labor have a square deal.
4. To live within our means and spend no more than we take in.
5. Govern as a republic and not as a system of bureaucracies.
6. Keep our fingers out of the buzz saw of foreign entanglements.
7. Preserve the American market for American products.
8. Be ready to defend our shores against any invasion.
9. Provide for the aged and underprivileged.
10. Give opportunity for youth by opening factories and taking the shackles from business.

There are others, all of which are collateral to these 10. We must have a rebirth of that American spirit. The women of the Nation must be leaders.

The first step is to elect a Republican Congress. That will be the Seventy-seventh. There is luck in odd numbers. Send back Mr. HARTER. You may be proud of his record. Return Mr. ANDREWS and clean the slate with a solid Republican delegation from New York.

Then put someone in the White House who will not use the American people as laboratory specimens on which to experiment; a President who will not have a Perkins, an Ickes, a Hopkins in a Cabinet, and no Earl Browders sitting on the White House doorstep.

You have had 7 years of this experiment. The famine in Egypt lasted 7 years. The spending in the United States has lasted 7 years. We have a debt of forty-five billions. We have as many out of work as there were in 1933. We have 980,000 pay rollers.

The time is here, the clock has struck the hour to take the high-road of America and put into power a set of sound principles—the American way.

#### EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

WORDS OF THE MARCH SONG BY H. J. KENT

Mr. MURRAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the words of the march song LXXXVI—App—71

Wisconsiniana, by Mr. H. J. Kent, one of the leading citizens of central Wisconsin.

The sentiment expressed in this march song is indicative of the spirit of the great State of Wisconsin:

#### WISCONSIANA

I

Wisconsin! When the Bourbons from the throne  
Consigned to doom the Reynard's loyal breast,  
O glori'us land, what fate to vengeance sown  
Regales the northern coursers of the West!  
Beyond your bluffs a wonted rendezvous  
Constrains the wrath that balked the feudal sway;  
Yet surge the souls that pledged the mighty Sioux—  
Their stanchless cause no mastery can stay.  
Aguard on the ramparts of Freedom's domain,  
She rouses the westerly gales;  
Their thundering concourse the warriors enrein  
When tyrannies threaten her vales;  
Extending her sweep to the tempest's career,  
She rallies the salient crest:  
Wisconsin's valiant hearts revere  
Her home, the free Northwest!

II

Wisconsin! When the planters from their shires  
Assailed the torch of Concord's gen'rous hand,  
O sov'reign State, what boon to grateful sires  
Confers to us the guerdon of their stand!  
Upon its hearth a sacred heritage  
Assures the zeal that spurned the rebel call;  
Yet glow the hopes that bore the Union gage—  
Their guileless faith no mockery shall gail.  
O resolute goddess, O Justice divine,  
We tender our mother's appeal;  
The fruits of our toil to her fortunes assign,  
The truth of her compact reseal;  
Shall privileged endeavor the colors uprear  
And carnage her tribute attest?  
Wisconsin's valiant hearts revere  
Her home, the free Northwest!

—H. J. Kent.

WAUTOMA, WIS.

### Times Have Changed Since Cleveland Lived in the White House

#### EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

Mr. BRADLEY of Michigan. Mr. Speaker, verily times have changed since Grover Cleveland lived in the White House. When Cleveland wanted to take a vacation, he either went fishing down the Potomac or duck shooting out on the Chesapeake. His vacation pleasure craft was an old-fashioned rowboat that did not cost the taxpayers a dime. Today the present occupant of the White House is returning to the United States from a vacation in which he used a \$10,000,000 cruiser and a whole fleet of auxiliary aerial and naval craft.

Mr. Speaker, this reminds me that our present occupant in the White House has now traveled a grand total of nearly 10 trips around the world, or a total of 181,112 miles on the high seas since he was inaugurated into office. In fact, it seems safe to say that the President seems always to need a vacation and in this case, his thirty-second vacation, it again means a trip at sea with a chance to read and relax, and at the same time study naval problems of national defense, and perhaps erecting a defense against answering that seemingly all-embarrassing question, "Will he run again?"

While this exhibition of waste is going on, I am reminded that just before the President sailed on this last fishing expedition, he vetoed a bill that would have increased the pay of village mail carriers to a minimum of \$1,200 a year. There are only 8,000 of these servants of the people, and the total sum involved in the proposed bill was but \$178,320. The Chief Executive seemingly would rather spend the public's money on fishing trips and vacations than see these underpaid Government workers adequately provided for. I

believe the mail carriers could have been helped for less than the cost of this fishing trip.

Yes, Mr. Speaker, even Mr. Hoover, so much maligned by the new dealers, was himself guilty of the expensive relaxation of an occasional solitary trout-fishing expedition in the cool waters of the Rapidan. In fact, it was he who ordered decommissioned and sold, in the interest of economy, the famed Presidential yacht *Mayflower*.

I am also reminded that the White House expenses in general have been mounting skyward for several years, since "Hoover's extravagance." As an example of what the expenses have been and are today, I submit the following table, by fiscal years:

*White House expenses, including Executive Office as reorganized*

1933	\$369,000
1934	359,000
1935	453,000
1936	425,000
1937	502,000
1938	479,000
1939	2,370,000
1940 (Budget estimate)	2,972,000
1941 (Budget estimate)	3,573,700

These are the totals being spent by the Executive Office of the President, who, when a candidate in 1932, promised, October 19, at Pittsburgh:

I shall approach the problem of carrying out the plain precept of our party, which is to reduce the cost of current Federal Government operations by 25 percent.

Thus, Mr. Speaker, old Omar said:

The Moving Finger writes; and, having writ,  
Moves on: nor all your piety nor wit  
Shall lure it back to cancel half a line,  
Nor all your tears wash out a word of it.

Verily, times have changed since Grover Cleveland occupied the White House.

### The Pink Bollworm

#### EXTENSION OF REMARKS

OF

HON. MILTON H. WEST

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

RADIO ADDRESS BY HON. RICHARD M. KLEBERG, OF TEXAS

Mr. WEST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of the gentleman from Texas [Mr. KLEBERG] on the subject of the pink bollworm:

My fellow citizens of the radio audience, may I first thank the National Grange and the National Broadcasting Co. for this opportunity to talk to you. My subject, the Pink Bollworm against the United States of America, is one well worth attention, whether you be engaged as a professional man or woman, as a cotton farmer, lawyer, merchant, an industrialist, a laborer, or a child going to school, or a young citizen going to college.

The pink bollworm is a caterpillar or worm in one stage of his life and in another a fragile moth, light almost as gossamer, practically incapable of flying in the direction he would like to fly and wafted easily with the wind in whatever direction the wind happens to be blowing. Scientists denote the pink bollworm either as *Chloridea obsoleta* or *Heliothis armigera*, formidable Latin appellations these two. The parent moth lays eggs from which the young ones hatch out. They bore holes and penetrate the flowers, buds, and young bolls of cotton, causing them to drop off the plant. It is with reference to the pink bollworm's present location in Mexico and the United States, and his present determination to invade the cotton fields and cotton-producing area of the United States, that I talk to you today.

#### DESTRUCTIVE NATURE OF PEST

At the outset, may I state that there are some 166 different pests which attack cotton, according to the United States Bureau of Entomology. Of these, the pink bollworm is by far the most dangerous and destructive, so much more so that the pink bollworm is considered more destructive than all of these various pests combined. Everyone from the cotton producing area of our country

knows the damage that can be and is wrought by the boll weevil, which came into our country through the same gateway where the pink bollworm is at present entrenched. If he manages to force his way, and he will unquestionably do so, unless the Congress provides funds adequate for control methods now utilized by the Bureau of Entomology, we in the United States, will be the only great cotton-producing country in the world afflicted by both the pink bollworm and the boll weevil.

The pink bollworm has been known to entomologists for many, many years. He made his first appearance in North America in Mexico in 1917. He was imported in some cottonseed for planting purposes from Egypt. This seed was planted in what is known as the Laguna district in Mexico. This area is located some 350 miles from the border of the United States. The pink bollworm first appeared in the United States in the Presidio or Big Bend area of Texas in 1918. Careful investigation showed that the pink bollworm moth drifted by wind currents from the Laguna district in Mexico to this point in Texas. This discovery was made by stretching nets between captive balloons, which nets enmeshed this moth up to elevations in excess of 2,500 feet in the air.

Time is too short to go too much into detail, but, suffice it to say, that control methods employed by the Bureau of Entomology and cooperating farmers were shown competent in preventing the spread from areas in Texas, New Mexico, and Arizona to major cotton-producing areas in the United States. These just-mentioned areas have winds during the time of the year when the pink bollworm is in the moth stage, which, in the main, blow away from rather than toward the cotton-producing sections of our country. In 1936, however, the pink bollworm was found in the Matamoros area of Mexico just across the river known as the Rio Grande from Brownsville, Tex., and it is because of this present location of pink bollworm infestation that those of us who have made a study of this dangerous insect pest fear the possibility of his successful entry into the cotton-producing Southern States.

If the pink bollworm should get into the major cotton-producing parts of our country, the additional cost of production due to his ravages would, in my candid and earnest opinion, put those sections out of the cotton-producing business. In the South, where cotton is produced, merchants of all kinds do the major part of their business during the cotton picking and harvesting season. That is the time when all bills are paid—to dentists, doctors, and others. That is the time when new automobiles are bought. That is the time when employment and wages are at their height. Cotton gins, oil mills, compresses, trucks, railroads, ships, cotton merchants and buyers are all going full speed ahead. What if there were no cotton produced in these areas? Patently, cotton farmers would turn to those lines of production to which their lands, the climatic conditions, and location are best adapted. In the main, this would mean livestock, dairying, and hogs. Sugar beets, corn, wheat, etc., are likewise possible of profitable production in large areas where cotton is now produced, but in the main livestock would, in my opinion, command their first attention.

If these farmers turn to livestock it means that 90 out of every 100 men once employed in the planting, cultivation, and harvesting of cotton would be out of jobs. It means that every cotton gin, oil mill, and compress would close their doors and their employees would, in the main, seek places on the relief rolls. This would mean much additional money for relief. At the outset more than 1,000,000 would lose their present means of livelihood, with consequent cost to taxpayers wherever they are located in our country. In the main, in the South school teachers are paid from the general-tax fund of the respective States. Schoolhouses are built by the establishment of school districts, independent and otherwise, in which districts bonds are sold, etc. Tax delinquency and failure to meet bonded indebtedness would immediately become the rule rather than the exception. Business failures would perforce follow in the wake of such a disaster. The economic dislocation by the shifts in production inevitable from cotton to other lines of production would destroy the northern and northwestern and eastern dairy industry and seriously impair, if not destroy, the corn- and wheat-producing sections. The result to all lines of business occasioned by the loss of purchasing power on the part not only of the cotton farmer but of all farmers would be immediately felt by all kinds of industry and business in our land. For instance, in 1935, by careful estimate, 40 out of every 100 persons gainfully employed in all manufacturing industries in the United States were employed by industries which utilized cotton as an essential part of their manufactured products. The loss of American cotton and its byproducts to these industries opens another tragic field of thought. American money would go out for the purchase of foreign cotton.

#### APPROPRIATION SHOULD BE ADEQUATE

This is enough of the detail to such thoughtful minds as I know an American radio audience accustomed to this program possesses. Wherever you are, it is to your interest to inform your Congressman and Senators as to whether or not you think it is worth while to appropriate \$800,000 in addition to the \$526,000 contained in the agricultural appropriation bill for pink bollworm control, which is now being considered in the United States Senate. We have established records of the successful work being done looking to control and final eradication of the pink bollworm by the United States Bureau of Entomology. So there is no guesswork involved concerning the use to which the money will be put, nor should there be any doubt concerning the importance of the requested increase.

In summation, the pink bollworm in China, it was estimated, cost that country from eighty-five to ninety million dollars' worth of cotton in 1938. In other countries he is known to be responsible

for a curtailment in production of from 50 percent upward. His destructiveness in some small spots where severe infestations have been found has been known to amount to nearly 100 percent. The pink bollworm not only destroys by killing the flower and the square and the boll which he penetrates, causing these to either fall off or fail to mature, but where cotton bolls partially opened and the cotton is picked he ruins the staple and the quality.

It seems perfectly clear that we must prevent the dissemination of the pink bollworm over the Cotton Belt. The infestation in South Texas must be eradicated or controlled. Continued consideration should be given to the continuation and improvement of the measures now in effect, namely, the sterilization of seed, burning of cotton waste, the cleaning up of fields of all living cotton as soon as possible after picking, and the retardation of the planting date in the spring. This last so that when the pink bollworm is in the moth stage he will find little or no cotton blooming or in fruit. Fortunately, the pink bollworm's life span while in the moth state is of very short duration, and the measures of control just described have been found thoroughly effective both in controlling against the spread of the pest as well as in some instances resulting in complete eradication where no reinfestations from other sources have occurred. Plans are going forward looking to the working out of a system of cooperative attack by both the Governments of the United States and Mexico on the pest in Mexico. But surely we should leave no stone unturned to safeguard us against the catastrophe which we in this country face if this destructive insect gains a real foothold in the major cotton-producing areas of our country.

#### BOLLWORM CAN BE STOPPED

We know that where he is now found he can be decisively retarded and finally defeated. Climatic conditions, flat topography of the country, farm implements and tools, tractors, etc., and farmers who fear and know this insect make the present battleground the best place in our country to conduct this fight. It will be a different story if the pink bollworm reaches those sections of the country where cotton farming on hillsides is under the auspices of the Negro and the mule, and where tractors, etc., are not adaptable. This is not like the war in which Napoleon figured against Wellington, where Wellington lost many battles but finally won the war. This is a war where to lose one battle, which is a continuing one, means the loss of the war. So I earnestly urge your intelligent interest and attention to the dangers which surround this invasion. We run graver risks from this insect enemy than we do from invasion from any foreign foe today.

### Labor, the Organ of a Million Workingmen, Approves My Resolution for a Referendum on Overseas Wars

#### EXTENSION OF REMARKS

OF

#### HON. LOUIS LUDLOW

OF INDIANA

#### IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

Mr. LUDLOW. Mr. Speaker, labor has a vital interest in the peace movement. No other element in our complex civilization is quite so deeply concerned in the elimination of the causes of war as the toilers of the land. It is upon them that war's heavy hand is laid most relentlessly. Others may evade the hardships of military service through exemptions provided for executives, farmers, and persons of specialized qualifications, but for workingmen, generally speaking, there is no loophole. They comprise the mass of the eligible fighting population. They have to take it on the jaw.

Workingmen furnish the great bulk of the Nation's cannon fodder. War breaks up their happy homes, tears them away from their loved ones, and sends them forth to be shot or to be blown into bits or to be strangled with poison gas, and does not give them or their families one single, solitary word to say about it.

Labor, the largest, and by all odds, the ablest and most influential of all the publications that speak for organized labor, the organ of a million workingmen, approves my proposed amendment to the Constitution, which would give the people of America a right to vote on proposals to send our boys overseas, to fight and die in foreign wars. The following editorial appears in the March 5 issue of that publication:

#### EDITORIAL PRESENTING THE VIEWS OF LABOR

Twenty-three years after the United States entered the World War, the people are being let in on the secret of just how we were maneuvered into that conflict.

After careful editing, some of the contents of the files of the State Department are being published.

We see Bryan battling for peace, until he lost heart and resigned. His successor, Lansing, crafty international lawyer, wished to get us in from the start. Colonel House harbored the same design. Woodrow Wilson was for neutrality, but all his sympathies were on the Allies' side, and he was toying with the idea of entering the conflict during the very months that Democratic politicians were urging the voters to elect him because he had "kept us out of war."

The people were never asked what they thought about the matter. Just a few men, most of whom had never been elected to any office, discussed and finally decided this most momentous question. A similar group could do the same thing today, tomorrow, next year.

In other words, the people of this country have practically no control over the conduct of their foreign affairs.

Congressman Louis Ludlow says there should be a referendum before a declaration of war, unless some foreign power invades this hemisphere. What's wrong with that idea? Isn't it better than the present undemocratic set-up?

### Propaganda of the Interior Department

#### EXTENSION OF REMARKS

OF

#### HON. WESLEY E. DISNEY

OF OKLAHOMA

#### IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

#### STATEMENT OF MR. RUSSELL B. BROWN, OF THE INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA

Mr. DISNEY. Mr. Speaker, Russell B. Brown, general counsel of the Independent Petroleum Association of America, representing that organization, the Mid-Continent Oil and Gas Association, the American Petroleum Institute, and a number of other industry associations, in his appearance before the petroleum subcommittee of the Committee on Interstate and Foreign Commerce, House of Representatives, in opposition to H. R. 7372, Monday, February 26, made the following statement, discussing propaganda of the Interior Department:

Take this bill, examine it from the first word through the concluding sentence. What can be done under the terms of the bill itself to prevent waste? Outside of employing men to administer under salaries that may be ascertained by reference to other laws, nothing can be done under this law until someone not now known to you prescribes some regulations not now known to him defining some activity now uncertain.

The declared purposes of this bill are beautiful. They express desires and ideals that have grown out of years of experiences by men who have had to sacrifice a great deal that we might have a great and valuable industry, whose estate the proponents of this measure now want to administer; but the powers defined do not follow the purposes declared.

Since the full powers created by this bill are lodged in the Department of the Interior, we think it well to examine the attitude of those who appeared in various places in support of such measure.

It has been conclusively shown by previous testimony adduced before this committee that H. R. 7372 originated in and was drafted by and is now being sponsored by the Interior Department.

The witnesses for the Department have appeared, in small part, before this committee, but the primary witnesses for the Department, who have ignored this committee and the Congress, have appeared before the American public (1) under the cloak of anonymity; (2) unsworn; (3) not subject to examination and cross-examination; (4) using false and fictitious facts and incidents; (5) employing the facilities of dramatics, sound effects, etc.; (6) sent out under the guise of entertainment; (7) engaging in propaganda, at Government expense, to influence Federal legislation, in possible defiance of the Hatch Act, recently enacted by Congress.

In brief, the sworn witnesses of the Department deny responsibility for the policy involved in the act.

The unsworn witnesses, who engage in fictional propaganda, are the real sponsors of the act, and the claimed necessity therefor is predicated upon false and nonexistent hypotheses that are anonymously spread by radio broadcast to the American public.

Because of the illuminating nature of the Interior Department's self-exposure in the Department's program of radio broadcasts, it will be outlined for your careful examination.

The report of the energy resources committee of the National Resources Committee transmitted by the President to Congress under date of February 15, 1939, contains the following significant paragraph:

"Whenever the general public becomes sufficiently impressed with the threatened shortage of petroleum products and the possible

risers in prices for motor fuel, then the complex problem of regulating the oil and gas industry is likely to be transferred to the Federal Government."

I have emphasized the word "impressed" because this seems to be the inspiration for, as well as the procedure followed by, the Interior Department in attempting to bring about a demand for this legislation. This probably explains why reason and information have been asked to give way to emotion and fear.

This bill did not come without warning or without a sponsor. I now call your attention to the propaganda calling this bill into existence and urging its support. Here, too, we set forth the Interior Department's conception of waste so clearly that none can misunderstand it.

For your convenience I now present for the record the official revised script of four radio broadcasts of the Interior Department.

We also have noted in these broadcasts such hysteria and melodramatic emotionalism that we feel it would be dangerous to trust the control of a great industry to any governmental agency which is willing to display such a lack of balance and calm in its discussion of so important an economic problem as is involved in the conduct of the petroleum industry.

These programs, as is repeatedly indicated in the scripts, were intended to persuade citizens to bring pressure to bear upon Congressmen in favor of regulation of petroleum production by the Interior Department.

In the efforts thus to influence legislation program No. 24 of the Interior Department in its series entitled "What Price America?" on Saturday, July 15, 1939, attacked the petroleum industry over the Columbia Broadcasting System. The essence of this program was the promotion of fear. The official revised copy of the script in its directions for music, sound effects, and statements indicates that clearly. In the opening of the attack, the direction for the music is "up wildly and fade," while the sound direction reads, "Suggest utter confusion and hysteria of a population in and under. Automobile horns in hectic symphony."

Then come in the following utterances one after the other:

"DOCTOR. I'm a doctor. I must get there at once. A woman is dying.

"ATTENDANT. Sorry, Doc. We haven't a drop of gasoline in the station."

(Sound: Fire siren.)

"FIREMAN (shouting). It's the schoolhouse! And we can't move our fire engines.

"TRUCK DRIVER (through filter). Listen, Boss, I'm carryin' perishable goods—fruit and vegetables—on this truck. How am I gonna get them there before they spoil?

"TICKET AGENT. The Twentieth Century Limited can't leave this station, Madam. You'll have to get to New York by stagecoach.

"FARMER (surprised). Well, I'll be doggone. I can't use my tractor. I can't plow my farm.

"HUSBAND (ordering wife). Get the children. We'll leave the house and find a restaurant where they cook with a coal stove.

"DISPATCHER (droning via radio). All airplanes are grounded. All airplanes are grounded.

"BOSS. You men needn't report to work tomorrow. This plant's shutting down. Can't run our machines without oil."

(Sound: Telegraph key. In and under.)

"TELEGRAPHER. S O S. S O S. Steamer America calling. Stopped in midocean. One thousand aboard. Send help at once.

"MAN. Get some candles, Martha, or we won't have light.

"ADMIRAL (dictating). To the Navy Department: Fleet unable to leave port for Pacific coast as ordered." (Fade) "Guns useless without oil. Awaiting further word on"—

(Crowd up and fade.)

"VOICE. Preposterous, ridiculous, bunkum, rot? No, America. Silly, imaginative, extravagant? No, indeed, America. Our entire modern civilization depends on oil. It is absolutely irreplaceable. Dissipate this one natural resource of ours, and that danger is our danger. It would creep upon us slowly, however, softly, so we would not notice at first. (Suddenly) America, the seeds for such a calamity already have been sown \* \* \* are continuing to be sown now."

In the same broadcast is given an imaginary picture of Titusville, Pa., when the first oil well was brought in. With all the incitements to hysteria, we find phrases like this:

"Second VOICE. Gas is blown off into the air—gone forever.

"OILMAN (coming on). Who wants gas? I'm interested in oil, not gas!

"Third VOICE (quietly). Don't you realize that it's the pressure of gas that forces up the oil? Waste that gas and you lose oil. [Warning] "Soon there won't be any more oil coming out of your well."

Teamsters are pictured as dumping their oil when they are stuck in the mud. "There is plenty more." Dams are cut to let oil barges and rafts rush down stream, smashing some of them and wasting hundreds of gallons of oil.

One of the most unfair presentations is the following:

"VOICE. Meanwhile, America lights its homes with kerosene lamps and thinks it's wonderful. Kerosene is what oilmen are after—and curse loudly a bothersome byproduct."

"Third OILMAN (angrily). That darn gasoline—more trouble than it's worth!

"WORKER. What'll we do with it?

"Third OILMAN (impatiently). Throw it away. Do anything, but get rid of it.

"WORKER (suddenly). I know. Tomorrow's the Fourth of July.

"Second OILMAN (waiting). Yeah?

"WORKER. Why not dump that gasoline in the river; get all of the other oilmen to do the same. Most of 'em are doing it anyway.

"OILMAN (interested). Yeah?

"WORKER. Then we'll put a match to it and let it burn. What a sight!

"OILMAN (laughing loudly). Sure. Sure. That's fine! At least that gasoline will give us a laugh. Go ahead. It'll be patriotic."

[Laughs fading.]

The intent of these broadcasts to arouse fear and then anger in the minds of listeners is shown repeatedly in the various programs. In this program No. 36 the narrator tells a shoe black that oil is used to make shoe polish, and that oil is being wasted. The shoe black, in the script, is portrayed as interested, surprised, worried, aroused, angry, and again aroused. The shoe black was the brain child or the Charlie McCarthy of the Interior Department, and they caused him to react as they wished. The shoe black in Negro dialect declares that he is a citizen, and for the purpose of the broadcast he represents the citizens of this Nation whom these programs seek to interest, surprise, worry, arouse, and make angry, so that Congress may give the Interior Department control of the petroleum industry.

The narrator in this broadcast makes his charge of waste in petroleum production to a locomotive engineer, to Mrs. Murphy, to a service-station attendant, to a politician, as well as to the shoe-black, seeking to influence each of these against the petroleum industry in the interest of a bill like H. R. 7372. The desired effect on the radio's listeners is set forth in the effect on the five characters addressed by the narrator. Here they are:

"SHINE. Ah'm sure that smart people livin' all over the country—[quickly]—and there's lots of 'em—they ain't gonna let that oil be wasted like it is fo' long.

"ENGINEER. Men like me have got to make their voices heard. We can't afford to waste our oil.

"MRS. MURPHY. I'm thinkin' that ladies like me, who cook on oil and gas stoves, who need oil to make a kitchen a kitchen, they're not going to be quiet about this. They're goin' to be sayin' we don't want to see oil wasted any more than we want to see good food wasted.

"ATTENDANT. I've got it; I'll help! That's what I'm goin' to tell everybody I know. I'm gonna tell 'em the facts like that man told me—tell every guy that stops, whether he stops for gasoline, water, or free air. I'm gonna tell 700 people a week, we gotta conserve our oil not only for ourselves [fading] but for our kids!

"POLITICIAN. If this oil-conservation problem is so important that oil reserves have already been set up to protect our Navy, then I'm going to see what I can do to protect my constituents—the everyday oil users. What's more, if it's legislation that we need to conserve our oil, I'm going to lend my support to securing such legislation."

It would be amusing if it were not so tragic to note that in this same program No. 36 the narrator, according to the official script, says: "I'm speaking for the Department of the Interior, principal guardian of your natural wealth—it wouldn't let me say anything that wasn't so. (Sincerely.)" The word "sincerely" is a part of the script. This is immediately followed by a statement that our present known oil reserves will last only about 13 years, or possibly 17, and then, addressing an imaginary Mrs. Murphy, he says: "You've a Congress that represents you. You can do something about the waste of oil—the waste in production, the waste in treating crude, the waste in storage, the waste in transportation, the waste through fire losses."

Just how the Interior Department will be able to stop or reduce any of these so-called wastes is not shown. All of them involve incidental waste. Nothing can be produced without some waste. Nothing can be treated without some waste and so with storage and transportation. Waste from fire losses has long been negligible. Nevertheless Mrs. Murphy is supposed to get in touch with her Congressman and tell him that the Interior Department should take over the oil industry because of these wastes.

Here is the way this broadcast seeks to build up public opinion in support of legislation such as H. R. 7372.

"NARRATOR (beginning). Your Department of the Interior; that's the Department that looks out for most of your natural resources.

"VOICE. What's it been doing?

"NARRATOR. It's been working on this problem. Only if it's to do a real job of conserving your oil resources for you, it's got to be given the power by Congress.

"VOICE. There ought to be something that can be done.

"NARRATOR. There is. One way is to create a body in that Department of the Interior to fight the waste of oil for us."

Then the narrator pictures an Interior Department official, after such a law had been passed, addressing the industry thus: "Well, if you won't stop this waste, then we the people will institute legal action to make you do it. Our oil must be conserved."

This "we the people" has a famous precedent. Many years ago the Nine Tailors of Tooley Street published a petition which began with these words, "We the people of England."

Possibly the most notorious of these broadcasts is program No. 46. Here sound effects represent the gushing of many wells while ghosts of the past come back to speak at the narrator's call. One of these, an imaginary Ebenezer Floyd, is supposed to be a small oil producer in Pennsylvania. He tells of overproduction and waste in 1907 and then takes a leap into the future and, supposedly speaking in 1939, says: "Why, I can look ahead and see when we will have no oil in this country. These are the days to watch out and see that intelligent methods are used in getting the oil out of the ground.

Jumping Jehosophat, what have you got a Congress for? What good is legislation unless you use it to conserve your oil?"

Since Mr. Floyd's alarm in 1907 concerning the early exhaustion of our petroleum reserves, we have produced approximately 20,000,000 barrels of petroleum and still have known reserves of approximately 20,000,000,000 barrels. Through improved recovery methods we are getting more gallons of a better grade of petroleum products from every barrel of oil. We have eliminated much waste that was once considered inevitable and by the double method of improved production technique and larger utilization we have greatly increased the life of every oil field in the country. The Interior Department appears, according to its broadcasts, to be utterly unaware of all this.

Authority for these broadcasts is apparently assumed by Bernard C. Schoenfeld who signs himself "chief script writer, Radio Section" in a letter published in the National Petroleum News for Wednesday, January 31, 1940, which I now present to you.

The fact that there exists such a section with a chief has serious significance. The relation of a Radio Section to the proper work of the Interior Department is not clear. What is clear, however, is that this section, in some respects at least, has been devoting itself to an improper assault upon American industry and especially upon the petroleum industry.

That these broadcasts have, in some degree, accomplished their purpose is indicated by a letter (no doubt one of many similar ones received) which an official of the Interior Department selected to read in the course of an address made at a meeting of distinguished university alumni, since the opening of these hearings. This letter, written by a person who seemed sufficiently impressed with the shortage of petroleum products through the methods above indicated, was selected as the sort of response they sought and the type of mind to which they appealed. That you may understand the use to which the letter was put, I am quoting from the address I just mentioned.

"In this connection let me read you a letter that reached my office a few months ago: 'Dear Uncle Sam, I am only 8½ years, but the waste of oil that is going on is terrific. And I depend upon you to help us citizens to stop it.'

"I am happy to inform this particular worried citizen, and others, that under the Connally Hot Oil Act of 1935, administered by my Department, steps have been taken to bring some order into the oil mess. However, the question of conservation of oil is primarily up to the States \* \* \*"

A few days ago we celebrated the birthday of Thomas A. Edison. An entire Nation paid tribute to the genius who blessed the world so greatly by his efforts. Yet many of his inventions appear crude and wasteful in the light of his later improvements. His progress could have been greatly hampered by such a section as this now lodged in the Department of the Interior. For a few hundred dollars per year we could hire a man who, given the freedom of the radio as was given this section, could have held the work of this great man up to the ridicule of the uninformed of America until his name might have been jeered instead of cheered as it now is.

So the laughter and mockery with which Deborah Read greeted the young Benjamin Franklin as he strolled Philadelphia's streets with his bread under his arm might have been multiplied a million times until it destroyed one of the greatest careers of our history if the radio had existed then and had some willful agency in the Government of that time so used it.

These broadcasts are dishonest. The arrangement of words—the inflection of voice—the melodramatic effects are all designed to create a false impression. Some European countries use this method to dominate a nation, but this is something new in the United States.

There is a law which provides for punishment of any officer or employee in the United States who indulges in actions to influence legislation. Here is the way that law reads:

The United States Code, title 18, section 201: "Use of appropriations to pay for personal service to influence a Member of Congress to favor or oppose legislation.

"No part of the money appropriated by any act shall, in the absence of express authorization by Congress, be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device, intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation; but this shall not prevent officers and employees of the United States from communicating to Members of Congress on the request of any Member or to Congress, through the proper official channels, requests for legislation or appropriations which they deem necessary for the efficient conduct of the public business.

"Any officer or employee of the United States who, after notice and hearing by the superior officer vested with the power of removing him, is found to have violated or attempted to violate this section, shall be removed by such superior officer from office or employment. Any officer or employee of the United States who violates or attempts to violate this section shall also be guilty of a misdemeanor and on conviction thereof shall be punished by a fine of not more than \$500 or by imprisonment for not more than 1 year, or both." (July 11, 1919, ch. 6, sec. 6, 41 Stat. 68.)

This law is an expression of legislative opinion on propaganda by Government employees designed to bring about legislative activity.

How could the oil men of the country support a measure such as that before us, giving to some subordinate in the Interior Department power to compel the industry to accept its regulations to

prevent what it might be pleased to denominate waste, when they have heard the Interior Department's authorized representatives blare to the world its false accusations.

The domestic petroleum industry recognizes that it may expect to meet sincere critics all along the road and is prepared to meet them and to profit from any constructive proposals. It also recognizes that it may expect to meet unfair criticism. It is, however, too much to ask that it stand silently by when an unfair critic, clothed in respectability through employment by the Government and given thus a voice of authority, uses his place as a perch from which to launch dishonest assaults upon the industry. Still worse is it when the very evidence of progress made by the industry is made the basis for these attacks.

A person willing to do these things, or to approve them, or to permit them, in order to obtain legislation for control of the petroleum industry might be willing to do more.

It must be said to the credit of the Columbia Broadcasting System, over which these programs were broadcast, that, since the exposure of the propaganda by the National Petroleum News, it has discontinued their programs and has announced that hereafter it will itself prepare the script for any future Government broadcast.

If the Interior Department broadcasts should be successful and achieve their purpose, they would have effected an unprecedented change in our American system of government. It would mean a bloodless revolution, with the transfer of authority over our industrial life from free enterprise to Government dictatorship. The precedent thus established might be followed with other industries until the business life of the Nation was regimented from top to bottom, even as it is today in some other countries of the world. It would be a form of communism or totalitarianism. This Department does not seem to have understood the ideals of the administration itself in regard to propaganda as set forth by President Roosevelt in his recent address to the American Youth Congress when he told the delegates:

"You have a right, peacefully and openly, to advocate certain ideals of theoretical communism, but as Americans you have not only a right but a sacred duty to confine your advocacy of changes in law to the methods prescribed by the Constitution of the United States; and you have no American right, by act or deed of any kind, to subvert the Government and the Constitution of this Nation."

Here the President has clearly indicated the manner in which, if the people desire, they may change their system of government. To do this obliquely and by indirection in some such manner as is being practiced today by the Interior Department through its advocacy of a Federal oil-control bill is not in harmony with the sound doctrine proclaimed by the President.

RUSSELL B. BROWN.

## Short on Vital Materials

### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1940

ARTICLE FROM THE WASHINGTON POST

Mr. SHANLEY. Mr. Speaker, it seems eminently appropriate to include a provocative article on vital war materials, especially when that document comes from authoritative sources.

The article that follows was in this morning's Washington Post under an Associated Press byline:

UNITED STATES SHORT ON NINE MAJOR WAR MATERIALS—MINING EXPERTS AGREE AMERICA IS DEFICIENT ON METALS AND MINERALS

New York, February 14.—Mining experts agreed here today that the United States is deficient in resources for seven essential war metals and two war minerals.

These reports were made to a symposium of the American Institute of Mining and Metallurgical Engineers. Some of these metals are so important, engineers declared, that their lack in some European countries and their control by others made the present European war inevitable, even omitting some of the other reasons for fighting.

The United States is not so badly off; but, nevertheless, China, which can be cut off at any time, is a main source for two of these war essentials, India a third, Asia Minor another, and Italy and Spain a fifth.

The seven metals are:

Tin: On which an army's canned food depends. The United States produces but 1 percent of its tin, and the source is the Far East.

Nickel: One-half of 1 percent produced by the United States, with Canada the main supply source.

Manganese: United States production, 5 to 10 percent of its needs. Supply, Russia, Cuba, and Brazil.

Chromium: Home production, 1 percent. Sources, Turkish Asia Minor and Rhodesia, the latter a British source already cut off from the United States.

Tungsten: Essential for tools to make munitions. United States, production 40 to 50 percent. China furnishes the rest.

Mercury: For fulminate caps for projectiles. United States supplies 50 to 60 percent, and the rest comes from Italy and Spain.

Antimony: For bearings of mechanized Army and alloy for bullets. United States' production, 10 to 15 percent. China, Mexico, and Brazil the other sources.

The two minerals are mica, for electrical equipment, and quartz, for military radio. The United States supplies about 20 percent of its own mica, with the rest coming from India and Brazil. America has virtually no quartz and gets its supply from Brazil.

J. W. Furness, Chief of the Economics and Statistics Bureau, United States Bureau of Mines, said that as soon as one nation controls a lot of mineral resources, and limits their distribution under a highly nationalistic policy, war is inevitable.

D. F. Hewett, Chief of Metalliferous Deposits of the United States Bureau of Mines, gave examples. Great Britain, he said, has prevented exploitation by foreign nations of manganese on the African Gold Coast and chromium in Rhodesia. They may only buy from Britain. He said America's Rhodesian supply has been cut off lately.

Other experts declared one reason Russia wants Finland is to place Russia almost on top of the Swedish iron mines, which supply 50 percent of Germany's iron. The mines are in northern Sweden, are the richest iron ore in the world, and Germany gets this by rail across northern Norway and thence down Norway's coast.

At present, said the engineers, this rich cargo travels inside Norway's 3-mile territorial-waters zone.

### Don't Fool Yourself

#### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

Mr. HOFFMAN. Mr. Speaker, appearing before the House Labor Committee, Lee Pressman, general counsel for the C. I. O., who is doing as much as anyone in America to further the cause of the Communists, stated, in substance, that there was no real demand for amendment of the National Labor Relations Act. He classified me as a reactionary and as one unfavorable to labor.

Some day he and those who think with him will learn that Pressman and his kind are the real enemies of labor. Certainly, joining with Secretary Witt, of the Labor Relations Board, to instigate and then carry on a strike against the Inland Steel Co., because it would not sign a contract, a strike which brought about violence and threw thousands of men out of work and made their families dependents, was not of benefit to labor. It was rather in the interest of those ghouls who feed, and sometimes live in luxury, upon the sums which they filch from the pockets of workers.

That action was rather in the interest of the Communists and labor racketeers to which Pressman's activities so often contribute.

Anyone who reads knows that there is in this country an overwhelming demand that the National Labor Relations Act be amended, the present Board abolished. Literally hundreds of editorials have been published demanding the amendment of this law. Two of the more recent ones are typical. One comes from a daily published at Sturgis, Mich., in the Fourth District, by Mark P. Haines, who reflects the views of the average patriotic, fair-minded American in the smaller cities and towns. He writes:

[From the Sturgis Daily Journal of February 26, 1940]

AFTER THIS, WHO CAN DEFEND THE N. L. R. B.?

To the long list of the Labor Relations Board's incongruous activities, including the roles of investigator, prosecutor, judge, and jury, there must now be added that of legislative lobbyist.

The astounding story of the Board's efforts, fortunately futile, to block loans from Government agencies to employers who had incurred its displeasure has already been spread on the records.

Now from the lips of unwilling and interested witnesses comes the sordid tale of a campaign organized by the Labor Board to prevent adoption of any amendments to the Wagner Act that would weaken its arbitrary powers.

On frequent occasions when the N. L. R. B. has been under fire for rankly unjust and arbitrary rulings it has pleaded that it had no other course under the law; that its sole job was to administer the act as it stood.

Unquestionably the Wagner Act does confer enormous authority on the Board, which it is eager to retain. But it has continuously and grossly abused this authority.

These abuses have been perpetrated under cover of the law. In some cases the Board has been called sharply to account by the courts. In too many instances the Board has got away with it by invoking its blanket powers.

But there is not even the color of legality in the gross impropriety the Board is now shown to have committed in its systematic attempt to influence legislation by Congress for its own selfish ends.

A letter from the former Secretary of the Labor Board, placed in the House committee record recently, stated: "We intend to conduct meetings, radio forums, and similar activities throughout the country as part of a campaign to convince Congress and the people that there is no need to amend the Wagner Act at this time."

To supplement this "educational" campaign, the Board appointed a group of lawyers to round up witnesses who would testify as they were told before a Senate committee. On discovering that one prospective witness favored giving employers the right to petition, an agent of the Board crossed his name off the list. One of the greatest threats to democracy consists in the tendency of so-called independent governmental agencies to become self-perpetuating bureaucracies.

If it had done nothing else—and it has done plenty—to warrant its abolition, the N. L. R. B.'s undercover activities to influence legislation in its favor would be enough to impel Congress to rip these unfaithful servants out of office and junk the wretched law that brought such a board into being.

The other comes from one of the greatest of American dailies, the Chicago Tribune, which reads:

#### CONGRESS AND THE LABOR BOARD

The administrative record of the National Labor Relations Board has not been fully examined as yet. The Smith investigating committee has been given another appropriation to continue its work and its reports should furnish the material for the amendment of the Wagner Act.

From the published transcripts of these committee hearings, from court records, and from the protest of employers and employees alike there already has been compiled a history of a high-handed administrative bureaucracy which, in a relatively short time, has established many new records for arbitrary treatment of persons and organizations over which it has been given or has assumed control.

The Labor Board is unique in the diversity of its invasions of rights and privileges and in the plenary character of the authority it undertakes to exercise, some of it, according to the ruling of the Supreme Court, being legally derived from the act itself.

Congress, according to the Court, has deprived citizens of legal redress against certain rulings and findings of the Board. These findings have been made final and the only redress is political. Congress has made the Board its own court of last resort in certain instances and, that having been done, only Congress, in the opinion of the Court, can restore the judicial protections. The opinion makes amendment in this particular imperative. If this is an error of Congress it can be corrected by Congress.

Other intolerable faults in administration, in conduct and behavior which have not gone up as yet for final judicial decision, can be removed by amendment. There are lower courts' decisions holding that the Board's examiners have denied citizens the right of fair trial. The Board itself has tried to throw the responsibility upon regional officials, who, whatever the Board members may say, certainly did nothing more than act in the spirit in which the Labor Act has been administered generally.

Regional executives who were partisans in labor controversies in which they played the triple role of policeman, prosecutor, and judge, who set out to get this or that individual and to aid favored interests, to throw out one labor organization and put another in, and to deny impartial hearings to persons and organizations not liked by authority, were not acting contrary to the disclosed trend and purpose of the Board itself.

The excuse has been offered that lack of experience led to errors in procedure and that this was almost unavoidable. The excuse does not hold water. Until the consequences began to embarrass Mr. Madden and his associates under investigation no real attempt was made to stop the major abuses. If a subordinate official was tough with a proscribed employer, management, or union, he knew that he had the silent approval of his superiors. Although the correspondence examined by the Smith committee gives many instances of premeditated violations of ordinary rights, it does not disclose that offenders were vigorously disciplined, rebuked, or set on the right track.

It would be foolish for the Board to continue to defend its methods by such evasions. It knew what was going on, and until the disclosures became sensational it did not make changes in its procedure. It organized a high-pressure lobby to fight amendments to the Labor Act in a fashion which many of the Congressmen think was a punishable offense under law forbidding such activities.

The Labor Board, until it found itself in a very bad position, defended its administration in all respects and contended that any amendment to the law was proposed merely for the purpose of breaking it down. It is admitted now that the Board has been un-

able to find what it calls a formula for the adjustment of the principal labor controversy with which it deals, the conflict between the C. I. O. and the A. F. of L. The American Federation declares that a formula has been found, but that it is one of persistent injustice to the older labor organization.

Condemnation of the Board is nowhere more explicit and thoroughgoing than in the evidence submitted by Mr. Green and the other executives of the A. F. of L. These explicit accusations demonstrate how well the Board has undertaken to repay the campaign contributions of John Lewis to the New Deal and how actively it was endeavoring to retain for the New Deal the support which Lewis now pretends to have withdrawn for reasons which do not appear as he would have them. The record is full of reasons why he should and probably will continue to remain a boss in New Deal politics.

Limitation upon employer rights imposed by the law under court interpretation of it and by the acts of the Board itself includes the unconstitutional prohibition of free speech which is denied the officials of companies when collective bargaining is being considered by the employees. The Board edict that a management may not express an opinion in such instances has not yet had a final court review, but Congress need not wait for that. The authority which the Board presumes to find in the law can be specifically taken away. The investigation of the operation of the law and of the conduct of the Board has already presented many reasons for the correction by Congress of these abuses before they go to still further extremes.

How long will we sit here inactive, refusing to do the will of the people, or, appearing to do it, camouflage the real issue by changing the Board membership and adopting of amendments which accomplish nothing?

In March of 1939 I introduced a bill to amend the act which contains most of the amendments which will finally be adopted. Among these amendments was one which would do away with the present personnel of the Board. Another which would free the employee from coercion from any source. Another which would speed up the procedure. Another would separate the investigatory and prosecuting departments from the judicial department of the Board. Another would bar the use of hearsay and rumors and permit a judicial review of the evidence when one was found guilty of a violation of the law. Still others make it impossible for the Board to deny to those who appear before it a trial, such as all Americans are accustomed to believe one charged with an offense is entitled to have. This imposing upon a single agency "the multiple duties of prosecutor, judge, jury, and executioner" was recently condemned by the Circuit Court of Appeals for the Seventh Circuit.

It is very evident that it is more than probable that, unless some action is taken soon, the act will not be amended at this session of Congress. For that reason I have filed a discharge petition, and if the Members of the House really want revision of the act at this session they can get it, so far as the House is concerned, by signing this discharge petition, the number of which is 23.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

STATEMENT BY SECRETARY CORDELL HULL BEFORE FINANCE COMMITTEE

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the RECORD a statement made by Hon. Cordell Hull, Secretary of State, before the Finance Committee of the Senate, on Monday, February 26, 1940.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Finance Committee, the hearings which begin today before your committee relate to a piece of legislation which is of extraordinary importance to our Nation at this time. It has a direct and vital bearing on our domestic economic prosperity and on world peace.

When I appeared before the Committee on Ways and Means I presented a formal statement dealing comprehensively with all important phases of the problem, and I shall not now take your time going over the ground thus already covered. However, I should like to make some additional remarks, especially with reference to some points which were raised in recent discussions.

I am glad to note that there is now scarcely any inclination anywhere to question the proposition that adequate foreign trade is indispensable to full and stable prosperity for our Nation, which requires the fullest possible development of both the domestic and the foreign markets. There is overwhelming evidence to show that, when our exports shrink seriously, the country's production, trade, prices, values, employment, incomes, and therefore purchasing power are adversely affected. This is true of agriculture, manufacturing industry, transportation, mining, and all other phases of our economic life. There is also overwhelming evidence to show that all these determining factors of our national prosperity are favorably affected by an expansion of exports. We are living in a period in which our vast home market must be supplemented by foreign markets for our ever-increasing surpluses. Satisfactory disposition of such surplus production has become an indispensable factor in our permanent progress and our sound and balanced prosperity. Of equal significance is the growing realization in our country of the close connection between trade and peace.

Let me recall briefly the background against which the trade-agreements program was enacted by the Congress 6 years ago. Trade between countries, involving the bread and butter of millions and affecting the political stability and contentment of millions, declined enormously. The peoples of the world had traded with each other in 1929 to the amount of \$69,000,000,000. By 1932 this trade had fallen to twenty-seven billions. This meant that millions of workmen were out of work and their families were in desperate need; millions of farmers and producers of other raw materials were unable to sell the results of their labor except at a miserable price. Governments were compelled to make enormous relief expenditures. They resorted to any type of measure which promised to relieve this unemployment and distress irrespective of its effects on the rest of the world. In other words, the background of circumstances leading to the enactment of the trade-agreements program was a most disturbing and rapid falling apart of the commercial and financial structure of the world, caused in large measure by the ever-rising barriers to trade raised by all countries, in which course our own Nation was, unfortunately, an outstanding leader.

All countries were stricken, and few more seriously than the United States. Within 3 years our exports declined from five and two-tenths billion dollars to one and six-tenths billions. This loss of more than three and five-tenths billions dollars' worth of export business spelled havoc and tragedy throughout the land. Of itself, it would have been enough to throw out of gear the whole machinery of our national economic life. Combined with other factors, it brought this country face to face with the gravest economic emergency in our national history.

Between 1929 and 1932, inclusive, national income fell from \$80,-800,000,000 to \$39,500,000,000; cash farm income, from \$11,200,-000,000 to \$4,700,000,000; nonagricultural employment alone from 36,200,000 to 27,800,000; wages and salaries in manufacturing industries from \$15,800,000,000 to \$7,400,000,000; wholesale prices from a level of 95.3 to a level of 64.8. Agriculture was bankrupt; industry was bankrupt; and even the banks were bankrupt, hundreds of them having failed.

That emergency could not be met fully and successfully, unless, at the same time that we were putting into effect far-reaching and necessary domestic measures, effective means were also found to restore our foreign trade. This could only be done through reciprocal reduction, on the basis of equal treatment, by us and by other countries of the unreasonable and excessive trade barriers which were strangling commerce. Since other governments possessed the means of prompt action in dealing with trade matters, it was essential that our Government devise for itself an instrument of similar action.

This was done through the enactment of the trade-agreements program, which has enabled the executive branch of the Government to engage, within the limits of policy strictly prescribed by the Congress, in vigorous action for the restoration of our foreign trade. In that vital task, working against great difficulties, we have achieved a gratifying measure of success. During the period of operation of the trade-agreements program our exports expanded markedly, in sharp contrast with their steep decline during the period of operation of the Hawley-Smoot embargoes. This revival of export business has been an important factor in bringing about the recovery which has occurred in agriculture, in industry, in employment, in prices, in values, in the national income, and all the other elements of our national prosperity.

Between 1932 and 1939 national income rose from \$39,500,000,000 to about \$70,000,000,000; cash farm income from \$4,700,000,000 to \$7,625,000,000; nonagricultural employment from 27,800,000 to 33,700,000; wages and salaries in manufacturing industries, from \$7,400,000,000 to \$12,600,000,000; wholesale prices from a level of 64.8 to a level of 77.1.

In enacting the trade-agreements program the Congress was not making a definitive determination of a long-range and permanent tariff and commercial policy for this country. What was created in 1934 was a temporary agency, designed to meet the imperative needs of an abnormal situation and calculated to aid in bringing about conditions in which a permanent policy would become feasible.

Grave emergency conditions, resulting from the tragic errors of the past, existed in many phases of life here and abroad. The trade and other economic policies of the period following the World War were, in effect, instruments of intense and destructive economic warfare. Largely under their influence, there occurred a growing weakening of social stability within nations and an ominous deterioration of international morality and of political relations among nations. There was no hope of arresting these fatal trends, unless friendly and mutually beneficial trade relations were to supplant the existing system of economic warfare.

The trade-agreements program enabled us not only to promote directly our domestic recovery through an expansion of our foreign commerce, but also to take a position of leadership in efforts to check the spread of suicidal economic nationalism and to build a firm foundation for the kind of international trade relations which are indispensable to the maintenance of enduring peace—without which there can be no sustained prosperity for our Nation or any nation.

It was not to be anticipated that the immense task involved could be accomplished overnight. The destructive forces released by the disastrous policies of the past were too powerful to be overcome easily or swiftly. Substantial progress in this direction was made since 1934. That progress has been interrupted by the outbreak of new widespread wars. Whether what has already been accomplished will be completely wiped out or whether it will, after the termination of hostilities, serve as a foundation and a powerful impetus for further progress will depend, in a decisive measure, upon what our country does now.

Most of those who oppose the extension of the Trade Agreements Act propose no substitute for it, except a return—open or disguised—to the Hawley-Smoot regime. That would be where we would find ourselves if the act were permitted to lapse or if its effectiveness were to be destroyed by the adoption of crippling amendments.

It requires no imagination, but only recollection of what happened under the Hawley-Smoot Act in 1930-32, to visualize what would be the result of a return to a policy of virtual embargoes and attempted self-containment at any cost. Our people are not likely to forget how, 10 years ago, the proponents of ever higher tariffs made solemn promises to the farmers, to the workmen, to the businessmen, to the Nation as a whole, that increasing prosperity would follow the prohibitive tariff schedules which they were placing on our statute books—nor how those promises were fulfilled in bankruptcy for the farmer, in staggering unemployment for labor, in a collapse of prices and values for the businessman, in distress and despair for the entire Nation. Our people are not likely to forget the contribution which the enactment of the 1930 tariff made to the intensification of economic warfare among nations, to the growth of trade barriers, to vicious spirals of resentment, ill will, and retaliation.

Other opponents of the trade-agreements program are putting forward proposals which, in the guise of an allegedly "more realistic" approach to the whole problem of foreign trade, would go beyond the extremes of the Hawley-Smoot policy and would commit this country to the use of exchange controls, quotas, and all the other devices which in recent years have disrupted and retarded international trade. To abandon the trade-agreements program and to substitute for it a system of this kind would be to destroy the only policy which in recent years has offered effective resistance to a spread of these destructive practices. It would be equivalent to committing our Nation to a course of far-reaching economic regimentation, since the experience of other nations shows clearly that, in an effort to make extreme trade controls function effectively, regimentation has to be constantly extended to other phases of business activity and of economic life in general. It would be a starkly realistic approach, not to an effective promotion of our foreign trade, but to governmental control over business activity on a scale never before attempted in this country, and to a policy of plunging this country into destructive economic warfare—from which no nation ever emerges the gainer.

The trade-agreements program has enabled us to expand our foreign trade without subjecting it to the strait jacket of extreme Government control. Under it our trade has increased far more markedly than that of any other of the commercially important nations.

The program has been devised and carried out as a means of creating conditions in which free enterprise can function most effectively. Reversion to a policy of extreme protectionism or substitution for the trade-agreements program of a policy under which we would adopt all the instruments of economic warfare that have been so disastrously prevalent in the recent past, would not only wipe out our recent trade gains, but would impose upon our people a further national loss of staggering proportions. Our Government would be compelled to adopt most costly and difficult measures of relief and adjustment and to regiment the country's economic activity. And the most astonishing thing is that courses of action which must inevitably lead to these results are proposed and advocated by the very people who like to regard themselves as the real proponents of free enterprise and nonintervention of Government in economic life.

This is the crux of the whole issue. The question of the survival or disappearance of free enterprise in our country and in the world is bound up with the continuation or abandonment of the trade-agreements program.

The record of what has been accomplished under the trade-agreements program toward opening and enlarging trade opportu-

nity for all groups of our producers in both the foreign and the domestic markets is an open book. So much has already been said on this subject that I shall refrain at this stage from going into details on that score. My associates and I will be glad to furnish you with the fullest data. But I should like to raise this question: Who would be helped and who would be hurt by the abandonment of the trade-agreements program or by the adoption of the proposals which have been made to limit its scope and impair its effectiveness?

Would our agriculture be helped or hurt by abandonment or impairment of the trade-agreements program?

In the agreements which have been negotiated, important foreign markets have been kept open or expanded for our producers of lard and other hog products; cotton, tobacco; wheat and other grains and grain products; fresh, canned, and dried fruits and vegetables; and others. Surely, these producers would not be helped—on the contrary, they would be grievously injured—if they were to be deprived of these advantages.

Abandonment of the program would be hurtful to them in several very important ways: First, it would lose for us the additional leverage which the agreements now give us in defending the interests of our exporters in connection with the trade dislocations and distortions growing out of war conditions. Second, it would sacrifice the immediate and uninterrupted export benefits we are obtaining in markets not seriously disturbed by the war situation. Finally, it would involve sacrifice of the many ultimate advantages that the concessions would give to us in reexpanding our shipments to war-disturbed markets when hostilities cease.

In the trade agreements we have made some limited reductions in duties on certain products. So carefully have these adjustments been made and so painstakingly have they been safeguarded wherever need for safeguards was demonstrated, that these duty reductions have not inflicted any injury on any group of producers. No satisfactory evidence to the contrary has been brought forward, for the simple reason that no injury to our producers has, in fact, occurred. On the contrary, there is ample evidence to show that these very producers would be hurt, not by the continuation but by the abandonment of the program.

These producers, as all producers, are vitally concerned with the state of our domestic market. They can sell their output at remunerative prices only when the purchasing power of our people is at a sufficiently high level. But our national purchasing power and, therefore, the state of our domestic market are vitally dependent upon the condition of our foreign trade.

In the course of our negotiations with other countries, we find, on occasion, that moderate and adequately safeguarded reductions of duties on some commodities are sufficiently attractive to other countries to enable them, in return, to make valuable concessions for our exports, and thus help us to expand our domestic market. Let me refer again, as a good illustration of this, to the assertions of alleged injury which have been heard in connection with the moderate and carefully safeguarded duty adjustments on some dairy and cattle products.

Look at these facts: The cash income of the dairy industry, which had fallen, between 1929 and 1932, from \$1,844,000,000 to \$991,000,000, rose by 1938, to \$1,398,000,000. The cash income of the cattle industry, which had fallen from \$1,495,000,000 in 1929 to \$621,000,000 in 1932, rose, by 1938, to \$1,144,000,000. The prices of dairy and cattle products have gone up substantially in recent years.

Surely our dairy and cattle producers would not be helped if we were to restore to the Hawley-Smoot levels the few duties that have been reduced, and, in doing so, wipe out the concessions secured for our exports. Surely, these producers would be among those most hurt by the resulting painful contraction of the domestic market. Surely they have not so soon forgotten their experience from 1929 to 1932.

Would our manufacturing industries be helped or hurt by abandonment or impairment of the trade-agreements program?

The problem in this field is fundamentally the same as that with respect to agriculture. This country is the world's largest exporter of manufactured goods. In the trade agreements already concluded, important foreign markets have been kept open or enlarged for the producers of automobiles and trucks, tractors, agricultural, industrial, and electrical machinery; cash registers; typewriters and various office appliances; rubber tires and other products; cotton and other textile products; lumber, wood manufactures, and papers products; hides and leather products; petroleum products; glass and glass products; iron and steel products; copper and copper manufactures, and many others.

Surely, these producers would not be helped if they were to be deprived of the valuable advantages which have been secured for them. Surely, they would not be helped if we were now to give up the means provided by the trade agreements for defending their interests abroad.

Nor would the industries with respect to whose products duty reductions have been made in the trade agreements profit by the abandonment of the program. They might derive shortsighted satisfaction from seeing duties on their products restored to the Hawley-Smoot levels, but they would pay for this doubtful satisfaction with a decline of their business activity, which would inevitably result from a return to the embargo policies of the early thirties.

And labor—would labor be helped or hurt by the abandonment or impairment of the trade-agreements program?

Labor has just as direct and definite a stake in foreign trade as has any other group of our population. The state of employment and the level of wages obviously depend on the volume of business activity. When foreign markets decline, the result is increased unemployment and lower wages for those employed in the exporting industries. When the domestic market contracts as a result of loss of foreign markets, the results are still more unemployment and still lower wages throughout the economic system.

With the domestic market amply safeguarded, as it has been under the trade-agreements program, labor has been a direct gainer from the increase of our exports of manufactured goods. Such exports rose from \$624,000,000 in 1932 to \$1,523,000,000 in 1938. At the same time our dutiable imports of finished goods were \$170,000,000 in 1932 and only \$232,000,000 in 1938.

The trade-agreements program has increased employment mainly in industries that pay wages well above the average for American manufacturing industry. In a number of our most important industries, the exports to countries that have made concessions on the products of such industries account for a far greater percentage of increase in employment than the exports to other countries.

I should now like to touch briefly upon two questions of procedure which have been raised in connection with the trade-agreements program. The first relates to the most-favored-nation principles; the second, to the functions of the Congress in connection with the program.

Would our foreign trade be helped or hurt by the abandonment on our part of the most-favored-nation principle?

The importance of that principle to us arises from the simple fact that most-favored-nation treatment, or the rule of equality, is the only practical and effective means of safeguarding our exports from destructive discrimination on the part of other countries, and of making possible the maximum recovery of trade through promotion of triangular and multilateral flow of commerce. This fact has long been recognized in our country, as well as the fact that we cannot secure such treatment for our exports, unless we are prepared, in return, to grant it to other countries.

It was in recognition of these basic facts that President Harding and Secretary of State Hughes made the favored-nation principle in its unconditional form an integral part of our commercial policy. It was in recognition of these same facts that the principle was included in the Trade Agreements Act and has been applied in the carrying out of the trade-agreements program.

When we grant most-favored-nation treatment to the country with which we conclude a trade agreement, we receive in return an assurance of similar treatment. When we extend to other countries the benefit of the duty adjustments made in a particular agreement, we do so on explicit condition that these other countries give our trade substantially the same type of treatment. We reserve the right to withhold or withdraw these benefits from countries which do not give our trade such treatment. The result so far has been that the volume of our exports thus safeguarded from serious discrimination has been several times greater than the value of our imports on which we have generalized concessions made in the trade agreements.

Had we neglected to provide for our trade the safeguards against adverse discriminations abroad, which can be effectively assured only through the use of the rule of equality under the most-favored-nation principle—had we failed to do everything in our power to strengthen this necessary means of promoting the increase of world trade, criticism directed against us on this score would have been understandable. Instead, we are being criticized for steadfastly insisting upon these necessary safeguards, abandonment of which would subject our commerce to the constant danger of finding itself hopelessly handicapped in foreign markets.

I come, finally, to this question: Would our foreign trade and our national interest be helped or hurt if the Trade Agreements Act were so amended that individual agreements be made subject to Senate ratification or congressional approval?

Judicial opinion is uniform to the effect that both the delegation of authority of the kind contained in the Trade Agreements Act and the practice of concluding Executive agreements are entirely consonant with our established constitutional practice. Over 1,000 Executive agreements on a large variety of subjects have been concluded in the course of our history. It seems eminently clear that trade agreements should not be regarded as treaties requiring Senate approval. You will find in the recent hearings of the Ways and Means Committee a thorough brief on the matter by the legal adviser of the State Department, Mr. Hackworth.

In the Trade Agreements Act the Congress retained—as it should at all times—definite and basic control over tariff policy. It carefully prescribed the policy, the methods, and the limitations of the trade agreements program and entrusted to the Executive the duty and responsibility of administering and carrying into effect the provisions of the act. In proceeding on this basis the Congress recognized fully that the needs of the abnormal and rapidly changing conditions with which we have been faced require a means of prompt and effective action at a time when all other important nations possess such means of action. Trade channels today shift or are shifted more rapidly than ever before. If we are not in a position to act, with relative speed and certainty, to protect our trade opportunities in other countries and to adjust, as circumstances may require, the trade opportunities we afford other countries, our trade will inevitably be handicapped to our own disadvantage.

The experience in connection with the negotiation of the 22 agreements that have been concluded offers an ample proof that the

method we have pursued has served us well as a means of effective action; and that the authority under the Trade Agreements Act has been exercised with caution and moderation and with strict regard not only to the national interest, but also to the needs and problems of the individual branches of agriculture and industry directly involved.

The only result of the requirements that individual trade agreements be made subject to congressional approval or Senate ratification, under existing conditions, would be to make the program entirely unworkable. That would inevitably hurt our foreign trade and, through trade, our Nation's economic well-being.

We are now in a period when, as a result of the new and widespread wars, the need for means of prompt and effective action on the part of the Government in the promotion and defense of our foreign commerce is even more imperative than it has been hitherto. We are in a period in which our economic policies and action may have a determining influence upon the developments, which, after the cessation of hostilities, will shape the future world.

If we were now to abandon the program, we would reduce to practically nothing the efficacy of the existing trade agreements as a means of safeguarding our exports from the inroads of wartime restrictions. The need for keeping alive the principles which underlie the trade-agreements program is crucial now, during the war emergency, and will be of even more decisive importance after the war. Even a temporary abandonment of the program now would be construed everywhere as its permanent abandonment. Unless we continue to maintain our position of leadership in the promotion of liberal trade policies, unless we continue to urge upon others the need of adopting such policies as the basis of post-war economic reconstruction, the future will be dark, indeed. The triumph or defeat of liberal trade policies after the war will, in large measure, be determined by the commitments which the nations will assume between now and the peace conference.

At the termination of hostilities there will be an unprecedented need throughout the world for vastly increased production of useful goods of every kind. Only if this vital need is met can our country and all countries hope for full employment and higher living standards. But production, employment, and living standards cannot be restored and expanded unless the nations decide from the outset to direct their policies toward as rapid as possible a reestablishment of mutually beneficial international trade. Otherwise the economic life and the political stability of the world after this war will rest upon even more precarious foundations than those upon which they rested after the last war.

Had the nations of the world, including our own, followed at that time commercial policies conducive to the fullest practicable development of mutually beneficial international commerce, world trade would undoubtedly have expanded on a healthy basis far beyond the limits actually attained, and a foundation would have been laid for stable economic prosperity for all nations. Instead, the nations sought escape from their difficulties in constantly creating greater barriers to trade, the effects of which were obscured for a time by the unhealthy stimulation of reckless borrowing and lending of the twenties. But the ravages of the great depression, the years of only partial recovery which followed, and finally the supreme tragedy of the new wars have brought retribution for the mistakes and follies of the first decade after the World War.

Must all this be repeated again, perhaps in an even more acute form, after the present war? That may well be the case if we now turn our backs upon the policy which, under our leadership, has offered in recent years the only hope of promoting trade among nations in such a way as to rebuild the foundations of economic prosperity within nations and of stable peace among nations. Were we to do this, we would inflict upon ourselves and upon the world an incalculable injury.

After the World War, through the policies which we then pursued, we helped to create a situation in which the entire economic structure of the world rested upon shifting sands, with nothing in sight but inescapable disaster. The policy which we have pursued for the past 6 years, if we only have the wisdom to continue it, will enable us to place the whole weight of our country's influence behind a determined effort—in which, I am sure, we shall have the cooperation of other nations—to rebuild international relationships in such a way that our Nation and all nations can prosper and be at peace.

## Production of Electric Power

### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ARTICLE BY SAMUEL A. CARLSON

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Tri-County Herald, of Jamestown, N. Y., written by Samuel A. Carlson,

who for many years was mayor of that city. The subject of the article is the public generation and distribution of electricity. His city is a very fine example of what can be accomplished in that line.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tri-County Herald, Jamestown, N. Y., February 16, 1940]

COLUMN OF INDEPENDENT THOUGHT

(By Samuel A. Carlson, Mayor Emeritus)

Secretary Ickes, of the President's Cabinet, made the statement some time ago that one-half of the corporate wealth of America is concentrated in the hands of 200 corporations, and that these corporations are dominated by not more than a few hundred men.

These men exercise a controlling power over the entire economic and industrial life of the Nation. A large percentage of this wealth represents public utilities and insurance holdings. And when we are told by the daily press that every publicly owned undertaking means tax burdens, let us not overlook the fact that the average citizen pays more in private tax assessments to these utilities and insurance corporations than he does for all the scores of services which he receives through Government channels.

When the late notorious Insull and his associate utility magnates swindled the American people by imposing billions of dollars in exorbitant charges for services, we did not hear Mr. Wilkes or any other champion of the so-called "free enterprise" policy talk about the encroachments of communistic influences.

Newspapers are continually harping about cheap electricity being supplied to consumers by the T. V. A. at the expense of the taxpayers of the Nation.

An unbiased examination of all the facts will I think convince anyone of the falsity of these charges. No doubt there have been some blunders in connection with this T. V. A. project just as there have been in any similar undertaking under private control.

It has been stated on the floor of Congress that one of the effects of the T. V. A. development has been a reduction of electric rates throughout the entire Nation in a sum exceeding \$1,000,000,000 annually. This fact alone justifies every dollar that has been invested for public benefits in this region. We must not overlook the fact that every consumer of electricity is either directly or indirectly a taxpayer.

In a letter published in the CONGRESSIONAL RECORD, January 29, 1940, Mr. L. J. Wilhoit, chairman of the Electric Power Board of Chattanooga, Tenn., stated that that city paid \$10,850,000 for the private power distribution system, and that this sum was \$3,140,000 more than a new system could have been duplicated for.

This liberal sum was paid not only to avoid expensive litigation but to reimburse every stockholder for his investments in the private corporation. Mr. Wilhoit further states that the rates now paid by the city to the T. V. A. for power includes 12½ percent cost which the T. V. A. in turn remits to the States, counties, and cities for losses in taxes formerly paid by private corporations, and that all cities in the valley are making similar contributions for tax purposes.

Notwithstanding these tax contributions, which are included in all electric bills to consumers, the people of Chattanooga are saving in reduced rates the sum of \$3,000,000 every year as compared with the rate formerly paid by the private company, even after the city had made adequate allowance for operation, depreciation, interest, and the annual amortization of bonds.

In this connection I may also state that, according to reports recently made in Congress, the total revenue of the T. V. A. system, which is now \$16,000,000 annually, provides for a sinking fund to reimburse the Government for all original expenditures in the development of power utilities in the Tennessee Valley after having given the industrialist, the farmer, and city dweller the benefits of low-cost service in place of excessive taxes previously paid to private corporations in the form of exorbitant rates.

Yet, strange as it may seem, there are good citizens who regard staggering expenditures of public money in battleship construction for foreign wars as a perfectly proper tax burden, but that expenditures of far less sums for self-sustaining utility systems affording cheap electricity for the people is considered by these same citizens as a dangerous step in the direction of communism.

## Embargo on Shipment of War Materials to Japan

### EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

### LETTER TO REAR ADMIRAL HARRY E. YARNELL AND REPLY

Mr. SCHWELLENBACH. Mr. President, there are pending in the Foreign Relations Committee of this body two resolu-

tions involving the embargo of shipments of war materials to Japan. One was offered by the Senator from Nevada [Mr. PITTMAN], the other by me. The question has been raised by some that the adoption of such a resolution would be at the risk of war. No one can deny that the man in this country best qualified to pass upon this question is Rear Admiral Harry E. Yarnell. He for many years commanded our Asiatic fleet. Believing him to be our outstanding authority on the question, on February 21 I sent him a letter which I now ask to have inserted in the Appendix of the RECORD. His reply, dated February 26, is of extreme importance and interest. I ask that it be inserted in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEBRUARY 21, 1940.

Rear Admiral HARRY E. YARNELL,

Naval War College, Newport, R. I.

DEAR ADMIRAL YARNELL: As you may know, I have introduced Senate Resolution 143 providing for embargo of certain materials now being shipped to Japan, which shipment, in my opinion, is a violation of the obligation of our Nation and our citizens under the Nine Power Pact. I am enclosing for your information a copy of that resolution.

Many people, both in and out of Congress, are in sympathy with that sort of a resolution to be enacted by the Congress. However, they are fearful that the adoption of such a resolution by the Congress would be likely to result in involving us in war with Japan.

It occurs to me that it would be of extreme value in the light of your experience in the Far East and the confidence that Members of Congress have in you to have an expression of opinion from you upon that question. If you can consistently do so, I would appreciate such an expression and, further, such explanation in reference thereto as you might see fit to give. I would appreciate it, further, if you are willing to give an expression of opinion upon the question, if you would indicate whether or not I might feel free to make public your reply to this letter.

Yours very truly,

LEWIS B. SCHWELLENBACH.

NEWPORT, R. I., February 26, 1940.

Hon. LEWIS B. SCHWELLENBACH,

United States Senate, Washington, D. C.

MY DEAR SENATOR: Your letter of February 21 has just been received. In it you ask whether in my opinion, the adoption of Senate Resolution 143, providing for embargo of certain materials now being shipped to Japan would be likely to involve us in war with that country.

Personally, I do not think so. Japan is at present engaged in a major war which has resulted in a stalemate with no end in sight. It would be suicidal for her to engage in another major war with a powerful enemy.

Is there not, however, a larger question involved and that is: To what extent should a self-respecting nation refrain from asserting its rights and the defense of its interests through fear of the consequences?

In civil life it has been found that "appeasement" does not work in dealings with lawbreakers and gunmen. The experience of recent years has shown that also it is of no avail in dealing with nations whose rulers decide on a course of action against harmless neighboring nations involving death and misery to millions of innocent people in total disregard of treaties, international law, or the dictates of justice and humanity.

We have rights in China acquired by treaty through our intercourse with that nation for the past 150 years. We have never demanded special privileges but only equal rights with any other nation. As a result of our fair attitude we have today the friendship of the Chinese people, an asset that cannot be disregarded.

For the past 2½ years there have been many cases where our rights in China have been violated or openly flouted. American properties have been occupied or destroyed, missions bombed, and our citizens insulted with few steps having been taken to recompense the sufferers or even to express regret. Evidently there is a belief in Japan that no danger of a war exists with the United States through their actions against our rights and our citizens.

As for our interests in the Far East, the question arises whether our Nation can afford to see the domination of that great area by a power inspired by the ideals of fire and sword that have had full sway in China during the present war. Success in this adventure will entrench the Japanese Army in control of the government for many years, and as time goes on, will lead inevitably to the acquisition of more territory by force of arms.

There are in the United States today two widespread but contradictory opinions: first, sympathy for the democracies as opposed to the aggressor nations, and second, the determination to keep out of the present war.

The decision as to when our vital interests will require more active assistance to those nations whose ideals of government are similar to ours will become more pressing as time goes on. We will face an uncertain and dangerous future if the democratic nations of Europe, and China, are defeated in the present war.

When nations realize that aggressive warfare does not pay, that the time has passed when territorial conquests bring welfare to

the conquerors, there may be a return to reason and a willingness to decide international differences by conferences rather than by the sword.

By a policy of friendship, Japan could have dominated the markets of China through proximity and her ability to sell more cheaply than competitors. Unfortunately those enlightened statesmen in Japan who believed in and advocated such a policy were overthrown by the Army. As a result, untold death, misery, and destruction have resulted in China and the Japanese people have been saddled with a debt that will require years of toil and privation to overcome.

Very sincerely,

H. E. YARNELL.

## The Farmer and America's Future

### EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the able Senator from Ohio [Mr. TAFT] at Springfield, Ill., on February 24, 1940, on the subject *The Farmer and America's Future*.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of Illinois, you are in the midst of a great agricultural district, one of the greatest in the United States, and you are naturally interested in the problems of agriculture. I have tried to work out to my own satisfaction a definite position on the principal political issues before America today and present my position tendency to avoid the discussion of specific issues, but certainly no headway can be made toward the solution of any problem unless there is a frank and full argument on the merits and demerits of specific proposals. The recent report of the Republican program committee sets forth in definite terms the views of that committee on the principal issues. It will stimulate clear thinking, on which the Republican Convention can formulate a sound, constructive platform. Every Republican speaker can help along that end by a discussion of specific problems.

In the case of agriculture this is peculiarly necessary, for the solution of the agricultural problem is more difficult than any other of those which we face. Furthermore, it is one of the most serious, certainly the most serious after the problem of unemployment. All statistics show that the national economy is out of balance. The farmer is not receiving for his products prices equivalent to the prices which he has to pay for the goods he buys. It is a matter of pride to me that when the new dealers looked for a period in which industry and agriculture were in balance they selected the years 1909 to 1914, when the Government had been under Republican leadership for 12 years, and most of which selected period my father was President of the United States.

Other methods of calculation show that the farmer today gets much less for an hour's work than the average city workman who has a job. He has to pay more for what he buys in terms of hard work than does any other group in the population, and a good deal more than he himself had to pay in the early days of the century. Whether this is due to the tariff, the dislocation caused by the World War, the tendency of distribution costs and city wages to become frozen at artificially high levels makes very little difference. The farmer is at an actual disadvantage, and this disadvantage, if we look back at some years before the depression, does not result entirely from the general stagnation of industry. The farmer is not as well off as the man in the city who has a job. We may remember, however, that he is a good deal better off than the millions in the cities who haven't any jobs.

The farmer is particularly affected by the depression. His condition depends on the prices of raw materials. The depression and unemployment have reduced the demand for these farm products, whereas farm production does not decrease as does industrial production. Farming is a way of life, and the farmer must go on producing if his family is to go on living.

When the farmer is at a disadvantage, the entire country is concerned to see that that disadvantage be removed. From an economic standpoint, we cannot have prosperity while one of the basic industries is substantially depressed. Economic prosperity depends largely on the prosperity of the farm, just as farm prosperity depends on employment and normal activity in industry. It is somewhat difficult to give priority in importance—like the old riddle, whether the chicken or the egg comes first. But if prosperity is to

be permanent, it must be general, and the continued depression of a basic industry as great as agriculture will ultimately drag down the entire structure.

From a social standpoint, the welfare of the farmer is even more important to the country. The strongest and most virile people of the United States are still on the farm. The farmer, with 12 percent of the national income, raises and educates 30 percent of the boys and girls of the country. We look to the farm population to provide new life and strength to the body politic. The basic principles of American democracy are more firmly established in rural America than anywhere else. The qualities of thrift, independence, and self-reliance cannot be destroyed in this Nation while the farmers have a substantial voice in determining public opinion. It is essential that the farmer be not pauperized; that he be given an equal place in our economic life with those who engage in other occupations.

The agricultural problem is not a partisan question. Both parties and the leaders of both parties are vitally interested in assisting the farmer to overcome the handicaps imposed by present conditions. The farmer is primarily concerned that the party returned to power shall approach his problems with a real sympathy toward his position, a willingness to consider plans that are proposed even though they be new, and a determination to find a correct solution. Last year I campaigned throughout the 80 rural counties of Ohio, a State which stands fourth in agricultural production and has very much the same type of agriculture as Illinois. It was the most pleasant campaigning I have ever done, because the audiences were eager to have American issues discussed on their merits. Nothing will defeat the spread of communism and fascism and all the other "isms" as much as the preservation and building up of rural America.

#### NO PANACEA FOR THE FARM PROBLEMS

All are anxious to solve the farm problem. But the practical difficulties are great, and our experience with the experiments already made does not indicate that they will provide a permanent solution. Comparing farm prices on August 15, 1933, with August 15, 1939, just before the outbreak of war, we find that wheat had fallen from 74 cents to 54 cents; rye from 58 cents to 34 cents; corn from 72 cents to 45 cents; cotton, in spite of the tremendous acquisition of 10,000,000 bales by the Commodity Credit Corporation, had fallen from 8.80 to 8.70. The present low price of hogs is ruinous and a disaster to the Corn Belt. On August 15, 1933, none of the farm-control plans except cotton had even begun, so that 6 years shows no substantial improvement in the price of basic crops, in spite of billions of dollars spent by the Government. Livestock prices, on the other hand, had improved considerably in value during those 6 years, but this is hardly attributable to New Deal measures, for there has not been recently any attempt to limit directly the production of livestock. In fact, in referring to an increase in cash income from meat animals, the Secretary of Agriculture, in his 1939 report, says: "This recovery was due chiefly to an increase in the domestic demand for meats, the basis of which was an increase in national income and increases in pay rolls and employment." It is certainly not a partisan attitude to question the effectiveness of the programs pursued up to this time.

There is no panacea for the farm problem. Agriculture consists of a large number of separate industries, each one having its own problems and requiring special consideration. To limit corn production in Illinois and build it up in the South, to build up one branch of farming at the expense of another, to improve conditions in one section of the country at the expense of conditions in another, does not result in any net improvement. Heretofore the emphasis has been placed on the decrease of production. If we could increase the markets, it would be obviously a much better solution, because it would greatly increase the gross farm income.

#### 1. INCREASE THE FARMER'S MARKET

First of all, therefore, the effort of the Government must be to increase the farmer's market. We can at least assure him the American market for his staple products. We can impose adequate tariffs on agricultural products produced elsewhere. Under the reciprocal trade-treaty policy, the present Government has been steadily reducing tariffs on agricultural products, notably livestock, and even where protected by quotas this importation has an effect in demoralizing the domestic market.

I believe the reciprocal trade-treaty policy should be modified so that no tariff on any product can be reduced below the cost of production here and abroad. After the treaty is made, it should be referred to the Tariff Commission, and no new rate should go into effect until the Tariff Commission certifies that the remaining tariff will remove any advantage the foreign product has because of lower production costs or currency depreciation.

In the second place, we should give full support to the efforts which the Department of Agriculture is at last making to find new uses for the products of the American farm. Four laboratories are being constructed to carry out this chemurgic plan. We have seen cotton come to be used in the manufacture of tires and roads; soybean products in the manufacture of automobile parts; skimmed milk in the manufacture of textiles. The development of the Herty paper process in the South may well establish a new industry, and enable this country to produce much of the pulp and paper which now have to be imported. This is a slow matter, but in the long run it may be one of the most important things that can be done. An encouraging start has been made and should be pursued as rapidly

as possible. New industries such as these, however, must have a sympathetic, rather than a hostile, attitude on the Government's part.

In the third place, the Government should take a more active part in encouraging increased markets for farm products abroad. Under normal conditions, export subsidies are not desirable, but in the process of adjusting those crops which have always depended upon export for a large part of their market, such export subsidies may be necessary. I believe we should further pursue the realistic policy of making every kind of deal to dispose of American farm products. This barter policy also may not be the best in the long run, but under war conditions international trade is bound to be largely a matter of negotiation between national governments, and we might as well do what we can to dispose of American surpluses even at prices below the American price.

Finally, there can be nothing so important as increasing domestic demand by a return to normal conditions of prosperity in the United States. It has often been pointed out that when farm income is high the national income is high, but it is also true that high farm prices almost invariably accompany a general condition of prosperity in the United States. If 9,000,000 people could be restored to jobs, there is little doubt that we would be a long way on the road to a solution of the farm problem. The farmer is therefore interested in those policies which will stimulate private industry, for 9,000,000 men can only be put to work in private industry. The farmer is vitally interested in the adoption of policies reducing the excessive regulation of prices, wages, hours, and every other kind of business activity. He is interested in assuring a stability to investment by balancing the Government's Budget and returning to sound and stable currency. He is interested to see that the Government no longer pours out vast billions which the farmer, as well as every other citizen, is going to have to pay back in increased labor and increased taxes. He is interested in the elimination of Government bureaus and the cutting down of Government activities which compete with private industry. Following previous depressions, the number of people employed in this country has been steadily increased by a Government policy which encouraged and assisted men to go into new business and to develop big industries out of small industries; which kept open the channels of trade against private monopoly and Government interference, so that every citizen had an incentive to apply the qualities of thrift, hard work, energy, and genius to the development of new industry and the creation of more jobs.

#### 2. CUT MIDDLEMAN'S MARGIN

Similar to the increase of the farmer's markets is the improvement of distribution methods by which those markets can be reached. The cooperative movement has made great strides, and cut down the margin between the producer and the consumer. It should be encouraged still more by legislation and by sympathetic Government assistance. The Government might well interest itself still more in the problems of marketing and distribution in our large cities. The present commissioner of markets in New York, Mr. Fellowes Morgan, has worked constantly and successfully in reducing the tremendous cost of distributing farm products through the great city of New York. The elimination of artificial control and expensive practices can increase the farmer's price at the same time that the consumer has less to pay.

The only permanent solution of the farm problem satisfactory to the farmer lies in the increase of the farmer's markets and improved distribution. But temporarily there is a surplus problem, and plans to prevent a surplus are practical necessities in the case of particular crops.

#### 3. ARBITRARY PRODUCTION CONTROL UNSOUND AS PERMANENT POLICY

I question the soundness of the production-control plans of the present administration. They proceed on the assumption that it is impossible to attack the problem by increasing markets. They represent a suicide theory under which we must have constantly decreasing production in every field of agriculture, mining, and industry. Nearly all production-control plans in the past have broken down, and in the end have made the situation even worse for the producer. We saw that result with rubber in the East Indies, coffee in Brazil. The limitation on the production of cotton in the United States has built up the cotton industries of other countries, and permanently destroyed a large part of our cotton market. The administration today is seeking international agreements to limit production, but the history of such agreements in the past gives little reason to hope for their success.

We hear a good deal about the democracy of these plans under which the farmer votes to continue them or not to continue them. There is nothing bona fide in these votes. There is no real contest conducted except on the Government side through Government propaganda. The ordinary farmer has no practical alternative except to cast an affirmative vote. It is extraordinary that under such circumstances any production-control vote has ever failed to carry.

I do not believe that the present plans can be abandoned overnight, but I do think that we should work toward their gradual abandonment. There may be some fields in which a control of production can work out effectively. I am thinking particularly of the California situation in which the production area is small at any given season, and easily controlled, and where the result of overproduction is even more disastrous to the grower because the high freight cost may wipe out every cent of his return.

Another device which should certainly be continued for reasons other than production control is that of soil-conservation payments. Such payments probably tend to reduce temporarily the total production of farm products, at the same time building up the soil so that such production may be greater in the future. There is a question whether in the long run soil-conservation payments decrease production. Considering all crops raised and all branches of agriculture, I very much doubt it.

#### 4. RETIRE MARGINAL LANDS

A better method of reducing production permanently and at the same time raising rural standards of living is the retirement of marginal acreage, either through the purchase of land by the Government where it can be bought at low prices, or by leasing. If the money spent on agriculture in the last 7 years had been used to buy land at \$20 an acre, we might have retired many millions of acres and substantially removed any surplus problem. I realize it is not so easy to buy large quantities of land and return them to the public domain, but if production is to be reduced, it is far better to do it by the purchase of land on which a man can hardly support his family, rather than by cutting down the productivity of the best land in the United States. In some sections the purchase policy might be combined with reforestation to conserve the soil and finally build up a paper and pulp industry in the United States. I know that in Ohio and Illinois, any method of reducing production is better than the limitation of corn acreage.

A substantial objection to any direct production control is the regimentation which it necessarily involves. It cannot be administered without a detailed regulation of every farm, and the allotment to each farmer of an acreage allowance based on some historical or other factor. Conditions in the farm industry are constantly changing, and any such attempt to fix present activity on what has been done in the past penalizes the efficient farmer and penalizes initiative. It requires a vast swarm of Government agents checking acreage and arguing with the farmer. The Department of Agriculture has increased its employment from 26,000 in 1933 to more than 100,000 today. Whatever plan is adopted, I am convinced it must be one which does not involve an individual regulation of every individual farm. Whatever good might be done is more than balanced by the deprivation of liberty and freedom, which is the very cornerstone of our Republic.

#### 5. PRICE FIXING UNSOUND

The present administration, whether it admits it or not, has taught the people to believe that prices can be fixed by Government. In my opinion, price fixing cannot be an effective policy except under a completely totalitarian state. In a free country the law of supply and demand in the end prevails over any government fiat. A high fixed price for wheat simply means that the market for wheat would be largely destroyed. The bootlegging of wheat would exceed the bootlegging of liquor under prohibition. I quite agree with Secretary Wallace, who said on February 15 before the House Committee on Agriculture: "On the whole, fixed price programs seem to represent a desperate effort to avoid budgetary difficulties by making it possible for farmers to obtain reasonable incomes through market prices. I have nothing but sympathy for their objectives, but I have not yet found any price-fixing proposals that do not involve some grave objections." If the Government once undertakes to fix the price of basic commodities, it cannot stop until it fixes the price of related commodities. Under the original A. A. A. we saw Government control begin with wheat and cotton and go on finally to peanuts and potatoes. You cannot fix prices without regulating practices and margins and profits until every step of the business process is subject to some Government bureaucratic regulation.

#### 6. SOUND LOANS AND EMERGENCY PRICE PEGGING

The wisdom of the policy of Government loans on farm products depends on many different considerations. Certainly there should be adequate machinery to make sound loans to enable farmers to carry crops over from the time they have harvested to some other season when prices may not be demoralized. Where a bumper crop threatens to depress the price to a point well below what is known to be normal, loans certainly should assist the farmer to a larger carry-over of that crop for 1 or perhaps 2 years. But if the policy is to be a real loan policy, then the loans must be made at a price somewhat below the market price of the product, as other sound loans are made.

If loans are made at prices equal or above the market price, they are not really loans at all, particularly when the producer is not obligated to pay them back. The making of such loans is merely a method of guaranteeing a minimum price.

If prices do not happen to recover, the Government must acquire the surplus itself at a price above the market. Such a loan policy as a permanent policy is subject to the same objection as Government price fixing. Thus the loan policy in cotton has resulted in the accumulation of about 10,000,000 bales of cotton by the Commodity Credit Corporation at a cost of \$500,000,000, the disposal of which presents an almost insoluble problem.

Some weeks ago I said at Des Moines, Iowa, that the corn-loan policy would not work in the long run. I was glad to read in Secretary Wallace's statement to the House Committee on Agriculture on February 15 that he entirely agrees with this statement. He points out that the effect of a high price pegging loan program will be to raise domestic prices, increase production, and thereby make it impossible to liquidate high loans without incurring large losses. "Any loan program," he said, "can be swamped by continued excesses of production. Furthermore, the excessive and unnecessary use of

credit aggravates maladjustment and only defers for a brief time the inevitable reckoning in appropriations to cover loan losses."

Evidently there is some ground for the apprehension which both Secretary Wallace and I have in reference to this corn-loan program. Although the price of corn is being pegged, the price of hogs, which is most vital to the corn producers, is now the lowest since 1934. With hogs selling on the Chicago market at an average of slightly above \$5 per hundred pounds, there can be no profit to the corn raiser no matter how much corn is stored in Government bins or on the farm. It is folly to say that any substantial benefit is being derived by loaning to the farmer 57 cents a bushel on his corn and compelling him to market his hogs at a net to him of not more than \$4.50 per hundred. A final market for most of the hundreds of millions of bushels of corn now stored must be found in the price of hogs. Whatever the farmer gains through his corn loan this year is being lost by low hog prices. Undoubtedly, in an emergency, when the bottom drops out of the market, the Government may temporarily guarantee minimum prices through loans or otherwise, but such a program must be approached with the greatest care, because politics being what it is, it is always easy for the Government to accumulate products, but it is very difficult to find the time when politics will permit the surpluses so acquired to be disposed of. We should certainly work toward a condition in which price fixing, production control, and high Government loans amounting to price guaranties can be abandoned.

I showed at the beginning of this address that the farmer was at a decided disadvantage in receiving less for his work than other groups in the population. So long as that condition exists, I believe that a subsidy to the farmer is justified. This is particularly true when we consider that large payments are being made to the cities for relief. I do not think that this subsidy can continue to be as much as the combined agricultural appropriations in recent years; just as relief appropriations are being reduced.

The best form of subsidy is the soil-conservation payment, combined with incentive payments for the raising of crops not now produced in sufficient quantity in the United States. Soil-conservation payments accomplish some temporary reduction in cash crops and an improvement in the soil, besides the direct cash benefit to the farmer. Incentive payments build up farm income, and work toward a permanent solution of the present lack of balance. They should be administered without reference to the past history of any farm, but on a set schedule of payments for acreage placed in particular crops.

But such soil-conservation payments should not be confined to a limited number of crops. If there is to be a subsidy it should be spread over all phases of agriculture including the dairy farmer, the poultry farmer, and the livestock farmer.

#### M'NARY-HAUGEN PLAN PERMANENT

There is, finally, a special problem with those crops like wheat and cotton, where the price is likely to be determined by the foreign market, although the farmer must buy everything on the American level.

I believe that a device can be developed along the lines of the McNary-Haugen bill which will enable the farmer to retain the foreign market at one price while receiving an American price for most of his crop. I believe such a device can be worked out without imposing Government control on every individual farmer. It should not involve any direct subsidy. If it can be successfully worked out, as I think it can, it is the most important feature of a permanent farm program. In manufacturing industries surpluses are frequently disposed of abroad at a loss. The same thing can and must be done where we are dependent on foreign markets to consume the normal output of American farms.

Where extraordinary surpluses develop, the Government should assist in taking those surpluses off the market to a reasonable extent, and for a brief period of time. When such a purchase policy is adopted, the disposal of such surpluses to persons on relief through the food-stamp plan is certainly a far better method of surplus disposal than the broadcasting of surplus commodities, hit or miss, which preceded the adoption of that plan. But the whole policy of Government purchases of food products should only be used in emergencies, and should be restricted to the amount necessary to relieve completely abnormal conditions.

I have tried to outline a sound agricultural program, based primarily on the increase of agricultural markets, rather than fancy patent-medicine schemes to avoid the inevitable law of supply and demand. The program of the present administration cannot be abandoned overnight, but we should work as rapidly as possible to a sound basis for Government action. Government intervention in emergencies can still be resorted to, but the New Deal has been in a perpetual state of emergency. The New Deal has completely failed to cure the unemployment problem and to raise farm prices. It leaves us with a lower standard of living than we had 10 years ago. In spite of power beyond any that any government has ever had, in spite of billions of dollars more than any peacetime government has ever enjoyed, it admits its failure by its constant demand for more power and more funds. There is only one way to escape a perpetual emergency, and that is to adopt sound principles of finance, sound policies to aid agriculture, sound principles to promote industry.

The Republican Party is willing and anxious to sit down with the farmers of the country and work out solutions of their problems which will work, emergency or no emergency. It is determined to restore the farmer permanently to equality with other groups, and restore the America of today to the prosperity and happiness of the America of other years.

## What Would Lincoln Think?

### EXTENSION OF REMARKS

OF

HON. JAMES M. SLATTERY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ARTICLE BY HON. HENRY HORNER, GOVERNOR OF ILLINOIS

Mr. SLATTERY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What Would Lincoln Think?" written by Governor Horner, of Illinois, and published in the Christian Science Monitor of February 10, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of February 10, 1940]

#### WHAT WOULD LINCOLN THINK?

(By Henry Horner, Governor of Illinois)

When I was asked, for reasons known to the editorial mind, to write a few paragraphs on this subject, my immediate impulse was to decline. Who was I to say what a man who lived under conditions radically different from those which prevail today would think of the world of 1940? How could anyone make even a good guess? The mere attempt seemed to be arrogant presumption.

My impulse was strengthened by the recollection of efforts of this kind which I had observed in a good many years of study of Lincoln's life. I had seen one writer try to prove that Lincoln today would have been a Communist, while another was sure that he would have been the principal pillar of unrestrained individualism. I had watched one group cite his example in behalf of prohibition and another point to him as an advocate of so-called personal liberty. And so on almost without end. I had smiled and resolved never to indulge in pure guesswork myself.

But as I reflected, I began to see that while one couldn't plot the exact course which Lincoln might take if he were confronted with a definite modern problem, it still might be possible to write with some assurance about the general attitude which he would assume if he were alive today. Unless we misread his character completely—and I do not believe that we do—he would surely be found adhering to certain points of view.

I cannot believe, for example, that Lincoln could have condoned the racial and religious discrimination so evident in much of the world today. The same ugly forces now manifest made themselves felt in his day. The Know-Nothing Party was built on nativism and religious prejudice, and in the decade before the Civil War the Know-Nothing Party was a power in politics. Many a politician bowed to its strength, either joining the movement or letting it be known that he was not unfriendly.

But not Lincoln. In 1855, when the party was at the height of its power, and when he himself was adrift politically, he confessed in a letter to an old friend that he did not know how his own party affiliation might be described. But he added: "I am not a Know-Nothing; that is certain."

There is nothing in Lincoln's life to indicate that this was not a deep-seated, enduring conviction, and much to indicate that it was. Are we not justified in assuming, therefore, that Lincoln would stand today where he stood in 1855? In my opinion, the question answers itself.

In the second place, if Lincoln were alive today I believe we would find him as sanely national in his outlook as he was in his own lifetime. Blocs based on class or sectional differences would have appealed to him in vain. I do not mean that he would have shut his eyes to class or sectional distinctions. As a political leader aspiring to Douglas' place in the United States Senate he recognized the validity of sectional interests, and disclaimed any intention of reducing "to a dead uniformity all the local institutions of the various States." Similarly with economic matters. He knew that Kentucky, with an economy which rested on tobacco, was bound to be essentially different from Illinois, where corn was the great staple. He knew also that labor and capital had interests which were not always identical, and he realized that to ignore points of difference was stupid.

Still he was convinced that the Union—the whole Nation—transcended local interests and must come first in case of real or imagined conflict. If Lincoln were alive today, I believe he would sympathize with the special interests of the farmer, the laborer, and the capitalist, and that he would not be unmindful of the divergences between the cotton-growing South and the industrial East, or between urban and rural areas everywhere. But I am sure that his outlook would remain broad, and that his decisions would be arrived at with one question ever dominant in his mind: "What is best for all the people of the whole Nation?"

Finally, I am sure that we would find Lincoln unshaken in his faith in democracy. No matter how questionable any other assertion about Lincoln's possible attitude may be, there can be no doubt

that belief in the overwhelming superiority of democratic government was as inseparable from him as life itself. I like to think of him as he stood in Independence Hall on Washington's birthday in 1861, en route to his first inauguration, quietly telling his audience that he had "never had a feeling, politically, that did not spring from the sentiments embodied in the Declaration of Independence," framed and adopted in that very building. Nor was it the mere matter of separation from the mother country, he went on to say. What had appealed to him so strongly, and what filled him then with deep emotion, was that promise of the Declaration "that in due time the weights would be lifted from the shoulders of all men, and that all should have an equal chance."

To Lincoln democracy was more than a framework of government in which the people choose their own officials and make laws through their own representatives. It was that, to be sure, but it was also a social system which raised no artificial barriers; which gave every man, no matter what his origin, an opportunity to advance as far in whatever direction as his ability warranted.

To Lincoln, moreover, this was a matter of the deepest personal concern. He himself had come into the world with no artificial advantages, but there had been no barrier to his rise to the highest, most honorable position in the country. These are personal matters about which men as reserved as Lincoln rarely speak. There was one occasion, however, on which he spoke his conviction, and what he said reveals more clearly than any other utterance the fervency of his faith in democracy. For that reason, and also because few are familiar with it, I quote the passage here. The time was the fourth year of the war, the audience a regiment of Ohio volunteers:

"I almost always feel inclined," Lincoln said—and we can imagine that he spoke slowly and quietly—"when I happen to say anything to soldiers, to impress upon them in a few brief remarks the importance of success in this conflict. It is not merely for today, but for all time to come, that we should perpetuate for our children's children that great and free government which we have enjoyed all our lives. I beg you to remember this, not merely for my sake but for yours. I happen temporarily to occupy this White House. I am a living witness that any one of your children may look to come here as my father's child has. It is in order that each of you may have through this free government which we have enjoyed an open field and a fair chance for your industry, enterprise, and intelligence; that you may all have equal privileges in the race of life, with all its desirable human aspirations."

In a word, only in a democratic government were the opportunities symbolized by Lincoln in the White House possible.

Broadly liberal, sanely national, fervently democratic—this was Lincoln in his lifetime, and this Lincoln would be today. No American can hold to a better creed.

### 1940 Census Questionnaire

### EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

BRIEF BY HON. CHARLES W. TOBEY, OF NEW HAMPSHIRE

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the *RECORD* the brief filed by me with the Committee on Commerce of the Senate in support of Senate Resolution 231, relating to the 1940 census questionnaire.

There being no objection, the brief was ordered to be printed in the *RECORD*, as follows:

First. These questions 32 and 33 are illegal, because they are not authorized by Congress.

Section 204, title 13, of the United States Code, 1934, providing for the taking of the fifteenth and subsequent decennial censuses, reads as follows:

"The fifteenth and subsequent censuses shall be restricted to inquiries relating to population, to agriculture, to irrigation, to drainage, to distribution, to unemployment, and to mines. The number, form, and subdivision of the inquiries in the schedules used to take the census shall be determined by the Director of the Census, with the approval of the Secretary of Commerce. (June 18, 1929, ch. 28, sec. 4, 46 Stat. 22)."

Section 21 of the Census Act of June 18, 1929 (ch. 28, par. 21, 46 Stat. 26), provides that the act entitled "An act to provide for the fourteenth and subsequent decennial censuses, approved March 3, 1919, and all other laws and parts of laws inconsistent with the provisions of this act are hereby repealed."

The above referred to 1929 act governs the 1940 decennial census; and, according to the old legal maxim "expressio unius est exclusio alterius," it follows from the usual and ordinary rules of construction that no other classification is to be read into the statutes

in disregard of that restrictive clause. Nowhere in the 1929 statute is there a provision in conflict with section 204.

Officials of the Census Bureau have concentrated their efforts in an attempt to stretch the meaning of the words "population," "unemployment," and "distribution" as used in the restrictive clause of the 1929 act, attempting to broaden these words beyond their ordinary sense and customary meaning.

They have even contended that income is included within the term "unemployment" on the ground that an act of Congress passed in 1938 providing for a restricted census of employment specifically authorized questions on income and used the word "income."

The census officials have admitted that their sole authority for the scope of questions comes from the 1929 act and not from the 1938 act, and, of course, this posterior act cannot be used to shed light on the intent of Congress in an anterior one, and if any meaning at all is to be drawn from the specific mention of income in the 1938 act it is that Congress, feeling the need to mention income to authorize questions on that subject and recognizing that such was a field not included in the ordinary sense of the word "unemployment," took pains to make its intention clear.

Second. These questions 32 and 33 are in violation of the Constitution.

Article IV of the Bill of Rights provides that: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated."

This inhibition against unreasonable searches and seizures is not limited to protection against search or seizure by force, but is alike a protection against demands by Government agents for unreasonable production of information, documents, or papers.

The Supreme Court of the United States in *Interstate Commerce Commission v. Brimson* (154 U. S. 447), states: "We said in *Boyd v. United States* (116 U. S. 616, 630)—and it cannot be too often repeated—that the principles that embody the essence of constitutional liberty and security forbid all invasions on the part of the Government and its employees of the sanctity of a man's home and the privacy of his life." The Court then added, "Of all the rights of a citizen, few are of greater importance or more essential to his peace and happiness than the right of personal security, and that involves not merely protection for his person from assault but exemption of his private affairs, books, and papers from the inspection and scrutiny of others. Without the enforcement of this right all others would lose half of their value."

Third. It is not fair to the people for the Senate, without protesting, to allow locally and politically appointed, temporary employees of the Government to demand from their neighbor citizens such private information under threat of penalty of fine and imprisonment. It is a recognized right of the people to petition to the Congress for a redress of grievances. The people have done so and are doing so, in protesting against these personal questions, and have expressed justified apprehension that the method used to gain such information will result in embarrassment and injury to them. Many of their letters to me have given illustrations of such betrayal of confidence in the past, and I have read a number of these letters into the *RECORD*.

To sum up, I respectfully submit that in order for the committee to report unfavorably on S. Res. 231 it must be prepared to satisfy the Senate that the questions therein are: (1) Authorized by Congress, and (2) constitutional, and (3) fair to the people.

On the other hand, if the committee reaches the conclusion that the income questions are either: (1) Unauthorized by Congress, or (2) unconstitutional, or (3) unfair to the people, then it logically follows and it is clear that the committee should report favorably on the resolution.

### Review of New Deal Administration

### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

RADIO ADDRESS BY HON. CHARLES L. McNARY, OF OREGON

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the *RECORD* a radio address delivered by the senior Senator from Oregon [Mr. McNARY] on March 3, 1940, on the American Forum of the Air program.

There being no objection, the address was ordered to be printed in the *RECORD*, as follows:

Seven years of the New Deal leave our major national problem of unemployment still unsolved.

They leave our farmers without either sufficient markets or satisfactory prices.

They leave our heavy industries in stagnation; our business enterprise in a strait jacket and the ranks of organized labor in the throes of internal strife.

Instead of fulfilling the New Deal promise of a more abundant life, these 7 years have served only to clamp down more tightly upon the American people the hardships of a temporary depression as a permanent way of living.

Our vast army of unemployed, our huge Federal deficit, the boundless waste and extravagance in Federal expenditures, the lack of coordination and efficiency in Federal administration, and the constant playing of politics—these are some of the yardsticks which measure the extent of the New Deal failure.

Seven years ago the American people, with a faith that finds no parallel in American history, entrusted the welfare of our Nation to the New Deal leadership. No administration ever started out under more promising auspices.

Partisan politics were adjourned. The President was given greater power than any President of the United States ever possessed in peacetime. Congress wrote blank checks for him; it turned over to him many of its fundamental prerogatives. And not until flagrant abuse of executive authority made action imperative did Congress move to reclaim the constitutional authority it had so ungrudgingly surrendered.

Let me give you some of the melancholy details of the desperate situation which confronts the American people after 7 years of the New Deal.

More than 9,000,000 unemployed disconsolately tramp our streets. The Nation has been reduced to a lower standard of living than it enjoyed 10 years ago.

Creation of new enterprises is at a virtual standstill, and sorely needed plant modernization and expansion have been deferred until such time as the blight which the New Deal has cast upon industry can be removed.

Organized labor is divided into two hostile camps, with its annual income lower despite higher hourly wage rates.

Cash farm income for the 7 New Deal years average only \$7,247,000,000 a year, compared with \$9,046,000,000 for the preceding 7 Republican years, and the basic problems of agriculture are no nearer solution than before the administration's exercise of sweeping controls over farms and farmers.

The flow of new investment capital has virtually dried up at the source, and funds which normally would have gone into new enterprise have sought safety either in bank vaults or low-interest Government bonds.

Youth is discouraged and discontented as it finds the doors of economic opportunity barricaded by the sluggish condition of American enterprise.

Our people are staggering under the greatest tax burden in the Nation's history, whereas their annual average per capita income has been reduced to \$464 for the 7 New Deal years compared with \$570 for the 7 preceding Republican years.

Government expenditures, excluding postal receipts and debt retirement, reached a total of \$9,210,091,000 in 1939 compared with \$3,863,544,000 in 1933, when the Republican Party temporarily retired.

Our national debt has been almost doubled under the New Deal until it now stands at more than \$42,000,000,000, not including nearly \$6,000,000,000 of obligations guaranteed by the Federal Government.

What, you may well ask, is responsible for such a condition in the richest nation in the world and among a people who have led all others in initiative, enterprise, ingenuity, and the vigilance with which they have guarded their liberty?

The answer is plain. It lies in the false New Deal economic philosophy that abundance can be produced by creating artificial scarcity; that the Nation can become rich and prosperous by wasteful and extravagant spending of the people's money; that our profits system is outmoded and outworn and can only function if the Government itself undertakes to keep it operating. As the Republican program committee succinctly states:

"The primary reason for the economic failure of the New Deal goes beyond detailed errors in legislation, administration, and the selection of Federal personnel. It lies in the fact that, despite the ideals it has expressed for social America, the New Deal leadership has almost completely misunderstood economic America. It has sought to advance its social liberalism through economic policies which, historically and in their current effect on American enterprise, are profoundly reactionary."

In this misunderstanding of economic America; in its false theory of a vanished economic frontier; in its deliberate discouragement of savings; and in its flair for rash experimentation, the New Deal committed blunder after blunder; was guilty of a whole series of unforgivable errors.

It began to undermine our traditional Americanism by placing emphasis upon collectivist values instead of individual values.

It fostered the belief that security was a greater boon than liberty.

It sought to substitute ideals of dependence for self reliance.

It reached out for more and more legislative authority at the expense of our constitutional system of representative government.

It substituted a government of men for a government of law.

Propaganda was resorted to in an effort to convince the American people that affairs in Europe and Asia were of more importance to the American people than our urgent domestic problems.

Spending and financial profligacy replaced a sane policy of economy in government and reduction in taxation.

Our industrial and agrarian life suffered grievously by the substitution of the long-exploded doctrine of semifree trade for the American doctrine of the protection of American industries against pauper and coolie wage levels.

In sharp and refreshing contrast to all this, the Republican Party takes the position that the well-being of the American people depends upon the Government remaining unreservedly loyal to a political system of representative self-government.

It believes that this system must be safeguarded alike against insidious minorities and intolerant majorities by a balance of power.

It rejects the New Deal philosophy of defeatism and abundance through scarcity.

Instead, it reaffirms its faith in our historic system of free enterprise under regulation adequate to safeguard the common good against betrayal by special interests.

It believes that abundance cannot be achieved by scarcity but by plenty, and that plenty can be had, not by idleness, but by real work in private industry at a living and not a subsistence wage.

It stands for adequate relief for every man, woman, and child in need; it favors the use of Federal funds for this purpose to the full extent that need requires. But it advocates returning the administration of these funds back to the States and localities, under proper Federal safeguards, to the end that relief may be given with greater promptness and greater efficiency and that politics may be banished from the entire relief set-up.

Nevertheless, it regards all relief as only a temporary palliative and not a cure for the ills of unemployment with which this country is afflicted.

It believes that our unemployment problem will be solved only when the present bureaucratic fetters are removed from industry and business so that it can go forward again at its accustomed pace and provide real jobs at decent wages for all those who now must look to Government for their daily bread or starve.

It believes that the farm dollar should be interchangeable with the industrial dollar. This happy condition prevailed during the Republican administration from 1909 to 1914, which period the New Deal considers the yardstick of good times, and which is frequently referred to as the "golden age" of agriculture.

The Republican Party, the party of peace, the party of hope, the party that looks forward and not back, holds firmly to the belief that under its guidance American enterprise can find profitable expansion, offer more investment opportunities for savings, provide more jobs for workers in factories, larger incomes on farms, and security for the unemployed and our senior citizens.

We are convinced that all these desirable and necessary advancements can be effected far more readily by the Republican Party than by the New Deal on the basis of its asserted achievements during the past 7 years, or than can be accomplished by it in the 10 months remaining of its existence, or in the 4 additional years for which it is striving with all its might and men and means.

However, the Republican Party faces the future unafraid and with supreme confidence of an overwhelming victory in the fall of this eventful and turbulent year.

## Inland Waterways

### EXTENSION OF REMARKS

OF

HON. JOHN E. MILLER

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ADDRESS BY COL. R. A. WHEELER

Mr. MILLER. Mr. President, I ask leave to have printed in the Appendix of the RECORD an address delivered on January 25, 1940, by Col. R. A. Wheeler, resident member of the Board of Engineers for Rivers and Harbors, at Raleigh, N. C., before the Engineers' Institute, on the subject of the Contribution of Inland Waterways to Transportation. The address is an instructive and thorough discussion of the subject.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The topic assigned to me on the program is the Contribution of Inland Waterways to Transportation. I am glad to be addressing my remarks on this subject to engineers, especially to such a representative gathering of engineers as sits facing me here today, because I see the appraisal of the role played by inland waterways in the general transportation scheme as essentially an engineering problem.

Naturally, the first thing we always want to do is to reduce any problem to its simplest terms; but, unfortunately, there is no simple equation that will represent all the factors in this problem. If

there were, it would have been solved long ago. Transportation is not a homogeneous material that you can measure by the yard. Railways, highways, waterways, airways, and pipe lines have no common denominator. They don't serve the same purposes nor obey the same physical or economic laws. We can, however, clarify the issue by pointing out at the start that transportation is but a means, not an end in itself. Commerce requires transportation, and transportation must be made to serve commerce efficiently and economically if we are to progress in a material way. If any particular class of carrier is to prosper it must be conceived soundly in the first place and managed efficiently enough to earn the profit necessary for its existence. If it is to maintain its usefulness it must adjust itself so as best to serve the various needs of agriculture, industry, and trade. It is from that angle, primarily, that the Army engineer organization I represent approaches the problems of river and harbor development. If we keep that broad concept in mind it is easier to see just where inland waterways fit in as an essential part of the transportation picture.

According to the latest figures issued by the Interstate Commerce Commission, freight transportation for the entire country for 1938 was performed by the following agencies:

	Percent
Railways.....	62.8
Highways.....	8.6
Pipe lines.....	14.3
Inland waterways.....	14.3

The percentage for inland waterways evidently includes commerce on the Great Lakes in deep-draft vessels. Recourse to the Annual Report of the Chief of Engineers, United States Army, for a further break-down of these figures, indicates that about 4 percent of the total freight movement of the country took place on inland waterways other than the Great Lakes. The significant fact in these figures is that while the total national traffic was declining from more than 588,000,000,000 ton-miles in 1937 to less than 466,000,000,000 ton-miles in 1938, commerce on the light draft inland waterway channels increased from less than 17,000,000,000 to almost 18,000,000,000 ton-miles.

Now, there are several obvious reasons why this kind of water-borne tonnage has consistently held its own or continued to grow in the face of strong competition and general business recession. Certain inherent differences distinguish barge freight service on inland waterways from other carrier services in the matter of low cost. It is not subject to taxes for right-of-way, since it does not possess and does not require exclusive right-of-way in order to function. If it develops that there is an excess of transportation service on any particular water route, some of the equipment can be shifted to another water route without disrupting the general business set-up and without incurring an economic loss from scrapping a costly right-of-way. Without doubt, the basic consideration in the low cost of barge service is the fact that all the people own the channels through which it operates and the benefits of this low cost are shared by everybody, just as the ownership and benefits of low-cost postal service are shared by the entire people. If the water-borne tonnage is permitted to develop freely in the volume for which the capacity of the waterway has been designed and provided, the cost of the channels per ton-mile of freight transported will be extremely low. Savings made by use of waterways are so substantial and are found to be distributed so widely and generally down the line from producers, carriers, shippers, and distributors to consumers that they more than offset the public expenditures. Commercial statistics indicate that thrifty business foresight is especially stimulated during hard times to take advantage of low-cost water transportation when available and to stock essential materials for future needs. The progressive completion of additional links of standard waterways and their successive inclusion in the system increase the average length of water haul and continually place new markets and new sources of raw materials within economic reach of each other. Another impetus toward increased use of water routes is the rapid advance in perfecting, adapting, and modernizing floating equipment and motive power, water terminal facilities, and operating practices. Indeed, to the landlubber who thinks of river navigation as a sort of hazardous adventure, the smoothness, speed, and efficiency of operation of a modern tow of from 2,000 to 8,000 tons cargo and more, between ports such as Pittsburgh, Chicago, Minneapolis, New Orleans, and Houston, would come as a revelation. The extension of joint barge-rail and barge-motor-truck connections deep into areas tributary to river ports has not only made these benefits available to a large portion of the United States, but has resulted in a combination service surpassingly flexible and complete.

Growth of water-borne traffic is retarded, on the other hand, by a number of factors. Barge transportation is slow, sometimes irregular, and subject, in northern latitudes, to seasonal interruption by formation of ice in the channels. Completion of the principal links in the system to dependable navigable stages at all seasons has been slow. This not only has been discouraging to shippers but has rendered the cost of service, low as it is, more than it should be. Business is conservative. It requires a considerable period of time for supplementary terminal facilities to gravitate to waterside and for industry generally to learn how to take advantage of new connections and new routes and methods of transport. It is perfectly natural that conflicting transportation interests, all bidding for the job of carrying the country's freight, should clash; natural that they should use every legitimate means within the

scope of their power and resources to prevent the establishment of traffic on a competitive route. This is to be expected under our American system of free initiative and enterprise. But since I am talking to you, as engineers, about the contribution of inland waterways to transportation, I must point out, in passing, that you can't with one hand, by artificial expedients, hold adapted tonnage away from river routes provided to carry it, and then with the other hand point to the absence of water-borne tonnage as any logical indication of the value of the waterways.

There is of course no fixed, static volume of transportation to be arbitrarily apportioned among the various types of carrier. A low-cost carrier does not obtain its tonnage solely by diversion from a high-cost carrier. To a considerable extent it creates its own traffic. Some commodities are so necessary, or so perishable, or in such universal demand, or of such high intrinsic value that they move at any time and at almost any cost. Other commodities move neither so freely nor so far if the cost of movement is high. Still other commodities are of such low value or so generally available that they will not move at all unless provided with a very low-cost outlet to market. The cost of moving such basic commodities affects the price of practically everything we use. Essential industries (and I use the term in its broadest sense to include farming, mining, and the like) need low-cost transportation of such commodities as ore, pulpwood, logs, coal, petroleum, grain, stone, sand, gravel, sulphur, and crude chemicals. And low-cost transportation means water transportation—make no mistake about that. When I say low cost, I mean genuinely economical, taking into account all service costs and including provision and maintenance of the channels, locks, and everything else essential to navigation. Needless to say, that statement does not refer to construction projects not yet ready for commerce, nor to outmoded improvements now ready for abandonment. It refers to completed links in the waterway system, such as the Ohio, Monongahela, Illinois, Mississippi, Warrior, Atlantic-intracoastal, and Gulf-intracoastal improvements, which were thoroughly investigated and soundly conceived in the first place; and then properly designed and equipped for the service they are required to perform.

A glance at any general map of the United States reveals the greatest natural system of inland and coastal rivers and tidal estuaries in the world adapted to improvement and interconnection as continuous waterways. Since the job was undertaken by the War Department more than a hundred years ago, almost 30,000 lineal miles of various channels have been under improvement of some type. The Annual Report of the Chief of Engineers of the United States Army, covering these activities, is available to the public. According to law, it gives a detailed report of every river or harbor improvement authorized or adopted by the Federal Government. As a consequence, it includes the history, traffic records, physical and fiscal data of some thousand projects, encompassing every type of improvement from the most insignificant snagging operation to the multiple steamship locks at Sault Ste. Marie. However, most of the waterway money, technical skill, effort, and care of our organization are expended on some half a hundred principal improvements, totaling about 4,200 miles of high-grade modern standard channels varying from 8 to 14 feet deep, which handle almost all of the inland water-borne commerce of the country.

Although we have developed to a high degree of efficiency certain of our waterways, we have not yet taken as full advantage of our favorable topography as have most of the other enlightened nations. Artificial canals and interconnections, built at public expense, to promote the free movement of essential low-grade commodities are and have been for many years prominent features of all the continental transportation systems of Europe. Almost daily news dispatches indicate the extensive and indispensable use of waterways by the warring nations. This Nation has not been forced by necessity or by the competition of other countries to adopt the most practical economical way of doing things. But the time is approaching when we shall have to do just that, if we want to continue our national prosperity.

Thanks to the foresight of Congress, the War Department has formulated during the course of many years, and in cooperation with engineers of the other departments of the Federal and State Governments, a thoroughly studied general plan of development of national water resources which is undergoing constant modification and adjustment to the demands of public use. Whenever a local improvement is requested, if it appears meritorious enough to secure favorable congressional action, it is tested first of all for its worthiness as a part of the national scheme. Simultaneously and in coordination with the survey of topographic, hydraulic, and geologic features, and the preparation of a plan of improvement, a broad economic survey and traffic canvass of the territory is conducted to determine the amount and the extent of the benefits to be expected and the collateral damage that may be involved. The economic study usually covers considerably more territory than the physical survey because the economic effects are commonly more extensive. I stress the importance of making the economic studies in parallel with and by the same personnel that does the field work and structural design, because each one affects the other, and the final plans are usually the result of the compromises familiar to all engineers seeking the most favorable balance among conflicting requirements.

During the course of the investigation by our district and division engineers of proposed improvements open hearings are held to bring out public sentiment and the views of all interests affected. The reports are then referred to the Board of Engineers for Rivers

and Harbors which was created by law for the specific purpose of advising Congress on the merits of the proposals. The Board, which is composed of seven selected officers of wide experience, is assisted by a staff of engineers and economists qualified by training and experience to make the necessary critical analyses. Only after full consideration of all available information does the Board prepare its recommendation to the Chief of Engineers, who in turn makes appropriate review of all recommendations that have been submitted and transmits them, with his own comments and recommendation to the Congress.

Transportation and defense are currently the leading topics for discussion at the National Capital. It is unfortunate that so much of the information broadcast in the magazines, over the radio, and at public gatherings reflects a strictly partisan approach to transportation problems. The ethics of partisanship and propaganda does not require that justice be done to both sides, and confusion results. It is as unfortunate as it is remarkable that so little of what is written or heard about this vital question is contributed by engineers. Engineers try to do justice to both sides. It seems to me that no other group of men could possibly be better fitted by temperament, training, and experience to dig down through the mass of survey records, statistics, estimates, guesses, and outright propaganda; to throw off the influence of particular affiliations and sympathies that tend to warp men's judgment, and to reach and expose to light the bedrock facts upon which to build a sound policy. Certainly there is no greater, finer, higher opportunity open to the profession for disinterested public service.

The engineers' function in transportation includes structurally sound design, safe construction, and economics. This function carries a responsibility for economic soundness of projects and policies. Notwithstanding the professional modesty characteristic of engineers, it is well known generally how conscientiously and efficiently they do their work. So it seems almost superfluous to say that a large part of the analysis of proposed river improvements is devoted to the study of the economic aspects as a basis for our recommendations upon whether or not they are in the public interest.

For use as a yardstick the only sound criterion is whether the provision of low-cost carrier service will result in an economic public benefit. If the project does not afford the public a clear opportunity to enjoy benefits substantially greater than all the costs, the carrier costs, the so-called hidden costs, and all the damages involved, it is not recommended. Most proposed improvements are, in fact, reported unfavorably. Even when a project is clearly justified, when low-cost water transportation has already been provided as a means to increase industrial output, and the opportunity to save money on freight bills has thus been made available, there is no compulsion, legal or moral, that can be brought to bear on shippers to make them use it. It can only be pointed out that when they have it, and do not use it, they are simply paying two prices for one service.

Strange things can happen temporarily to the soundest economic set-up under the guise of competition. However, there is no need for engineers to become unduly exercised or to attempt to do much about temporary competitive expedients. If they fly in the face of that reliable old economic law if supply and demand, they ultimately adjust themselves. It is the same with artificial handicaps and restrictions imposed in repeated but futile attempts to make equal things that are essentially unequal.

The Army engineer organization has a very comforting philosophy about that. We are not trying to build in synchronism with fluctuating business cycles, nor, for that matter, with fluctuating economic creeds. We are trying to build with a long-range view to the future prosperity and security of the country, knowing that waterways adequate to meet national demands cannot be provided nor equipped after an emergency has arisen. In the long run, national commerce is going to find its way in representative volume to the means of transportation best suited to its particular needs.

### American Road Builders' Association

#### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ADDRESS BY RAYMOND H. COMBS

Mr. MEAD. Mr. President, the address of President Combs, of the National Rural Letter Carriers' Association, before the American Road Builders' Association on January 20, 1940, is of especial interest to Members of the Congress, for the reason that it pertains to a subject that touches every section of the country, and affects the lives of both our rural

and our urban populations. In it also can be found a potent reservoir for work opportunities for our unemployed.

Farm-to-market or community roads provide a sound program of useful public instruction which will enhance the value of our agricultural lands, improve conditions for our farm population, and provide wider marketing facilities for those who reside in our industrial centers.

I ask unanimous consent to have the address of President Combs published in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President and gentlemen of the convention, ours is a subject of such enormity as to challenge the imagination of every forward-looking American, and I am highly honored to be permitted to contribute a segment of thought in your important symposium.

We feel that there is a natural bond between your group and ours, in that you represent the fingertips of the road-building industry and we represent the fingertips of the Postal Service. More than this, you and I, as missionaries from the grass roots, enjoy intimate contact with rural people which enables us to accurately interpret their desires and sympathies with the merit of their contentions.

You devote your lives to building roads, and we devote ours to being grateful for this service.

According to the best information available, there are approximately 3,000,000 miles of highways in this country, of which 425,858 are Federal-aid and State primary roads.

Thus it will be seen that the great reservoir from which the road-building industry must draw its sustenance in the future are the unsurfaced, farm-to-market, feeder or community roads.

Within the area covered by these roads is to be found not only the opportunity for construction but the people who hold it within their power to give the "go" or "stop" signal on the roads program.

And so it readily will be seen that finance, science, and society are interrelated to such a degree that it is imperative that each shall be given appropriate emphasis in developing a well-balanced road program.

We must never lose sight of the fact that roads are built to serve people; and as Texas Highway Commissioner Harry Hines so appropriately informed a committee of Congress recently, where he said: "Farm-to-market roads really touch the lifeblood of our country. Yes; and there is something mighty human in those heartrending stories where a doctor could not get through the roads at night; kinfolks who died because the family was unable to get them to a hospital for an emergency operation; rural families marooned for days, unable to get supplies or to market their milk, butter, and other perishable products, which arrests our attention. It's a little hard sometimes for those living under modern conditions—steam heat, taxicabs, cafes, hotels, hospitals, doctors, nurses—to visualize the suffering and hardship of unimproved rural life, where many unspoken prayers are rendered on a rosary of tears."

May I be pardoned for mentioning here that while we have been in convention assembled today more than 32,000 rural letter carriers, imbued with the spirit embodied in their motto, which is "Service With a Smile," and motivated by an indomitable will to uphold the tradition as expressed in the slogan, "The Mails Must Go Through," have been traveling 1,392,000 miles through snow, ice, sleet, and storm, with the temperature far below zero, in many parts of this country.

Yes; roads and road building are intensely human after all.

It is pleasing to note that since initiating the Federal aid to feeder roads in 1936, most of the States have now perfected the legal machinery to permit them to participate in this program, and they now are utilizing the money appropriated for this purpose. As was to be expected in a project encompassing 48 States with varying highway laws, some difficulty seems to be appearing regarding specifications and selection. If specifications for feeder roads call for a higher type or more expensive road than the community itself feels necessary to care for their needs, naturally there will be resentment from the people. This, of course, can be avoided by fitting the roads to the needs of the community in which they are to be built.

Some officials take their road problems to the people through hearings, where those most interested are afforded an opportunity to canvass their needs and get a clear understanding of what the official or engineer is attempting to do. This is a thoroughly democratic procedure and should be encouraged.

Again quoting Commissioner Hines, of Texas, who says:

"Outstanding in significance have been the hearings before our highway commission monthly, year in and year out—a constant plea by county courts, judges, and commissioners, chambers of commerce, including city and town officials, desiring all-weather road facilities out to their customers, as well as large delegations of farmers—500 in one delegation last month—pleading for a paved road to move their milk, butter, livestock, grain, and other products to market—likewise to permit the school busses to move. Why, gentlemen, some of our district schools have 10 to 12 school busses hauling the children through the mud, snow, and ice at this particular time. It isn't a light matter to have our little boys and girls dumped in a ditch full of slush and mud when a school bus slides off the dirt road."

Exploring this thought further, who is better qualified to advise a State highway department concerning the type and specifications of a feeder road than the county engineer or local road officials who are domiciled nearby?

This problem can and will be solved through the cooperative effort of all interested parties.

Congress, in authorizing money for community roads, used the following language: "Said sums to be expended on secondary or feeder roads including farm-to-market roads, rural-free-delivery mail roads, and public school bus routes."

Here again we find different methods of selection in the various States.

This emphasizes the need for cooperative effort to the end that as much uniformity as possible be had in designating feeder roads in conformity with the intent of our legislators as quoted in a preceding paragraph.

I think we all realize this is a tremendous undertaking but through meetings such as this where highway officials from all States congregate we feel certain that plans will be developed where feeder road Federal-aid money will find its way to feeder roads and not be diverted to State primary roads or to grade-crossing eliminations. Here, again, who is better qualified than you gentlemen and local highway officials who are on the ground, so to speak, to advise the State highway department concerning the selection of feeder roads.

You may be certain that the rural letter carriers of this country, who travel and have an intimate knowledge of these roads, stand ready at all times to render enthusiastic cooperation.

The Federal Government collects each year from the highway users in the form of gasoline and excise taxes approximately \$350,000,000, and there would seem to be no good reason why this money, in its entirety, should not be used for the benefit of the same highway users in the form of more and better roads.

You and I are cognizant of the fact that many miles of primary roads become obsolete each year but this should not militate against providing all-weather surfaces for feeder roads that are in a deplorable condition. Rather should it supplement the argument for additional funds.

It should be quite well recognized today the community road improvement is the most popular road program in the country and can be the means through which will be generated the enthusiasm and power necessary to carry a well integrated and intelligently planted national road program to success. We must harness this enthusiasm and power. You and I know that this cannot be accomplished unless careful thought and attention are given to these community roads.

In the first place we must see to it that the spirit of democracy has an opportunity to function, keeping in mind that democracy means not "I am as good as you are" but "You are as good as I am." We must also be watchful that no opportunity is lost to dramatize the program.

For example, if we are faced with the choice of tearing up and reconstructing a road previously hard-surfaced or the construction and surfacing of a nearby road that is practically impassable we may find it expedient to look after that impassable road first, because it is difficult for the layman to understand why he should be left to wallow in the mud while the money that would take him out of the mud is being expended for the reconstruction of what he considers a pretty good road.

This brings to mind the country school teacher who asked her class to write 100 words on motoring. One little farmer boy wrote: "We went out motoring. Got stuck in the mud. The other 91 words is what Dad said."

You and I know that a traffic count is an important factor in gaging whether or not a road already hard-surfaced should be widened and modernized but it is not of such relative importance in determining whether or not a mud road should be improved. This is to emphasize the fact that the development of feeder road improvements is different than the development of a modernization program for roads that have heretofore been improved.

In studying the national picture regarding feeder or community roads we immediately are faced with the fact that the mileage of dirt roads is tremendous and if we expect to make any measurable headway we must have more money allocated for this purpose. In spending this money for feeder roads we can be happy in the thought that it not only provides an economically sound investment which will be repaid in the decreased cost of operation of motor vehicles and improvement of real estate values, but will be a stabilizing force in the social fabric of rural America.

Perhaps more important than these will be its contribution to the relief of unemployment because it is generally recognized that road improvement furnishes the best and most permanent form of project to lessen the relief load.

In conclusion permit me to say that my experience in dealing with the personnel of the Bureau of Public Roads, from its chief down, the members of the Senate and House road committees, with State highway department officials and engineers, with county highway officials and engineers and with local highway officials and engineers, leaves with me the firm conviction they are an exceptional group of men, imbued with a sincere desire to develop in this country a road program that will serve the needs of the country. And permit me to say further that I deem it particularly fortunate that an opportunity is accorded for all agencies interested in roads to coordinate and correlate their activities through the American Road Builders Association.

## Humane Shelter at Memphis, Tenn.

### EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ARTICLE BY CLARK PORTEOUS

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Memphis Press-Scimitar of February 28, 1940, concerning the humane shelter we have there, and the resulting reduction of cases of rabies thereby.

This statement will be enlightening. Ever since this building was erected—which was done partly with W. P. A. money and partly with city money—it has been subject to much levity at the hands of the press and public men. It has proved to be a very valuable institution in Memphis. It is a splendid protection against rabies; and most of the statements made about it are pure figments of the imagination, with no basis in fact on which to rest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Memphis (Tenn.) Press-Scimitar of February 28, 1940]  
FALSE: SOUTHERN LADIES GIVE THEIR POODLES SHOWER BATHS AT HUMANE SHELTER—TRUE: HUMANE SHELTER DOES REAL WORK; CUT RABIES DEATHS HERE SINCE 1935

(By Clark Porteous)

Memphis is justly proud of its fine humane shelter at 463 North Front, which has saved lives and cut the number of Pasteur treatments from a high of 282 before the shelter to a low of 64 last year. There hasn't been a single Memphis death from rabies since the shelter opened September 1, 1936.

But the old "boondoggling" libel of the Memphis Humane Shelter just won't remain in its grave. It first popped up 4 years ago, while the shelter was being built by W. P. A. and the city, just before the Presidential campaign in which President Roosevelt defeated Alfred M. Landon.

The attacks on the new humane shelter were soundly refuted then.

#### STRAY DOGS PICKED UP STEADILY

Now falsehoods directed at the shelter have started again—this time in the House of Representatives in Washington.

Representative DEWEY SHORT, Missouri Republican, in an attack on the \$5,000,000 census item in the deficiency appropriation bill, made the following statement in Congress:

"It is an utterly amazing, shocking, and perfidious proposition to place before a body of intelligent men.

"New dealers built a \$50,000 dog pound in Memphis, Tenn., so that southern ladies could give their poodles a shower bath.

"Think of that! There are some very fine people in my district who do not even have a shower bath. But we are not as dirty as some new dealers and do not stink as badly as Harry Hopkins and his crew.

"I can tell you what my constituents will tell these census takers. They will say, 'It is none of your damned business.' And you'll have to build a prison on every 40-acre plot if you plan to jail others who will refuse this information."

First, Mr. SHORT is wrong about the cost of the project. Memphis used W. P. A. funds to reduce rabies. The shelter cost \$19,000, with W. P. A. putting up \$13,000 and the city supplying \$6,000.

As for showers, there just aren't any in the simply built, sanitary and efficient shelter. The only way a dirty stray dog can be cleaned before it is put in its cage is with a plain rubber garden hose.

In March of 1936, the New York Times dealt lightly with the shelter, mentioned shower-bath facilities and straw bedding for dogs. News stories told of modernistic design, curtained windows, spacious runways, and individual rooms.

H. I. Phillips, a syndicated humorist, sang the praises of the dog pound in hundreds of newspapers, joked about it being a "puppy's delight." These statements were refuted.

Later, Col. Frank Knox, newspaper publisher and Republican candidate for Vice President, spoke of marble showers for dogs. Again the statements were refuted, that time by CLIFFORD DAVIS, now in Congress himself.

Mayor Chandler, who was in Congress with Representative SHORT when the W. P. A. appropriation for the shelter was made, today answered his former colleague, as follows:

"I know that the facts of this W. P. A. project for protection of human life were made very clear in Congress in 1936. But under

the immunity permitted by the Federal Constitution to a Member of Congress, there is no way to keep unprincipled people from misrepresentations."

Dr. S. L. Wadley, epidemiologist for the city health department, said, "Of all the money spent in Memphis by the Government, the money for the humane shelter was the best spent."

Dr. Wadley said the last death of a Memphian from rabies—one of the most horrible deaths known to doctors—was in 1936, before the shelter opened. A child bitten in Memphis died of rabies in February 1935. During the 3 years before the shelter opened there were six rabies victims in Memphis.

Dr. Wadley recalled that there was a makeshift shelter at the city stables on High Street before the new shelter opened. He said the dogs were all kept in one pen and people complained about their dogs being placed there, reporting that some developed hydrophobia after they returned from the pound.

#### THE FALSEHOODS ARE STARTED AGAIN

Dr. Wadley attributed the remarkably fine record in rabies reduction for Memphis to steady work of picking up stray dogs by several small animal patrols operated from the shelter. He recalled that before the new shelter, whenever the newspapers reported a rabies case, there would be a drive to pick up stray dogs, with penal-farm trustees doing the work.

Dr. Wadley said he hoped to see the ordinance changed further so that dogs will not be allowed on city streets unless on leashes.

Attorney Charles Crabtree, chairman of the humane board, termed the statement of Representative SHORR "ridiculous," cited the rabies record as proof of the good work of the shelter.

Following is the total number of Pasteur treatments to prevent rabies given by the city, at a cost of about \$7 each, since 1933. Note the reduction starting in 1936, year the shelter opened:

1933	264
1934	282
1935	280
1936	131
1937	70
1938	120
1939	64

Following are the number of dogs found to have had rabies:

1932	115
1933	113
1934	113
1935	145
1936	62
1937	20
1938	59
1939	19
1939	1 cat

Mayor Chandler said he would reappoint the humane board, which operates the shelter under supervision of Commissioner Joe Boyle, within a few days, with the exception of Mrs. Frank Sweeney, who has left Memphis. Commissioner Boyle is meeting with the board at 2 p. m. today to get acquainted with the set-up.

Members of the board, other than Chairman Crabtree, include Mrs. W. R. King, Ed Holcomb, C. C. Cartwright.

Dr. L. M. Graves, superintendent of the city health department, and Commissioner Boyle, ex officio members.

### National Employment Program

#### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

LETTER FROM JOHN THOMAS TAYLOR ENCLOSING PROGRAM ADOPTED AT LAST NATIONAL CONVENTION OF THE AMERICAN LEGION

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from a letter addressed to me by John Thomas Taylor, director of the national legislative committee of the American Legion, together with the national employment program as set forth in the report of the committee on employment, which was adopted by the American Legion National Convention at Chicago in September 1939.

Colonel Taylor's letter, as well as the accompanying partial report, set forth the vexing problem of unemployment, with

particular emphasis upon the employment dilemma of the middle-aged and older worker.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE AMERICAN LEGION,  
NATIONAL LEGISLATIVE COMMITTEE,  
Washington, D. C., February 15, 1940.

Honorable JAMES M. MEAD,

United States Senate, Washington, D. C.

DEAR SENATOR: Your letter of February 8, enclosing copy of S. J. Res. 80 and S. 1904, which you introduced on March 22, 1939, deserved an earlier reply, but due to the fact that I have been away from the office a great deal my correspondence has suffered.

Both of these measures contain proposals in which the American Legion is very much interested. With regard to S. 1904, the American Legion has complained to some of the departments that by fixing a minimum age of 35 for certain positions they automatically bar World War veterans.

This fixing of minimum-age limits on certain positions which automatically bar World War veterans resulted in the adoption of a resolution at the Los Angeles National Convention (1938), which requested legislation "making veterans of the World War eligible (provided they are otherwise qualified) for the position of post-office inspector, regardless of age."

With regard to S. J. Res. 80, of course, the American Legion has considerable of an employment program, including the following:

(1) Conduct a National Employment Week for Workers Over 40 during the first week in May 1940.

(2) Favoring a Federal-State program that will offer a retraining and training program as the means of reinstating these employable citizens (all citizens over 40) to their regular employment, and

(3) Pointing to the inconsistency of the United States Government in urging private industry to hire workers over 40, while at the same time refusing employment and promotion in Government service to those over 40, and urging adoption of rules in the Government service "making possible the employment and promotion of American citizens over 40 with the desired qualifications."

So that you may have some idea of the extent of the employment program adopted at the last national convention held at Chicago in 1939, I enclose herewith the summary of proceedings of the twenty-first annual national convention.

Very sincerely yours,

JOHN THOMAS TAYLOR,  
Director, National Legislative Committee.

#### REPORT OF COMMITTEE ON EMPLOYMENT

Resolution No. 280. Subject: National employment program, was adopted as follows:

"Be it resolved by the American Legion in convention assembled at Chicago on September 25 to 28, 1939, That the following shall be the national employment program for the ensuing year:

"1. Reaffirm that action taken by past national conventions that employment shall be a major program.

"2. Continue and increase our efforts and financial expenditures for the reemployment and vocational training of men over 40.

"3. Conduct a National Employment Week for Workers Over 40 during the first week in May 1940.

"4. Reaffirm our endorsement of a rigid enforcement and extension of civil service with adequate preference for veterans.

"5. Increase the use of field secretaries in aid of the employment program.

"6. Regularly devote one page of the monthly magazine and the columns of the National Legionnaire to articles on employment and veterans' preference.

"7. Vigorously press a program of employment stabilization.

"8. Sponsor a national conference of outstanding leaders of finance, industry, labor, and agriculture to endeavor to secure a permanent solution of the unemployment problem."

### Proposed Loan To Finland

#### EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ARTICLE BY DAVID LAWRENCE

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by David Lawrence, published in the Washington Evening Star of March 1, 1940, on the proposed loan to Finland.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

**LOAN MARKS MILESTONE IN POLICY—PRECEDENT SET IN COURSE OF ALLEGED ISOLATION**  
(By David Lawrence)

Many years from now the congressional action just completed in making available a loan of \$20,000,000 to Finland will look far more significant than it does today. For, in the midst of a war for its very existence, Finland has received an outright governmental loan which ostensibly is to be used for purchase of food, but which actually will be a net addition to Finland's financial resources in its fighting with Russia.

The obligations of neutrality—a very doubtful term these days—caused Congress to refrain from naming Finland as the borrower, and the artificial device of increasing the funds of the Export-Import Bank was used to achieve the same purpose.

This may appear to be legalized subterfuge, but in a world wherein nations fight each other with all the weapons of war and yet obtain the advantages of peaceful commerce by refusing to sanction a formal declaration of belligerence, neutral governments are similarly compelled to adopt diplomatically conceived instrumentalities.

**DECEIVES NO ONE**

No one is deceived by the process. The Russian Government knows what the America Congress has done. So do the people of Finland. The President of the United States has even gone so far as to express publicly his belief that 98 percent of the American people sympathize with Finland in its struggle to retain independence.

Finland, of course, will have to comply with the formalities. She will buy foodstuffs with the money made available by the Export-Import Bank, but she will rearrange her domestic purchases so that money ordinarily used to buy food will go into the coffers of the Finnish treasury to buy munitions. Just how the Finns will rearrange their credits is their own business. The American Government will ask no questions and will, of course, have no authority over what the treasury of Finland does with all its financial resources.

The salient fact remains that America has helped Finland at a critical time. Finland won her way into the good graces of the American people not only by her democratic processes, but by honoring her debt obligations to the United States.

**IS PRECEDENT ESTABLISHED?**

So far as Nazi and Communist observers may see, the United States Government has backed up its expression of moral support with material aid to Finland. Does it mark a precedent for the future? The political generals here on both sides insist that America will never enter the war, but can it be as certainly asserted that the United States will not some day extend financial aid to other nations similarly hard pressed?

Already there is talk of a relief appropriation for Poland, but this is plainly a humanitarian measure. Congress is being importuned by Republicans and Democrats to come to the relief of the millions of human beings who are starving in the conquered areas of Poland. Germany refuses to extend aid, insisting that the British blockade cuts off supplies needed for her own people.

Former President Hoover has told a congressional committee that America, in his opinion, should appropriate money for the aid of the starving Poles. His view will help to keep the question from becoming tangled in partisan politics, which happened in some respects with reference to the Finnish loan.

**SWEDEN MAY BENEFIT**

Congress is in a mood to hand out a few millions here and there for humanitarian reasons, and some day it may be in a mood to lend large sums to Norway and Sweden if they should find themselves attacked. The probabilities are that even some of the increased authorizations just voted through the Export-Import Bank will be used in substantial ways to help Norway and Sweden to buy munitions and prepare for potential developments in Scandinavia if the Finns are conquered.

So whether America likes it or not, she has become involved in the world-wide struggle for the preservation of democracy, and while nobody is even remotely suggesting that the United States will ever send an army overseas again, American credits are bound to flow abroad in support of the cause of democracy. The Finnish loan makes a precedent that cannot possibly be erased and marks a milestone in America's course of alleged isolation.

**Peace or Participation**  
**EXTENSION OF REMARKS**  
OF  
**HON. ROBERT R. REYNOLDS**  
OF NORTH CAROLINA  
IN THE SENATE OF THE UNITED STATES  
*Monday, March 4, 1940*

EDITORIAL BY HON. JONATHAN DANIELS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL

RECORD an editorial entitled "Peace or Participation." This very able editorial expresses most forcefully my attitude pertaining to the European situation. The editorial was written by Hon. Jonathan Daniels, editor of the News and Observer at Raleigh, N. C., as a result of a letter directed to him by Mr. W. T. Couch, of Chapel Hill, N. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Raleigh (N. C.) News and Observer]

**PEACE OR PARTICIPATION**

THE EDITOR, THE NEWS AND OBSERVER,  
Raleigh, N. C.

DEAR SIR: In a number of editorials since the outbreak of the present European war, the News and Observer has advocated the maintenance of strict neutrality. I believe that if the policies you have advocated are followed, this country sooner or later will be actively fighting in a great and terrible world war.

I wish to ask you a few questions, which I think will clarify this issue.

1. What neutrality laws would be violated by the extension of governmental credits to Finland sufficient for that country to buy whatever armaments and munitions are necessary for her to defend herself? Please remember Russia has not declared war on Finland and Finland has paid her debts to the United States. I cannot limit myself to the advocacy of aid to Finland; but it seems to me that for anyone, even those who wish to keep strict legal neutrality, aid to Finland by our Government should be recognized as desirable.

2. But can we afford to stop with aid to Finland? Do you think it is impossible for Germany and Russia, one or both, to win the present war?

3. Do you believe this country could live at peace with Europe and Asia dominated by Hitler's Germany or Stalin's Russia, one or both? Do you believe the possibility of victory for communism and nazi-ism over about half the people of the globe is not of enough consequence to make it imperative for this country to take sides, before taking sides is too late?

4. What hope is there for the development and maintenance of international morality at any time in the future if the most powerful nation on the globe, the United States, refuses to consider and act on the moral problems involved in the present conflict?

5. Do you believe any European country would be willing to pay any attention whatever to anything the United States has to say at the end of the present conflict if we do not carry our part of the burden while war is going on? And how long will we live at peace with a Europe that pays no attention to our interests?

In my opinion the course you advocate is the worst one possible. If the people of the United States, through their Congress, made it known to the rest of the world that they will support to whatever limit is necessary France, England, and Finland in the present conflict, there would be no hope of victory for the other side. It is possible that a commitment by this country to furnish supplies would make Germany and Russia see their present course as hopeless and bring the war to an end within a short period. In any case, whatever Germany and Russia might do, the furnishing of supplies by this country would certainly shorten rather than prolong the war—unless we assume that Germany and Russia, without our active participation in furnishing supplies, are strong enough to make victory for them probable.

Look at this problem coldly and selfishly as you please. Answer these questions and see where they take you.

If Germany and Russia win this war and if there is any interval of peace, it will not be long before this country will be fighting them and using the tremendous armaments which it is now building up. Why not give these armaments to that side with which we have some hope of living in peace and accord? If we do this, they may not need our men. If we do not do this, before it is over we will furnish both supplies and men.

Sincerely yours,

W. T. COUCH.

Chapel Hill.

The editor of The News and Observer is glad of the opportunity given him by the letter from Mr. Couch, head of the University of North Carolina Press, who, as a man of intelligence and good will, represents the views of many Americans. But it is well to emphasize at the beginning that the Chapel Hill publisher and the editor of The News and Observer are miles apart.

The editor of The News and Observer is opposed to any American entry into this war.

On the other hand, Mr. Couch has already reached the point where "I cannot limit myself to aid to Finland." He suggests that it is "imperative for this country to take sides, before taking sides is too late." But he feels, apparently, that we can take sides as supplier and financier without sending men, and that as such participant without risk of life we should have respect and prestige in the world at the end of the war.

The News and Observer believes that if we go to war we will go to war not only with our treasure but our youth, and that we shall buy in blood the same old profitless disillusionment upon which we spent treasure and blood in the last one.

But to answer Mr. Couch's questions:

1. The News and Observer is not interested in the violation of any "neutrality laws" but in violations of neutrality itself. It is not concerned with technicalities of war declaration but with the horror of war's actual existence. As a matter of personal sympathy the editor of the News and Observer is as ardently on the side of

the Finns as he has been on the side of the Ethiopians, the Chinese, as millions of Americans were on the side of the Boers. But individual sympathy is one thing; official national aid by America to one side in a war is another. Mr. Couch cannot limit himself to advocacy of aid to Finland. He would go further. And that way beyond aid is war.

2. The obvious implication of Mr. Couch's second question is his will to enter the struggle to defeat Germany and Russia. Again as a personal feeling the editor of the News and Observer with Mr. Couch prefers the Allied cause to that of Germany and Russia. But he does not believe in the possibility of "victory" for anybody in large-scale modern wars. Did the Allies win the last war? Did democracy?

3. Mr. Couch's question is for the long future. The question as to whether we can live at peace in the future is unimportant compared to his disregard for living at peace now. Wise men wish peace for their children. The News and Observer does not believe they prepare for it by making war themselves upon no matter what high moral pretensions. We fought a war to end war. Did we end it?

Furthermore, Hitler and Stalin are mortal. And neither communism nor nazism are in any true sense Russian or German. Both grew in the aftermath of war in nations where they had not held power before. We might very well—and quickly—create fascism in the United States by fighting fascism and communism abroad, and get communism here as our own share of victory or defeat.

The theory that the Germans, because now Fascist, and the Russians, because now Communist, are men of special wickedness is another aspect of the German theory that the Jews are evil and the Germans good. All peoples—all nations—have good and evil in them. France a century ago went from royalty through terror, through dictatorship, limited monarchy, the commune, to the republic. The devil does not live forever under any one roof—or flag.

4. What hope is there for the development and maintenance of international morality if the United States does not keep its peace, and in peace strengthen its democracy as example for a world in chaos? We undertook before to help reshape the world in terms of international morality. This present world is what we shaped.

5. At the end of this war, if, despite the pressure of emotional men, the United States shall have kept its peace, it will, in a weary world needing help, not only be stronger than it was in the councils of vindictiveness with which the last war ended, it will also stand as proof that there is no victory for any but those who follow the paths of productive peace.

Mr. Couch believes that if the course of the News and Observer in its will to stay out of this war is followed, "this country sooner or later will be actually fighting in a great and terrible world war." That may be the end before us all. But Mr. Couch would hurry us into that war now. He only deludes himself when he thinks we could run to war with supplies and money and keep our men at home. If that were possible, it would be contemptible. If we are going to war to save the world, as Mr. Couch in fact proposes, we cannot go as pawnbrokers and peddlers. We must go as men. How much respect would there be for us in the role of this safe supplier Mr. Couch conceives at the end of the war? We were "Uncle Shylock" to our own allies at the end of the last one, though we sent our men as well as our money. What term would there be for us among nations bled white if we should go, as Mr. Couch thinks we might, into full partisanship but in such a way that "they may not need our men?"

If we go to war, we go to the limit. Don't make any mistake about that. War would be not only airplanes from Hartford and dollars from Washington but also boys from Raleigh and Chapel Hill.

Finally—

The News and Observer is for peace.

It believes that peace cannot be preserved unless official neutrality is preserved and that every official act which is unneutral in fact is a step to war.

If war comes, as it may under the pressures of emotional men, the News and Observer does not believe that the United States, or any combination of nations, can by war save democracy, by war end war, by war destroy fascism or communism, by war create goodness or decency on this earth.

The road to war is an old road. It leads to death and nothing else. Sir Gallahad in the modern world must ride with the four horsemen of the Apocalypse. And he can destroy peace a good deal easier than he can save the world.

### Gold and Silver Purchase Programs

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ARTICLES FROM THE WASHINGTON TIMES-HERALD AND THE WASHINGTON EVENING STAR

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Leon Pearson

which appeared in the Washington Times-Herald of February 19, 1940, and an article from the Washington Evening Star of February 20, 1940.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Times-Herald of February 19, 1940]  
(By Leon Pearson)

Like the chance outcome of daisy picking—she loves me, she loves me not—are matters of state often decided. So it was with the most important monetary measure so far this session of Congress.

The tide of opinion was going one way. Senator BARKLEY made a telephone call, the tide was reversed, and all Mexico breathed a sigh of relief.

The Senate Banking and Currency Committee was debating Senator TOWNSEND's resolution to put an end to purchases of foreign silver. This would have been a body blow to Mexico, which supplied nearly half (\$31,000,000) of the total United States buy (\$70,000,000) in 1939.

TOWNSEND had strong support from Members of both parties. The purchases were regarded as a waste of money, with little benefit to this country and large benefit to Mexico. And why be charitable to Mexico? One Member went so far as to urge passage of the measure as a retaliation against Mexico for oil expropriation.

Such sentiment caused the subcommittee to take favorable action at its 10 o'clock meeting in the morning. At 10:30, the full committee met, and sentiment seemed to be sweeping in the same direction. Up rose Senator BARKLEY, administration leader, and excused himself. He went into an adjacent office, picked up a telephone, and called the Treasury.

Morgenthau was out of town. He got Acting Secretary Dan Bell. "This Townsend bill," said BARKLEY, "has just been passed by the subcommittee, and is about to be passed by the full committee. I've been trying for a day and a half to find out what you people think of this bill. How about it?"

Bell told BARKLEY that the President was opposed to the bill, that he wanted power to continue foreign purchases of silver. Bell said he hoped the committee's action might be headed off.

BARKLEY went back to the committee room, reported the opinion of the President, and asked for delay. It was granted.

This action was cabled to Mexico, where officials breathed more freely, hoping for something better than daisy plucking at the next turn.

[From the Washington Evening Star of February 20, 1940]

#### GOLD IMPORTS INCREASE SLIGHTLY FOR WEEK

Gold imports totaled \$55,216,779 in the week ended February 14, an increase of about \$600,000 from the previous week.

The Commerce Department said the imports included \$5,569,978 from Russia, the first direct shipment from that country in about 2 years. The shipment drew considerable attention when it was unloaded from the Russian vessel *Kim* at San Francisco.

Other principal shipments included \$7,040,193 from Norway, \$6,759,270 from Sweden, \$3,733,306 from the United Kingdom, and \$28,056,587 from Canada.

Gold deposited under earmark at the Federal Reserve banks by foreign central banks and governments declined \$15,105,735 during the week to a total of \$1,110,250,000.

Silver imports amounted to \$962,315, about the same as the preceding week, and included \$185,162 from Canada and \$585,368 from Mexico.

Exports were \$1,882 of gold and \$19,127 of silver.

EDITORIAL FROM THE RENO (NEV.) EVENING GAZETTE

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the State of Nevada, published in the Reno Evening Gazette of February 15, 1940, endorsing my bill on silver-buying repeal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Reno (Nev.) Evening Gazette of February 15, 1940]

#### FOREIGN SILVER FOLLY

Again the administration has stepped in to oppose those who would discontinue the purchase of foreign silver, of which this country has already acquired more than 1,800,000,000 ounces, every ounce of which is a menace to the future price of American silver.

To discontinue the purchase of this foreign metal, the administration spokesmen say, would disturb our trade relations with some of the Latin American states, notably Mexico. Thus, it appears, it is the administration's policy to continue to buy their trade and their alleged good will at the expense of the taxpayers of America and the silver miners and operators of the metal-mining States.

For years the National Government has been spending tremendous sums to move out of this country the great surpluses of wheat, corn, and cotton, because their very presence here operates to depress both the present and future prices of those commodities. Especially these surpluses are a menace to future prices as every agricultural producer knows. On the other hand, however, the administration is pursuing a directly opposite course with respect to silver. In the face of the well-known law of supply and demand, and the operation of that law upon future prices, it is piling up billions of ounces of silver, more than four-fifths of which was mined abroad, to afflict hereafter the American silver industry by depressing the price of its product.

The Townsend bill to discontinue these foreign purchases should be passed. By advocating this sensible measure, Senator TOWNSEND is better representing the silver industry of America than some of its pretended spokesmen.

### St. Lawrence Waterway

#### REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 29, 1940

Mr. MARTIN J. KENNEDY. Mr. Speaker and Members of the House, yesterday in the city of Albany, the capital of my State, a mass meeting was held at which more than 80 groups were represented. These groups embraced every form of commercial activity in my State and the purpose of this gathering was to voice a formal protest against the consummation of the proposed Great Lakes-St. Lawrence deep waterway treaty.

I would like the Members of the House to know that on January 17, 1940, I introduced H. R. 360, which is now pending before the Rules Committee. My resolution provides for an inquiry of all matters pertaining to the Great Lakes-St. Lawrence deep waterway treaty, because I am firmly of the opinion that this treaty should not be made, and, further, if it is made it should be made only as a result of current information after consideration of all the problems involved.

I would respectfully ask each Member of the House to read my resolution for the reason that it suggests by its questions the many controversial points at issue which should be clarified before this treaty is seriously considered for ratification.

At this point I would like to mention a few of the organizations who are actively opposed to this treaty: New York State Chamber of Commerce, Albany Chamber of Commerce, Buffalo Chamber of Commerce, Troy Chamber of Commerce, Maritime Association of the Port of New York, Niagara Frontier Planning Board, New York Waterways Association, Albany District Port Commission, National Coal Association, West Side Association of New York, Association of American Railroads, Harbor Carriers of the Port of New York, Long Island Association, New York State Retail Fuel Merchants' Association, American Merchant Marine Institute.

I would also like the Members of the House, as well as the Senate, to read the individual views of Senator ROBERT F. WAGNER, of New York, submitted to the Senate under date of January 10, 1934. At that time, the proposed treaty on this subject failed ratification by the Senate and nothing

has developed in this matter which warrants the reversal of the position then taken by the Senate.

On January 23, 1940, I addressed a letter to the Secretary of State expressing my personal views on this treaty and directing his attention to the fact that the neutrality of the United States might be seriously questioned because—

In reference to what should be the paramount aspect of these negotiations, i. e., the effect upon our neutrality, it is obvious that the British Empire, now a belligerent country, would have so enhanced its war resources by this proposed treaty that our own neutrality might be open to serious criticism.

We must be mindful of the fact that Canada is a dominion of the British Empire. That country is presently interfering with the United States mails and ships. Its response to your courteous notes of protest against such interferences was not the response of a country with which at this time we should conclude such a treaty as is proposed.

My dear Mr. Secretary, no possible harm could come to the national welfare of the United States by such a reasonable postponement of this project as I have suggested in my letter of January 17, but there is real cause to fear the effects on our neutrality that might follow the signing of a treaty with a country now at war, to build a seaway entirely within its borders on money to be loaned by the Treasury of the United States.

In view of my letter of January 17, as well as the above considerations, I respectfully renew my request for a suspension of all negotiations on the St. Lawrence-Great Lakes deep waterway.

As the advisability of making this treaty is being bitterly debated in many public forums, it is important that the Members of Congress keep an open mind on the subject so that every piece of valuable information may be carefully weighed and considered. I believe the following editorial taken from the New York Enquirer of February 26, 1940, expresses the thoughts and wishes of many of our citizens:

#### LET THE FACTS BE KNOWN

Representative MARTIN J. KENNEDY of New York has introduced in the House a resolution calling for a comprehensive and thorough investigation by the House Committee on Interstate and Foreign Commerce, of the Great Lakes-St. Lawrence waterway project.

The proposed undertaking, to be carried out jointly by the United States and Canada, has many serious aspects, as far as this Republic is concerned. The need of securing a true understanding and evaluation of its complexities is of vital importance to the American people, for whom it has political, economic, and financial considerations which call for the closest scrutiny and the exercise of the highest statesmanship.

It is to be hoped that the Kennedy resolution will be speedily adopted and put into operation. The New York Representative has performed a timely national service by his wise initiative. There would be no justification in our entering into a compact with our northern neighbor, for the materialization of the project, without being fully cognizant of its meaning to the United States. Unfortunately, it would seem that our consummating a treaty with Canada under blindfolded conditions is desired in certain quarters.

The Great Lakes-St. Lawrence waterway project is not new. It has been under discussion for many years. A treaty between this country and Canada with regard to it was rejected by the United States Senate in 1934. At the present time negotiations for another treaty are going on between Washington and Ottawa.

The New York Enquirer is opposed to this Republic involving itself in such a perilous international undertaking.

In view of our past experience, Uncle Sam will be expected to make the major financial and other sacrifices, and unless the British imperial outpost north of us gets the very best of the bargain there will be no Canadian-American treaty covering the project.

It is certainly an extraordinary thing that this Republic should be asked to become a partner in a water route which will be almost completely upon Canadian territory, whose sole outlet to the sea will be altogether under Canadian jurisdiction, whose capabilities, by reason of its shallowness, will be restricted to smaller-type vessels, and whose shipping facilities will be available for only 7 or 8 months a year, by reason of adverse climatic conditions.

Allow me to thank you for your interest in this proposition and to express the hope that nothing will be done in the matter of the making of this treaty, at this time, because I believe it would be a useless expenditure of money,

but, more than the wasting of the money, is the possibility that it might affect our neutrality. The neutrality of this country is the closest thing to the heart of every American.

### What Recovery

#### EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

Mr. HOPE. Mr. Speaker, the Department of Agriculture recently published some interesting figures showing changes in farm population and farms, total cash farm income, cash income per farm, and cash income per farm person for the three decades 1910-39. Here in a simple five-column table agricultural statisticians have condensed 30 years of American farm history. The table shows the marked upswing in farm income during World War years, the precipitous post-war drop, the slow but steady rise during the 1920's, the impact of world depression on American agriculture, the temporary increase during the first 5 New Deal years, and the drop since 1937.

Column 1 shows the trend in total United States cash farm income. Total farm income, excluding benefit payments, in 1939, the last New Deal year, was \$7,600,000,000, compared with \$5,300,000,000 in 1933, the first New Deal year. Total farm income was \$11,200,000,000 in 1929.

Column 3 shows the trend in cash income per farm. Cash income per farm was \$1,102 in 1939 and \$785 in 1933. This compares with \$1,784 in 1929.

Column 5 indicates the trend in cash income per farm person. Per capita farm income was \$238 in 1939 and \$167 in 1933. Cash income per farm person in 1929 was \$371.

TABLE I.—Cash income from farm marketings—total, per farm, and per capita—United States, 1929, 1933, and 1939

Year	Cash income	Number of farms Jan. 1	Cash income per farm	Farm population Jan. 1	Cash income per capita
	Million dollars	Thousands	Dollars	Thousands	Dollars
1929.....	11,221	6,290	1,784	30,220	371
1933.....	5,278	6,720	785	31,693	167
1939.....	7,625	6,920	1,102	32,059	238

Source: The Agricultural Situation, December 1939, p. 17.

While these statistics indicate some recovery from the world depression which struck world agriculture with particular force, they do not reveal any sign of a full and sustained recovery. Thus total farm cash income in 1939 was only 68 percent of the predepression level. In other words, total cash income in 1939 was 32 percent below 1929; cash income per farm was 38 percent below; and per capita farm income was 36 percent below the 1929 point.

That United States farmers are not as well off under the New Deal as formerly is shown if one compares farm income during the 7 years 1926-32 with the 7 years 1933-39. The 7 Republican years include 3 years of world depression and the 7 New Deal years include 5 years of recovery and 2 of depression. Cash farm income for the 7 Republican years averaged \$9,046,000,000 a year, compared with \$7,247,000,000 a year for the New Deal period. Average annual income per farm for the period 1926-32 was \$1,432, compared with \$1,062 for the period 1933-39. Average annual income per farm person for the Republican period was \$298, compared with \$228 for the New Deal years.

TABLE II

	Republican years 1926-32	Democratic years 1933-39 <sup>1</sup>
Average yearly total farm income.....	\$9,046,000,000	\$7,247,000,000
Average yearly income per farm.....	1,432	1,062
Average income per farm person.....	298	223

<sup>1</sup> Including benefit payments: Average total farm income \$7,670,000,000; average income per farm, \$1,124; and average income per farm person, \$271.

Source: Computed from data in The Agricultural Situation, December 1939, p. 17.

Nor have New Deal production and marketing controls, commodity loans, and ever-normal granaries succeeded even in stabilizing farm income. Cash income per farm and per farm person in 1939 was approximately the same as in 1935. In the 2 years 1938 and 1939 farmers lost everything they gained between 1935 and 1937.

What can American farmers expect if the rate of progress since 1933 is maintained? In other words, how long will it be until the American farmer will get back to the income position which he occupied under Republican administrations? The figures which I have given indicate that by 1948, if recovery continues at the rate since 1933, the farmer will have regained his 1929 level. At the same rate of recovery farm income ought to equal \$15,000,000,000 by 1958. It will be 11 years until farmers' cash income from wheat gets back to the 1929 level. Cotton producers, however, will have to be more patient, because it will be 43 years until they receive as much as they did in 1929.

There is one offsetting factor, however, which may tend to slow up this rate of recovery. If the New Deal continues to spend in excess of receipts at its 1933-39 rate, the gross public debt in another 10 years will reach \$70,000,000,000 to \$75,000,000,000.

### Presidential Spending From Washington to Roosevelt

#### EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

TABLE SHOWING PRESIDENTIAL EXPENDITURES, PREPARED BY THE NEW YORK SUN

Mr. MICHENER. Mr. Speaker, there is no more important question before the American people today than that of Government finance, spending, and deficits.

In this connection it is most interesting to give consideration to the record of all Presidential administrations from Washington to Franklin D. Roosevelt, inclusive.

Therefore, pursuant to permission given me to extend my remarks in the RECORD, I include the following:

TABLE SHOWS SPENDING OF AMERICAN PRESIDENTS

(Article prepared by Washington Bureau of the New York Sun)

This table sets forth the complete financial record of every President of the United States from the adoption of the Constitution in 1789 to date. The figures given up to 1939 show the actual receipts, expenditures, and deficits recorded in the annals of the Treasury Department and certified to Congress in the Annual Report of the Secretary of the Treasury. Figures for 1940 and 1941 are the estimate presented to Congress by President Roosevelt in his Budget message.

The totals show that Franklin D. Roosevelt, in 8 years, has spent 58½ percent as much as all of his predecessors put together in 144½ years. He received in taxes in these depression years 44 percent as much as all of his predecessors together have collected, and he has almost exactly doubled the national debt.

President	Number of fiscal years served	Receipts	Expenditures	Surplus (+) or deficit (-)	Public debt at end of administration
George Washington	8	\$32,665,765	\$34,088,506	-\$1,422,741	\$83,762,172
John Adams	4	34,984,839	34,262,668	+722,171	82,976,294
Thomas Jefferson	8	113,400,835	72,424,289	+40,976,546	65,196,318
James Madison (War of 1812)	8	130,311,080	176,473,974	-46,162,894	127,334,934
James Monroe	8	171,895,953	147,237,899	+24,658,054	90,875,877
John Quincy Adams	4	94,831,286	65,427,037	+29,404,249	67,475,044
Andrew Jackson	8	252,061,371	152,969,098	+99,092,273	336,958
Martin Van Buren	4	102,219,579	122,325,262	-20,105,683	5,250,876
Harrison and Tyler <sup>1</sup>	4½	104,430,540	108,904,688	-4,474,148	15,925,303
James K. Polk (Mexican War)	4	123,139,658	175,477,220	-52,337,562	63,061,859
Zachary Taylor	1	43,603,439	39,543,492	+4,059,947	63,452,774
Millard Fillmore	3	163,993,174	140,088,047	+23,905,127	59,804,661
Franklin Pierce	4	282,172,928	255,154,264	+27,018,664	28,701,375
James Buchanan	4	197,716,370	272,933,490	-75,217,120	90,582,417
Abraham Lincoln (Civil War)	4	763,026,123	3,352,380,410	-2,589,354,287	2,677,929,012
Andrew Johnson	4	1,825,248,490	1,578,557,655	+246,690,835	2,545,110,590
U. S. Grant	8	2,670,905,586	2,253,386,783	+417,518,803	2,107,759,903
Rutherford B. Hayes	4	1,225,899,968	1,032,268,057	+193,631,911	2,019,285,728
Garfield and Arthur	4	1,474,023,408	1,027,742,757	+446,280,651	1,578,551,169
Grover Cleveland (first administration)	4	1,474,159,137	1,077,629,099	+396,530,038	1,249,470,511
Benjamin Harrison	4	1,536,450,844	1,412,315,899	+124,134,945	961,431,766
Grover Cleveland (second administration)	4	1,316,948,887	1,441,674,184	-124,725,297	1,226,793,713
William McKinley (Spanish-American War)	4	2,076,208,146	2,093,918,534	-17,710,388	1,221,572,245
Theodore Roosevelt	8	4,676,747,262	4,655,450,515	+21,297,447	1,145,315,372
William Howard Taft	4	2,794,065,060	2,799,211,874	-5,146,814	1,193,047,745
Woodrow Wilson (World War)	8	24,375,781,688	46,938,280,143	-22,562,478,455	23,976,250,608
Warren G. Harding	2	8,116,239,632	6,667,235,429	+1,449,004,203	22,349,687,758
Calvin Coolidge	6	23,959,941,899	18,585,549,136	+5,374,392,763	16,931,197,748
Herbert Hoover	4	11,453,002,513	15,490,476,696	-4,037,474,183	22,538,672,164
Total of all Presidents up to F. D. Roosevelt	144½	91,586,076,130	112,203,367,065	-20,617,290,935	22,538,672,164
Franklin D. Roosevelt	8	40,089,857,957	65,628,526,692	-25,538,668,735	44,938,577,622
Grand total, all Presidents	152½	131,675,934,087	177,831,893,757	-46,155,959,670	

<sup>1</sup> Up until 1843 the fiscal year coincided with the calendar year. In the administration of President Tyler, however, it was changed to run from July 1, to the following June 30, thus making President Tyler accountable for 4½ fiscal years instead of 4.

## Research on Sugar Plants

### EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

ADDRESS BY DR. E. W. BRANDES

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Research on Sugar Plants and Some Practical Adaptations, delivered by Dr. E. W. Brandes, principal pathologist in charge, Division of Sugar Plant Investigations, Bureau of Plant Industry, Department of Agriculture, before the second general meeting, American Society of Sugar Beet Technologists, at Denver, Colo., on January 5, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The title selected for this informal talk is Research on Sugar Plants and Some Practical Adaptations. That is a broad subject and gives the opportunity to speak at length, but I will limit my remarks to a half dozen lines of work sponsored by the Division of Sugar Plant Investigations during the past two decades. An appraisal of the value of this research to American agriculture will be recapitulated, showing that in this period a total approaching \$1,000,000,000 of conserved capital and added national wealth is directly attributable to it, and indirectly many millions more have gone to "good neighbors." Nor are the results to be evaluated only in monetary units, since at present a half million of our people who might otherwise be on relief have means of livelihood because of this research, which, relatively, has cost little.

The realistic view demands that these benefits be credited as net gains with no deduction for compensating factors, such as possible other uses of the land and labor or possible income of any kind derived indirectly. We have a long-established firmly rooted domestic sugar industry. That is a sufficient reason for the successful efforts to make it more efficient. Nor are the ramifications of these contributions to national wealth limited to the producers who benefited directly by the results of this research, as these producers in turn constitute a market for American goods greater than that which might come from potential producers elsewhere.

In comparison with other sugar-producing areas, the United States has made much progress in the improvement of the sugar plants during the past 20 years. In that period there has been a series of interruptions in growth of the several sugar industries, in the main resulting from natural causes adversely affecting the plants themselves. These natural causes, chiefly plant diseases, more than any other factors, have threatened the continued existence of the industries. Their impact on the industries and their effects on growth have varied in duration and degree and have been different in character.

Intimate knowledge of these natural causes as they affect production units represented by plantations or farms is required if reliable interpretation of production statistics is to be made. Broad interpretations of production trends without such intimate knowledge, especially of extensive areas, are likely to be imperfect. The interruptions in productivity of our sugar industries during the past 20 years were characterized, for example, by practical collapse in Louisiana and the South, violent and unpredictable annual fluctuations of output in the western beet areas, and curtailment, lesser in amount than in Louisiana, followed by temporarily retarded recovery in Puerto Rico.

The ominous nature of the situation in the South in the period from 1918 and culminating in 1926 was apparent to all without need for intimate knowledge of the cause. But reaction to it by observers was not unanimous and the differences lay in ability to ascribe the cause and visualize the chances of any remedial measures. A well-known economist immediately sounded the death knell of the industry and no prudent financing institution was willing to risk a dollar on it. The income of sugar farmers in Louisiana dropped to such a pitiful figure that the State's leading adviser in agriculture complacently drew attention to the fact that a minor poultry industry was more profitable. However, a small group of growers was persuaded that the natural cause of the calamity could be determined and that some control could be found, and they met the challenge rather than passively submitting to what many took to be inexorable force. They seized upon the hope of remedial measures then offered and those in prospect, and with indomitable will literally lifted themselves by their own bootstraps. The remedy offered was a botanical specimen unprepossessing in appearance, which elicited some amused if not derisive comment at first, even by the man who later with self-effacing public spirit contributed the same means of salvation to thousands of his neighbors. He lost his own plantation because the remedy came too late.

Reduced to simple terms, the recent decline of the Louisiana sugar industry was due to the unnoticed introduction of a virus disease of sugarcane, mosaic, which met an unprepared industry not provided with adequate research facilities. The lesson in unpreparedness cost the industry more than can be measured in money. Adjustment of whole communities to a calamity bringing universal loss of revenue brought the gravest personal and family problems and, because of the lack of other enterprise to turn to, an unwholesome resignation. In the end, after costly delay, a reasonably satisfactory solution was found in the improvement locally of sugarcane varieties by breeding for resistance to dis-

ease and adaptation to our climate and soils. This involved an elaborate program of scientific work after literally combing the world for breeding material. Details of the main and accessory projects by a dozen specialists have been reported in numerous publications, and need not be enumerated here.

The practical adaptation of this research is shown by the production figures which indicate that beginning with the year 1927, when the first new variety was increased to acreage reflected in the statistics, there has been a constant rise as variety succeeded variety in the gradual development of better sorts by breeding. The actual increase in production was from less than 50,000 to nearly 500,000 tons of sugar, the acreage in cane for the tenfold increase being only about double. (Some of the acreage planted in 1926 was not harvested.)

A similar visitation of disease caused by the same or related viruses occurred in Puerto Rico, where studies were begun by the Division of Sugar Plant Investigations earlier than in the Gulf States. Because of great local variation in weather, indirectly affecting the efficiency of natural dissemination of the virus, the problem in Puerto Rico resembled that in Louisiana only in part. In some districts it is possible by a system of almost constant roguing to grow susceptible varieties of cane even today. Because of the expense and potential danger, that is not a wholly satisfactory system and requires further attention. Other districts representing a large percentage of the total area in cane required substitution of resistant varieties.

The history of discovery and development of resistant varieties for Puerto Rico was analogous to that on the mainland, except that, due to more exacting demands of climate in the latter area, finding suitable breeding material required a more thorough search. Without the background of fundamental research carried on by the Division, the sugar industry in Puerto Rico would be in a far less flourishing condition today and the same can be said of the relatively new industry in Florida, which faces other unsolved problems because of its position intermediate between Tropical and Temperate Zone conditions. Parenthetically, the sugarcane virus-disease problems the world over and their solution by "variety revolution" or other means received their present conception, and the inspiration and methods of control, because of the appropriations by Congress of money for this research.

Beyond mere repair of the disease injury, the improved tone and tempo of sugarcane yields so easily perceived in many plantations of Cuba and the West Indies generally, South American countries, and to some extent in Africa, Oceania, and Asia, even the little industry in southern Spain, trace a measure of their current impetus to this research. Twenty-two countries have safely received improved plant material for which the Division acted as a clearing house, whatever its origin, by maintaining a quarantine station. Encouragement lent by the improved performance of the resistant or tolerant varieties led, by natural reasoning, to consideration of further improvement by other means and has resulted in substantial gains to levels never before reached, this in the face of a declining world price of sugar. The sum total of benefits to humanity by conservation of effort and in lessened cost of an indispensable commodity would be a staggering amount.

To arrive at the estimate of American dividends paid by this research, we credit to it all production with plant material released by the Division used where sugar production had quite failed, owing to low yield, and a part of production on lands that, because of low yield, were jeopardized but not actually abandoned. On the latter the significant increases in production since the improved, disease-resistant varieties have been planted are very great and are just as directly attributable to this research.

In addition, we credit the capital investment in factories, machinery, plantation railways, and specialized implements and equipment in the areas definitely marked for abandonment or already abandoned. If solutions had not been found for these field problems, all fabrication equipment would have had junk value only. On that basis we boldly assert that the Gulf States sugar and sirup industries owe to this research over a period of 14 years \$350,000,000 and the present employment of 60,000 workers, with an average of 3 dependents each, or a total of 240,000 persons.

The increased per acre production in Puerto Rico, beginning in 1919 when the first mosaic-resistant variety was supplied, has been steady and has now reached over 100 percent. While the prompt clarification of the perplexing disease problems, the early resistant varieties, and guidance were directly contributed by the Division of Sugar Plant Investigations, continuance of the work by local research institutions and added improvement must be recognized; therefore, one-half of the annual increments in per acre yield since that date, a total of \$225,000,000, is the claim. In this industry, which, as a whole, was not threatened with extinction, credit for salvage of capital investment is relinquished, except for factories supplied by the worst-affected 70,000 acres and the workers thereon, respectively \$10,000,000 and livelihood for 25,000 workers. That these workers and dependents, 100,000 people, would have found other gainful employment in the present depressed period for the agricultural industries is less likely than the alternative, enlistment in the army of unemployed.

This record of the southern sugarcane industry laid prostrate by a virus disease finds counterpart in the ravages of sugar beet curly top in western United States. The effects of the disease have been grave enough and so widespread in many years of the decade preceding 1934 as to bring about sharp decline in the average acre-yields of a whole State. In such years of disease outbreak, the factory records reveal that average acre-yields in some districts have dropped precipitously from the expected 15 tons or more to 5 tons

or less. Such figures, based on harvested acreage, obviously give no record of thousands of acres abandoned.

As throwing light on the impact of curly top on the beet-sugar industry, one may trace the history of sugar-beet culture in western reclamation projects or other agricultural areas in the West—such as the Truckee project, Salt River project, Delta and other Utah areas, the San Joaquin Valley of California, the Yakima Valley of Washington, and many others. The story is much the same for all—introduction of the crop, a brief period of fine prospects, and finally crop failure because of curly top, and ultimate abandonment of sugar-beet growing by farmers.

The history of factories erected with high hope and welcomed by farmers on the irrigated lands as providing a market for the pivotal cash crop in the agricultural program also portrays the emergency situation that curly top brought about. Each venture represented the investment of upwards of one-half millions dollars. The subsequent history of these beet-sugar factories is a drab picture of idle years or, at best, sporadic activity as one season's crop or another by some vicissitude of climate managed to escape a disease epidemic. A factory erected in the Yakima Valley operated only a few days in a single season, then was closed and eventually dismantled. Curly top practically made the beet-sugar industry in western United States lead a gypsy existence in its futile quest to find some reasonably secure areas in which to grow the sugar beet.

No business could long continue under these conditions and by 1929 the western beet-sugar industry was at its lowest ebb and bankruptcy was imminent for many enterprises.

But these failures of capital to yield returns, the losses of original investments, and the collapse of many ventures in spite of constant outlay of new capital, signify far more than mere money losses. In essence, they are faithful indices of far-reaching and profound effects upon the agricultural population and on the agricultural system of the West. On the human side, they involve disappointment, wastage of human effort, and wreckage of farm families. Wherever a factory was forced to stand idle because the sugar-beet crop failed because of curly top, the livelihoods of not the fortunes of several hundred farmers around the factory were jeopardized.

In 1929, Congress recognized the emergency situation and appropriated a considerable sum for investigation of the beet-leaf hopper and the virus it transmits. These funds for research on the disease have permitted an augmented attack on the whole problem and prompt capitalization on all the promising leads developed by earlier research of this Division. It was possible in 1931 to demonstrate the first progress in the development of curly-top-resistant varieties. By 1933, steps were under way to increase the seed of a variety that was introduced in 1934, under the designation "U. S. 1," for use by farmers.

Since that time, other curly-top-resistant varieties have followed in quick succession—U. S. 34, U. S. 33, U. S. 12—each representing an improvement in curly-top resistance and adaptation. The industry has fully cooperated to bring each of these improved varieties promptly to the growers, as is shown by the record that of about 300,000 acres subject to curly top, 235,000 acres were planted in 1939 with varieties arising from this research, and much of the remaining acreage was planted with curly-top-resistant varieties in some degree akin to Government releases.

The removal of the threat of failure to the beet crop, through the continued improvement in resistance of beet varieties, is signalized by the rebuilt factory in the Yakima Valley—erected on the foundation of a factory formerly dismantled—the erection of new factories in California, Utah, Idaho, and the reentrance of the sugar beet into districts of California, Nevada, Idaho, Utah, New Mexico, and western Colorado.

It cannot be said that curly top is vanquished, because with severe exposure in the worst years it still takes some toll and prevents the crop from delivering the maximum which soil and climatic conditions might warrant. Beet farmers may now plant these new varieties with confidence that the crop will be carried through to a reasonably high yield in spite of disease, and they look forward to new and even better adapted varieties as further research fits the curly-top-resistant types to the great range of conditions encountered in the broad expanses of our sugar-beet areas.

If one seeks to appraise the benefits of this research effort, which has involved a dozen or more scientific workers and has had the wholehearted cooperation of the industry, he must take into account the dire condition into which curly top had forced the western producers. He must also have enough confidence in the American way of life to want American industry not only to be maintained but to grow.

The capital investment in farm lands, farm equipment, irrigation systems, factories, factory equipment, transportation, and power facilities directly concerned in sugar-beet production and beet-sugar manufacture in the United States as a whole may be placed at \$350,000,000. The capital investment in important subsidiary industries which furnish supplies and services to the beet industry and the livestock industry directly concerned in utilizing sugar-beet byproducts as feed would greatly increase this figure. Nearly one-fourth of this entire investment, amounting to between \$80,000,000 and \$100,000,000, was jeopardized. Is it not fair to credit the research which turned the tide from bankruptcy to a surge of growth and development, as typified by the recent \$25,000,000 expansion of the western industry, with saving and safeguarding a major share of this national wealth?

Moreover, progress in agricultural research refuses to confine itself to the narrow limits of the single problem-reaching solution, but it serves as a leaven for a whole agricultural complex. The farmer with a promising crop is the one who gives it good culture, he secures the means whereby he can fertilize his crop, he arrives at the position which enables him to devote acreage to legumes to rebuild his soil. One finds specific illustration of the intimate coordination of research in the yoking of the division's research on curly top with its investigations on sugar-beet-seed production. Dependence upon Europe for seed, a condition which lasted nearly a century, was recognized by many informed and able men as imprudent, but attempts to remedy this incongruous situation were sterile until seed of the curly-top-resistant varieties were produced commercially by the "American" method. The linking of two objectives in our program secured, in no small measure, the practical adaptation of this research.

Investigation sponsored by this Division had shown that sugar-beet seed could be efficiently produced in the United States by a new method which differed radically from the conventional European method which was lavish in its requirement of hand labor. Our investigations revolutionized the methods so that today we produce sugar-beet seed in the United States by short occupancy of the land in much the same way that winter wheat is produced, abundant use of machines dispensing with the hand-labor gardener methods of Europe.

With the advent of curly-top-resistant varieties, the efficient method for increase of seed had been perfected by our investigations. We can be justifiably proud of the record that every pound of curly-top-resistant seed used on American farms has been home-grown. In 1939, more than 6,000,000 pounds of curly-top-resistant seed were produced. The American method of sugar-beet-seed production has also found use with improved varieties arising out of breeding work of commercial companies and with leaf-spot-resistant varieties coming from other research projects of this Division. In 1939, the total sugar-beet-seed production in the United States reached a high of nearly 14,000,000 pounds, just a small amount below our total domestic requirements.

History has repeated itself and Europe is again engulfed in war. But, in contrast to 1914, when the American industry was almost totally dependent upon Europe for the seed to plant the sugar-beet crop, we enter 1940 with a full-fledged sugar-beet-seed industry which had its origin in American research and, in a way, was a byproduct of the investigations on curly top.

The files of the Bureau of Plant Industry of 1915, 1916, and 1917 give a vivid picture of that hectic period of World War days when, by dint of the strenuous effort of the Department of Agriculture, the Department of State, and only by the consent of the British Government, passage through the blockade of Germany was secured for meager amounts of sugar-beet seed, absolutely essential if a sugar-beet crop was to be grown in the United States. Such seed as filtered through came in under bond that it would not be resold, and a bond that the sacks would be returned was exacted. Such are the grim realities of wartime, where such an item as return of gunny sacks could determine whether an American food crop could be grown.

With the growth and functioning of an American seed industry, which is providing better seed to the American farmer than any that can be imported, and as a credit to American research and American ability to capitalize on research findings, the beet-sugar industry has freed itself from this foreign noose.

When the present European war largely cut off European supplies, the beet industry's house was nearly in order and seed supplies assured. Certainly by 1941 it is possible for all branches of the beet-sugar industry to have adequate home-grown supplies.

What appraisal is fair for the benefits that the domestic sugar-beet enterprise has contributed and will continue to contribute to our national welfare? As was not the case in the World War period, the beet-sugar industry can now, if demand for sugar requires, expand to do its part in supplying the Nation's food—an impossibility 25 years ago because of the throttling effect of lack of adequate seed supply.

In direct benefits, the sugar-beet-seed enterprise returns to farmers about \$1,100,000 annually and a new source of farm income has been created.

#### PROMISING RESEARCH IN PROGRESS

Among the numerous projects under way but not yet practically adapted in the sense of large-scale translation into commercial practice, the work on cold tolerance of sugarcane and on black root and leafspot of the sugar beet are examples of research that may soon be capitalized upon.

The improvement of Temperate Zone sugarcane to meet the hazard of unseasonably early cold has taken more definite form since the discovery in central Asia of cold-resisting wild cane in 1936. Progress has been made in overcoming the problems of cross-breeding due to the very different time of blooming of parent canes. Utilizing the reversed seasons north and south of the Equator, the male parent was planted in the Northern Hemisphere, the female parent in the Southern Hemisphere, and while blooming simultaneously pollen was sent by airplane to cross-pollinate plants in the Southern Hemisphere. The seed was shipped by air to Washington and planted there and in Florida and Louisiana. The first-generation hybrids bloomed in the United States at a season intermediate between the two parents. To make backcrosses between the hybrids and commercial cane it was necessary to advance artificially the blooming time of the latter from late December to late September. This was accomplished by using a photoperiod house at Canal Point, Fla., a device that created au-

turn light conditions in summer and accelerated the blooming by 3 months. Thousands of the second-generation seedlings will be ready for cold-resistance tests in 1940, and many are of good type and appear promising for sugar-production tests in 1941.

The traditional acceptance of the idea that the eastern sugar-beet region is one of high cost compared with the Intermountain and Pacific regions, and that the regions are unequally dependent upon protection afforded in various ways, including geographic location, may have some basis in two bugbears. These are difficulties of establishing and maintaining stands because of black root and difficulty of practical control of leafspot, which is a problem in parts of the West also. There is no need to doubt that with intensive experimental tests of principles already well crystallized in control of black root, as seed treatments, rotations that starve the pathogenic organisms plus other field sanitation measures, and with adequate consideration of the separate needs of different districts in the humid area, the disheartening toll taken by this disease complex can be greatly lowered. Because of local environmental differences in the districts of the humid area, a cure-all applicable everywhere should not be expected and therefore more intensive tests are needed.

The leaf-spot-resistant sugar beet variety U. S. 217, released in 1938, has demonstrated a high degree of resistance and under exposure to the disease has shown decisively better performance than the European brands with which it has been compared. Where leaf spot was not a factor the variety has been exceeded in root yield, and hence in sugar per acre, by certain improved tonnage types. A new leaf-spot-resistant release, U. S. 200 X 215, produces greater tonnage than U. S. 217, with practically equivalent sucrose percentage. To produce this variety, two inbred strains, which in themselves, regardless of leaf-spot resistance, approximate European brands in performance, were intercrossed in order to take advantage of first-generation hybrid vigor. Tests in 1938 showed the resistant variety exceeded the nonresistant check, taken as representative of European brands, by 333 pounds of sugar to the acre. The variety has as yet been produced only on a limited scale, something over 200,000 pounds of seed being available for 1939 commercial plantings.

It will be noticeable to you that the foregoing remarks have been limited to citing research activities of the Division of Sugar Plant Investigations. I am more conversant with details of those activities than with the numerous contributions to progress by others and it is with no intention to slight their valuable basic steps, or parallel or accessory work on the same problems, that illustrations of practical adaptation of research were selected from those sponsored or vigorously pushed by the division.

The *raison d'être* of this talk is to emphasize in an impersonal way an idea that should be quickly recognized by biologists; the increasing control over living plant forms and their environments because of advances in biological and other science. Economic implications in the illustrations cited, with understanding of their extensive or limited use, are very great. The basis of the sugar industries is the mutable sugar-producing plant and very impressive are these recent demonstrations of opportunities to quickly change the character of plants in different producing areas with attendant changes in costs of production. Advances in plant breeding, unpredictable as to their impact upon the national economy, just as improvements in mechanics or chemistry, are sometimes far reaching and are likely to throw into confusion the calculations of economic planning.

### Earl K. Long's Statement

#### EXTENSION OF REMARKS

OF

#### HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

#### STATEMENT BY GOVERNOR LONG OF LOUISIANA

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by Governor Long, of Louisiana, printed in the American Progress of Hammond, La., in the issue of Friday, March 1, 1940.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the American Progress, Hammond, La., March 1, 1940]

EARL K. LONG'S STATEMENT—GOVERNOR LASHES INTO ENEMIES WHO KEEP UP THE SLANDERING AND BLACKGUARDING—KNOWING THEY CANNOT KEEP THEIR FAKE PROMISES OF \$3 LICENSES, \$30 PER MONTH PENSIONS, AND THE REST OF THEIR DOPED-UP CLAPTRAP, THE SAM JONES GANG NOW STARTS ITS SMOKE SCREEN TO TRY AND COVER UP THE RUN-OUT THEY WILL TAKE ON THE PEOPLE

I have just noted from the press that the hot-lunch program will be stopped; also the newspaper comment that this was strictly

a vote-catching scheme. This is not so. I shall continue the hot-lunch program even if I have to call a special session of the legislature to raise the funds to carry out the \$1,000,000 voted by the last session, and of which only \$100,000 has been used.

No man in the public history of this State has ever been vilified, and blackguarded, continuing even after defeat, as I have. Those opposed to me politically have paraded and stampeded every city, town, and hamlet in this State, and have libeled and blackguarded my friends, in and out of office. As to those who did not support them, and who hold public office, they have threatened impeachment, recall, or other reprisals. Hitlerism or czarism is not any comparison to the lengths they will go. They promised the State central committeemen that they will keep their jobs, or promised new jobs, and raises in salaries, and threatened to blackguard them. They have practiced every form of political trickery known to the human race.

They brag about the "great landslide" of Sam Jones as a candidate for Governor, when actually he received less than 19,000 majority, which is slightly over 51 percent of the votes. They try to talk about honest elections, when it is a known fact that never in the history of this State was money used to swing an election as it was by my opponents in this one. Around the polls they had fists full of it. It dangled from the hands of some of their supporters like apples on the trees. The newspaper headlines were full of every conceivable misleading, twisted, or warped imaginary thing that could be brought to attention. They pictured and photographed as great leaders any people who helped to bring about the accomplishment of the election of Sam Jones; men like Joe Fisher, who are ex-convicts and today have not regained their freedom; the same people whom they listed as dangerous and suspicious crooks, 7 or 8 months ago, and against whom everything bad could be said. They enlisted the aid of lottery gamblers, dive-runners, and everything to gain their point. They still libel me and picture me as ruthless, crooked, and corrupt, when, as a matter of fact, the reason I lost the election was because I refused to tell falsehoods and hold out promises to the people that I knew were impossible to fulfill and, if carried into effect, would wreck the faith and credit of the State. In no campaign in the history of the State were the pay rolls ever held to the low level which my administration held them. Supplies for all departments were bought at the lowest reasonable cost and discounts possible to obtain. Anyone with a thimble full of sense knows that when they can get 14 men who are on the various State pay rolls to vote for their man for secretary of state, something crooked, some promising, some bribery, and other corruption and skullduggery have taken place. Now, they attempt to have the same committee meet 1 week and 1 day later and reverse the action taken by them without any cause whatsoever, when every lawyer from Baton Rouge to Philadelphia (and return to Dalcour) knows that the ministerial duty of the committee to select a nominee for secretary of state has been performed and is now final. This could only be done by additional promises, political trickery, falsifications, skullduggery, threat of blackguarding, and prosecutions or nonprosecutions. Sam Jones and his advisers are bringing about worse conditions in Louisiana than were ever brought about in any State in the Union. They do not want clean government; what they want is simply the government. God have mercy on the people, the State, and its institutions.

In this campaign there is not a man or a woman with the gumption of a good 12-year-old child who does not know that Sam Jones and those on his ticket told every conceivable thing that could be imagined to gain victory at the polls, with slight regard for the facts and the truth.

Their ardent admirers and supporters admit openly that it would be impossible for this man to lower the old-age pension to 60 years and give every man or woman \$30 per month; to cut the automobile tag to \$3 when today it furnishes slightly over \$4,000,000 and it will cost over \$6,000,000 to halfway maintain our road system. This \$3 automobile tag would bring in less than \$1,000,000. Everybody knows that to give the school teachers 12 months' salary, and increase the bus drivers' pay, the severance tax would have to be increased. They further know that this crowd will not increase it, but have pledged to decrease it instead. Since the second primary they have amalgamated with every political side that they called objectionable, that they called crooks, that they called thieves and grafters, all to carry out their objectives of ruthless, premeditated skullduggery, persecution, etc., against the few men against whom they have not been able to find one scintilla of wrongdoing, crookedness, or that such men have used this State or any of its finances to better themselves financially.

I have told the people, since the day I became Governor of this State, that I had done no wrong, as a private individual or as a public official, either as Lieutenant Governor, Governor, or in any other public office that I had held. Just 1 week or 10 days before the election, for the psychological effect, it would certainly seem that the Federal investigators returned from Washington and made headlines again in the papers to scare, stampede, intimidate, and harass the citizens of this State; and gave out a statement against one of the leading officials and politicians in this State, and continued to give out statements up to 2 or 3 days after the election. Every precedent in Federal prosecution has been violated, except in the territory in the north central part of the State where publicity before indictment and arrest was suppressed, and properly so, by court order. After they can do no more good, or harm, they return to Washington and take credit for the Jones victory in Louisiana. That the Federal Government had a right to come into a local State primary election for party nominations and take charge and throw

its influence for or against any one group of candidates was never heard of in any State in the Union before this time.

The Federal district attorney for Shreveport and the northern district goes so far as to give out a statement as to the rules and regulations, etc., as he sees it, regarding the State Central Democratic Committee, in order to influence and aid one particular side. The rulings he gave out he knows, and everyone else knows, to be erroneous, incorrect, and untrue. Even the law west of the Pecos or south of Orleans could not have been so strained or stretched.

Three or four days before the election, the district attorney of the northern and central Louisiana district had subpoenas issued for hundreds of election commissioners, officials, etc., which was never heard of before. In my opinion, this was strictly to intimidate, to browbeat, to harass and lessen their enthusiasm and activity for their cause during the election. Included in this group was one of the most prominent public officials in this State, whose term of office was extended by a State-wide vote of the people, a man who is supposed to have great political influence, and who is known to be a very retiring, timid individual, who dodges a fight or a contest every time he has the opportunity.

There never was an election where the rights and privileges of people were so trampled on, so unscrupulously raided as we saw in this second primary. In one precinct of the State the Sam Jones commissioners actually prevented sick people from voting and gave as their reason why these infirm people should be denied their God-given right to have a voice in Government as consisting solely of the fact that they were sick. Did you ever hear of such high-handed, terrorizing tactics? Imagine a State where people are thrown out of polls simply because they are sick. Is this the kind of Government that Sam Jones stands for? Is this an example of his great "ideals" and "honesty"?

The Sam Jones-controlled parish executive committee, acting upon the advice of the very Sam Jones attorneys who are counseling him in his efforts to manipulate his man into the office of secretary of state, flatly refused to promulgate the returns from that precinct. And this in the face of the fact that had all the votes in controversy been discarded, Philander G. Smith, who was actually nominated by a majority of the votes in the ward, would still have had a majority without these discarded votes. In short, this committee declared the party nominee to be the candidate who received a minority of the lawful votes cast for police juror in that ward.

I do not see how a conscientious and unbiased individual, who supported this opposition crowd, could still have any respect or confidence in them as politicians or men, since all these various things have taken place before, during, and after the election.

The opposition leaders make the statement that, as I was defeated at the polls for the office of Governor, therefore, I should not be secretary of state. As a candidate for Governor, I received over 265,000 votes. The man they hope to put in received 165,000 as a candidate for secretary of state and was defeated for that office. They now try through any means at their command to put him into the office of secretary of state, left vacant by the death of the late, lamented E. A. Conway, and their argument is that a man who received 100,000 more votes than their candidate should not have the job—such hypocrisy! I say and have said, when I was an independent candidate for Lieutenant Governor, that this State would be better protected and safeguarded if a few independent people were in the cabinet of every Governor, and for this reason I asked Earle J. Christenberry to withdraw and leave the important office of the State treasurer to the opposition, to give some assurance that the funds and finances of the State might be better protected and in order that less unrest would exist when the opposite political faith was watching.

At this time I realize that some traitors have left the ship. I have no hard feelings against them; in fact, they have my prayers, the poor, weak, pitiful things.

To those good people who voted for me, and to those who thought they were doing right by voting against me, I want them to know that I cannot be browbeaten, bribed, or blackguarded into doing anything that I think is wrong or inconsistent with my sense of duty.

I shall stay in and fight for what I think is right as long as God gives me the vigor to subsist. I want to do as I did over 20 years ago when I entered politics with my brothers in Winfield and with my brother, Huey P. Long, as a candidate for public service commissioner in 1918.

I wish to thank the good people throughout this State for the fight they put up for me on February 20. They were the finest and truest friends any man ever had. They did not forsake me—I will not forsake them. Stand by your guns and fight for what you think is right. Though we have received a temporary setback—our cause is just, our cause is right, and in the end right must prevail. I do not care how much the newspapers lie, how many blackguarding editorials they print, how many suckers sell out or get out, how many hirelings they employ to put out propaganda or how many loud and sneaky thieves they put on who would plunder every dollar there is in the State treasury. The only regret I have is that it cannot be I alone who will pay the cost.

I said upon entering this campaign "better is a little with righteousness than great revenues without right." In leaving the Governor's office I still say this is my theme song and always will be.

The experiences which I have gone through as Governor for the past 6 months and in this campaign, and especially during the past 10 days since the election, cannot be estimated in dollars

and cents. I could write five volumes on the subject and still would be telling only half of what I have learned in watching and knowing humanity at its lowest and highest.

I am sincerely sorry that everyone cannot share in the knowledge of my experiences with human nature.

I have been through the mill. I know I am right in the course I have pursued. I sleep with my conscience. I am the captain of my soul.

With best wishes and sincere regards to the citizenry of Louisiana, I am

EARL K. LONG,  
Governor in Temporary Defeat.

### The Money Problem

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

PETITION OF MULTNOMAH (OREG.) CIVIC CLUB

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition from the Multnomah Civic Club, of Portland, Oreg.:

MULTNOMAH CIVIC CLUB,  
Portland, Oreg., February 6, 1940.

PETITION TO CONGRESS

To the Honorable FRANKLIN D. ROOSEVELT, President of the United States.

To the PRESIDENT OF THE SENATE and the SPEAKER OF THE HOUSE OF REPRESENTATIVES, and

To the OREGON DELEGATION IN THE HOUSE AND SENATE.

Greeting.

DEAR SIR: We, the undersigned, respectfully petition Congress that they appoint a special committee of the House and Senate, giving them ample finances, to study the problem of the national and international situation as to money and credit and their uses and abuses, beginning with the Revolutionary War period and on down to the present day.

We ask this because it now develops that we have 64 percent of the monetary gold stock of the entire world, hidden away under guard in our vaults in Kentucky, where, according to a prominent official of the Federal Reserve Board, "The question of its value is very, very doubtful, and its value in the future is entirely unpredictable."

We believe that the time has come when the findings of this committee should take the form of a complete plan to rehabilitate the whole situation as to money and credit.

Let us quote a few of the ideas of worth-while men that this time is fully come. Dr. Gustave Cassel, Sweden's most noted economist, says, "Monetary stability is what human happiness most requires."

Woodrow Wilson once had a wonderful idea when he spoke as to the merits of an "honest dollar." We thought we had this once, but after the experience of the last 10 years, we are beginning to wonder if our dollar is not entirely dishonest; seeing that all the powers of government are not enough to keep it from constantly appreciating until the whole basis of commerce and business is out of control.

Our President, in a radio speech on October 22, 1933, said, "It is the Government's policy first to restore the price level. When we have done that we shall then seek to establish a dollar which will not change its purchasing and debt-paying power during the succeeding generations." But, alas, it has done neither, by the last reports of both banks and Treasurer.

When the committee has determined the thing which ought to be done, their findings should be given the widest publicity, so that the people will have something solid beneath their feet upon which to act.

In this connection we desire to suggest that the personnel of the committee be not dominated by either a banker or representative of what, for lack of a better term, we call, big business, seeing that it is these good gentlemen that have done their best who have brought us into the crisis we are now in.

The reasons we are reappealing to Congress at this time are:

First. When we have practically all the gold in the world—which we shall have within a year if the present rate of increase continues, and it will continue if the wars in Europe and the Orient continue—the nations of the world will be forced to seek credit of us which we shall have to grant or else see all of our commerce stop, and our people subjected to conditions that are much worse than they now are. The lack of gold in other countries will simply force us to do this and result in driving us into the war to protect our credit, and make it possible to recover our loans.

Second. If our cash-and-carry law is to be continued, it will be necessary for us, even before we shall have all the gold, to send our real wealth, in the form of commodities, abroad, accepting for them gold that our own bankers now say is questionable insofar as its value is concerned, either now or as to the future.

Third. Involved in this question of credit and money we believe is the whole question of unemployment, with all its accompanying evils. For 10 years, in spite of the heroic efforts of the Government, for which they are to be highly commended, the situation seems to be getting steadily worse. In fact, the unemployment condition seems to be in direct ratio to the inflation of reserves in the Federal Reserve bank, as well as the terrible development of idle money in the savings and commercial accounts, which are now greater than ever known. In fact, it is beginning to be quite plain that the whole Nation is suffering from a very acute disease that has always been the forerunner of disaster in nations that are gone. We have become a nation of hoarders of money instead of a nation of users of money. It is not too much to say that this condition is the very tuberculosis of nations.

In this connection it should be noted that the tendency of the times is to take the men and women that have ability and wealth-producing power out of the channels of production and to place them in the channels of mere handlers of the wealth that the small and feeble produce. The very worst form of this tendency is the constantly increasing numbers being taken up in the manufacture of munitions or machinery that is used only in war, all of which is merely increasing our worthless gold stock and helping to ruin our profitable and worth-while trade in real wealth production. It only fills the vaults in Kentucky instead of the hungry stomachs of the needy.

Fourth. At our \$35 an ounce price for gold, we have caused an epidemic of gold seeking all over the world, but worse outside of our borders than in them. Of the ten billion increase during the last 6 years, only one billion has been domestic; while the foreign has accounted for the other nine billions. This nine billions has been paid for by good United States securities and commodities, a direct loss to our real wealth we could ill afford to make, to get more questionable gold. This is so bad that one of our great magazines has published an article, the gist of which is that we are really subsidizing international wars by our price of gold.

In view of all this it is plain that if our people must go to war, or if they must go through the ordeal that they have been going through for the last years they have a right to know what the reason is and all about it.

Such a report is absolutely necessary at this time to keep our people from being led astray by the "isms" that are afloat everywhere due to similar causes. We are told that "there are only a half dozen men in the whole world that really understand money and credit." It is quite apparent that some of those who are supposed to understand money and credit understand only the game of getting what the other man has, in the way of money, by issuing their own credit.

If we must all be involved in this cataclysm of war and poverty, we are at least entitled to know what it is all about. First, if industrial initiative can be preserved and special privilege abolished and a natural and free economy set up in place of the situation we have, the goal will be worth fighting for, and the people will do themselves and their cause honor in the fighting, but within such investigation and report the people will fall into the same ditch that the money manipulators have, and disaster will result.

We therefore earnestly beseech you that no foreign loans or other obligations be made until such report has been made and the people given a chance to express themselves upon it.

W. A. BOODY, President.  
ROY S. SEARLE, Secretary.

### The Aviation Industry

#### EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1940

ADDRESS OF ROBERT H. HINCKLEY, CHAIRMAN, CIVIL AERONAUTICS AUTHORITY, AT HONORS NIGHT DINNER, INSTITUTE OF THE AERONAUTICAL SCIENCES, NEW YORK, JANUARY 26, 1940

Mr. BAILEY. Mr. President, a few days ago I obtained unanimous consent to have printed in the Appendix of the RECORD an address by Hon. Robert H. Hinckley. Subsequently I was informed that the matter would occupy approximately two and three-fourths pages of the RECORD, and would cost \$125. It was suggested that I ask consent a second time to have it printed in the RECORD. I now ask

unanimous consent the second time, on the ground that the address is on the subject of civil aeronautics by the chairman of that activity, and is a very valuable source of information to the Senate. May I have consent?

The VICE PRESIDENT. Is there objection? The Chair hears none.

The matter referred to is as follows:

Every time I see a great airliner in port or in flight I think of it as the end product of thousands of hours of painstaking work in scientific laboratories. The curve of the wings, the N. A. C. A. cowling, the adjustable pitch propeller, the delicate yet dependable instruments filling the panel, the lightness and strength of the metal covering and internal structure. I think too, of the marvelous efficiency of the motors and of the high octane fuels, of the quality of lubricants, of the radio system and of the passenger comfort. But never do I forget that the place of origin of this modern miracle was Kitty Hawk, N. C., and that the original creators were two brothers who knew how to use the scientific method. Neither do I forget that you meet each year to report new discoveries and thus honor the men who closed an age-old debate on December 17, 36 years ago. They proved that men could fly. Their achievement was one of those revolutionary scientific demonstrations that smash centuries of so-called hard-headed logic.

One of your distinguished members suggested to me that I "express some basic ideas about aeronautical engineering, research, and applied aerodynamical science." I appreciate the compliment. However, I am not going to venture out beyond my own depth into the sea of science.

There are certain things about science which a sensible administrative official must understand. He must have a healthy respect for the problems which science has solved, and an eagerness to use these solutions wherever they will further his work.

In public work, just as in private enterprise, a large proportion of your actions can be based upon precise scientific knowledge. And I hope you realize that every public official is extremely grateful for this, because each time he can turn to a formula he can act promptly and confidently, avoiding the turmoil of controversy and debate.

As you well know, we depend on formulas devised by you to solve problems of design, of airworthiness of airplanes, of reliability of communication systems and the like, and the list of scientific facts on which we can lean is growing all the time. But in a dynamic activity such as aviation, new problems are arising also. You can tell a city council, for example, what kind of paving formula to put into the runways at an airport; but can you tell them precisely how long those runways should be so as not to be obsolete in 20 years? You see, that city council may be facing a formula of its own—a mathematical pattern of interest and sinking fund with relation to the bonds it sold to build the airport.

I do not mean by this either to state or to imply any criticism of science for not always being able to see into the future. Rather, I want to take you away from your science and into those realms of government—and there are more of them than you might realize—where for various reasons there are no calipers for objective measurement, and decisions must be based upon opinion.

I want to talk to you as businessmen and as citizens, rather than as scientists. You are businessmen, in the sense that your own work depends, broadly, upon the welfare of the business of aviation. I have been a businessman much longer than I have been a Government official. But my brief public experience has been a revelation to me, showing me problems in public administration that I never dreamed of in my own business.

A public job is both a wonderful and a terrible thing. You are at the very hub of activity in your field, with a considerable amount of power over it. Your own success will be measured by how well your job gets done.

And then you run into this no-man's land of science, where there are no objective yardsticks, where human opinions and human emotions color every judgment. For example, how far shall we carry Government assistance to aviation? How far centralized control? At what point shall we abridge the rights of the individual flyer for the sake of the public? Shall we also abridge his flying freedom to protect him against himself? Shall we set up rigid standards both for air-line pilots and air-line equipment, or how far shall we trust private industry? What is our obligation toward operators who come running to us with minor problems and ask us to regulate, regulate, regulate? How far shall we go to eliminate competition? What is wasteful competition? What is the regulatory relationship between the Federal Government and the various States? Shall we promote airports and trust the planes to follow, or promote planes and trust the airports to follow, or both, and how much of each? Right now we have the problem of determining how much the larger airports of the country, where many scheduled air liners land, are to be restricted so far as their use by private owners and small commercial operators is concerned.

These are just a few of the questions that pop at us, and for which we have no scientific answers. Of one thing we are sure: We do not know all the answers. We want to sit down and hear everybody who wants to be heard, and determine a common-sense course of action.

I am going to talk about Government in aviation. Of course, I mean democratic government. I am going to describe for you a number of our difficulties. It would not be necessary to endure these difficulties if this country was run like modern-day Ger-

many or Russia. In those countries the all-high merely would issue a decree which said, "This is how it will be; let there be no further discussion."

None of us, in the United States wants this method. Each of us wants a voice in what is to be done—and wants the right to discuss it, as loud, as long as he wishes. In short, we want individual liberty.

Well, we all pay something for every blessing we enjoy; and we pay for democracy by wide-open discussion and wide-open handling of the public business. We have our own crystal-clear way of meeting our problems. If we want, for example, a continuing permanent policy in aviation, all we have to do is to demonstrate the public desirability of that policy. That may be a little trouble. It may entail explaining ourselves a great many times, and living somewhat in a goldfish bowl. That is what we pay, in a democracy, for individual freedom.

Take conservation. The American people believe it is wise, and are willing to spend public money for it. Any time they change their minds, they can stop.

Aviation is no different from conservation or any other public activity. You have to prove your case. But if you do prove it, your program is safe no matter how any election goes, or who is at the helm.

Those of us in this room are all wrapped up in aviation. But I am going to talk about government, because we must serve aviation in a way that will strengthen, instead of weaken, the bigger thing, which is our form of government.

We can fairly assume that the Civil Aeronautics Authority has as cordial and cooperative a relationship with the industry it supervises as any Federal agency has in its respective field. The Civil Aeronautics Authority is only 18 months old, so that everybody still can remember clearly how and why it was created. We all remember that aviation awoke one morning to the realization that it was in a desperate condition. "Chaotic" is the way a congressional committee described it. Unbridled, ruinous competition had frightened off investors and ruined many operators. Government services to the industry were scattered in small segments through numerous unrelated Federal agencies. And so aviation requested one central authority with which it could deal. The Civil Aeronautics Authority was that authority.

Since that time we have had to plot and travel a new course somewhere between old-fashioned, dog-eat-dog, laissez faire competition and the other extreme of absolute monopoly. We have had to guide and service the fastest growing public utility the country has ever known in a way that would maintain competition and private initiative. Nobody could give us a formula for that, and it's a big order. The industry itself should remember that.

I don't mean the industry should not criticize. Constructive criticism is good medicine for governmental bureaus. Bureaus have an inevitable tendency to grow smug. Their officials tend to lose their sense of responsibility to the public—to feel they know more than those with whom they deal—to resent being questioned.

Their values get distorted and they are sometimes short on humility. Sometimes the need for a regulation disappears, but the regulation does not. It is kept alive by the bureaucrats who seek to perpetuate themselves, or fall victim to the easy habit of inertia to any and all change. The best insurance against such dangers is for us to keep the door always open to recommendations and criticisms.

On the other hand the matchless self-confidence with which uninformed critics can tell us the answers to our most vexing problems in a few well chosen words is wonderful to behold. I have shied away from talking to you tonight about applied aerodynamical science because I know that, as scientific men, you have a habit of wanting to know a speaker's scientific background; and you might very properly say to yourselves, "What are his technical qualifications?" I imagine most lay speakers who appear before you feel the same hesitancy that I feel. But I can assure you that people in general, whether qualified or not, have no hesitancy about telling public officials exactly how to run the most complex public functions.

Only a short time ago a well-known political figure without any knowledge of scientific matters advised the President of the United States that certain governmental agencies had only ornamental use. Among these governmental agencies he included the National Advisory Committee for Aeronautics. Yet, I am sure that an objective study of the evidence would show that, for every dollar expended by the Government through the National Advisory Committee for Aeronautics, many dollars were returned in cash dividends.

Another example of this tendency to make hasty judgments because of a particular bias and lack of knowledge was called to my attention recently. One of the greatest banking figures in America, in addressing the Congress on Education for Democracy, bitterly criticized the current "tendency toward over-legislation in the United States." On the same newspaper page was another statement by an ex-candidate for the Presidency of the United States, crying out with equal violence that there ought to be a law. Speaking as an independent oil operator, he charged that the oil crisis was due to (I quote), ruthless and arrogant big business refusing to cooperate with conservation authorities (end of quote). Believe it or not, he urged the President to call a special session of Congress to enact legislation for strict control of the oil industry. So we have two men of similar political convictions, one bitterly criticizing over-legislation in general and the other demanding more Government regulation in his own behalf.

The tendency to make hasty judgments in terms of personal bias runs through human experience the world over. It is a basic right of free people to stand up and declare what is wrong with things, even though they may not know what they are talking about. According to the democratic theory, if you have no scientific answer, then the sum of the answers of all people concerned is better than the answer of a small group or clique.

I do not know to what extent the Institute of Aeronautical Sciences will extend its field to include the problems which we might classify under the general heading of "Human behavior." I know that the solution of such problems is very difficult. I know that the units of measurement in these fields are few and that the methods for making such measurements are being developed. But that is no reason for ignoring them, and I note with commendation that you have on your program workers in the field of medicine. These workers play a very important part in aviation, although they may not have developed as many formulas or units of measurement or exact methods of measurement as are needed in that field. Every field you conquer means fewer headaches for administrators.

By saying that we welcome criticism and want a great many people to express themselves, I do not mean that we want to pass a lot of rules. We do not want to pass a single regulation that is not absolutely necessary. We recognize that a pioneering activity such as aviation needs especially to be left free from overregulation. Daniel Boone would have had a hard time making his reputation under a modern bureaucracy, what with nonresident hunting and fishing licenses in each State, and knowing what game was in and out of season, and having to pass examinations on marksmanship, swimming, and meteorology.

This may sound ridiculous, but if we take down our hair and talk facts, some of our own rules can produce at least a chuckle. We say with great solemnity, in print, that no private aircraft shall take off unless it has enough gas and oil (taking into account the wind and other factors) to reach its intended destination. We actually have that rule. We have another which declares that the wheels of a private plane must be blocked or roped, or its parking brakes fully on, before its motor is started. Now, consider what happens to a fellow who has a plane with foot brakes and a self-starter, but no parking brakes. He must block his wheels before starting his motor. But he isn't going anywhere unless he has somebody else there to take away the blocks, or unless he puts on power and jumps the blocks because it's against the rules for him to leave his ship with the motor running. And if you are a woman flyer and become pregnant, you must stop flying immediately because you are deemed to be in an abnormal physical condition.

I am not even saying these rules are bad. They may be absolutely necessary. I mention them merely in order to say, like the fisherman, "If you think these are good, you ought to see the ones that got away."

I wish every man seriously interested in aviation could sit officially with us for awhile and watch the steady procession of people coming to us and asking us to pass more regulations. Everybody is opposed, as a general principle, to much regulation. He is opposed, that is, until some particular thing comes along that goes his own way, and then he cries out that there ought to be a law.

This problem is common in government. This year's census is an example. Thousands of organizations and groups have been pressing the Census Bureau to ask the public their particular questions. These range from the cosmetics people, who seriously want to know the number of blondes, brunettes, and redheads, to the cemetery people, who want to know whether you own a burial plot. The Census Bureau has refused to ask more than about 3 percent of the questions submitted, yet I will predict that nevertheless it will be criticized for too much snooping into people's personal affairs. So the governmental aspects of aviation aren't much different from the governmental aspects of other things. Our concept of this situation is that we should hear everybody concerned, and gather very complete evidence; but that the Civil Aeronautics Authority's working relationship with the industry—particularly since the whole field is new—should be kept as fluid as possible, with mandatory regulation at a minimum.

Another point. Just as we would like to keep the industry as free from excess regulation as possible, we also would like to avoid the creation of new governmental machinery to do work that can be done just as well—and often perhaps better—by private facilities.

This policy touches another danger point in governmental bureaus. We recognize clearly that an acquisitive tendency often is present in government; that bureaus seek to gather unto themselves entirely complete facilities for a given function, so that they will be entirely self-sufficient, and not have to depend either on other bureaus or outside facilities. Thus they are in complete control.

We do not want this complete autonomy for the Civil Aeronautics Authority. And because the statement sounds very pious and a little too good to be true, I hasten to add that we are not motivated by piety, but by some common-sense observations.

Someone in the administration said recently that private enterprise is judged by its successes, while government is judged by its failures. And that philosophy is behind this policy of ours.

For example, I have heard the charge hurled repeatedly at this administration that it has not accomplished anything basic in

low-cost housing. Now, the construction industry itself is a vast thing, and has had this problem before it since the turn of the century; yet I never have heard it similarly accused. Rather, the public will wait during long years of failure until some industrialist finds the practical answer, and then heap honorary degrees and riches on his head.

If I might make so bold, the same is true about aircraft with nonstall and nonspin characteristics. We have them now, of course, but their arrival was exceedingly tardy and beset by all sorts of controversy which is far from ended even yet.

I am not complaining about these things. I am merely stating facts. Industry can make a thousand mistakes and be remembered only for the thousand-and-first success. Government cannot. This causes the constant temptation in government to drift with the tide. On one extreme it may mean the piling up of restrictive rules just because people ask for them, and on the other extreme it may mean doing nothing. When in doubt, say "no." There is safety in doing nothing. I may make a mistake, and government is judged by its mistakes. So, I'll find a reason against this proposal and stop it. It may be that a one-eyed aviator can't fly. If I say he can, and 200 of them do it without accident, then I was right; but if one of them crashes, I did wrong. No, sir; one-eyed aviators must not be permitted to fly. I, as a Government official always open to criticism, can't take a chance.

Perhaps you can see, then, why we turn willingly to non-governmental facilities whenever we can for much research, aircraft testing and servicing, pilot training, and the like. They then will share the responsibility with us, and help us to avoid the bureaucratic sickness.

Of course, the Civil Aeronautics Authority has to take the lead. It has to create the set-up. One of our biggest problems right now is how much of our authority we can properly delegate, and it's another of those fields of pure opinion. We are working on it, along with numerous other problems such as, shall we subsidize feeder lines, shall we promote safe-type aircraft, and what is our relationship with aviation authorities of the various States.

I believe we all will agree that one of the basically important things to the industry is the number of people who own and fly aircraft. Several months ago I asked our people a few questions in this field, and I was startled to learn that nobody ever had compiled the answers. I merely wanted to know the statistical story of those who buy private planes—how long they keep them, whether their second planes are better—that sort of thing. The great achievements of the commercial carriers give us in general a pretty rosy picture over the last couple of years, and it is something of a jolt to make such a simple inquiry in the private field and draw a blank.

Well, our people have done some rather elementary research since that time, and I want to tell you about it. We made a cross-section study of the private ownership of airplanes in this country during the past 8 years. We found that the average life of a private airplane was 6 years. But we made the very unpleasant discovery that the life of an airplane owner, as an owner, was far shorter than the life of his first plane.

In short, four out of five of all those who bought their first planes during this period had got rid of them within a mean period of 2½ years, and had not bought others. Over half had disposed of them in 2 years, and one-third had got out of the ownership field in 1 year.

Let's put it another way. Approximately 15,000 new noncommercial owners bought airplanes during the years 1931 to 1936, inclusive. Yet so many dropped out that the net total increase in private owners for the same period was less than 300. Less than 20 percent of airplane purchasers continued their ownership longer than the 7-year period of the study.

The "mortality" of ownerships is so great today that 2,900 new owners must be found each year to maintain the present total without increase.

What is the answer? We don't know. It may be, as some would say, too much bureaucracy—too many logbooks and inspections, too much required practice. It may be too few airports, so that a flyer's destinations are limited. It may be any of a score of things or, more likely, a combination of several.

At any rate, aviation as a whole must diagnose this trouble, and cure it. We hope that all of you will go to work on it with us.

One thing we already have done, of course, is to arrange for the training of thousands of new civilian pilots. We feel certain that if you create a great many new flyers you are going to produce, inevitably, a considerable number of new owners.

I have been speaking in general terms about our problems and policies. Perhaps if I tell you the story of the civilian pilot-training program I can apply these policies specifically.

America, traditionally, depends for its national defense largely on its civilian facilities. Instead of building military roads, we build great commercial highways, knowing full well that these highways can be used in case of a national emergency including, of course, war. The same holds true for our steel mills, our textiles, our chemical plants, and even our airplane-manufacturing plants.

Because of the development of totalitarian states with their aggressive policies, it may be that we have put too much dependence on civilian facilities. That I do not know, but I am sure that we must at least have those civilian facilities. This holds especially for the field of aviation, for I am quite sure you will admit

that the airplane is changing the world as no other single instrument of our day. But it holds not only for the airplane as a machine, it holds for the human material that must control this machine. Moreover, it takes longer to train a pilot than it does to build an airplane.

It seemed, therefore, desirable to kill two birds with one stone—to develop civilian facilities, including pilots and civil aircraft factories, as a defense measure, and at the same time to advance use of the airplane and knowledge about the airplane through civilian activities. If by any happy chance we do not have to defend ourselves, there will be nothing but profit, because the expansion of our civilian facilities is long overdue.

How did we go about meeting these two problems? First, we prepared a plan of action within our own organization. Then we discussed it with State aviation officials, with officials of our educational systems, including the Office of Education, with the operators of private commercial schools and the builders of civil aircraft. We did not forget the Army and Navy, because our defense services have had years of experience with pilot training. Naturally, our original plan was considerably altered as the result of the advice we got from all these interested groups. We wanted that advice. That is the policy of using the consensus of interested viewpoints, where we have no formula.

But in order to test it out, we obtained from the National Youth Administration \$100,000 to conduct a group of experimental courses at 13 colleges in various parts of the country. Three hundred and thirty students were enrolled, of whom 97 percent finished their training and received certificates of a private-pilot grade.

Following the completion of the experimental course, we called in the operators of the commercial schools who had been conducting the flight training, and the college officials who had been directing the ground schools. We obtained from both groups valuable suggestions for the improvement of our original plan.

As the result of this careful preparation, we were able to go before congressional and senatorial committees and present objective evidence of the desirability and workability of a much larger program. This program is now being carried on in 437 colleges and universities throughout the country and the territorial possessions. That is the policy of using the nearest thing to a scientific approach that was immediately available.

Congress wisely provided that at least 5 percent of those we train in this larger program should come from noncollege young people. We have met this requirement by arranging for the training of 700 young people, or approximately 7 percent of the total to be trained, by commercial operators and to be supervised largely by local committees of interested citizens. Wherever a State has a director or commissioner of aviation, he has been asked to supervise this part of the program for his State. In other States the training has been turned over to chambers of commerce who, in turn, have called on their aviation committees to perform this public service. That is a policy of simple democracy, of not limiting this opportunity to college students alone.

Now, what has been the response of students to this opportunity? There is enough money in this program to permit 10,000 young people to learn to fly this year. Each of those who qualifies for flight training has to put up a \$40 fee of his own money. Yet the 437 colleges and the 75 noncollege stations were literally swamped with applicants. We do not know what the total of applications was, but we are confident that if we had had the facilities it would have been no trouble at all to enroll 50,000 young people. In one university there were 1,200 applications for a quota of 30 places in the course.

The demand did not stop there. When we started ground schools for those who had qualified, 3,600 additional college students enrolled and started ground training, even when assured they cannot have flight instruction this year. These 3,000 are being carried by the universities and by their own funds, without cost to us.

The situation in the noncollege group is even more startling. Here, it now appears, at least 10,000 applicants between 18 and 25 years of age will pay \$10 each for the privilege of taking a ground course and competing for 700 places in the flying course. They are doing this with their eyes open to the fact that 93 percent of them will have to fail. Their enthusiasm is so inspiring that a number of chambers of commerce have raised private funds to increase the local quotas.

It should interest you to know also that every applicant for flight training must present the written consent of his parent before he is allowed to enroll in the flight-training course. This last provision alone is in dramatic contrast to totalitarian states where parents are punished if they in any way interfere with the wishes of youth to follow the proposals of the government.

It seems to me, then, that our procedure in the flight training is in line with the best democratic philosophy. The Authority did not hesitate to tackle it, did not play safe in fear of failure. It obtained the advice of all the interested groups in the field of aviation and education instead of depending on the decision of a few agency officials. It reached out to educational and flight-training institutions where facilities were already set up, instead of creating bureaucratic units of its own that it could supervise with an iron hand, without interference from anyone else. It showed confidence in these local units by leaving to them many details of administration and operation. It has made participation on the part of those institutions, on the part of the students themselves, and even on the part of parents purely voluntary. It has avoided the selection and hiring of thousands of employees directly responsible to a centralized organization. It has not bought thousands of new airplanes

and other equipment, nor has it established scores of offices to house new employees. In short, it largely has relegated to local groups with existing facilities the task of carrying out a new enterprise to meet a public demand.

The same policies have been followed in our pilot selection research program. This enterprise has been turned over to the National Research Council, an agency of the National Academy of Sciences. The National Research Council was originally set up by President Lincoln, and reorganized under President Wilson, to serve the Government in research whenever requested. A distinguished committee of scientific men has been appointed by the Council to give direction and advice to workers in university laboratories who will conduct researches on problems of selection and training of pilots. Thus, the existing facilities in many of our best universities have been made available to us.

I know that I have slighted much of the work being carried on by the Civil Aeronautics Authority by describing, in some detail, the organization and operation of the civilian pilot-training program, but it seemed to me that the newness and, to some extent, the novelty of this program offered an excellent illustration of the way a service agency can operate and avoid the pitfalls of bureaucracy.

I hope you will not feel that my detailed recital of some of the problems of public administration was intended to bring you a tale of woe. The clash of free opinion is tremendously stimulating. The wheels of Uncle Sam's big wagon may creak pretty loudly at times, and it may break an axle now and then, but it does keep moving forward at the head of the entire human parade.

Every good citizen's responsibility is to help keep it out in front, where its very leadership will be a constant reminder to the people of other nations who are following, for the moment, governmental philosophies with which ours must compete.

It seems to me that a scientist has a greater responsibility in this respect than the average man. He may be making life fuller and richer for all of us in the long run, but in the meantime he is making it more and more complex by providing strange new mechanisms that only time will show us how to use wisely.

That is why I have tried to take you into my office and let you see the parade of the problems for which we have no formulas. There is, of course, a better way, if only it could be done. That would be for each of you to spend a little time in Government service and get this story first-hand. I think it might be of benefit to you, and I know it would be of great benefit to the country.

## Americanism

### EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

ADDRESS BY HON. BERTRAND W. GEARHART, OF CALIFORNIA, TO WASHINGTON LODGE NO. 15, BENEVOLENT AND PROTECTIVE ORDER OF ELKS

Mr. GEARHART. Mr. Speaker, unanimous consent having been given by the membership of this body, I present the text of an address which I delivered to the members of Washington Lodge No. 15, of the Benevolent and Protective Order of Elks, on last Wednesday night, the 23rd day of February 1940, and ask that it be spread upon the pages of the CONGRESSIONAL RECORD of his day's proceedings. The address was broadcast over the facilities of radio station WOL.

The address follows:

Exalted ruler, brothers, and friends of the air waves, in accordance with the expressed desire of the grand exalted ruler of the Benevolent and Protective Order of Elks, the brothers of Washington Lodge No. 15 are gathered tonight to pledge anew their allegiance to the United States, and to express again their abiding faith in those principles upon which our beloved country is founded, those principles under the influence of which our country has grown to be in the incredibly short space of 150 years the greatest and mightiest of all of the nations of the world.

There is no prouder title that can be achieved under any flag than American citizen. To be an American is to be free, to enjoy liberty, to live in amity with one's fellows, to know the true meaning of fraternity. The priceless privileges which have become the birthright of every American citizen, be he rich or be he poor—the principles that give us liberty and make us free—are in number great but all of them, taken together, can be described and referred to collectively simply as Americanism.

Because Americanism can find its highest expression only under the blessings of a continuing peaceful relationship with all of the world, the members of the Elks, determined that the processes of civilization shall not be interrupted, are at this moment gathered

about their flag-draped altar on this solemn occasion to demand again that America keep out of the war which rages in Europe.

The question of war and peace has always been a matter of deep concern to all of the people of all of the nations of the world, to Americans no less than to others.

And well it might be. The horrors, the miseries, the distress, and despair which follow in the wake of war have too often been the bitter experience of mankind.

In these days when the world is filled with trouble, when many of the great and small nations of the world are in death's embrace, it is well that the sober-minded, patriotic, thinking people of the United States take counsel in their effort to keep America out of the war which rages overseas.

All over the United States earnest-minded people have bound themselves together in organizations of different kinds and under different names for the sole and only purpose of preventing, by all honorable means, the involvement of our country in the bloody contest which threatens to envelop the entire world.

To this high resolve the almost three-quarters of one million members of the Benevolent and Protective Order of Elks have pledged their support. Our country will remain out of this conflict over there, our youth will be spared the sacrifices incident to war, if the influence of this mighty patriotic and fraternal order can prevent the tragedy of our involvement.

The members of the Elks are rendering an invaluable service in the cause of peace for America, a service so timely and so necessary in these troublous moments that I am happy indeed to commend them—loyal citizens that they are—for their self-sacrificing endeavors in a noble cause, for, most certainly, they are in this instance laboring in a most righteous campaign.

I despise war.

Though I hate it more than any other human activity, I do not want to be understood as one believing that war is always bad and that it is never necessary. Out of righteous wars much good has come. One must not forget that it was out of the bloody crucible of heroic sacrifice that America, with all of its blessings, was born. Without that war in which our forebears fought—and many of them died—there could not have been a United States of America.

But the Revolutionary War was a war in which American rights and American privileges were involved.

Elks are not pacifists. I am not a pacifist. Quite the contrary, as my participation in the World War emphatically discloses. Just as my paternal ancestor of the Revolutionary War days took his stand at the side of General Washington more than 160 years ago, I hold myself—as does every Elk—in readiness to answer the call and to fight for our country whenever its existence is threatened or the priceless privileges of American citizenship are challenged. No true American could do less than that.

It is because I know that no American's freedom—no American's liberty—is threatened; because I know that the peace and dignity of the United States is not at all involved that we are raising our voices to demand that America keep out of the war that rages over there.

It is nought but a gigantic real-estate deal that is in process of adjustment and settlement—a stupendous maneuver for power in European politics for which the blood of Europe's youth now flows.

The outcome of this, Europe's newest adventure in power politics—whatever it may be—will not affect America's destiny, America's future, one whit, unless we permit ourselves to be drawn into the vortex.

Why, every thinking American inquires, should we send our boys over there to die—to be mutilated or maimed—on European battlefields that some king be made more secure on his throne, that certain heads of states may add to their power.

The reason they fight is of their own making. It was their greed, their craving for power, that precipitated the conflict. It should be their armies, not ours, that should bear the brunt of it.

The determination of those shameful issues—the turning of the victory one way or the other—is not worth the expenditure of one American dollar; least of all, not worth the sacrifice of one American life.

Is there an obligation resting on the shoulders of the American people to right every wrong, stamp out every evil, adjust every inequality, eliminate every injustice that may raise its ugly head in every corner of this far-flung world?

Have we not enough wrongs to right, enough evils to stamp out, enough inequalities to adjust, enough injustices to eliminate right here in our own country to keep us reasonably well occupied in the days immediately to come without running around the world looking for something to do?

Cannot we serve America well, humanity best, by governing ourselves well, by solving correctly and with promptitude the manifold problems of America, the governmental problems with which we are daily beset?

Dictators decry democracy. They sneer when free institutions are referred to. They contend that self-government is a farce, that the people—upon whom democracy depends—are incapable of governing themselves.

Let us prove to the world, and to the dictators in particular, that democracy and self-government can be made to work. Let us prove to the world that democracy will work by making it work.

If we will but do this, America will become again the "hope of the world," an inspiration to all of the downtrodden, enslaved people of this world to resist their tyrants, to destroy their oppressors, to regain their lost liberties through a renewed confidence in the kind of institutions that make men free.

It is no easy task governing America well. But if we can make the administration of public affairs reasonably efficient—just in its human relationships—helpful in its objectives, historians will speak well of us when they take up their appraising pens.

And, best of all, Americans will have remained free, their capacity for self-government vindicated. Dictators, discredited in the light of the contrasted ideology, will be toppled from their high positions of power, power built upon the shifting sands of falsehood, pretention, and deceit.

And in such a contest with dictators the life of no American boy would be sacrificed, no blood would be spilt, no American home sorrowed, no wives widowed, no children orphaned, no mother's heart broken.

Americans, awake. Our job today is to keep America out of Europe and Europe out of America.

If we can but keep our emotions in leash, our sentiments under control, our feet upon the ground, we can keep America out of this war.

No aspiration could be nobler than that.

### Odd Fellows Demonstration

#### EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1940

ADDRESS BY HON. WILBURN CARTWRIGHT, OF OKLAHOMA

Mr. CARTWRIGHT. Mr. Speaker, by permission granted to extend my remarks, I insert herein the following speech delivered by me to all the Odd Fellows lodges of Baltimore, Md., at the Odd Fellows demonstration in the Grand Lodge room of the temple, on the evening of Wednesday, February 27, 1940:

Fellow Odd Fellows and friends, I am delighted to be here at the invitation of your Grand Master, Hon. Leonard Mason. When your gracious invitation arrived I wondered what I could say on so propitious an occasion as this great demonstration of an ancient and honorable fraternal body that could be called a real contribution.

With a large part of the world at war and hate filling the air and the press as both sides turn loose their verbal and written vitriol—with many problems still besetting our own grand and glorious country—the natural tendency is to be pessimistic.

In view of the long and magnificent history of the Odd Fellows and the tremendously helpful force it has always exerted, I felt that this gathering would be the last place for a pessimist to find a warm welcome. So I determined to be myself. You know, I have always been an optimist. Perhaps one is not always warranted in taking an optimistic view of things. But who will deny that the rainbow is a cheering sort of hallucination, or whatever you may call it? Anyhow, I have been rainbowing for 10 these many years and determined to keep right on turning on the pleasing colors today despite all that is going on here, there, and everywhere—clear down to Jericho and back again.

If anybody else scheduled to speak from this rostrum insists on viewing with alarm, well and good. All of us cannot get exactly the same squint on things. As for me, I propose to try to keep my own little corner bright by letting in such light as may be available.

Some folks seem inclined to smile when the term "Odd Fellow" falls on the ear. Well, let them smile—or laugh raucously if it pleases them to do so. A good laugh never yet hurt an Odd Fellow, and if some ignoramus who knows nothing of the history and noble work of this group sees something funny in the name it may help him to let off steam. May he live to be able to laugh many more times. Indeed, a good laugh is about as fine a tonic as man or woman can take; that is, next to a full dose of optimism. And I guess a really healthy laugh, based on something worth the effort is apt to promote a feeling akin to optimism.

You know, I came up through a pretty hard road myself. When I first saw the light of day the country in the vicinity of my home was still rather rough. If there were any silver spoons around in

that section the supply must have been exhausted before I arrived, for when I attempted to reach in and pull one out of my mouth it just was not there. Work started early for me and just naturally kept right on—and I am still at it.

But I saw the rough country develop into a great farming and industrial area and am happy to say that development is still going on and is certain to continue long after my course is run. That is one major reason why I have always been an optimist. It has been my privilege to come in contact with large numbers of persons from all walks of life. Some of them have been unlovely and unpromising, but the vast majority have been square shooting, straight-thinking folks, and they were bent on contributing something worthwhile to their communities and our fair country. That did not tend to make me pessimistic, as you may readily understand.

In due course I ran across the Odd Fellows—not to mention other beneficial and fraternal groups—and found them working for mutual helpfulness all along the line. That naturally tended to confirm me as an optimist. So if I still insist on being a fool optimist even when the clouds are lowering and things are awry here and there, bear with me. The thing that has become congenial with me is something I cannot help. Besides, there is a lot to that old saw about every cloud having a silver lining; about it always being darkest just before the dawn. Try that one on your trusty harmonica and then join in the laugh.

A plague on all pessimists. Why, who could look into the faces of the good people comprising this assembly and fail to see hope, faith, and charity written as plainly as pen or brush could make them? If you folks are not all optimists I am almost willing to cease being one—for a moment. In fact, I would not hesitate to make a bet with the rankest pessimist within the hearing of my voice—if any there be—that he could not muster enough buddies here today to form even half of a bass quartette. So away with them.

We came here today to meet a lot of congenial souls and to be happy. If any Member hid a cold sponge in his vest pocket before entering the hall, he would do well to sneak out the side door and cast it to the four winds before his dereliction is discovered. Many of these genial souls can work up indignation a foot thick on short notice when their cause is just. And when indignation gets that thick its executorial power is something to contemplate with fear and trembling. If the shoe pinches anyone within hearing, this would be a fine time to do a fade-out and get rid of the incriminating evidence, lest that indignation start mounting and pillory the culprit in his tracks.

Now, if there are any present who did not find themselves attracted to this demonstration to have a happy time let them raise their right hands. Everybody else in this presence would like to get one good look at anyone who would choose an occasion of this kind to be a Gloomy Gus. Well, I see no rush of hands. Everybody seems to be grinning from ear to ear. Thank God for a good healthy grin—it is one of His best medicaments.

Why shouldn't I be an optimist? Even the Chamber of Commerce of the United States has suddenly reached out and donned the garments of optimism. Only a few days ago the national chamber took its stand squarely where I have been standing for a long time. Welcome to the ranks of the optimists, big business. You have been a bit gloomy off and on for a number of years. Now you have looked out the window, discovered there really is a rainbow and come right over lock, stock, and barrel. Just think of the fun you have been missing all this time while fussing and fuming. The rainbow has been hanging there all the time, if you had but brushed the mote from your eye.

The national chamber has good ground for becoming an optimist. It finds all the business indicators pointing to a prosperous 1940. They are happy about it—just as we are happy to be here today, to get to know each other a little better. Seriously, however, it is most encouraging when organized business, which all must concede has taken a terrific licking over a period of years, feels warranted in rushing into print on a Nation-wide basis with a formal announcement that the outlook for business and industry this year is improving. It is good news for business and industry, for employer and employee, for everybody from coast to coast.

But I saw it first—that is, the warrant for optimism. What I have said antedates the announcement of the Chamber of Commerce of the United States. To me there was no question but the good old United States of America was coming back strong—the stronger the better. You know, our great Nation is the same size as before the depression hit it more than 10 years ago. There are more people in it than at that time, and they are just as good people. Its resources are all still intact. The native genius of the people has not diminished. You just cannot keep a great nation down. It may be troubled and hesitant for a time, but it is as certain to rise again as is the sun to shine.

It has been a pleasure to meet with you. The great order you represent had its American start in Baltimore. When a demonstration is held our eyes naturally turn toward the monumental city. Here the American founding fathers laid the foundations of a structure that was to diffuse friendship and helpfulness in all directions. That beneficent influence continues to spread in an ever-widening circle, blessing humanity wherever it goes, promoting good citizenship and happiness—and optimism.

I thank you.

## Little Monuments to the Roosevelt Depression

### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

EDITORIAL FROM THE CHICAGO TRIBUNE OF FEBRUARY 24, 1940

Mr. HOFFMAN. Mr. Speaker, a concrete example of the effect of some of the policies of the New Deal is given in an editorial of the Chicago Tribune of Saturday, February 24. That editorial is as follows:

[From the Chicago Tribune of February 24, 1940]

#### LITTLE MONUMENTS TO THE ROOSEVELT DEPRESSION

A number of readers have written to us about the article in last Saturday's Tribune by our real-estate editor on the wrecking of buildings in Chicago during the last 7 years. The article was illustrated on the back page with pictures of 19 important buildings which had been razed during the New Deal depression, and either had not been replaced or had been replaced by one- or two-story taxpayers.

Some readers felt that we should have told the facts about the "large amount of new building during the Roosevelt administration," as one letter phrased it. Accordingly a comparison of the volume of building in Chicago under the New Deal and under the preceding national administrations is presented in a chart on the back page of the Tribune this morning.

The chart emphasizes and supplements Mr. Chase's article. He showed that more buildings had been wrecked [since 1933] than had been erected. The graph establishes that the amount of new building has been smaller than in any national administration in more than a half century.

During the Roosevelt administration the average annual volume of building in Chicago was \$18,000,000. This compares with \$83,000,000 per year under President Hoover, \$297,000,000 per year in the Coolidge-Harding administrations, and \$83,000,000 per year during President Wilson's two terms, including the war years, when it was a patriotic duty to refrain from building if you didn't have war orders requiring it.

In 1939, the best of the Roosevelt years, the value of new construction in Chicago was \$41,000,000, and this figure included at least eleven million under Government subsidy. This was the lowest peak year in any President's term during the present century.

The average of \$18,000,000 worth of new construction per year under the New Deal compares with \$95,000,000 per year under President Taft, \$54,000,000 per year under President Theodore Roosevelt, although the panic of 1907 and the ensuing depression held down the figure, and even \$24,000,000 under President McKinley, although the Chicago building trades at the time were suffering from racketeering by Skinny Madden and there were many strikes, one of which in 1900 was of record duration. It lasted all year.

The average of \$18,000,000 worth of new building in Chicago for the first 7 years of Franklin D. Roosevelt's administration compares with an average of \$30,000,000 per year in Grover Cleveland's second term, during which occurred the panic of 1893 and the following depression, which was the worst down to that time. In President Benjamin Harrison's administration, which separated Cleveland's two terms, \$47,000,000 worth of building per year was done, including the old Masonic temple, which was wrecked last year, and the Great Northern Hotel, which is now being taken down.

In Cleveland's first term, building averaged \$20,000,000 per year. To find a period when so little building has been done as under the New Deal we have to go back to the Garfield and Arthur administrations. The population of Chicago then had just crossed the 500,000 mark.

That building construction has been in a state of paralysis during the Roosevelt administration there can be no question. The New Deal propagandists talk of the many millions which have gone into fine new Chicago structures and of Washington's helpfulness to the construction industry. True, the New Deal has underwritten home building on a shoestring, has subsidized other building, and has advanced money on distressed property. Each of these activities will involve losses eventually to be paid for in income taxes, and meanwhile the resulting total building volume is by all past standards of measurement a drop in a bucket.

All other building, except of a necessitous sort, has been stopped in Chicago at a time when the flow of new capital into business generally has also been reduced to a trickle. The construction industry, like the others, has been held back by the higher costs of production, extortionate taxes, and tyrannous regulation which the

New Deal has placed in the way of earning a profit. The shacks which the auto-parking companies put up to shelter their employees and the two-story taxpayers on skyscraper sites give mute testimony about the state of business. They are monuments to the Roosevelt depression.

## Americanism Versus Internationalism

### EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio speech delivered by me over the Columbia Broadcasting System, Saturday evening, March 2, 1940:

The subject of my remarks this evening, Americanism versus Internationalism, describes the difference between the foreign policies of the Republican Party and the Roosevelt Administration. The Republican Party has and will continue to uphold the traditional American foreign policies proclaimed by George Washington, of neutrality, nonintervention, and no entangling alliances, and adhered to by Thomas Jefferson and all of our Presidents down to the World War.

Before discussing this vital issue, I shall digress to make some observations regarding the inspired submarine propaganda. Once again the submarine bugaboo has been let loose in order to keep the war hysteria stirred up and to excite American citizens by inspired tales of submarine activities and outrages near Puerto Rico and off the Atlantic coast. Today's report of an alleged submarine attack on the British steamer *Southgate* is obviously part of a carefully planned propaganda program to influence American public opinion by the use of periodical submarine scares in the Caribbean Sea.

Our naval ships keep darting hither and thither after phantom and mysterious submarines, but none have yet been actually verified. Admiral Leahy, the Governor of Puerto Rico, was reported as saying if these fictitious submarine accounts continue there will soon be news items of flying submarines having been seen over our coastal cities.

The day before the repeal of the arms embargo the British ship *Couimore* was reported as having been sunk by a German submarine off our coast, but when our destroyers sought to locate the victim it had vanished, only to turn up later in a British port.

We are in the midst of war hysteria and poisonous propaganda, aimed to break down our will for peace. The propaganda machine has, however, already shot its bolt with the mystery submarines, which leaves the American people cold. It is time to develop a bigger and better bugaboo, and a more effective hobgoblin.

Unfortunately some of the submarine propaganda emanates from the White House. A few months ago it was announced from the White House that a foreign submarine had been sighted about 20 miles off Key West, Fla., by Navy patrol vessels. President Roosevelt has further excited the American people by the silly secrecy in connection with his mysterious fishing trip.

If there were submarines in the Caribbean, he should not have risked any argument with them, as they are apt to shoot first and ask questions afterward. However, if they are wholly imaginary submarines, that is quite a different matter. Suppose a phantom submarine had fired a phantom shell at the Presidential fishing boat. Would our honor have been impugned? It would be hardly fair to involve America in war over a fishing junket. What a war slogan that would be—make the Caribbean safe for F. D. R.'s fishing!

Dr. Virgil Jordan, president of the National Industrial Conference Board, in a speech before the Foreign Policy Association in Philadelphia last week, predicted that President Roosevelt would be a candidate for a third term on a platform of national emergency and pacification of Europe; that within a year the Army, Navy, and air forces of this country would be actively engaged in hostilities in Europe and Asia; that American industrial life would be completely in the hands of political agencies; and that increasing internal disorder would be suppressed by armed force, espionage, censorship, and suspension of civil rights and civil processes.

Dr. Jordan remarked that he hoped the catastrophic events of which he spoke would not happen, but added that he thought they would, because there are so few people in this country who now realize that they can happen and are happening, and who are now willing to make any personal sacrifice or take any risk to try to prevent them from happening.

That Dr. Jordan has based his conclusions on firm foundations can be readily ascertained by reference to the parrotlike statements made by Ambassadors Kennedy, Bullitt, and Davies, who, on returning to the United States from abroad, proclaimed that it was

essential that President Roosevelt be reelected in order that his foreign policies might be carried out in Europe.

Peace-loving Americans should carefully examine those foreign policies and determine for themselves where they led us in 1917 and where they are leading us now.

I am not in the confidence of President Roosevelt regarding his foreign policies, nor is any Republican Member of the House or the Senate. I am not disclosing any state secrets when I say that President Roosevelt has deliberately scrapped the traditional custom and practice of all prior administrations, Democratic and Republican alike, of nonpartisan cooperation and consideration of our foreign policies.

He has from almost the outset of his rule insisted on being the sole dictator of our foreign relations, and has ignored the minority members of both the Foreign Affairs Committee of the House and the Foreign Relations Committee of the Senate consistently and with studied indifference. This course of action is a complete and tragic change from the traditional nonpartisan approach and consideration of international issues. It is bound to be a dangerous and a disastrous departure from American practice and ideals, an evil and ruinous experiment, and an apple of discord where unity and cooperation should exist.

President Roosevelt is alone responsible, and the international seeds of discord he has sown will plague the American people until there is a return to our traditional American policies and customs.

President Roosevelt is an internationalist, and was one 20 years ago when he campaigned as Vice President for the League of Nations. I do not impugn his motives; he has a right to be an internationalist, and the Democratic Party has no monopoly of them. We have a few and just as determined and outspoken internationalists in the Republican Party, such as former Secretary of State Henry L. Stimson and Nicholas Murray Butler. President Roosevelt, however, is the avowed and recognized leader of the old pro-Leaguers, who believe it is our moral duty to stick our nose into the eternal disputes and wars of the Old World.

President Roosevelt's views and statements are a matter of record. He has urged Congress to give him power to lay economic sanctions, to determine the aggressor nations, to repeal the arms embargo, to lend money to foreign governments, to quarantine certain nations, and has urged other acts short of war but leading directly into war.

In addition, he has attacked heads of foreign governments, ably seconded and abetted by members of his own Cabinet.

He not only led the fight, but used every weapon and every influence of his high office to repeal the arms embargo, which served notice on the world that we were taking sides in the European war and jeopardizing American neutrality and peace. I still maintain that was the first step toward intervention and involvement of America in war.

The repeal of the arms embargo was effected by the strong-arm methods of President Roosevelt, and the false and already repudiated promises of large purchases of cotton, tobacco, and foodstuffs from farm districts. Repeal was only consummated by the practically solid vote of the solid South, where the two-party system, unfortunately, does not exist, and where the League of Nations has had its stronghold.

I have taken some pains to detail the foreign policies of President Roosevelt and the internationalism of the new dealers so that the record may be clear to the American people, who must decide this vital issue affecting their security and the lives of their sons.

I am an isolationist from all foreign wars but not an isolationist from arbitration, limitation of armaments, relief for humanitarian purposes, and peaceful settlement of international disputes. I wish Under Secretary of State Sumner Welles success in his efforts to restore peace in Europe, and hope that his peace trip is not a mere political gesture on the part of the President.

I do believe and predict that in case of failure of these peace efforts President Roosevelt will discard his lip service to keeping out of war, like Woodrow Wilson, Colonel House, and Secretary Lansing, and will lead the pro-Leaguers, internationalists, and interventionists in an open campaign to finance Europe's wars by sending arms, ammunition, and airplanes, and, if necessary, to turn our Navy over to the British. Henry L. Stimson, a Republican internationalist, has already openly urged naval participation.

I agree with Dr. Jordan's prediction and believe by midsummer the campaign will be going at full blast and in all its fury, with the floodgates of war hysteria and propaganda wide open. I look for a campaign of provocation and war hysteria, increasing in volume and intensity during the summer months.

Let no American underestimate the power and influence of President Roosevelt and his skill in the use of mass propaganda, emotionalism, and war hysteria. For 2 years he has been determined to use the entire force and power of America to quarantine certain nations. He is ready to seize the first opportunity and almost any pretext to inaugurate his campaign for internationalism and intervention.

Personally, I prefer to have it out in the open, and the sooner the better. This is by far the most important issue in America, transcending all party lines. There should be no pussyfooting or shadow boxing on keeping America out of foreign wars.

There can be no compromise on this issue. I propose, as a World War veteran, to give no quarter nor ask any from the internationalists and interventionists who are leading us to war. I intend to insist on a clear-cut, straight-out antiwar plank in the Republican national platform, and for making the fight for Americanism against internationalism.

The American people should be given the right to express their sentiments—and will—on the war issue in the 1940 campaign, as they did on the League of Nations in 1920.

I repeat, I hope Mr. Welles will succeed in his peace mission. However, I fear his chances are slim, with no American Ambassador at Berlin and in view of the attempts of the administration to delay the *Bremen* from sailing and the placing of countervailing duties on German goods. For over a year President Roosevelt and his Cabinet have been denouncing Hitler and Mussolini in violent and provocative language. For the first time in our history foreign policy has been based upon hatred, threats, and attacks on the forms of government and rulers of foreign nations. It is the most amazing departure from American tradition, and has created war hysteria at home and hatred abroad.

The Saturday Evening Post, in an editorial, had this to say: "For a year and a half the President of the United States has been talking war. He began it with the quarantine speech in Chicago in October 1937, saying there was no escape for us through mere isolation or neutrality, and that the peace-loving nations must make a concerted effort to quarantine and stop the aggressors."

Under the leadership of President Roosevelt, the Democratic Party is the party of internationalism, and is rapidly becoming the war party in the United States.

Believing that we are already on the road to internationalism and war, I am appealing to the radio audience, irrespective of party affiliations, to write their Representatives in Congress to sign the petition I have filed (petition No. 24) to bring up for consideration my resolution providing for a national referendum before conscription of American citizens for service in foreign wars outside of the American Continent and our possessions—House Joint Resolution 408.

This resolution differs materially from the Ludlow war referendum, which is opposed by the veteran organizations as jeopardizing our national defense and interfering with the constitutional right of Congress to declare war. My resolution does not require a constitutional amendment. It can be adopted by a majority vote in the House and Senate before adjournment next June if the American people will take the trouble to write their Representatives in Congress.

I am convinced this resolution carries out the sentiments and wishes of 90 percent of the American people to keep America out of foreign wars. Already numerous important and powerful organizations have volunteered their active support. It far transcends all party lines, and I have been assured of the cooperation of Representative Louis Ludlow as well as a large number of Members of Congress who have opposed the Ludlow war referendum resolution. My proposal in no way interferes with national defense or the constitutional right of the Congress to declare war.

I am giving you the Macedonian cry of "Come over and help" by writing or wiring your Representatives to sign my petition to permit the American people to vote whether their sons shall be drafted for foreign service in our armed forces outside of the Western Hemisphere or the Territorial possessions of the United States.

Every day my office receives letters from all sections of the country asking what can we do to promote peace and keep America out of war. My answer is to appeal to you this evening to exert your influence and express your will to your Representative in Congress, and request him to sign petition No. 24 to let you and the American people vote whether the youth of our country shall be drafted to fight another futile war in foreign lands.

Let us resolve to unite in an antiwar program of Americanism against internationalism, and millions for defense but not one dollar to send American soldiers to foreign lands to fight other people's battles.

### The Government in Housing

#### EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

ADDRESS BY HON. WILLIAM B. BANKHEAD, OF ALABAMA

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address to the Central Housing Committee by the Honorable WILLIAM B. BANKHEAD, Speaker of the House of Representatives, at Washington, D. C., February 17, 1940:

Mr. Chairman, members, and guests of the Central Housing Committee, this meeting today is highly opportune, because it is time for us to summarize what we have accomplished during the past 7 years in our program of providing this Nation with better housing and of making home ownership more secure. It is time also to analyze those accomplishments, to gather our forces, and to rededicate our services toward our common goals. The exhibit before

us, Your Government in Housing, which you have prepared for use at the fairs, is a convincing demonstration of the progress that has been made under this administration. It offers promise of still greater accomplishment, as the result of increasing cooperation between the many agencies of the Government which are concerned with housing and, in turn, of the cooperation of the Government with the vast resources of private industry.

More than a million desperate families who were saved from dispossession of their homes know, of course, that their Government aided them to rehabilitation. Officials of thousands of institutions acknowledge the help they were given when their mortgages were without a market and their assets frozen. Business and civic leaders know the Government's part in halting the collapse of all property values and some of the constructive things that have been done to bring better shelter to all groups of the Nation's citizenry. But there is still no general realization of the full scope of our accomplishments in the housing field since 1933. Few know either the magnitude of the salvaging job done during the depression or the firmness of the foundation that has been laid for constructive housing development in every part of the country and the revival of home building on a tremendous scale.

Compared with what has been accomplished in the last 7 years, the entire earlier record of the country in those directions is insignificant. With the development of industry and the growth of great urban centers the problem of adequate housing for the great mass of Americans became increasingly serious, but attacks on that problem were confined largely to discussions and conferences. It will be remembered that in 1930, when the whole issue had become more acute than at any time in our history, when foreclosures had reached record-breaking proportions and threatened the very foundations of home ownership, months of effort were spent in a conference on housing. Proposals and counterproposals were considered and embodied in reports comprising 13 printed volumes. Out of it all, about the only definite accomplishment was an act providing for the establishment of a reserve system to which the home mortgage lending institutions of the country could turn for protection and for money to meet mortgage demands without the necessity of sweeping foreclosures. And even that act came too late, for the country's mortgage structure already was collapsing.

I bring this record to light only to emphasize what we faced when we took over in 1933, to outline clearly the progress we have made in meeting problems belatedly acknowledged, and in overcoming them, and thus to renew our faith that we can achieve the goals which are clearly in the minds of all of us here. These goals are concretely put in the keynote of your exhibit:

"To reduce costs of home financing and safeguard home ownership; to enable more families of average income to own homes; to improve existing homes both in cities and on farms; to abolish slums; to stimulate credit; to encourage the building industry; and to make it possible for Americans to live as Americans should."

Now that we are progressing steadily toward our major objectives it is difficult to realize the conditions that existed only a few years ago. Our first task then was to halt the avalanche of foreclosures which had mounted to 1,000 a day and which threatened to destroy all sense of property values. But Congress and the administration proved equal to the emergency—the direst emergency this Nation had ever faced. The Government directly refinanced over 1,000,000 distressed home owners—the average delinquent 2 years in both principal and interest, between 2 and 3 years in arrears on taxes, and utterly without private credit—to the extent of more than \$3,000,000,000. It disbursed nearly \$1,000,000,000 to distressed banks and trust companies, more than \$750,000,000 to frozen building and loan associations, \$190,000,000 to finance and mortgage companies, more than \$160,000,000 to insurance companies, and more than \$750,000,000 to individual mortgage holders and estates in exchange for defaulted mortgages. By giving those institutions a large measure of liquidity, it allowed them to extend leniency to millions of home owners in addition to those whose mortgages were directly assumed by the Government itself. And a vast floor was placed under the entire real-estate market.

It would have been futile, of course, to stop with the refinancing of distressed mortgages. It was necessary to make future mortgages secure and to protect the savings of the Nation's thrifty people which always have been used to finance homes. The Government not only vitalized and expanded a reserve system for home-financing institutions but extended protection to the investors in those institutions by insuring their accounts. It extended home-financing facilities to all sections of the country which were not adequately served, and thus laid the groundwork for the housing development which was to follow.

To spur a still-lagging private industry in the building of new homes and the improvement of old, the Government began insuring the mortgages of private institutions. The year just ended produced the largest volume of residential building since 1929, approximating 450,000 to 475,000 urban dwelling units—a significant figure if we recall that at the bottom of the depression only about 50,000 urban dwelling units were constructed. Billions of dollars have been spent in the construction of new homes and the purchase and improvement of existing homes, because Government initiative led private industry to the housing well. Moreover, the owners of these new homes and of the rehabilitated structures of today are in a very different category from the home owners of yesterday. We have established an unbiased agency to which the average citizen, ignorant of the pitfalls and dangers of home buying, may turn for a measure of protection never before available to him. For the first

time in our history the basis of security for financing has been extended to cover such hitherto disregarded essentials as general planning, subdivision, school and store facilities, accessibility to work, efficiency of planning, economy and soundness of construction, and general stability for long-term amortization.

Largely through this emphasis on essential fundamentals, private industry is today producing well designed and constructed homes within the means of families with incomes of \$1,500 or less.

It has not been long since most home owners were owners in only a technical sense, staggering under a mortgage burden that allowed few ever to possess their properties debt free. Short-term straight mortgages were carried for only a few years and were renewable only at heavy fees; on top of these were second and third mortgages, bearing extortionate charges. But under the leadership of this administration there has been developed a new program of home ownership based on long-term, amortized, direct-reduction loans bearing the lowest interest rates in the Nation's history—a program which swept away second and third mortgages and saved home buyers hundreds of millions of dollars in interest alone. Not only were financing charges on homes reduced, but the standards set by Government-sponsored programs began to give American home seekers the kind of home they deserve.

While stimulating private industry to meet the needs of those of average income, the Government at the same time turned to the problem of slums and began to deal with the blighted areas which were the inevitable result of the unplanned growth of our great urban centers, decaying sections which are the forerunners of slums. It provided financial assistance through legally constituted public housing agencies, usually local housing authorities, to assist in the development of low-rent housing and slum-clearance projects which local authorities design, build, and operate on a rental basis. We all know the familiar quotation that "one-third of the Nation" lacks adequate housing, but this knowledge does not hide the truth that we had failed miserably in this country of ours to provide decent or even livable accommodations for those of low income. This administration took the first concrete step to overcome conditions which were a reproach to our civilization. Commitments aggregating two-thirds of a billion dollars already have been made to communities in 33 States, which will mean over 180,000 new, comfortable, decent homes for people who have been forced to live under conditions of which America has become at last aware, ashamed, and determined to end. And not only have homes been provided and a tremendous lift given to the construction industry, but the way has been pointed for private investment to go and do likewise.

Throughout all of America's increasing housing consciousness in recent years the major emphasis has been upon improving urban housing and wiping out city slums. This apparent lack of concern over the condition of the Nation's rural homes arises from the fact that rural housing is scattered over sparsely settled areas and, no matter how dilapidated and substandard it may be, it does not present the startling, ugly totals of congested urban slums.

Through years of abuse of our soil resources the earning capacity of much of our rural land has been depleted to a point where, even in periods of high farm prices, it is insufficient to support minimum standards of decent housing. This is particularly true of the South, where it has been said that approximately one-half of the farm population is housed in substandard dwellings. Public interest in the rural aspect of the slum problem must be awakened in order that the Federal Government may assume a responsibility comparable with its program for urban housing. Under pending legislation, a hundred thousand homes would be produced.

We have provided a cooperative credit system for agriculture, including funds for the construction and improvement of farm homes, which has loaned money to farm tenants, sharecroppers, and farm laborers to allow them to become farm owners. Some \$2,595,000,000 of farm mortgages have been financed, and today some 800,000 farmers are living in their homes because of aid granted by the Government. Some 750,000 farmers have received rehabilitation loans averaging \$350 each. About 140 rural-community projects are being operated under Government direction. And, in addition, grants for bare subsistence have been made to 200,000 families in extreme distress in farm areas devastated by drought, flood, and similar catastrophes. Like their cousins in the city, inhabitants of rural sections have been relieved of the burden of extortionate interest rates. To the farm owner and to the farm-home seeker also a new day has come.

It is with some pride that I review this recent history of ours, for I have been a Member of all the Congresses which enacted the major laws which have made possible these far-reaching programs—the Home Loan Bank Act, the Farm Credit Act, the National Housing Act, the United States Housing Act, and the Farm Tenancy Act. Knowing the lack of public realization of what has been accomplished, it is difficult to refrain from detailing more of our common story. It is sometimes difficult, too, not to stand on the record and be satisfied with what we have accomplished. The very volume of our accomplishment has made conspicuous the opportunities that now, more than ever, challenge our attention and demand remedial measures. These are the concern of every one of you meeting here today, and they have been your concern since the beginnings of the Central Housing Committee.

I do not intend to trace the entire history of this committee. Suffice it to say that President Roosevelt from the outset of his administration had sought coordination of the various governmental activities, as expressed in recent reorganization measures—first, through the National Emergency Council, and later through the National Resources Board, which he asked to submit a program for the coordination of projects of Federal, State, and local

governments. Proceeding on this basis, the Resources Board, in its 1934 report, directed attention to the many agencies and organizations in the housing field and the need of coordinating their efforts.

This report led to joint meetings of representatives of all housing interests, public and private, and the setting up of a Committee on Coordination. The committee, representing seven major agencies, found many other agencies of the Federal Government—even the War and Navy Departments—directly or indirectly concerned with housing construction or finance. It reported that information was lacking among executive officers of Federal agencies interested in housing as to what other agencies in the same field were planning or doing; that there was a reservoir of unused general and technical information and experience, which had been accumulated at public expense, whose translation into more fruitful accomplishment was dependent upon new avenues of release and cooperative action; and that no procedure existed which was designed to unify the activities of Federal agencies concerned with housing or to correlate and capitalize the results of their labor in research, planning, and administration.

The committee agreed that by taking the proper steps much expense could be saved, efficiency could be increased, overlapping and wasteful duplication largely eliminated, serious gaps filled, and unused resources put to work. It stressed the need of coordination, not superimposed but as a responsibility to be assumed, with a clear program, a simple flexible organization, and an intelligent leadership to insure a free exchange of the information obtained at public expense, and a proper unification of plan and objective.

As the outcome of these recommendations, and with the approval of the President, the Central Housing Committee became a going concern under its own power before the formal reorganization and realignment of agencies began. We can bridge the details of its many self-imposed tasks since 1935 when we look around today and witness not only the administrators of these housing agencies gathered together but likewise their principal technical assistants—not agency by agency but in specialized groups. And what is also significant, here also are interspersed leaders from other construction agencies and their technicians. I do not have to be told, Mr. Chairman, about the fruits of this movement, about the things that have been done, and are being done, for the common good. Even lacking your outstanding accomplishments the mere bringing together of executives in the different branches of the one field for discussion of their mutual problems, comparison of their procedures, and pooling of their technical resources cannot but lead to results of value to the Government as a whole.

One striking instance of this is apparent to all of us seated at these tables. In your exhibit the keynote is what the Government is doing for the home owner and the tenant, in city and country, and the names of the contributing agencies are not even mentioned.

Mr. Chairman, I have been following your own commendable procedure in emphasizing the whole by subordination of its component elements. Although to this point I have been addressing myself primarily to agencies concerned with housing construction and finance, my interest has been caught by the bringing together of housing people and technicians drawn from other agencies whose experience may bear on your housing problems or whose work may be helped by current cost-cutting developments in the housing field.

It is gratifying to learn that such working contracts have been established between the housing groups and many of the other governmental departments where specialized interests overlap, and the presence at this table today of leaders from these departments is, I hope, an indication that such contacts may increase and be of benefit to all concerned, even beyond the field of housing. This kind of an executive undertaking, with its possibilities of administrative economies, as well as of larger returns from appropriations and of increased efficiency, is something that the legislative branch can appraise and appreciate.

In this connection it may serve to point a moral if I tell you of another example of coordinated efforts which your versatile and resourceful chairman emeritus promoted. For decades the development of the National Capital was retarded for lack of adequate authorizations and appropriations—a situation due largely to the lack of any basic, coordinated program. The demands of diverse agencies and interests converging on Congress from many angles usually confused the issue or afforded an out when pressure was strong for funds in other directions. Some agencies having to do with the District flourished while others languished. A classic product of the period was the success of one group in bridging the Rock Creek Valley, while another interest was beginning to fill it. In the early twenties a Committee of One Hundred was organized to reconcile differences of opinion and approach on Washington problems and to develop coordination of effort. National and local civic and professional groups cooperated, 11 agencies of government were brought together, and a balanced, well-organized program was presented to the Congress. Within 2 years authorization and appropriations followed, and in the relatively brief span of 15 years nearly all of the desired objectives have been achieved by collective agreement.

Each administrator may feel that he has his own particular legislative mandate to pursue, but Members of Congress are not insensitive to conflicting policies or to programs which are not integrated, and I have cited a case history which has definitely proved the value of working "one for all, and all for one." If you can do as good a job in the organization of a national housing policy as in the setting up of this exhibit, you should go far.

I have called attention to the establishment of working contacts with the public. We cannot deal with such contacts solely as channels of outgoing influence for the accomplishment of your various programs. Interagency needs and advantages to agencies are trifling in the aggregate when compared to the needs of, and potential advantages to, the public we serve in its elements of the family, the body politic, and industry. All of which means that the fruits of research, and of experience as well, should be made available to those sections of the public in the form in which it will be of greatest applied value. Mistakes, frankly acknowledged and analyzed, may be as fruitful as your most-prized achievement, and both can be made to serve the man who is putting his all into a home; the municipality struggling to correct conditions; and the cross-roads carpenter-builder, whose capability and capacity concern a huge portion of our population.

The Central Housing Committee has been doing its work so modestly that, I am frank to say, it has engaged my interest as a wholly new type of procedure—of coordination by cooperation—in the direction of efficiency in administration; and I can see that it serves to bring together what you have well termed "working teams" in a manner that reorganization measures have not and cannot touch.

To produce results such cooperation must be wholehearted and must extend from the administrators down through the organization. Committees which produce justify their existence and warrant support; deadwood has no justification anywhere. I am especially impressed by the active interest and participation of agency administrators, notwithstanding the demands upon their time; but I know, and so do you, that the full measure of achievement can be realized only when every representative of every agency concerned with housing is working in complete harmony with every group contact. Harmony, I might add, is not a matter of organization but of spirit, and there is no substitute for personal interest or effort.

I cannot refrain from saying that since today you have unveiled your organization as well as your exhibit, I shall make it my business to keep in touch with your work; and I shall receive with keen interest submissions which bear evidence of having gone through the mill of the central housing committee.

Every goal you seek is possible if you have within you the strength that comes from unity. All I have to suggest is an extension of your good beginnings. What you have accomplished should serve as an incentive to greater achievements, the welding of one strong program by all the talent and energy and patriotism that is within you. For your work in the past your Government is grateful, but the future holds for you the gratitude of the whole Nation if you can accomplish the housing of all Americans as Americans should be housed.

## Money Disbursements of Wage Earners, Etc.

### EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, March 4, 1940

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial taken from the Washington Daily News of Wednesday, February 28, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### IN ONE EASY LESSON

The instructive exhibit which appears alongside this column is taken from a 358-page book just published by the United States Department of Labor and entitled "Money Disbursements of Wage Earners and Clerical Workers in Five Cities in the Pacific Region, 1934-36."

We commend it to the careful attention of thoughtful citizens. It is only part of a footnote prepared "for the reader who prefers an algebraic statement of the adjustment procedures followed" by the book's authors. It may, however, convey a rough idea of what a benevolent Government is doing to simplify and clarify the statistical material gathered by its bureaus and offered for the enlightenment of its grateful people.

In time, no doubt, other great national problems will be given similar treatment. Once they are all stated in elementary formulas like those above, with each weight varying appropriately from one economic level to another, it is apparent that our troubles will be over. Well, almost over.

Having glanced at this exhibit, you probably will exclaim: "Why did I ever think it was difficult to understand the Money Disbursements of Wage Earners and Clerical Workers in Five Cities in the Pacific Region, 1934-36?"

Don't be too hasty. Remember that what we present here is only a portion of only one of the book's 358 pages, and is intended only for the reader who prefers an algebraic statement of the adjustment procedures followed. Others, including the possible reader who does not prefer an algebraic statement of the adjustment procedures followed, will find the entire book a useful companion during the long winter evenings and short summer evenings as well. It may be obtained by sending 35 cents to the Superintendent of Documents, Washington, D. C., and asking for bulletin No. 639, United States Department of Labor, Bureau of Labor Statistics.

Mr. President, the stimulus producing this editorial is "The instructive exhibit" which was printed as a cartoon opposite the editorial, and which carried the following note:

News Cartoonist Talburt is on vacation. Hence this funny picture.

Those of us, like the editor, who are dependent upon others for much of our work can sense the consternation produced by the absence of the usually splendid and intelligent cartoon.

Here is the funny picture. Let us see what this funny picture is. The editor tells us:

It is only part of a footnote prepared "for the reader who prefers an algebraic statement of the adjustment procedures followed" by the book's authors.

It is, in fact, merely a symbolized statement explaining a statistical technique and meant for others trained in statistics. To me and the editor, such scientific symbols always seem funny; but are they? The age of laughing at the tools which scientists use in arriving at the result of their research we thought had passed. The funny picture is merely a footnote explaining a paragraph which in turn is found in an explanation of a table exhibited in the appendix.

The report from which the footnote is taken is a 109-page report dealing with a study of the money disbursements of wage earners and clerical workers in five cities in the Pacific region, 1934-36. The rest of the 358 pages of the book gives tables and other information gathered from which the report was compiled.

Society is complicated, and a study of money phases of society will, of course, be a complicated study; but we will no more understand society and solve its problems without study than will man master a disease without research. I know that the editor could not be thoughtless about these matters, but those who accept his deductions may be extremely thoughtless.

I pay 10 cents a week for the privilege of reading this editor's writings, and until February 28 I never felt that I did not have my money's worth. The editorial of February 28 left me with a feeling that I had been actually cheated. I do not want my money back, and I do not want to argue with the editor, because I know I am "licked" in that before I begin; but, as one public servant to another, can we not chat about this report and editorial?

Let us see if we cannot get at least something more significant out of the report even "in one easy lesson" if we read it to gain knowledge rather than to make fun. I am tempted to start out my comment on "In one easy lesson" with the phrase, "In one easy editorial," but I will not.

A study by the Bureau of Labor Statistics on Money Disbursements of Wage Earners and Clerical Workers in Five Cities in the Pacific Region, 1934-35, furnishes us with much-needed information. Far from confusing the average reader, as inferred in the editorial, the Bureau of Labor Statistics, in simple language, makes the following points with abundant clearness:

1. The average current expenditures of the families of wage earners and lower-salaried clerical workers in each of five cities on the Pacific coast ranged from \$1,469 in San Diego to \$1,657 in San Francisco (p. 7).
2. The families studied did not include any who had received direct relief or work relief during the year, or any in which the worker had less than 30 weeks of employment (p. 3). In other words, they are a relatively favored group.
3. In general, families of wage earners had more than \$2,000 of income only if they had two wage earners (table 4, pp. 15-16).
4. In every city more than one-quarter of the families operated at a deficit. In Los Angeles the proportion was more than 36 percent (table 11, p. 39).

We are all, of course, interested in the farmer. From the editorial, one would not discover that the report in question shed any light on his problem. Here is what I found from the report:

5. Families spend more for food than for any other item. In San Francisco, an average of \$550, or one-third of the income, is spent for food (p. 9). Of the families that have an income of less than \$400 per person (table 3, pp. 128 ff.), nearly half were unable to spend enough money for an adequate diet at minimum cost (table 15, p. 49).

From the public viewpoint, this information is important. It shows that agriculture need not despair, but also that its improvement depends upon urban buying power.

Everyone is interested in automobiles. The editorial failed to credit the Bureau with a helpful study, yet in the report I find:

6. Automobile ownership is especially common on the Pacific coast (p. 8). At even the lowest financial levels studied more than half the families in Los Angeles, for example, own cars (p. 220). This is good news to my colleagues from Michigan and other automobile centers. But then I find on the same page (table 13) that there is no market, even for second-hand cars, until families have the means to expend \$700 or more per adult person annually. Of the automobiles owned by the families studied in 1936, more than seven-eighths were 5 years old. Cars of more recent manufacture were not bought in even one-third of the cases until families had expenditures of \$700 per person. And thus we might continue for a long time.

I should say the editorial does state that the algebraic symbols it cartoons appear as a footnote. It is, in fact, a footnote in a technical appendix addressed to technicians. The symbols which were found so ludicrous are a brief method of describing the processes used by the Bureau of Labor Statistics. They are simple and easily understood by those who are likely to try to do another such job, or to readers who have the training to criticize the technical accuracy of the Bureau's results. I suggest that my colleagues look at page 2 of the United States Government Printing Office Style Manual (abridged), January 1939, if they want another useful example of a type of "short hand" with which every Congressman and printer is familiar, but which is Greek to the layman.

Actually, I wish to commend the Bureau for including in the report under discussion an exact statement of what it has done and how it has done it. The editor of every newspaper knows that the validity of a story must be judged in large part on the basis of its sources. Many students and critics of government reports have justly complained that government documents present conclusions without telling how they have been arrived at. Fortunately, there has been a growing tendency to include precise descriptions of sources of information and methods of procedure in government reports. Statistics and statistical methods can be made to yield us today's lampoon, but also they may help us to find tomorrow's solution to some of our problems.

### Interview With Msgr. Joseph F. Smith

#### EXTENSION OF REMARKS

OF

HON. L. L. MARSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview by Msgr. Joseph F. Smith, pastor of St. John's Cathedral at Cleveland, Ohio, granted on the occasion of his 75th birthday and published in the Cleveland Plain Dealer of February 8, 1940:

Between thoughts of the next world, Msgr. Joseph F. Smith, pastor of St. John's Cathedral, yesterday discussed President Roosevelt, Cleveland, communism, prosperity, and war.

It was the seventy-fifth birthday anniversary of the vicar general of the Cleveland Catholic diocese, who rose to the head of

the parish in which he was born when it was known as the bloody fifth ward.

Any trepidation the reporter had about discussing controversial topics at his first meeting departed after greetings were exchanged on the second floor of the cathedral house.

#### AGAINST THIRD TERM

What did Monsignor Smith think about a third term for President Roosevelt? That was easy. "I'm against it," the prelate said, definitely, his rotund body reclining in a simple, frame rocker. "No man is so important for us to feel it is necessary to give him a third term. We have a thousand men to select from who, with good management and wise advisers, can give us all we could hope for from our Government.

"It is dangerous to break down precedent of 150 years."

Monsignor Smith attacked the President's spending policy as interfering with, rather than bringing prosperity.

The monsignor said he believed the country was solving its difficulties and that he saw no reason why we could not have prosperity in the near future that will equal the very best periods in our history.

#### MUTUAL CONSIDERATION NEEDED

"For prosperity there must be a mutual consideration on the part of industrialists and labor unions," he said. "The hope for understanding might have been developed much better without all the Federal and State legislation of recent years."

Differences in those matters can best be settled by sitting around a table and discussing them "face to face," he said, adding that the laboring man essentially is honest, but has not the opportunities or education to grasp a situation as quickly as the industrial leader.

Communism will not take root here as long as there is freedom of religion, in the opinion of Monsignor Smith.

"Russian communism, dominated by hatred of religion, is the natural result of abuse of religion in the old Russian Empire," the monsignor said.

### The British Navy Is the Biggest Racket Since the Roman Legions

#### EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

ARTICLE BY ASHBY WILLIAMS

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely and enlightening article entitled "The British Navy Is the Biggest Racket Since the Roman Legions." This is a contribution by a distinguished member of the bar of Washington, D. C., Attorney Ashby Williams, as follows:

The Roman Empire, in its heyday, embraced all of Europe except that part occupied by the Germans, all of North Africa, and the western part of Asia. This vast territory was acquired by Rome as a result of the development of the Roman legions, and was retained by her by the Roman policy of "divide and conquer," that is, by fomenting discord among those who resisted its power. The result was that for approximately 700 years all these peoples paid tribute to Rome, and a favored group of Roman citizens lived in wealth, luxury, and idleness, while the great masses of the Roman people lived in poverty or slavery.

Great Britain, for the past three centuries, and particularly during the past 175 years, has been conducting the same kind of racket, except that while the Romans conducted their racket with the Roman legions the British have conducted their racket with the British Navy, and have maintained it by the same policy of fomenting discord amongst those who are not partners in their racket.

Great Britain has acquired one-fourth of the territory of the globe. This she has acquired and maintains through her Navy. Through her Navy she has developed a merchant marine which enables her to levy tribute in freight rates and commercial advantages not only against her possessions but against other countries whose goods are carried in her ships because they cannot compete with her racket.

The state which sustains a normal relationship with other states, relying upon hard work and economy as the guiding principles in the administration of its assets, needs no build-up to justify its existence and policy. On the other hand, a state which is engaged in a racket must justify its conduct in the eyes of its neighbors, or suffer a destruction of its racket. It is for this reason that we find that the British have, through the years, become most astute in the propagation of ideas intended to justify their racket in the eyes of the rest of the world.

For many years the British were obliged to rely exclusively upon their own means to justify a toleration of their racket by the rest

of the world, and as a result thereof they became the most astute propagandist in the world. Their most effective propaganda—at least so far as America is concerned, since most of us are of the same blood, religion, and habits as the British—has consisted in spreading the notion that whatever Britain did, by way of conquest, colonization, and trade exactions, redounded to the moral enlightenment of those people upon whom it imposed its will and levied its tribute. To the unthinking mind this is a powerful argument, but in reality it is wholly devoid of justification. The reason for this statement is as follows: A state which seeks to impose its will upon another, upon the ground that it is right and moral to do so, assumes, first of all, that it alone possesses the power to determine what is right, and, in the second place, its will is imposed, not because it is right, but because the state has the might. Such a state is, therefore, both an egotist and a hypocrite.

In the struggle for life, a state may impose its will upon another, but in such case it can never be said that it is done because it is right. It can only be done because the state has the power, and does it from necessity, whether right or wrong.

Mr. Chamberlain in a recent address in London wound up by saying: "May God give us the might to do what is right." In this one statement we find all the egotism and all the hypocrisy of the British racket.

While the propagation of the notion that the exploitation of other peoples by the British was in the interest of morality has been subtle and insistent, it has not been the only idea she has sought to propagate in defense of the racket. Of particular interest also has been the propagation of the idea that the British always live up to their obligations, a fact unsupported by evidence and the idea that the British are always fair and just to their adversaries, an idea wholly without foundation.

A study of British action will demonstrate that the extent of her perfidy is governed exclusively by the degree of her plight or the extent of her avarice. I can remember when the British killed thousands of innocent South Africans and took their country after gold was discovered. Before my time she had employed the same methods to acquire the riches of India. It is hardly conceivable that the other British possessions were acquired with the permission of the peoples involved.

It is possible to demonstrate that the capacity for propaganda cultivated by the British over a long period of time in defense and in justification of their racket has completely blinded the American people to the extent and character of the racket which has been, and is being, conducted by the British. This demonstration consists of the following: If you ask one hundred wholly uneducated people, people without any knowledge of history, geography, or philosophy, what their sentiments are, from 80 to 95 of these people will reply that they are all for the British. This in itself is sufficient to demonstrate that what they think and what they feel is not the result of any independent judgment based upon an examination of the facts of history, but upon what they read and hear spoken, this being in the main wholly pro-British and anti-German because of the propaganda mentioned above.

To what extent have we been suckers to the British racket?

The people in this country have paid tribute to the British from the very day that the first man landed at Jamestown. I do not ask you to accept my statement as to how the British exploited the Americans prior to 1776. In the Declaration of Independence Mr. Jefferson enumerated 27 abuses and usurpations imposed upon the people of these colonies by the British Government. Singularly enough, included in this number is one "for cutting off our trade with all parts of the world." Moreover, unlike the British and the American propagandist, Mr. Jefferson did not indulge in the erroneous assumption that these abuses and usurpations were imposed by the Government in England rather than by the people themselves, as will be observed by reading the next to the last paragraph of the Declaration of Independence.

After this Government was launched on its course, the British, in maintaining their sea racket, asserted the right to stop our ships on the high seas, search them and remove persons from them. I am very grateful that the Americans of those days had the hardihood to go to war rather than submit to such an affront. Nevertheless, I cannot forget that the British came up the Patuxent River, crossed to Bladensburg and marched into Washington, burning the Capitol, the White House, etc. The attitude of the British had not changed from the time Mr. Jefferson wrote the Declaration of Independence, because in that famous document he had said in 1776, speaking of the British sovereign, "He has plundered our seas, ravaged our coasts, burned our towns, and destroyed the lives of our people."

Now, I see that Great Britain has assumed the right to inspect the mail from this country direct to neutral countries, and is stopping our ships to take the mail off and examine it; she is taking our ships into waters which the Congress of the United States has forbidden them to enter, and is detaining them to suit her convenience; she is stopping our ships from neutral ports and searching to determine whether or not they carry exports having their origin in Germany, and if so, removing them.

In addition to the things I have enumerated, things which are open, obvious, and defiant in a much more subtle way, Great Britain, in the conduct of her racket, is levying tribute upon every American citizen. This she is doing in the following way: By making it impossible, due to the conditions, trade arrangements, and freight rates to and from the various parts of the British Empire, for the United States to maintain a merchant marine, with the result that much of the freight transported from and to this

country is carried in British ships, the British receiving the profit. Britain covers one-fourth of the territory of the globe, embracing about one-fourth of the people of the globe, and she owns about one-third of the world's shipping. Most of her population of about one-half billion have a standard of living far below that of Americans.

There is one other instance worthy of notice in which we played sucker to the British racket. During the World War we spent approximately forty or fifty billion dollars and lost, in dead and wounded, approximately 500,000 men. To what end, may I ask you, was this great sacrifice made? Certainly not for the benefit of America. As a result of this extraordinary sacrifice, at the end of the war, the British racket not only continued but hundreds of thousands of square miles of territory and millions of other helpless people were sacrificed to this British racket, which continued in full career.

What do I mean by the British racket? I do not mean simply that Britain has a great navy or that she owns great possessions. What I mean by the British racket is the British imperialism, which makes of England not a country sustaining a normal population and existing normally as a result of hard work and economy. The racket consists in the fact that England, through the possession of a great navy and the control of the seas, has actually exploited a great part of the world to the enrichment of the Empire, particularly England. The racket consists in the fact that she has been able to impose upon her possessions trade arrangements which have resulted in tribute to England, and in connection therewith, and because of the favorable trade situation occupied by her, the development of a merchant fleet with which no other nation on earth, including the United States, can compete.

The normal population for England would be approximately 10,000,000 people. I understand about 40,000,000 people live there. This is due to the imperialistic policy of England, just exactly like the imperialistic policy of Rome which resulted in subjugating and exploiting most of Europe, all of north Africa, and a part of Asia for several centuries for the benefit of imperial Rome.

Within itself such a policy of imperialism, imposing the will of a few upon the many and exacting tribute from the many for the benefit of the few, is destructive of world peace and harmony.

Geographically England is a part of Europe. Politically she is not. If England were a part of Europe in the true sense, Europe's problems could be solved. But it is impossible to solve any problems in Europe so long as the British racket continues, because European powers who are able to do so are bound in self-defense to destroy the British racket or become strangled by it.

The parallel between this rise, the exercise and the destruction of the Roman racket, and the rise and what now appears to be the destruction of the British racket, is a most striking and interesting one.

The only people in Europe whom the Romans could not conquer were the Germans. Gibbon speaks of the "war-like Germans, who first resisted, then invaded, and at length overturned the western monarchy of Rome." Therein, it seems to me, lies a deadly parallel proving that history repeats itself. Germany, much more than ourselves, has been paying tribute to the British racket, and if I am able to determine anything from current events, it seems quite apparent that a united Germany has decided to destroy the British racket once and for all and restore some semblance of order to Europe.

The British Navy is useless without the British merchant marine, and without the British merchant marine there would be no use for the British Navy. At the rate that merchant tonnage is now being destroyed, merchant tonnage not only of Great Britain but of all nations, the time cannot be far distant when the British racket will be destroyed. It is to be devoutly hoped that a sufficient number of men in public life, familiar with history, geography, and, to some extent, with philosophy, will correctly inform themselves in regard to the extent and vice of this British racket, so as to prevent British propaganda from again enlisting the enormous resources and manpower of this country in another effort to strangle the rest of Europe in the interest of the British racket.

The British racket has gone on so long and the British propaganda has been so successful in concealing its true nature, or morally justifying its existence, that the British themselves have lately had the effrontery to come out in the open and publicly defend their racket.

I refer particularly to the recent address at Chicago of Mr. Lothian, the British Ambassador, who unblushingly advocated the continuance of the racket on the ground of its moral benefit to the world, and urged the American people to become a partner in its preservation, although, mark you, not in its profits. In similar vein Mr. Churchill, in a recent address in London, had the unmitigated gall to advise Belgium, Holland, and other small neutral nations to join the British in the preservation of this racket, and Mr. Chamberlain, in trying to minimize the effect of Churchill's inept suggestion, had the pious effrontery to say that Britain would defend Holland and Belgium against aggression whether they asked for it or not. In other words, the British have actually convinced themselves that the British racket is a moral world crusade.

I oppose the British racket, and would like to see it destroyed because I do not want to see this country continue paying tribute to this racket, as it has done during all of its past history, and is doing today, tribute in men, tribute in money, tribute in property and service, tribute in disrupted foreign commerce, tribute in domestic and international moral disorganization, tribute in

the loss or destruction of liberty, tribute in the loss of everything we hold dear; and to what end? To the end that Britain may carry the goods of the world and take a rake-off from every pound for the benefit of a small group of Englishmen.

**Letter From George Washington Dennis, of  
Charlevoix, Mich.**

**EXTENSION OF REMARKS**

OF

**HON. FRED BRADLEY**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 4, 1940*

Mr. BRADLEY of Michigan. Mr. Speaker, we have heard it said many times, and unquestionably with justification, that many of our citizens have lost heart and now prefer to become wards of a paternalistic Government.

This morning I received a letter from one of my constituents which proves that this feeling of despair is not universal in our land. His attitude is that of millions of other sound, substantial citizens living in our rural communities. His letter which follows should be a word of encouragement to us all.

DEAR FRED: I received the little booklets all okey. Don't have any trouble on my little 47-acre farm. Can keep about 25 head of cattle on the alfalfa I grow on the 47 acres; don't need any county agent's advice. Just want to be let alone by these smart fellows.

I have owned my farm 41 years. I know best what to grow on it. Plenty stock, and keep the cow dung right on it, and when I want money from the bank, I always have milk on my pant legs and shoes; that's the security I put up and it always gets the dough. But, Fred, we've got to make a change. Things have gone far enough. We've got to make more babies and less mobiles and tractors. The killing of 25,000 people a year won't last always; these were every one consumers, they had better be on a farm than in the road in a car making Henry Ford more money. Put all idle men on a piece of tax-title land and farm it with his hands and a pair of horses, and he will sleep better at night. Fred, we've got to go back while there's a few left.

GEORGE WASHINGTON DENNIS.  
Route 1, Charlevoix, Mich.

Mr. Speaker, we shall never have a surplus of the George Washington Dennis spirit—such spirit is the backbone and hope of America.

**War Propaganda in Submarine Scares**

**EXTENSION OF REMARKS**

OF

**HON. LEWIS D. THILL**

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 4, 1940*

Mr. THILL. Mr. Speaker, many thousands of dollars contributed by American citizens were spent in speeding three destroyers and a Coast Guard cutter to the supposed aid of the British steamer *Southgate*. Apparently the *Southgate* had issued a false alarm when it sent out the wartime signal S S S, signifying a submarine attack. Seaplanes of the neutrality patrol sighted the *Southgate*, and it was unharmed. After sending out the S S S signal, which proved to be unfounded, the *Southgate* might at least have sent another signal calling off the searching party and preventing needless expense to the American people.

In the absence of any logical explanation of the behavior of this belligerent steamer in sending out a false distress signal, might it not be assumed that it is another attempt to propagandize the American people and make them conscious of a supposed submarine menace in American waters?

The following news item which appeared in the Sunday Star, March 3, 1940, discusses the mystery surrounding this incident.

[From the Washington (D. C.) Sunday Star of March 3, 1940]

**U. S. NEUTRALITY PATROL SEEKS EXPLANATION OF U-BOAT ALARM—  
SOUTHGATE IS UNHARMED; INDIGNATION EXPRESSED AT SILENCE  
DURING HUNT**

SAN JUAN, PUERTO RICO, March 2.—The United States neutrality patrol tonight sought an explanation of the apparent false alarm sounded last night by the British steamer *Southgate* in reporting she was being attacked by a submarine off the Virgin Islands.

After sighting the seemingly unharmed 4,862-ton *Southgate* today, seaplanes of the neutrality patrol prepared to take off again tomorrow to continue their investigation.

The patrol pilots seek some clue as to why the *Southgate* sent a distress signal and then kept silent while American vessels and planes spent a night and a day vainly attempting to learn her fate.

Some indignation was expressed over the *Southgate's* failure to make her safety known. It was estimated that thousands of dollars were spent speeding three destroyers and a Coast Guard cutter to her aid.

**FINDING OF SOUTHGATE FAILS TO SOLVE MYSTERY OF CALL**

Navy patrol plans which found the British freighter *Southgate* apparently unharmed yesterday left Washington officials puzzling over a new mystery of the war at sea.

Still unanswered were the questions whether a belligerent submarine was operating on this side of the Atlantic and had actually attacked the *Southgate*, or whether the message of distress early last night represented merely the latest of a series of baseless maritime scares that have occurred since the European war started.

Disposing of the possibility that an American submarine had been mistaken for a German U-boat, the Navy established that no United States submersible was in the vicinity—about 130 miles northeast of Puerto Rico.

**NO EXPLANATION**

Hours after the ship was located there was no explanation from her master for the wartime signal, S S S, signifying a submarine attack. The *Southgate's* wireless ignored requests for information, presumably because of unwillingness to betray the vessel's position should a hostile war craft be nearby.

In accord with procedure followed since the neutrality zone was created last fall, the Navy likewise maintained a protective silence, declining to divulge where the *Southgate* was found in midmorning.

**PROPAGANDA, FISH CHARGES**

Representative FISH, Republican, of New York, said that the report of the attack on the *Southgate* "is obviously part of a carefully planned propaganda program to influence American public opinion."

In an address, prepared for radio delivery, Mr. FISH said that "A month ago another British ship was reported as having been the victim of a German submarine off our coast, but when our destroyers sought to locate the victim it had vanished, only to turn up later in a British port."

"Unfortunately, some of the submarine propaganda emanates from the White House," Mr. FISH declared. "A few months ago it was announced from the White House that a foreign submarine had been sighted about 20 miles off Key West, Fla., by Navy patrol vessels."

**Let's Put America Back to Work**

**EXTENSION OF REMARKS**

OF

**HON. CHARLES HAWKS, JR.**

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 4, 1940*

**ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE**

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Senator STYLES BRIDGES, of New Hampshire, at the Lincoln Day banquet of the Lincoln Club at the Shirley-Savoy Hotel, Denver, Colo., Friday evening, February 16, 1940, as follows:

On Monday we celebrated the birth of a man whose name has become an American watchword. At that time the hearts of grateful Americans went out in gratitude to the man who united the Nation in her hour of need.

But the spirit of Lincoln is not something to be remembered each February. It is something that must live in the hearts of Ameri-

cans if our priceless heritage is to be preserved. We, as Republicans, must hold ourselves particularly responsible for the advancement of all that Lincoln symbolized.

The Nation has known many dark hours; but with indomitable courage and faith in themselves to surmount the difficulties that beset them our people have pushed ever onward.

A little over a hundred years ago, during the great depression of 1837, the great philosopher and poet, Ralph Waldo Emerson, wrote: "Society has played out its last stake. It is checkmated. Young men have no hope. Adults stand \* \* \* idle in the streets. None calleth us to labor."

During the last 10 years many Americans must have felt almost as despondent at times as did Emerson in 1837. After 10 years of depression we are still faced with mass unemployment, idle factories, idle funds, and idle farms. We are still faced with want and stagnation in the face of the greatest potential capacity to produce of any nation in the history of the world. It has been estimated that 10 years of depression have cost us over \$200,000,000,000 of our national income. That is a staggering sum beyond our understanding. Add to it 10 years of heartache and suffering, of hopes that have been shattered, of bitter disillusion and discouragement, and one begins to realize the tragic cost of this longest and deepest depression in our history.

The right of a man to work, to reap the fruits of his labor, and to care for his loved ones is his right to the pursuit of happiness. The right of a man to rise as high as he is fairly able through his talents and his labors is the right of opportunity Americans have always held so dear. The release of the creative energies of men is essential to the progress of the human race. And yet today millions of men are engaged in artificial work, of little value to themselves or anyone else, in order to earn their subsistence from the Government. Millions of workers are struggling to support their families on part-time work. Millions of farmers are dependent upon checks from the Government for taking land out of cultivation and for not producing. Is it any wonder that we have not achieved the more abundant life?

It is a primary duty of the Government of free men to assure them their right to work. And yet, after 7 years in office, the New Deal has failed to guarantee this right, not only to the unemployed but to millions of workers, farmers, and businessmen alike. After 7 years in office, it has no solution except more restriction of production and more subsidies to compensate for lack of work, subsidies raised by burdening present generations with oppressive taxation and future generations with staggering debt. An administration that is content to continue year after year to hand out subsidies without helping to put men back to work in the factory, the farm, or the mine is like a doctor who continually keeps his patient doped with morphine to ease the pain without attempting to cure him. Eventually the patient is in danger of suffering either from an overdose or of becoming chronically addicted to the use of the drug. America today is suffering from an overdose of New Deal policies.

But we need not become chronically addicted to the necessity of Government spending if we are given an opportunity to use our energies and our productive power to work to create a more abundant life for ourselves and a higher standard of living for all of our people. But America cannot go back to work in spite of the administration in Washington, or without its encouragement. She must have the active cooperation of all who hold public office.

Idle men can be put to work only through a revival of industry. Our primary duty to the unemployed is to make it possible for an expanding economy to provide them with jobs. But there is something else we can do besides providing them with temporary necessary relief. It is something that has been too much neglected. We can help the unemployed to fit themselves for the requirements of industry. We are approaching a point where there is an actual shortage of skilled labor in certain fields. Billions of the taxpayers' money have been thrown away on boondoggling experiments and pump-priming projects. You remember, for example, Passamaquoddy and the Florida ship canal. Far away as they were geographically, you in Colorado help to pay for them and other such projects. A group of women on the W. P. A. are now engaged in a survey to discover the location of the feminine waistline. You are helping to pay for that, too. If some of that money thus spent had been spent helping men and women on relief to learn useful trades and professions, they would be better prepared to take jobs in industry as they become available today.

If idle funds are to be put to work to employ idle men, the Government must adopt a program to encourage every legitimate investment. Today Government spending has taken the place of private spending in field after field. Private spending must be revived as the means of financing business if our system of private economy is to endure.

The Securities and Exchange Commission was established presumably to prevent fraud and speculation. Yet actually it has become an important reason for the lack of private investment. The cost of registering new securities with the Commission is far too high for the average company. The penalty for omitting required information is in itself enough to frighten away many who cannot afford shark lawyers.

During 1 week in January, the Securities and Exchange Commission announced a series of rulings placing new restrictions on the issuance of securities. The climax came when Chairman Jerome Frank announced on January 25 that the Board would begin to apply the famous death-sentence clause in the 1935 Utility Holding Company Act sometime in February. This was the provision that

was twice defeated in the House and passed the Senate by a margin of 1 vote. The compromise which emerged from the conference established no standards. It was so ambiguous as to give the Board almost unlimited powers in interpretation and administration. In all, over 1,600 companies will be affected.

The electric light and power industry alone is a \$12,000,000,000 industry that has functioned so well as to be the envy of the world. Today it is at the mercy of a board of five men. The S. E. C. must be preserved as an instrument for the prevention of fraud. But if our system of free economy is to be revived, if private capital is to be encouraged to finance business, the S. E. C. must not be allowed the power of life and death over the financing of industry.

If investment is to be encouraged, our entire tax structure needs to be revised not only to remove all deterrents but to encourage expansion and reemployment in business. Present surtax rates should be drastically reduced. They reach a maximum of 75 percent today as compared with 20 percent in 1926.

Today the investor is discouraged, because it is a case of "heads you lose, tails I win." He bears the losses by himself, but if he should make a profit, the Government gets most of it. This situation must be remedied before idle funds and idle factories can be brought together to put idle men to work. Actually, the Government will gain as well, because increased business will bring increased receipts at lower rates.

If business is to be put back to work, other steps are also necessary. The United States Government must be taken out of competition with its citizens. The Wagner Labor Act must be amended in the interests of industrial justice, peace, and progress. The hearings before the House committee reveal only too clearly why the Labor Board has not only failed to assure genuine collective bargaining to the worker but has widened the breach between capital and labor within the ranks of labor itself. The resulting industrial strife has not only worked hardship upon employer and employee but has added to the cost that you and I and every other consumer must pay. The Wagner Act—and this applies to every New Deal agency—must be administered by officials from whom the citizen is confident of fair and impartial treatment. They must be men who use their office to serve the interests of all of the people and not to conduct experiments upon society and our economic system. Only thus can confidence be restored in Government and business encouraged to go forward. Only thus can a revival of business bring higher wages and full-time employment to labor.

A revival of industry is no less important to agriculture. The farmer cannot go back to work, to producing to capacity instead of restricting his crops, unless the rest of the American people are able to consume and pay enough for farm products. But to this problem the New Deal has added others. It has harnessed the farmer with the Triple A, enforced a policy of scarcity, and attempted to tell him how to run his farm from the Nation's Capital. It was Jefferson who declared:

"Were we directed from Washington when to sow and when to reap, we should soon want bread. \* \* \* When all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become venal and oppressive."

The American farmer today is realizing the truth of this prophecy, uttered by the great founder of the Democratic Party which the New Deal party has ignored. After 7 years of restriction and regimentation, millions of our people are unable to buy as much food as they need, while the farmer is faced with shrunken markets and disastrously low prices.

The farmer must be freed from the strait jacket in which he has been placed by the New Deal planners. A farm program worthy of the name must be constructive, rather than destructive, based upon use rather than waste. It must be administered not by dictatorial decree but in the democratic way of the greatest possible self-government by voluntary cooperation. At the same time the farmer must be helped by the Government to place agriculture on a businesslike basis through improved methods of marketing and distribution as well as production. It must encourage the further development of cooperative marketing. It must stimulate the development of new industrial uses of farm products—an ever-widening field of potential markets for the farmer.

I have spoken so far in terms of groups of our people. And yet what affects one class of our citizens is of vital concern to every other group, for the welfare of each must depend upon the welfare of all. Whatever hurts one class of our people is bound to react upon others. The sooner we realize that industry, labor, and agriculture must hang together if they are not to hang separately, the sooner we learn that self-government and voluntary cooperation for the common welfare are the democratic alternative to coercion and regimentation by the Government, the sooner we shall achieve the democratic solution to our problems which alone can bring recovery and progress.

I wish also to speak tonight of two issues that are now facing the Congress which affect the lives of every American citizen and which are of particular concern to you in Colorado.

The first is the law authorizing the negotiation of the reciprocal trade agreements by the State Department which expires on June 12 unless it is renewed by the Congress.

In attempting to build up their case to show the blessings of these treaties, new dealers generally compare recent figures for imports and exports with those of 1932—the bottom of the depression. But this does not give an accurate picture, for the simple reason that the reciprocal trade program was not inaugurated until 1934, and did not become effective until 1935. By the time this

program was inaugurated our exports had increased by nearly one-third over 1932, while imports had increased over 14 percent. By the end of 1935—as the reciprocal trade treaties were just beginning to take effect, our exports had already risen over 42 percent above the 1932 level. Thus we were on the road to a substantial revival of foreign trade before the treaties began to do their work. In 1936 we had the first unfavorable balance of trade since 1893. By 1938 our volume of world trade was actually slightly lower than in 1932.

Proponents of the treaties are also fond of comparing imports from and exports to countries with whom treaties have been signed and those with nations with whom no agreement has been concluded. Here are some interesting figures on that. Let us take the first 8 months of 1939, to eliminate the effect of the war, and compare them with the same period of the year before. Exports to trade agreement countries fell 18 percent, while those to nonagreement countries rose over 14 percent. Imports from trade-agreement countries rose 15 percent, while imports from nonagreement countries rose 9.5 percent. During this period, at least, it would seem that the United States was faring better in the case of the countries with whom no treaty had been signed.

But the real burden of these treaties has fallen upon agriculture. Agricultural exports for the fiscal year 1939 fell \$69,000,000, or over 9 percent, from the level of 1932—the bottom of the depression. Moreover, agricultural products comprised only 2.3 percent of our total exports—in terms of percentage, the lowest for which we have any year on record.

Not only has agriculture been hardest hit, but the West has borne the brunt. In 1938, 424,000 head of cattle—exclusive of those for breeding—were imported. In 1939 the number rose to 754,000. In 1938 over 104,000,000 pounds of unmanufactured wool were brought into the country. But in 1939 the amount was nearly 246,000,000 pounds. In 1938 the number of pounds of hides and skins imported was a little less than 182,000,000. But in 1939 it was nearly three hundred twenty-three and one-half million which came in from foreign countries. Think what this means to the farmers in Colorado and throughout the West raising sheep and cattle. Think of the amount of American farmers that have been displaced by such a policy. Where can they turn for protection from the competition of peasant labor abroad, if not to their Government?

Under the present reciprocal trade program, tariff, taxation, and treaty-making powers—which are vested by the Constitution in the representatives of the people—have been surrendered to the President and to his Secretary of State. These concessions are extended—without the approval of Congress—not only to the nation with whom the treaty is concluded, but to countries which have made no concessions in return, indeed to all the world. This may further the goal of our idealistic Secretary of State, Mr. Cordell Hull, which is to bring about free trade throughout the world, but it does not make for the protection of the American farmer and worker. Under the program, Americans are denied all right of appeal to the courts of the Nation, a right which was guaranteed to them under the Tariff Act of 1930. The right of the individual to appeal to the court for the protection of his rights, and to test the constitutionality of a law by which he is injured, is one which Americans have always prized as essential to the preservation of their liberties. This is but one of several instances in which the right of appeal has been denied to our people by the New Deal.

New dealers would have you think that the Republicans brought about the world-wide collapse of 1929 and the depression which followed—and probably the present war indirectly—by the Tariff Act of 1930. That is no more true than that Secretary Hull's trade pacts achieved world prosperity and preserved world peace. But that is not the question. The point is that the interests of the American farmer and worker and businessman have been sacrificed in an attempt to bring about free trade. I readily admit that there has been more heat than fact in the discussion of the reciprocal treaties. But this applies to the proponents as well as to the opponents of the pacts.

However, there is this one fact that stands out like a shining light. It is that the proponents of the treaties cannot successfully argue that the treaties thus far have accomplished any good. Their contention is that when the present European conflicts are over then these treaties will work wonders—that it is because of a disordered Europe that they haven't worked wonders up to now.

I insist that we can't be shaping our economy for the day when peace reigns over all Europe. We have never known the time when there was not conflict over there.

The Republican Party from its inception has stood for the safeguard of the standard of living of the American people by an adequate protective tariff. It must do so today. It must assure them that competitive foreign products will not be sold in this country below the American cost of production. It must provide them with ample opportunity for hearings before the treaties are negotiated, and the chance to appeal to the courts at all times. It must return the power to ratify all treaties to the representatives of the people in Congress. And last but by no means least, if America is to go back to work all treaties must be negotiated upon the basis of true reciprocity, of mutual concessions and benefits.

The second question which Congress should face at this session is the result of its surrender of its control over our monetary system to the President. He may not have planned it that way

when he embarked upon the program of foreign purchases of silver and gold, but such has been the flood of these metals into the country that we now have nearly 3,000,000,000 ounces of silver and approximately \$18,000,000,000 worth of gold. By coincidence, the record achievement of eighteen billions in gold—which represents over two-thirds of the world's supply—came close to marking the sixth anniversary of the day that President Roosevelt, when he devalued the dollar, invited the rest of the world to send it over for \$35 an ounce. In about 3 months our gold hoard has increased by \$1,000,000,000. Treasury officials are lying awake nights wondering not only what to do with it but where to put it, because the recent flood has filled the Treasury's depositories almost to capacity. If gold continues to pour in at the present rate we may have to build another Fort Knox.

Today we have over two-thirds of the world's supply of gold—the greatest hoard of it ever known in history. Since the devaluation of the dollar, we have accumulated more gold by actual weight than we produced in this country from 1793 to 1939. We have increased our hoard by more than twice as much as the entire world produced from 1493 to 1850. Think of it!

What will happen when the war is over if we find ourselves in possession of nearly all of the world's supply of gold is a situation which administration officials do not like to face. Many of them concede that silver and gold alike will be of little value then.

The threat of such a possibility to you in Colorado and in the other mining States should be obvious. But it is a threat no less for all the American people who have paid so dearly for it. It seems to me I remember something about a legendary king who wanted everything he touched to turn to gold and was granted his wish—but he didn't enjoy doing so for long.

What we are doing now is to provide a temporary boom to the rest of the world, at the expense of the American people—as long as their supply of silver and gold lasts. The day of reckoning will come when we have stripped the rest of the world of these metals and are left holding the bag.

No one questions that we can and should protect our American miners of silver and gold. But it is to their interest as well as to the interest of all the American people—and, in the long run, to those of the entire world—that this fantastic policy be stopped. It cannot be done completely all at once without disrupting the currencies of the world; but it can and must be accomplished gradually if monetary values in the United States as well as in other nations are to be preserved.

We can put America back to work only by returning to sane and sound fiscal and economic policies.

We can put America back to work only under an administration that will seek to substitute freedom for regimentation, justice for arbitrary abuse of public power, opportunity for restraint, and tolerance for animosity on the part of those who hold office toward entire classes of our citizens. There is no other way to put idleness to work, to replace scarcity with abundance.

If we are to put America back to work, we can do so only by releasing the stifled energies and initiative of our citizens. No people are any stronger than the individuals who compose its people. If we release the potential powers of 130,000,000 people long famous as the most energetic and enterprising in the world, there can be no limit to the heights we may attain.

The true American tradition of individualism is not, as many new dealers would have you think, a philosophy of each man for himself and the devil take the hindmost. It is, rather, progress through the contribution of every individual to the welfare and prosperity of all. The strength of a free people will depend upon their unity in the common cause of going forward together.

Together we can and will work out the solution of the problems that beset us. How can new dealers talk of surplus labor when there is so much to be done? Together we can and will put Americans back to work in the achievement of a higher standard of living for all of our people and in the building of a better America, an America that is once more the envy, the inspiration, and the hope of the world.

## Anthony Wayne Memorial Parkway

### EXTENSION OF REMARKS

OF

### HON. GEORGE W. GILLIE

OF INDIANA

### IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

### EXCERPTS FROM RESOLUTIONS AND TELEGRAMS

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include several excerpts from recent resolutions and telegrams from various civic, historic, and memorial bodies in Fort Wayne, Ind., endorsing the Taft bill (S. 2441), which provides for a Federal survey of the military route of Gen. Anthony Wayne, preliminary to the

construction of a memorial parkway through Ohio and Indiana, and of a permanent shrine to General Wayne in Fort Wayne:

[Indiana Anthony Wayne Memorial Commission, February 3, 1940]  
The State Anthony Wayne Memorial Commission endorses United States Senate bill, 2441, providing for a survey of the proposed General Anthony Wayne Memorial Parkway, survey to include an estimate of the cost of construction of an appropriate national parkway on this route, and plans for designing and constructing a permanent memorial in the city of Fort Wayne, Ind., to Gen. Anthony Wayne.

BESSIE K. ROBERTS, *Chairman*.  
WALTER E. FREDERICK, *Secretary*.  
A. J. MCANDLESS.  
A. W. KETTLER.  
CARL J. SUEDHOF.

[Fort Wayne Anthony Wayne Memorial Commission, February 7, 1940]

The Fort Wayne Anthony Wayne Memorial Commission, appointed by the mayor by act of city council, in meeting held February 7, 1940, endorsed Senate bill S. 2441, introduced by Mr. Taft, May 17, 1930, which provides for a survey of the proposed General Anthony Wayne Memorial Parkway, and for plans for designing and constructing a permanent memorial in the city of Fort Wayne to Gen. Anthony Wayne.

Carl J. Suedhoff, chairman; Josephine Zimmerman, acting secretary; H. F. Gerdorn; E. W. Waltke; Earl Moss; Louis A. Warren; John C. Trier; W. C. Swartley; Edward B. Henslee; Mrs. William J. Gross; Bessie K. Roberts.

[Allen County-Fort Wayne Historical Society, February 6, 1940]

The Anthony Wayne memorial committee of the Allen County-Fort Wayne Historical Society endorses Senate bill No. 2441, introduced by Senator ROBERT H. TAFT, of Ohio, May 17, 1939, providing for a survey of the General Anthony Wayne Memorial Parkway and the location of a suitable and permanent memorial to Gen. Anthony Wayne in Fort Wayne.

Members of the committee are Dr. Jessie C. Calvin, chairman; Willis Richardson; Verlin J. Harrold; Roy Welty; John Craig; Robert C. Harris; Mrs. Hilda Thompson; Kathryn Troxell; and Mary Catherine Smeltzley.

Mrs. HILDA THOMPSON, *Secretary*.

[Eastside Community Association, Fort Wayne, Ind., February 9, 1940]

The executive board of the Eastside Community Association, of Fort Wayne, Ind., endorsed Senate bill No. 2441, introduced by ROBERT H. TAFT, May 17, 1939, which provides for a survey of the proposed General Anthony Wayne Memorial Parkway and for plans for designing and constructing a permanent memorial in the city of Fort Wayne to Gen. Anthony Wayne.

E. W. WALTKE, *President*.

[Fort Wayne Woman's Club, February 19, 1940]

The Fort Wayne Woman's Club, an organization of 800 women affiliated with the General Federation of Women's Clubs, at meeting of the board of directors on Tuesday, February 13, endorsed the Taft bill, which provides for a Federal survey of Anthony Wayne's military route and for a permanent memorial in Fort Wayne.

Mrs. WALTER JONES, *President*.

[The Fort Wayne Council of Community Associations, representing 17 Fort Wayne, Ind., community associations, February 27, 1940]

FORT WAYNE, IND., February 27, 1940.

HON. GEORGE W. GILLIE,

*House Office Building, Washington, D. C.*

DEAR SIR: Whereas the city of Fort Wayne owes its beginning to the signal military achievements of its founder, Gen. Anthony Wayne, and the historical importance of the site upon which the city of Fort Wayne was established, October 22, 1794, is enormous; and

Whereas this site at the headwaters of the Maumee had been, for centuries, a post of extraordinary importance to the Miamis, and had been their crossroads and Glorious Gate; and

Whereas President George Washington early recognized the ancient Miami stronghold at the junction of our rivers as a post of extraordinary importance to the Union and perceived the vital necessity of its being brought securely under American control; and

Whereas Gen. Anthony Wayne succeeded in the military assignment here with which President Washington commissioned him, after two earlier attempts had failed; and

Whereas General Wayne bulwarked here a fort commanding the headwaters of the Maumee which symbolized an American sovereignty that was to prevail; and

Whereas General Wayne's victory over the British and Indian forces here had the effect of preserving the entire western country as an important part of the American Republic, which otherwise would have lost this country to the British Empire; and

Whereas considerations of patriotism and the obligations of each generation to conserve and bequeath historic heritages are important factors of maintaining a national culture and civilization; and

Whereas a site of such extraordinary historical importance is worthy to be appropriately and permanently memorialized by the entire population of a republic eternally in the debt of the heroic Wayne and his courageous soldiers; and

Whereas the Federal Government has displayed a gratifying interest in the proposal to create such a memorial and has created a Federal Anthony Wayne Commission pursuant to act of Congress; and

Whereas the Governor of the State of Indiana and the mayor of the city of Fort Wayne have each created State and city Wayne memorial commissions to cooperate with the Federal Commission and in general to further the project of constructing such memorial; and

Whereas the natural first step in all such cases is a governmental survey to locate sites, make surveys of ground, and determine the general nature of memorial structures for the purpose of submitting to Congress recommendations of the necessary appropriations; and

Whereas there has been introduced into the Congress of the United States by Senator ROBERT H. TAFT, of Ohio, a bill listed as S. 2441, authorizing and directing the Department of the Interior to make such a survey, specifically designating that a suitable and permanent memorial "in the city of Fort Wayne" is to be included in such survey; and

Whereas the State commission appointed by the Governor and the city commission appointed by the mayor, as well as numerous unofficial bodies and organizations, have endorsed the said Taft bill, S. 2441, and urged its enactment by the Congress of the United States: Now, therefore, be it

*Resolved*, That the Fort Wayne Council of Community Associations, representing citizens throughout the city of Fort Wayne, Ind., does hereby add its endorsement to the said Taft bill, S. 2441, and does petition the Congress of the United States to enact said bill in furtherance of said memorial to Gen. Anthony Wayne.

Sincerely,

FORT WAYNE COUNCIL OF COMMUNITY ASSOCIATIONS,  
By HERMAN F. GERDOM, *President*.  
CHESTER W. KEEN, *Secretary*.

## Discriminatory Freight Rates

### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ARTICLES BY J. LACEY REYNOLDS

Mr. BOREN. Mr. Speaker, I want to present a series of four articles from the Tulsa World with reference to the inequality of freight rates between geographical areas of the United States.

Mr. Reynolds, who is the author of these articles, is a young man of keen intellect and thorough methods. I feel this timely information on this very important subject deserves the careful study and attention of every Member of Congress. I particularly feel that the author of these articles presents a viewpoint which is worthy of careful examination and thoughtful consideration.

The articles are as follows:

WASHINGTON, D. C.—The Temporary National Economic Committee will delve into the interterritorial freight-rate problem in hearings slated to begin some time next month, it was learned today.

The study will deal with the broad effects of discriminatory freight rates on regional competition, and will demonstrate, by concrete cases, how the South, Southwest, and West have been hampered industrially.

The coming hearings should be of tremendous benefit to these regions in their struggle for a lowering of the general freight level, particularly at this crucial stage of the fight.

The Temporary National Economic Committee's preliminary work is being done under auspices of the Federal Trade Commission, with the aid of transportation experts borrowed from other governmental agencies.

The discriminatory freight-rate problem is a major phase of the Trade Commission's general study of competition and the relative efficiency of big and little business. In developing this theme

Federal trade economists ran into the regional freight-rate situation and could not ignore it because of its bearing on the general economic picture.

The Temporary National Economic Committee investigation is expected to prove what southern business and political leaders have long argued, namely, that discriminatory rates can blight the economic development of whole regions of the Nation, and can be used by powerful interests to subjugate vast areas and populations.

The significance of the T. N. E. C.'s undertaking cannot be overestimated because of the bearing it is likely to have on the all-important investigation of railroad class rates in the South, Southwest, and West, which is being conducted simultaneously by the Interstate Commerce Commission.

Announcement of the T. N. E. C.'s plans comes at a time when the Interstate Commerce Commission investigation is threatened by opposition of hostile interests from within and without the South.

Veterans of the southern freight-rate fight say that the Interstate Commerce Commission investigation represents the culmination of their long campaign. It must continue if the campaign succeeds, they insist.

To understand the relationship between the T. N. E. C. study and the Interstate Commerce Commission investigation, and particularly the urgency of the latter, it would be well to review the whole southern freight-rate fight to date.

Long-time discontent over the high level of southern freight rates came to a head May 26, 1937, when the Southeastern Governors' Conference, consisting of the chief executives of eight southeastern States, filed a complaint with the Interstate Commerce Commission.

The complaint, which later became known as the Southeastern Governors' case, alleged that freight rates on a list of some 30 commodities moving from the South into the rich northern and eastern markets of so-called official territory, were higher than rates on this traffic moving similar distances within official territory.

The Governors said, in effect, that their industries had to pay more to get their products to market than did their competitors located within official territory.

The Governors' case was given tremendous impetus by publication of a study of discriminatory interterritorial freight rates by the Tennessee Valley Authority, which was sent to the White House on May 28, 1937, only 2 days after the Governors' case was filed.

This study, titled "the Interterritorial Freight Rate Problem of the United States," showed that the general level of freight rates in the South was more than 30 percent higher, and in the Southwest nearly 75 percent higher than in official territory.

When the Governors' case was decided late last fall, a majority of the Interstate Commerce Commission granted the South reductions ranging up to 45 percent on 11 of the commodities involved, and dismissed the complaint regarding the remainder.

Despite the division within the Commission (the vote was 5 to 4, with two commissioners not participating), the decision was hailed as a great victory for the southerners in their fight.

It was a great victory indeed, but southern freight-rate experts were quick to point out that it did not begin to solve the South's fundamental freight-rate problem. They asserted that the class-rate investigation which the Commission had instituted on its own volition in the meantime, carried the real hope of the South, as well as other less-favored regions.

The Commission ordered its own class-rate probe last year after a southern freight-rate bloc in both Houses of Congress had succeeded in putting into the transportation bill a freight-rate amendment.

The amendment directed the I. C. C. to investigate the situation, but as yet it has not become law. The bill was not reported out of conference committee before Congress adjourned last August, and, indeed, it still remains there but is slated to be reported out soon.

Incidentally, final enactment of the transportation bill is expected to bolster the determination of the I. C. C. to continue its investigation, despite the opposition of certain interests in the South as well as the North.

The Southeastern Governors' case is deficient as a remedy for the discriminatory freight-rate situation for a number of reasons, southern rate revisionists assert. First, it covered only a comparatively few commodities. It has been estimated that the commodities on which relief was obtained represented less than 3 percent of the volume of production in the South from the standpoint of value.

Secondly, the southern industries involved were established industries. Although no effort is made to minimize the importance of obtaining equal freight-rate treatment for established industries, nevertheless the case was not comprehensive in that it afforded no relief—except insofar as it constituted a precedent—for new, struggling industry, or for future industry.

Thirdly, the rates involved were chiefly on raw materials and semi-finished products or heavy goods, not high-class finished products. Many southern economists insist that if the South is to attain a balanced development and permanently emerge from its low-wage, low-income status, it must also encourage and promote industries which will produce finished products—watches, perfumes, chemicals, ceramic products, glassware, and like articles. Only this will permit the necessary recasting and rebalancing of the whole economy of the region.

Finally, the Governors' case had little effect in pulling down the high general level of southern rates. The reductions were excep-

tions to the general level and did not involve a substantial lowering of that level.

Where the Governor's case was weak in these respects, the I. C. C.'s class-rate investigation is strong. The range of commodities is infinitely more comprehensive in the investigation. Practically all southern industry—and not merely established, going industry—is affected.

Furthermore, industries turning out finished products moving under so-called class rates are the main concern of this study, and not merely processors of semifinished goods or producers of raw products. Also the general pattern of freight-rate construction is at stake and not merely a few deviations from that pattern.

In this latter connection, southern revisionists point out that a revision of the general system of rates is the crux of the whole freight-rate problem.

Under the present system, the burden of the high general level of rates falls on new industry, and new industry is the main hope of the South and Southwest.

New industry must bear the greater burden involved in the high general level, until it has attained sufficient size and volume to obtain an exception from the general rate level by filing a Governor's case.

Since the class-rate investigation is the only method of obtaining a revision of the general freight level of the South and Southwest, and since that level must be reorganized if new industry is to be given the chance which it enjoys in the North, the investigation must be prosecuted to the fullest, it is said.

Members of the southern freight-rate bloc in Congress recall that the T. V. A.'s study of interterritorial freight rates gave impetus to the Southeastern Governors' case affording a broad, general background against which the technical maneuvers could be successfully executed.

They hope fervently that the coming T. N. E. C. study will do the same for the I. C. C.'s class-rate investigation.

WASHINGTON, D. C.—Senator LISTER HILL (Democrat, Alabama) charged today that the Southern States Industrial Council and allied raw material and heavy-goods industries of the South were attempting to "sabotage" the Interstate Commerce Commission's all-important investigation of class rates.

Having obtained fairly low competitive freight rates for industries which it represents, the council is, in effect, attempting to block freight-rate reductions for other industries in the South—present and prospective, he said.

HILL, a leader in the fight of the South and Southwest to obtain tariffs which will enable these regions to compete with the industrial East, was vigorous in his denunciation, asserting that the council was "seeking to profiteer from the South's freight-rate fight, at the expense of other southern businessmen."

In his attack, he was joined by Representative ROBERT RAMSPECK (Democrat, Georgia), leader of the House freight-rate bloc; Senator A. TOM STEWART (Democrat, Tennessee), Representative LYLE BOREN (Democrat, Oklahoma), and other Congressmen from the South and Southwest.

RAMSPECK scored the council's attitude toward the I. C. C. investigation as "selfish," and said it showed "a reckless disregard for urgent needs of other industry in the region."

The Southerners' ire was aroused by proceedings of the council's transportation forum, held at Atlanta last month, as reported by C. E. Widell, of Nashville, chairman of the organization's transportation committee. Incidentally, a similar meeting is to be held at Birmingham in the near future.

Commenting on the I. C. C. investigation, Widell wrote: "Except for the political aspect of these cases, it is felt that little, if any, need actually exists for such drastic ventures into the field of our rate structures as contemplated in the pending proceeding."

Senator HILL quoted Widell as saying that "the subject is not of such serious proportions as to justify the widespread proceedings as instituted by the Commission."

Considerable sentiment was reported among the representatives of "basic industries"—industries producing primary raw materials or semifinished products—against "the wisdom at this time" of the class-rate investigation.

Widell also said there was "great apprehension that any drastic reduction in class rates throughout the South, Southwest, and western trunk-line territories would result not only in virtual bankruptcy for most of the roads of these territories but ultimately would lead to institution of further investigations of the basic commodity-rate structure in these sections in the effort to find sources of additional income for southern and other carriers hard pressed to meet outstanding obligations."

Senator HILL described this as an attempt to "pooh-pooh out of existence the very obvious discriminations suffered by the South."

Discussing the forum's reference to the political aspects of the freight-rate problem, HILL recalled that this is also the battle cry of northern interests opposing the South's fight for freight-rate equality.

"If the council is successful in sabotaging this investigation," said the Alabamian, "the ordinary businessman, the worker, and the farmer of the South will consider it a stab in the back at a crucial moment when they are about to obtain freight-rate equality and the right to develop industrially."

"I warn the council that the deep-seated determination of the people of the South, Southwest, and West to attain their rightful place in the economic sun is not to be trifled with at this time," he said.

"Testimony before a Senate subcommittee studying the regional freight-rate problem last year disclosed that the South already enjoys low commodity rates on raw materials destined for northern markets. We have competitive rates on lumber, logs, brick, sand and gravel, pig iron, coal and coke, and other such commodities, for example.

"But on semifinished products our rates to the North were somewhat higher, and on high-grade manufactured products ridiculously higher than rates for similar distances within the North.

"This picture must be kept in mind if we are to understand what is happening to our economic set-up under the present freight-rate structure. For it means we are exporting most of our raw materials—our irreplaceable natural resources—to the North. As long as we permit this without balancing it off with other types of production, we shall continue to bear somewhat the same colonial relation to the North as India bears to England.

"For no more compensation than the crumbs from the table," Senator HILL continued, "we are shipping our raw materials north to be manufactured into finished products when we could more economically do the fabricating in our own region and thus make the tremendous profits involved, for distribution to our own businessmen and workers."

He said he believed there was no basis for the council's apprehension that transportation charges on raw materials would have to be increased if rates on finished products moving under class rates are reduced to northern levels.

"I believe northern manufacturers want our raw materials, and for that reason have countenanced the low rates necessary to move this traffic," HILL said. "As their lesser resources are exhausted, they will continue to need our raw materials, and will, therefore, not insist upon increasing transportation charges on them."

The Senator also pointed out that the South's great extractive industries are absentee-owned, and said that it was "highly improbable that their northern proprietors would urge freight-rate increases that would diminish their profits.

The Alabamian recalled that the Southern States Industrial Council supported the Southeastern Governors' case, which was decided last fall in favor of the South.

"That case concerned rates on a relatively few raw materials and semifinished products," the Senator asserted. "The relief which we obtained there is welcomed, and the council is to be congratulated on its support, but it must recognize that the South is also interested in rate reductions on finished products.

"Thus we will assist the small struggling businessman now engaged in this type of manufacture, and also encourage new industry of this kind to establish there, for the benefit of the region as a whole."

The I. C. C.'s investigation of class rates, under which most finished products move—particularly those produced by the smaller struggling industries—is necessary if the South is to become more than a colonial producer of raw and semifinished materials, he said.

"The idea of opposing an investigation of class rates which are admittedly discriminatory against the South and West on the theory that their readjustment might disturb existing low rates on raw materials seems absurd to me," commented Representative RAMSPECK, in connection with the council's stand.

"It indicates a defeatist attitude toward the future of the South, or a desire that the South be kept as a section devoted primarily to agriculture and the sale of its natural resources as raw products.

"It forecloses the opportunity for the proper development of industries making finished products," he continued. "It seems to me that those advocating this policy must be doing so solely upon a selfish basis and with a reckless disregard for the urgent need for industrial expansion of the South."

Senator HILL was chairman of a special freight-rate committee of the Senate investigating the interterritorial freight-rate problem last session.

In concurring in the views of HILL and RAMSPECK, Senator STEWART pointed out that a majority of the representatives listed as attending the council's Atlanta transportation forum—22 out of 40—were representatives of railroads.

"One of them was a district freight agent for the Pennsylvania Railroad," said STEWART. "Naturally, we could not expect much assistance in our fight from a railroad which is exclusively eastern and which operates not a foot of line in the South."

## Nebraska's Seventy-third Birthday

### EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

ARTICLE FROM THE LINCOLN (NEBR.) STAR

Mr. STEFAN. Mr. Speaker, Friday, March 1, marked the seventy-third anniversary of the admission of my State of

Nebraska into statehood, and I feel that the record will not be complete without making some mention thereof. The statehood anniversary of my State has always been an important event so far as I am concerned due to the fact that my birthday anniversary occurs on March 1. I feel it has been a great privilege to have been a citizen of the great State of Nebraska for over 50 years and to have the privilege to represent the third district of my great State in this House of Representatives. Mr. Speaker, Nebraska is a great State and has a great history. It has contributed much toward the great story which can be found in the long history of our great Republic. J. E. Lawrence, editor of the Lincoln Star, has recently written some interesting things about Nebraska's admission to statehood, and with the permission of the Speaker and the Members of this House, I include the Star article in my remarks in order that this interesting story of my State can be preserved for the record:

#### THESE PLAINS

Seventy-three years ago Friday, in the White House in Washington, the pen of President Andrew Johnson traced itself upon the parchment paper of an Executive proclamation. It was the climax of a struggle which had precipitated bitter congressional debate between slavery and abolitionist advocates. For on March 1, 1867, Andrew Johnson signed his name to a document which made Nebraska a member of the Union of States—the thirty-seventh to be admitted.

#### DEFINING ITS BOUNDARIES

The boundaries for the new empire, which was carved out of the remnants of the Louisiana Purchase, were set forth in the customary technical language of the survey. With only slight variations, the survey lines described follow the present boundaries. The only changes made were to the northwest and the north, where a shift in the winding channel of the Keyapaha River deprived Dakota Territory of a 5-mile strip and added that much to Nebraska. Along the east, also, the changeable and turbulent Missouri, shifting its course during spring floods and eating into the adjoining bluffs, made minor changes.

#### TRULY BREATHING SPACE

But on that day the relatively few thousands here, and many more in older settled States, saw in the admission of Nebraska to statehood the opportunity to pick up life again where there was unlimited cheap land, which, during a trial period of 13 years, had demonstrated its fertility, and its ability to produce crops. The hunger for land then strangely was no less acute than it is today. The Homestead Act had been passed, and became effective in 1862.

#### WAITING FOR WAR'S END

In the immediate following year the western movement was restrained because so many men, young men, had been drawn into Army service. But between 1863 and 1870, in the interim during which Nebraska became a State, there were 103,000 entries under the provisions of that Homestead Act, embracing approximately 12,000,000 acres of land. Much of that lay within the boundaries of the new State. Much of it now represents the very choicest farming land in this section of the plains, land that has been farmed continuously for 65 to 70 years, and from which has been taken immense quantities of grain.

#### TIDES OF MIGRATION

That amazing and colorful influx of people is set forth so clearly by the census figures. Two years after Nebraska became a territory, in 1856, the population figure is given as 10,716. There is no reason to cast doubt upon the authenticity of that census, although the difficulties under which it was taken must be recognized. People were on the march. The long caravans which wound along trails leading over the prairies, increasing in size and numbers as a result of the fever of the gold rush, increased the population during the summer months because some of those headed for California gave up and remaining here. But the winters, particularly the winter of 1857, when the cold was most bitter, inspired an exodus of hundreds of settlers. And the thin fringe of civilization spreading westward was subjected to frequent change through heavy loss of life as a result of epidemics and sickness.

#### NEARLY FIVE TIMES

In 1860, 7 years before Johnson's proclamation, the official census gave Nebraska 28,841 people. That period from 1861 to 1865 was one of great anxiety here on the plains. The able-bodied men capable of bearing arms had been drawn into military service. Their departure for the South, in this instance for Missouri, encouraged a new boldness on the part of the Indians. Throughout all the Territory there were recurring rumors of Indian uprisings, and protests flooded into Washington against leaving the settlers here exposed to attack by hostile tribes. As a result, there was little gain in population until the close of the war in 1865. Then the men mustered out headed West. In 1870, 3 years after Nebraska had become a State, its population embraced 122,993 people.

#### DELAYED FOR DAYS

All of the pride of those settlers, who had been clamoring for recognition as a State, was put to a test. Although Johnson

signed the proclamation on the 1st day of March, it was not until 2 weeks later that it was published officially in the Territory. In the issue of March 14, 1867, of the Brownville Advertiser, it appears in full, without any comment or explanation.

#### SEWARD WAS PRESENT

The circumstances surrounding that ceremony which made Nebraska a State was somewhat vague. Johnson signed the proclamation in the presence of William H. Seward, at that time Secretary of State, and a prominent member of Abraham Lincoln's Cabinet. Also in Washington on that March day were John M. Thayer and Thomas W. Tipton, who had been designated as Senators to represent the State, and T. M. Marquette, who had been chosen Congressman. Apparently they were not present when Johnson gave the final flourish to his pen.

#### EVENTFUL 12 MONTHS

Momentous developments were taking place in the United States in 1867, as well as on the plains, where their echoes were muffled by lack of communication facilities. On the same day Andrew Johnson signed the Nebraska proclamation, the Reconstruction Act received the approval of Congress to usher into the war-ravaged South the era of carpet-baggers. There was no let-up for Congress. The Thirty-ninth Congress terminated its labors on March 4, and on the same day the Fortieth Congress was organized with the latest State, Nebraska, included in its membership.

#### FOUNDATIONS LAID HERE

On the closing day of March there transpired an event which had its inception on the prairies. President Johnson announced the ratification of a treaty with Russia, under the terms of which the United States bought all of Russia's North American possessions for \$7,200,000. As a forerunner to that purchase, the Russian crown prince had been brought to Nebraska territory and entertained at a big-game hunt.

#### CONTINUING REPERCUSSIONS

That first year of statehood for Nebraska contained all of the elements of a paradox. In middle May, Jeff Davis was admitted to ball in the sum of \$100,000, supplied by Horace Greeley and others. Early in June, the Archduke Maximilian, titular emperor of Mexico, was shot by order of the Mexican Government, after remonstrances by the United States had compelled France to withdraw its support from Maximilian. Then in August, President Johnson required Stanton, the Secretary of War, to resign, a request which Stanton first refused, and which was followed by action of the President to suspend him and to name General Grant as his successor. In the closing days of December an effort in the House of Representatives to impeach President Johnson failed by only the narrow margin of three votes, and on the closing day of the year it was announced that the national debt was \$2,740,000, of which \$1,120,000 was bonded, and the remainder was made up of greenbacks, treasury notes, and fractional currency.

#### SCARCELY A RIPLE

News traveled slowly, and distances were great. Only the most abbreviated accounts of these developments appeared in the press of the territory of the State. And these prairie settlers were not greatly interested. They had their own problems. Their first thought was food, shelter, and the most primitive necessities. Time was of no importance except in the race to procure the most desirable home site and to conquer the land in advance of the coming of winter. Few years produced greater changes at home and abroad than that first year of Nebraska statehood, but here people were engaged in the most homely tasks of settlement.

### Reclamation Has Been Successful—It Should Be Greatly Expanded

#### EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

Mr. LEAVY. Mr. Speaker, back in the seventies a military commission reported to President Grant that it was costing a million dollars for each Indian killed in the efforts to pacify the warring tribes of the West. It recommended that land be provided where the red man could become self-supporting.

The change in policy that followed saved the Federal Treasury hundreds of millions of dollars—billions in terms of today's money values—and thousands of lives. The vast majority of the Indians are now happy and contented.

#### COSTS OF RELIEF PROGRAM

The Federal Government is today confronted by an analogous situation. In the 7 years ended June 30, 1939, the Work

Projects Administration and its predecessor agencies have expended more than two and a quarter billion dollars in the 17 arid and semiarid States of the West.

In some years the outlays have approached a million dollars a day.

A large part of these modern-day expenditures are directly traceable to recurring droughts in the Great Plains area and the concentration farther west of a half million men, women, and children in homeless farm and other families who have fled thence in search of irrigated land or opportunities for employment.

#### RECLAMATION PROVIDES PERMANENT SOLUTION

The appropriations proposed for the Bureau of Reclamation in the pending bill are a step toward providing for a permanent solution of the problem and a means of reducing the Federal outlay for relief. The disturbing feature, however, is that at the rate funds are made available, the acreage that can be offered immediately or in the near future for the settlement of families who have migrated westward is wholly inadequate.

Further, the absence of a provision in the measure for continuing the Great Plains water-conservation program precludes opportunity to halt or eliminate much of the westward movement from that area.

Let us take stock for a minute.

A few facts may be illuminating:

First. In the 11 States of the Mountain and Pacific groups, to which the bulk of the drought refugees have fled, Federal relief expenditures have been 20 to 25 percent higher than the normal population would seem to justify.

Second. In the reclamation areas of these States the relief expenditures have been only one-third the outlay required in nonirrigated sections.

Third. In the drought counties of the Great Plains, Federal aid has been three times the per capita costs in areas less seriously affected.

Fourth. Few bona fide reclamation farmers have been on relief and in the exceptional cases where they have required assistance, unusual circumstances made appeals necessary.

#### NO CRITICISM OF RELIEF EXPENDITURES

There can be no fair criticism of the manner in which the present administration has met the emergency and expended huge amounts for relief in the West or other sections of the country. It was confronted by demanding circumstances and it used the only weapons available.

Had plans been in hand for the conservation of water resources in the Great Plains area, the necessity for the exodus of so large a number of families would have been obviated. Similarly had we been sufficiently forehanded and had prepared for rapid expansion of the reclamation program farther west, we would have been in a position to provide for the settlement of a much larger number of homeless farm families.

As it is, the reclamation of the arid West for homemaking opportunities has proceeded as rapidly as appropriations would permit. But it takes time to make investigations, prepare plans, secure materials, and build modern water-conservation projects, and bring new land into cultivation.

#### WHAT LARGER RECLAMATION EXPENDITURES WOULD HAVE DONE

Let me ask, however, if less than one-fourth of the Federal relief expenditures in the 17 States had been made available to supplement reclamation construction funds provided, what would have been accomplished?

And answer, we would have brought into cultivation land with adequate water supplies for the settlement of 60,000 to 75,000 families.

In cities, towns, and villages that are dependent on reclamation developments would have been found permanent employment for many thousands of wage earners who have been uprooted in communities to the eastward by depopulation of farming areas and who have joined the westward treks.

We would have provided supplemental water for many areas irrigated by private capital that are now threatened by shortages and which, when rehabilitated, would provide employ-

ment and settlement opportunities for large numbers of additional families.

We would have conserved practically all of the meager water resources of the Great Plains area.

Employment would have been given for many more thousands of wage earners at construction sites and in the production of raw materials and the fabricating plants of the Middle West, the East, and the South.

All these are what would have been accomplished had a small part of Federal relief expenditures in the West been diverted to permanent improvements for the conservation and utilization of the limited water and land resources of the area.

But the wheels of the clock cannot be turned back, so we must look to the future.

Why not take a leaf from the costly experiences of the Federal Government which resulted in a change in the policy of dealing with the Indians?

Will it not be far more economical to root these deserving farm families in the soil instead of continuing them on the relief rolls with little chance to become self-supporting?

#### PRESENT APPROPRIATIONS INADEQUATE

At the present rate of appropriations, 20 years will be required to complete some reclamation projects. In the meantime, without irrigated land on which to place the newcomers already in the West and others who are following, the problems will multiply and the drain on the Federal, State, and local treasuries will continue.

As a strictly business proposition, I would suggest the Federal Government could well afford to advance \$100,000,000 in reimbursable funds annually for the next 5 years in order to expedite reclamation construction. The returns to the Federal Treasury in dollars and cents and the saving in relief expenditures for the future would far more than offset the outlay.

#### RELIEF EXPENDITURES IN 17 WESTERN STATES

I desire to submit for the record a compilation of the Federal relief expenditures in the 17 arid and semiarid States by the Work Project Administration, the Works Progress Administration, Federal Emergency Relief, and Civil Works Administration for the fiscal years 1933 to 1939, inclusive:

##### Mountain and Pacific States:

Arizona	\$55,092,863
California	597,481,483
Colorado <sup>1</sup>	130,856,313
Idaho	50,383,386
Montana <sup>1</sup>	103,800,718
Nevada	13,634,492
New Mexico <sup>1</sup>	57,503,004
Oregon	80,861,453
Utah	58,365,017
Washington	168,116,452
Wyoming <sup>1</sup>	25,483,274

Total Mountain and Pacific States..... 1,341,578,457

##### Great Plains States:

Kansas	144,627,612
Nebraska	102,471,131
North Dakota	84,651,043
Oklahoma	189,197,441
South Dakota	100,793,541
Texas	296,425,852

Total Great Plains States..... 918,166,620

Grand total (17 States)..... 2,259,745,077

<sup>1</sup> Partly in Great Plains.

Mr. Speaker, the problems that have come from the droughts and westward migrations of distressed farm families are or should be well known. The difficulties and demands on the West for irrigated land have been accentuated in recent months by an increasingly large movement precipitated by the drought conditions of 1939. We in the West, who have seen the almost countless thousands of deserving Americans seeking a little productive land on which to make a fresh start, have looked upon reclamation as a constructive, economical, humane approach to a solution.

#### RECLAMATION NOT A PARTISAN ISSUE

In the West there has never been any politics in the advocacy of reclamation expansion, even before the crisis, with which we are now confronted. There has been glory enough for all in its achievements. Since both major political parties and their leaders have repeatedly given the policy their unqualified endorsement, we had supposed no one would seriously suggest halting or curtailing the program.

Especially has this feeling prevailed since the waves of migrations from the drought regions have created an unending demand for land in projects under construction and in other areas for which other water may be conserved and utilized. I may recall to your minds that to the three Pacific Coast States and Idaho alone there have come in the last decade more than 150,000 families, most of them with a farm background.

#### DR. GLENN FRANK SEEKS TO HAVE REPUBLICAN PARTY OPPOSE RECLAMATION

Consequently, it was something of a shock to read in the newspapers a few days ago that the Republican program committee, headed by Dr. Glenn Frank, had asserted:

It is difficult to see the justification of extensive reclamation of land at a time when we are resorting to elaborate programs to reduce the output of good land already under cultivation.

Ordinarily a sufficient answer would be found in the pressing demand for irrigated land on which to settle the scores of thousands of homeless farm families already in the West and to provide homes for the expansion of the normal population of the region. But, since a political flavor has been injected, let us see what has been the attitude of the leaders of the Republican Party in the past toward this constructive national program.

You are doubtless aware that President Theodore Roosevelt led a coalition of Republicans and Democrats in the Congress into enactment of the reclamation law of 1902. Succeeding Presidents of both parties gave it their support. Some 15 years ago conservative Calvin Coolidge was confronted by suggestions that "these projects should be stayed until agricultural production adjusted itself." In a letter to the American Mining Congress in September 1924, Mr. Coolidge wrote:

These criticisms lie on the lack of understanding that these projects take many years for development; that they furnish but a small portion of the increased food supply required even by our increased population; that utilization of their supplies lies in the development of the West itself.

Previously Warren G. Harding had held that it would be "good business" for the Federal Government to provide for the irrigation of 20,000,000 additional acres in the West and expedite completion of projects "long under way."

Former President Herbert Hoover wrote the governors of Western States in 1930 that "the arguments of opponents of reclamation will find satisfactory answer" if the "fundamental facts are properly appraised." He pointed out that "only 1 percent of the farm commodities raised in the United States are produced on Federal reclamation projects and 90 percent of the quantity so produced is locally consumed."

As late as November 1938 Mr. Hoover took occasion to reiterate his approval of the construction of Grand Coulee and declared:

I will rejoice when it is completed. Certainly no Republican administration is going to drop that project for a minute.

#### FRANKLIN ROOSEVELT A REAL FRIEND OF RECLAMATION

While Federal reclamation has received its greatest impetus under the administration of Franklin D. Roosevelt, the Democratic Party has not sought to arrogate to itself entire credit for the progress made. The present occupant of the White House, however, has taken cognizance of objections registered by persons ill informed as to the needs and objectives of the program.

At Cheyenne, Wyo., in September 1937, he took issue with the assertion that reclamation would make available unnecessary lands. He referred to the number of people—families—who could not make a go of it on poor land and who

were forced to move to avoid starvation. He emphasized the exodus of farm families from the drought region and their migration westward in search of irrigated land.

The situation is far more critical today than it was when the President spoke at Cheyenne in 1937. The need for expediting the reclamation program is even greater. Thousands of additional families have multiplied the problem and recurring droughts are driving many more from the Great Plains.

On the night of October 13, 1937, the President asserted Federal reclamation as a part of a national land-use program was not in conflict with crop-control objectives. He explained:

Crop control relates to the total amount of major crops grown in the whole Nation on all cultivated land, good or bad—control by the cooperation of the crop growers with the help of the Government. Land use, on the other hand, is a policy of providing each farmer with the best quality and type of land we have or can make available for his part in that total production. Adding new land for diversified crops is offset by abandoning poor land now uneconomically farmed.

#### SUBMARGINAL FARMS MUST GO

The Department of Agriculture estimates there are 86,000,000 acres of land in farms in the United States that are submarginal or unsuited for crop production. The Land Planning Committee of the National Resources Board has found there are 40,464,300 acres in the arid and semiarid States that should be retired. Of this latter 10,067,000 acres are classified as cropland.

In all, the Department of Agriculture, under its program, has purchased approximately 10,000,000 acres of submarginal land and taken it out of crop production. From an acreage standpoint the additional area the current Federal reclamation program will bring into production will be less than one-third that which has already been retired.

#### RECLAMATION CROPS DO NOT ADD TO FARM SURPLUS

Let me point out that when the reclamation projects under construction are completed the total acreage that will have been brought into cultivation will be less than 2 percent of the country's area in cultivation in 1939. Of the exportable surplus crops that have contributed to the distress of agriculture in other sections of the country—cotton, corn, and wheat—reclamation projects produce surprisingly little.

Only a few projects grow cotton—all in the southern area—and but 2 percent of the country's total production is grown on land reclaimed under this program.

Less than one-tenth of 1 percent of the Nation's corn and six-tenths of 1 percent of the wheat are grown on these projects.

The great bulk of the crops produced, as President Hoover pointed out, is consumed in the project areas.

What is shipped eastward can be marketed only when the farms near the great consuming centers are not in season. Freight rates offer an effective barrier to competition with the farm products of other sections.

Instead of providing competition for the agriculture of other sections of the country, Federal reclamation areas provide a market for crops not produced under irrigation and for the manufactured goods of the industrial centers to the eastward.

#### RECLAMATION AREAS PROVIDE DOMESTIC MARKET FOR FARM SURPLUS

Well-authenticated figures show that over a 10-year period the West as a whole purchased annually an average of more than \$100,000,000 worth of hogs and pork products from the farms of the Middle West.

The cotton produced in California, Arizona, and New Mexico, even when processed, would not be sufficient to supply the needs of the West and it offers an ever-expanding market for the textile products of the cotton fields and industries of the Southeast.

Cotton and cotton products required by the West over and above the volume produced in the area have an annual value of \$97,000,000.

No tobacco is grown on irrigated land or anywhere in the West and the section's requirements of this product have an average annual value of \$81,995,000.

#### ARID WEST THROUGH IRRIGATION GIVES EAST ONE OF ITS BEST MARKETS

In an 11-year period—from 1925 to 1935, including both depression and predepression years—the West purchased automobiles and trucks of an annual value of a quarter of a billion dollars.

Two out of every three dollars of new wealth created in the West and used for insurance premiums go to the financial centers east of the Mississippi River.

Based on figures for a typical year—1936—from my home State of Washington, it has been estimated that insurance companies east of the Mississippi have an annual net premium income from the 11 Mountain and Pacific States of \$373,000,000.

When you consider that the population of these 11 States has increased 300 percent since the Federal reclamation program was inaugurated in 1902, you may get some definite idea of the contribution the national irrigation policy has made to the Nation's economic development. The reclamation-project areas themselves, with a population of a million persons, have an annual purchasing power of more than \$200,000,000 that is expended in the agricultural and industrial sections of the Middle West, the East, and the South.

The fact that the population of cities, towns, and villages dependent on reclamation projects is three times that of the farms suggests the collateral benefits that arise from the developments and the opportunities for employment in urban areas that will follow expansion of the reclamation program. Their purchasing power, added to that of the farms, will be reflected in an enlarged domestic market for American agricultural and manufactured products.

#### HYDROELECTRIC POWER IN RECLAMATION PROGRAM

Let me turn for a moment to the hydroelectric-power feature of the Federal reclamation program. I will not go into details of the economics of this development. I take it for granted that it is generally recognized the conservation of water for irrigation and power, where feasible, offers an opportunity to reduce the cost of reclaiming land and assure return of the outlay to the Federal Treasury. At the same time it permits urban communities dependent on irrigation developments to participate in reimbursing the Government.

The record of Boulder Dam in the 3 years it has been in operation is evidence of the demand on the Pacific coast for increased power facilities. Installations of generating equipment are ahead of schedule and both public and private agencies are seeking its enlarged output. The production of 2,500,000,000 kilowatt-hours in the calendar year 1939 exceeded the entire output of all electric plants on the Pacific coast 25 years ago.

In the Pacific Northwest recent developments in the demand for power from Bonneville presages a market that will absorb the entire production of both Bonneville and Grand Coulee within 10 to 20 years. Low-cost power is in demand from private utilities, from industries, from rural and urban consumers, and utilization of Columbia River power for processing minerals in the Pacific Northwest enters into the national defense.

#### ELECTRIC ENERGY RESULTING FROM IRRIGATION WILL MAKE AVAILABLE ESSENTIAL MINERAL IN THE WEST

Preliminary estimates made by metallurgists show that the Northwest has heavily mineralized areas that are capable of supplying the country with many of the strategic materials vital to the national defense that are now imported. The economical recovery of these minerals depends to a large extent on low-cost power for processing purposes. Using aluminum as an example, it has been forecast that the high alumina clays of Washington and Idaho are sufficient to provide 50,000 tons of the finished product annually for 30 years. As aluminum is a strategic material of which the United States now imports 80 percent of its requirements, the importance of developing a domestic supply is obvious.

To produce 50,000 tons of aluminum annually would require approximately one-seventh of the ultimate capacity of Grand Coulee. Another important mineral resource in the Northwest is magnesium. With a potential production of 50,000 tons of magnesium from the large deposits of magnesite, the power

requirement would be equivalent to that for the production of aluminum.

While magnesium is not listed as a strategic material, it is essential for the construction of streamline railroad trains, airplanes, automobiles, trucks, and machinery where a light, durable metal is required.

In all, Dean Drucker, of Washington State College, has estimated there are in the Pacific Northwest ores and raw materials or which can be economically imported which will require for processing purposes approximately 45 percent of the ultimate firm power to be produced at Grand Coulee.

The significance of the entry into the Pacific Northwest of the Aluminum Co. of America and the Sierra Iron Co., with contracts for substantial blocks of Bonneville power, will not be lost. The fact that consumption of electric energy in the area increased 700 percent in the last quarter of a century tells its own story. The demand in the next 20 years, when the last unit of Grand Coulee is scheduled for installation, will not have to exceed 50 percent of the growth since 1912 to absorb the entire output of Grand Coulee and Bonneville.

NO NATIONAL POLICY HAS A BETTER RECORD THAN FEDERAL RECLAMATION

Federal reclamation as a national policy has been vindicated in all of its aspects by its achievements over a period of 38 years. It is a constructive, nonpartisan, economical undertaking that has for its major purpose the creation of homes where millions of Americans may become self-supporting on farms and in the cities, towns, and villages that follow in the wake of irrigation developments.

I take it that no serious consideration will be given to suggestions—whatever the source—that Federal reclamation be curtailed. On the other hand, in order to stop the continued drain on the Federal Treasury incident to homeless farm and other families already in the West, there must be constructive steps to expedite completion of the program.

In these days of a troubled world, the opportunities afforded by Federal reclamation will fill an urgent need for the West and aid in solving many of the Nation's problems resulting from the loss of foreign markets.

### Humanity United

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

ARTICLE BY O. M. THOMASON

Mr. ALEXANDER. Mr. Speaker, in the following article by O. M. Thomason, entitled "The Power of Empty Pockets," the writer points out about the same truth as the philosopher, Kant, in his Critique of Pure Reason, does at one paragraph in which he holds the view that man, if he will work together with his fellow men, unselfishly, can attain any objective, including health, security, and prosperity, or to put it in a more familiar phrase, life, liberty, and happiness.

And it is also very true, as Mr. Thomason points out, that all artificial differences such as race, religion, and political subdivisions must be submerged in the cement of a common salvation—not only economic salvation, but social, political, and in every other way.

Someone may say that there is a difference between the sort of economic security and contentment which Mr. Thomason is talking about, and happiness. Still it must be admitted that he is right, inasmuch as it is a very difficult matter for starving unemployed people to enjoy much happiness. In other words, before much happiness can be discovered, gaunt stomachs must be taken care of.

The following essay is a good illustration of the truth that implanted in our humanity is a something, a something

deeper, higher, broader, nobler than humanity itself. It is ever reaching out for that which will bring content, peace, happiness, fulfillment. This is witness to man's greatness—the divine within, seeking the eternal, the divine. The works of real men are evidence of the search, and on that basis I commend the following to your consideration with the hope that we may reason and go forward together, as Mr. Thomason says, to a new union for humanity, to a united humanity, in which we practice as well as preach that great truth expressed by the forefathers of this Republic that all men are created free and equal, even to the point of a humanity united.

#### THE POWER OF EMPTY POCKETS

(By O. M. Thomason, Willernie, Minn.)

The time has come when all men who want to survive must get together, stick together, and vote together, or they will go down and out together.

All artificial differences, such as race, religion, or political party, must be cemented by a common interest in a common cause—the economic salvation of all.

Businessmen, professional men, white-collar workers, preachers, farmers—all those directly connected and interdependent—must consolidate, cooperate, and concentrate to achieve plenty instead of poverty. They must become crusaders for a cause, for a right—the right to live decent lives and the freedom of enterprise.

Quit thinking of helping the unemployed by finding them jobs that don't exist, and think about saving yourselves.

The great American middle class—the bulwark of Americanism—is in danger of utter destruction by the power of the empty pocket. It—the middle class—is being definitely pulverized between the millstone of monopoly and the millstone of poverty. When the middle class is destroyed our civilization will be gone.

#### ECONOMIC STRESS GIVES RISE TO DICTATORS

Economic stress opens the door to dictators. As long as economic stress exists, even though you knock down a kaiser, a Hitler will rise in his place; overthrow a czar and a Stalin will step into his shoes. The power of empty pockets is the weapon with which absolutism mounts the peoples' necks.

#### TRADE AND MONEY

When a customer clicks a coin on your counter you do not ask him where he got it, whether he earned it digging ditches or inherited it from a great-uncle, whether it was paid him for writing a poem or he found it in a pirate's cache. All you want to know is, is it good money? And remember that money was not handed down from Mt. Sinai, nor was it brought, as some seem to think, by the stork. Money is a man-made convenience. Common sense will tell you that if commerce expands, money must increase, and that if money does not increase commerce will contract, shrink, disappear.

As long as there's idle factory capacity, unused resources, hungry people, and unsold goods there's not enough money in circulation—at the right place. Just as the quantity of blood in the body of a man must be greater than that in the body of a child, so as industry expands, as population increases, and the potential standard of living rises, there must be more money in circulation. Money is a conveyance and the more goods you have to convey the greater must be your vehicle.

#### INDEPENDENT MERCHANTS, LISTEN!

Remember, you independent dealers in standard merchandise, that near-empty pockets drive shoppers to chain and cut-rate stores, which means your ultimate extinction. Remember, that many who 10 years ago phoned to have it sent out, now crowd around bargain counters.

The greatest power in this land is the power of the empty pocket. It can and does paralyze industry, smash enterprise, jam bankruptcy courts, fill jails, and drive millions into shacks, onto highways, and relief rolls. It can change a nation of home owners into a nation of dole takers and beggars.

Until you free the masses—your customers—from actual poverty, no independent businessman is free from the dangers of bankruptcy. You must break the chains of party politics—any party politics—if you would be free from machine control and corruption.

Until you learn to cross the party line you'll never cross the poverty line. Voters of the Nation unite; you have nothing to lose but your poverty; you have plenty to gain.

For years you've been exchanging votes for promises. You pledged your vote for a promise to be remembered at Washington. When your Congressman got to Washington he "remembered" to remind you to do it again.

To achieve plenty instead of poverty we must unite the divided; must form a new union, the union of humanity. We must unite on the Declaration of Independence, the Bill of Rights, and the Constitution of the United States—must reaffirm the Americanism of Washington, Jefferson, Jackson, and Lincoln.

#### LIFE, LIBERTY, AND HAPPINESS

We must recognize that all reforms, whether social, political, economic, or monetary, necessary to make democracy work can be made within the framework of the American system; that under

the guarantees of the Constitution it is possible to enjoy the right of happiness, which rests on economic security.

The chief instrument of such happiness is that of goods and services—food, clothing, and housing. As to how much such goods one may enjoy should depend upon the capacity of the community to produce. Experts agree that this Nation can produce three times over what it now does. The reason it does not produce more is because of empty pockets.

#### TECHNOLOGICAL FACTORS

It is also agreed that, due to technological progress, it is quite impossible for industry to supply through wages, salaries, and even dividends, enough money to buy at a profit all it can produce. There is not need at the machines for all unemployed, even to supply all with needed goods. Such unemployables, if they are to live and industry is to thrive, must consume products; hence money must find its way into their pockets. On that there is universal agreement.

#### IT'S ON THE "HOW" THAT DIFFERENCES ARISE

It's on the "how" to get it there that differences arise. Don't argue and divide over that. Make Congress find the answer or get out.

It is agreed that more circulating money is necessary. As to whether it should be "raised" by this tax or that tax, whether by higher wages or lower prices, or whether by emitting into circulation among unemployed and unemployables, tax-free and interest-free money, there is also a difference of opinion. We must stick to the one point—more money—more money in circulation, not hoarded, either in banks or bedticks.

We must refuse to be alarmed at the thundered warnings of the dangers of inflation such new money would cause. That would depend on whether such money was "managed" and controlled or wild-catted by excited bankers. But with the dollar at 1326, as it is today, and a commodity price level of around 70, there is need for some money inflation. Increased wages, higher farm prices, and other raw materials can cause inflation on the sound theory that such additional money has entered costs and must be recovered in price.

But interest-free money (in the form of annuities for the aged, say) is not necessarily inflationary, since it has not been carried along on price tags. It makes its first appearance at the merchant's counter. Any tendency for its mere presence in larger quantities, manifested in brisker demand, to up prices would be counteracted by a corresponding increase in production. Under free competition the law of supply and demand would come to the rescue. Furthermore, since costs had not been increased, upped prices would not be a commercial necessity. This would destroy monopolistic control.

The value of money is one thing—the amount stamped on a coin or bill. The purchasing power is another. The latter is determined by the relative quantity of goods and circulating money, including the latter's turn-over speed. But turn-over is not the factor it is credited with being in price inflation. Volume is the determinant. But volume is constantly being diminished by "fixed" or dead-end costs and time lag, hence must continually be replaced with new money. Then there's the larger factor of expanding commerce, which requires more money.

#### HAS CONGRESS KEPT FAITH WITH THE PEOPLE?

Congress has the power to fix weights and measures, and to regulate the value of money. To fix one and not regulate the other is as farcical as having a steel tapeline with rubber sections in it, or as having a surveyor's chain with coil springs between the links, or a bushel measure with a false bottom in it. If a farmer borrows money to buy seed wheat at a dollar a bushel then has to repay the loan in dollars bought with 33½-cent wheat his bushel weight has increased from 60 pounds to 180 pounds. If he borrows money to buy a farm at \$300 an acre, then because wheat, corn, and hogs go down, land falls to \$100, he is buying 3 acres and getting only 1.

Certain well-meaning men yelled to high heaven because the gold content of the dollar was changed, but they are mute as the Sphinx over the day-by-day change of the purchasing power of the dollar by the "money changers." Determining the proper amount of circulating money (to avoid inflation or deflation, and to effect the needed reflation), is a technical function. Congress should make a mandate to maintain a stable dollar and place the responsibility in the hands of disinterested functionaries. All they need to do is watch the price level and keep it steady by regulating the dollar's power to buy by maintaining its quantity with desired goods.

But we must not become entangled in the mechanics of the problem. A babel of voices, each one demanding a different remedy, supplies politicians with alibis. We must strip them of all shields and force them to get results or get out. If they want to resort to crackpot or Utopian schemes, let them. If they want to continue our system of debt money then we must insist that they quit screaming about debt. Since all our money aside from silver certificates, silver dollars, and minor coins, and our United States notes—less than \$2,000,000,000, is debt or borrowed money, we must go deeper in debt all the time. If all our debts, National, State, municipal, county, township, corporate, and private, were paid, there wouldn't be a thin dime in circulation. Under a debt economy the greater our debt the greater our prosperity, silly as that sounds. If our statesmen insist on that kind of economy they should not worry about the results.

#### STABILIZATION OF PRODUCTION AND INCOME

Dally men rise in Congress to thunder "where's the money to come from?" and "back to the Constitution." If they would get back to the Constitution they would find where to get the money. They would find that it's their duty to "regulate" the value of money and to regulate it, means just what it says. You cannot regulate the speed of an automobile with a drunken driver's foot on the accelerator. To regulate the speed you must regulate, not fluctuate erratically, the flow of gas. The quantity of goods and the supply of money must be synchronized.

If that had been done nearly \$400,000,000,000 of wealth that never saw the light of day would have been produced in the past 18 years. Even in the "prosperity" period of 1922-29, due to non-use of productive powers, we lost \$113,000,000,000. In 1929-36 we lost \$200,000,000,000 and since then have lost by the same dunder-head method another one hundred billion, making a stupifying total of four hundred billions. At a cost of \$100,000 a mile that sum would have built a 2-lane concrete highway 150 times around the earth and 2,500 miles out into space toward the moon.

That production may more nearly equal need, the power to consume must be greatly increased—that is, the monetary national income must be augmented. To this end annuities, heritage dividends, pensions, or whatever name you desire to call it by, must be paid to the aged as well as all others rejected by industry. As to the minimum age, whether 50, 55, or 60, that is a controversial matter again. Obviously, however, an age not low enough to take up the slack of unemployment would be farcical. Let lawmakers take their chances.

It may be mentioned, however, that the amount paid, which should include needy widows, the blind, cripples, and others who are dependent, must aggregate the Nation's capacity to produce. The capacity to produce will increase as effective demand (need backed by purchasing power) increases. At first, before industry and agriculture get under way, \$100 a month might be large. After production and processing struck their stride, \$200 might be small. Production and consumption must be correlated so as to keep prices stabilized. To make such a program effective, money must be put into circulation at the bottom. This is on the sound economic theory that every person who consumes goods is an asset to business. Intelligent businessmen recognize that dead people (after the undertaker, the gravedigger, and maybe the tombstone dealer are through) are of no value to industry. Neither are broke people.

In our childish fear of getting "too much" we not only destroy existing goods but potential goods as well. We cast longing looks back to some income peak of 10 years ago and sigh for its summit again. Any glance we make to the future is on no higher level than 1929. We never look on a normal incline. A business bulletin for February last calls the production level of 5.5 below 1929 near normal. It describes the employment level of 7 percent below 1929 as "near normal conditions under full recovery." Why should full recovery of 1940 be only the normal of 1929?

#### NATIONAL INCOME SHOULD BE \$140,000,000,000

The national income of 1863 was \$4,000,000,000. That may have been normal then, but would have been decidedly sub-normal in 1880 when actual production was twenty billions. Should they have sought to return to the "good old days" of 1863? In 1914 production was \$40,000,000,000. Should we have waited for a return to the twenty billions of 1890? Well, silly as it is, that is just what we have been longing for since 1929. Indeed, it is what we actually did in 1932. In 1929 production was eighty-one billions. In 1932 it was down to less than forty billions. Surely it is time to change fool killers.

If from 1929 we had followed the past 85-year trend we should now be around a \$90,000,000,000 a year income, measured in the dear dollars of 1935, or one hundred and forty billions measured in the 100-cent dollars of 1926. Full functioning of manpower, machines, and resources would make such gains normally possible. The increase in population of half a million a year and the rising standard of living make such gains desirable. We should go on up, and up. Instead we beat our brows against the walling wall, howling for a return of 1929. "Full recovery" is a snare and a delusion.

#### CALL TO A MODERN CRUSADE

But this shall not continue. There is rising on the wreckage of past dreams and nightmares a new trend, based on a new idea. It is ready to spring into activity. It will be a tidal-wave crusade that will sweep the land. The millions who have been telling Congressmen "how" are going on a "sit-down" strike and demand that Congress find the "how." Various names have been suggested and slogans proposed. The Union of Humanity—a Crusade of Plenty for All—Divided We Starve, United We Eat, are some of them. But the names or the slogans are not the vital things. It is the spirit of determination to find a single point on which all can agree. As a result of many letters over the past 2 years I may summarize as follows.

We're going to quit dividing over plans on "how" to get "what" we need. It is agreed that the "what" we want is physically possible, and what is physically possible can be made financially possible. Our puny minds cannot grasp the possibilities within the reach of man, if he will unfetter stored-up energy and direct it in productive channels. We must free our minds from the cave-born incubus that man must be punished for some secret sins of his ancestors—that he must deny himself his sacred heritage, a

heritage arising out of the collective labors of the human race—a dividend flowing from stored-up values—a security that would free man from drudgery and let his timid mind follow his cunning hand in the performance of more and greater miracles.

"Humanity United" does not come with a blueprint. That's the social engineer's job. It comes to tell the engineer to roll away the stone—to break the chains of slavery, and let the prisoner free. We insist that none can be free as long as some are slaves. We deny that some are born with saddles on their back and others with spurs on their heels and whips in their hands. We deny that color of skin, accent of speech, or religious training makes one whit of difference in human rights.

We would expunge from our vocabulary such meaningless phrases as "foreign trade," "raids on the Treasury," "Government extravagance," "balanced Budget," and similar ghosts dangled by partisans to divide, and to bewilder the people. All such spooks would vanish overnight if people had sufficient buying power to consume the capacity output of industry, thus broadening the tax base and lightening the tax burden. We will not be led astray by the foolish phrase "finance production" but will insist on consumption being first financed, knowing that production will promptly respond.

#### THE HUMAN HERITAGE

We will not be diverted from our objective by the hue and cry over subversive doctrines and dangerous "isms." We would "plow under" all un-Americanisms by destroying the soil in which they grow—poverty. Remove needless poverty from this land of potential plenty and all radicalisms would be laughed out of existence. It is when young men are jobless, old men are homeless, and children are hungry that men listen to the seductive voice of the agitator.

We insist that it is the right of every person to have equal access (limited only by the same rights in others) to the means of acquiring the necessities, comforts, and even luxuries of life—to share equally in the heritage of the human race. To abridge such rights is the highest of crimes. To demand and struggle for such rights are the noblest of acts. On this point we agree.

#### ACTION WANTED, NOT LOBBIES

We will not send lobbyists to Washington to back-slap and hobnob with lawmakers—and opposing lobbyists. Such men become career lobbyists, making of the job a vested interest, a lifelong profession. We cannot expect them to get what we want, when by that very act they end their soft jobs. They like it too well in Washington. They know which side of their cocky is sugared.

On the contrary "Humanity United" will do its own lobbying—do it in each Congressman's home district—do it on his constituents. No bales of petitions and floods of telegrams will go to Washington to be burned in the Capitol furnace. He'll not know what's going on back home. He can't keep his eye on thousands of voters and his ears tuned to their speech as he can on one handshaker down there. He'll have plenty to worry about, and he won't know the answer until the votes are counted. We'll keep the pressure point on his reelection nerve center like a spinning drill on steel.

#### HOME CONSUMPTION AGAINST FOREIGN WARS

Human freedom rests primarily on material security, and material security springs from capacity production and consumption. Capacity consumption at home will eliminate the need for foreign markets (except actual surpluses to be exchanged for goods not produced at home). We work ourselves into a frenzy over a mere 2 or 3 billion dollars in exports when our own people could easily consume an additional 64 billion. We'd have little to export if our own people had the money to buy what they need and want. This would destroy the chief cause of international aggression and lift from men's bent shoulders the burden of armaments. It would bring humanity nearer the goal dreamed by poets and philosophers when " \* \* \* war drums throb no longer, and battle flags are furled in the parliament of man, the federation of the world."

But why pile Pelion on Ossa? The possibilities are unlimited if man will only use the key that unlocks the Pandora box, not of ills, but of blessings. That key is a simple device called money. It is man-created and can be made by him adequate or inadequate—can be made wings of freedom or chains of slavery.

#### PUT HER THERE!

On the wreckage of a thousand defeated causes "Humanity United" is rising. The Crusader, like Job of old, lays his hand over his mouth on all the intricate details as to "how." He simply says, "Brother human being, we can agree, we do agree on one thing. Let's stick to that—the enjoyment of all the good things modern civilization can produce. Put her there!"

Humanity United is devoted to representative constitutional democracy and spurns totalitarianism both in government and business. It seeks no special favors but universal rights. It strives for a united humanity, knowing that no chain is stronger than its weakest link, and that no nation is more secure than its most insecure citizen. Its Bastille Day is election day and its bullets are ballots.

Humanity United is streamlined and of simple organic mechanism, following the cellular system. Each cell consists of 10 memberships of 10 families. Each membership will receive the United Voice to keep members advised as to the political behavior of Congressmen.

No high salaries will be paid officers and speakers, lest Humanity United become a vested interest and a private racket. We will keep

the organization poor, so its leaders will strive to achieve its aims, instead of making the organization an end within itself.

Political platitudes and unctuous promises will fall on deaf ears. Shiftily side-stepping and clever face saving will bring down the political ax. Only straight from the shoulder, open and above-board acts will count. And no self-appraisal will be accepted. The record, the roll call, the fight on the floor will be the only evidence accepted in this court.

Politicians must bring home the bacon and the hams, too, or prove that they did more than "pair" in favor or whisper "Yea." We have no special detailed plan to put over. That's what we elect Congressmen for—to find a plan, a full plan, not a half plan, not a makeshift. If they fumble the ball, that will be their hard luck.

Hands across the Nation! Shake!

## Farm Representation

### EXTENSION OF REMARKS

OF

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

LETTER FROM J. C. ERP, PRESIDENT, MINNESOTA FARMERS UNION

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I present a letter received from J. C. Erp, president of the Minnesota Farmers Union, in regard to farm group representation, concerning which I spoke in the House on February 20, 1940:

FARMERS EDUCATIONAL AND COOPERATIVE UNION OF AMERICA,  
MINNESOTA DIVISION,  
Canby, Minn., February 27, 1940.

Congressman OSCAR YOUNGDAHL,  
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: The article published in the St. Paul Dispatch February 22, 1940, entitled "Thatcher, O'Neal Hit by Youngdahl," was brought to the attention of the State Board of Directors of the Farmers Educational and Cooperative Union of America, Minnesota Division, an existing Minnesota corporation, organized under the laws of the State of Minnesota December 6, 1929.

For your information, the members of the Farmers Educational and Cooperative Union of America, Minnesota Division, at their annual convention held at Granite Falls, Minn., last November approved of the nonpartisan cost-of-production bill, Senate file 570, the Frazier-Lemke farm-refinancing bill now pending before Congress; also the membership by resolution went on record strictly opposing the Reciprocal Trade Agreements Act that permits importation of agricultural products at the expense of the American farmers.

M. W. Thatcher has not been authorized to represent the Farmers Educational and Cooperative Union of America, Minnesota division, or its members; but instead the members went on record endorsing Mr. Edward E. Kennedy as their Washington legislative representative.

Very truly yours,

J. C. ERP,  
President, Minnesota Farmers Union.

## Seven Eventful Years

### EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

Mr. NELSON. Mr. Speaker, today marks the end of the seventh year of the Roosevelt administration. The significance of the numeral 7, as it appears in history, profane and sacred, is frequently stressed. Twenty years ago in this House I mentioned this, in connection with the story of Pharaoh's dream and its interpretation of the 7 kine and 7 ears of corn, as told in the forty-first chapter of Genesis. At the end of another 7-year period of another President, we may well recall this story, and also the question Pharaoh asked of his

servants, "Can we find such a man as this, a man in whom the spirit of God is?"

In order to appreciate the great benefits which have come to the people of the United States during the 7 years that Franklin Delano Roosevelt has been in the White House, it is not necessary that we make any lengthy review. All that we need do is to make of our own world, be it large or small, a window and see for ourselves. If in town or city, take note of the happy, contented people on the streets and compare in memory the troubled and distressed looks characteristic of the crowds to be seen at the beginning of the present administration. If in the country, attend a meeting of farmers and their families and make similar comparisons. If this is not convincing, study the faces of the unfortunate people of Europe, as shown in pictures published in the press of America. Do this and thank God that your home is here.

In the past I have quoted prices received by farmers during the last year of the Hoover administration, so shall not take time to do so now. In fact, farmers would like to forget those ruinously low prices.

Without going through the long list of laws, many of them suggested by the President, without citing bank failures to show how much better off the average man is today than he was before the beginning of this administration, I would ask that everyone honestly take stock of self. Where there was fear and hopelessness, we today find hope and homes. Never under any other administration was so much thought given to the happiness and well-being of the family. It is safe to say that there are few if any homes which do not today enjoy added comforts and conveniences made possible during the last 7 years. For example, we have the thousands of well-lighted farm homes, occupied by light-hearted people.

One picture will portray a situation familiar to many. No longer are there great groups of eager and distressed depositors milling about the doors of closed banks. Instead, in cities, towns, villages, and countrysides, we see thousands of boys and girls, young men and women, entering beautiful, safe, and substantial school buildings, buildings affording facilities for the upbuilding of minds and bodies. To summarize, in 7 years open schoolhouses have replaced closed banks.

I recall that in the last campaign complaint was heard to the effect that the White House had become the town hall of the people. Dignity and reserve, austerity, if you please, was no longer so much in evidence. Common people found access. In answer to this criticism, I would say that I can imagine no greater compliment. The Presidency belongs to the people and should be answerable to the people. Under the present administration big business has carried no secret key to the White House.

Speaking of the White House, it is a noteworthy fact that never before have "top hats and tails" had as little influence and overalls and aprons as much as during the present administration. To clearly understand what we owe the present administration we have to take but two looks, one back to 7 years ago today, the other to Europe as it is today, at this very moment.

Referring to the first inauguration of President Roosevelt 7 years ago today, a Washington correspondent of the New York Times of yesterday said:

Few people who lived in Washington will ever forget the New Deal's natal day. That day dawned a dark one in every respect. The great depression hung over the country like a darkening cloud. Banks were closing literally by the hundreds. Life savings in bank accounts and securities were being blown away like so much dust. Homes and farms were going on the auction block in ever-increasing numbers. In certain sections citizens were beginning to grow desperate. Word reached Washington that morning of hungry people raiding a food store in one community in the Southwest. In another State, only a few days before, irate citizens had forcibly stopped a foreclosure sale, and in another they had actually dragged a judge from the bench and threatened to tar and feather him for carrying out the State law in declaring the forfeit on a farmer's mortgage.

Speaking of the present, we read in the morning papers of the death of more than 100 persons on a British boat, on which Nazi planes had dropped bombs. In the same paper is another story to the effect that 393 merchant ships, 171 of them neutrals, have been lost during the first half-year of what it is feared may prove to be the second terrible world war in the memory of men not yet old. Also pictured in the press of this morning is a once proud German pocket battleship, lying in shallow water, awaiting the junkman. Elsewhere men are shown in trenches or busily engaged in making more. Contrast those scenes with more pleasant pictures here at home where the trenches and ditches that are being dug are for sewer systems, waterworks, and similar improvements making for the health of the people. Soon, too, with the coming of springtime in America, men will be busy, not on battlefields, but in fields on farms, where plows will be turning furrows of peace where the harvest will be grain, not graves.

Under President Roosevelt many fine things have come. I believe, though, that the cause nearest his heart, and it is also the cause nearest to every mother's heart, is peace.

Some there are who would berate or ridicule the President's effort toward peace. I recall a cartoon showing a great bewhiskered monster uttering the words, "Well, I'll be!" as, peering over a mountain-sized cannon-equipped tank, on which he ruthlessly rides, he sees, practically underneath the tank, a determined man, pushing with all his might. This, says the cartoon, is F. D. R.

So sincere is President Roosevelt's heart desire for peace that I believe he would willingly sacrifice his political life, if not actually his own life, if to do so would make possible abiding peace. Because of the none-too-friendly thought which the cartoon mentioned seems to express, I would add that while "over there" they are burying their dead, we here in America, happy land of the free, ought to be burying our differences. Instead, in too many quarters there is political exaggeration and agitation. Even the taking of the census seems to be no exception. One might be led to believe that the call of the census enumerator, Uncle Sam's carefully chosen representative, a man or woman sworn to make public no information given, might be the signal for a one-man, or one-woman, rebellion. Rather, should we be thankful for the privilege of being recorded as citizens of the most-favored Government in the world; thankful that the enumerator who, in April, will call at our homes, does not come ordering the husband or grown son of the family to active and immediate military service; thankful that the mothers are not handed food ration cards commanding that bread be saved in order to buy bullets.

A favorite cartoon, and I believe it is also a favorite of the President, shows Mr. Roosevelt with a firm and much exaggerated jaw. I am glad if this truly characterizes the present occupant of the White House. A man not afraid, he has not hesitated to acknowledge mistakes. Of course, he has made mistakes—made many—but, fortunately, he has not made the fatal mistake of attempting nothing.

More than 7 years ago, in his speech accepting the Democratic nomination in Chicago, Franklin Delano Roosevelt said:

I pledge you—I pledge myself—to a New Deal for the American people.

The 7 administration years which this anniversary marks represent the most momentous, the most forward-looking, and the most helpful 7-year period not only in the history of our country but of all countries.

This morning, marking a continuous custom inaugurated on his inauguration day, the President, in a solemn religious ceremony and in a Washington church, which he loves to attend, again asked God's guidance. So, as recorded in the forty-first chapter of Genesis, and as Pharaoh asked of his servants, may it be asked of ourselves, "Can we find such a one as this, a man in whom the spirit of God is?"

## Unemployment

## EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

STATEMENTS BY THE EXECUTIVE COUNCIL OF THE AMERICAN  
FEDERATION OF LABOR AND JOHN L. LEWIS

Mr. ANGELL. Mr. Speaker, unemployment is still the most acute domestic problem of the Nation. I desire to call attention to the statement of the executive council of the American Federation of Labor made at Miami, Fla., on January 30, 1940, and the statement of John L. Lewis of the United Mine Workers of America at its convention in Ohio in January 1940. These statements are as follows:

MR. GREEN AND MR. LEWIS AGREE UPON ONE THING

Unemployment still is the most acute domestic problem of the Nation. No orderly and intelligent effort has yet been made to determine the facts with regard to its causes, its extent, its cure. As a nation we have not hesitated to spend billions for the relief of those who are unemployed, but we have neglected to take the necessary steps to reduce and end unemployment.

At this time there are not enough jobs in private industry to go around. This is largely due, in our opinion, to the fact that lack of confidence has stunted business growth and expansion. We demand that those in authority take whatever steps may be necessary to restore business confidence.

We urge that all Government actions that tend unnecessarily to discourage business expansion cease and that a positive effort be made to encourage greater industrial activity. We have learned the lesson that when opportunities for profit diminish opportunities for jobs likewise disappear.—The executive council of the American Federation of Labor, at Miami, Fla., January 31, 1940.

As the current year opens, the Democratic Party is in default to the American people. After 7 years of power, it finds itself without solution for the major questions of unemployment, low national income, mounting internal debt, increasing direct and consumer taxation, and restricted foreign markets. There still exists the same national unhappiness that it faced 7 years ago. Labor and the people are losing confidence. They fear for the future, and rightly so.—John L. Lewis, chairman of C. I. O., to the United Mine Workers of America Convention at Columbus, Ohio, January 24, 1940.

## The Farm Program and Farm Progress

## EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5 (legislative day of Monday, March 4), 1940

## MEMORANDUM AND TABLES SHOWING FARM PROGRAM

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a memorandum and some tables with respect to the farm program and farm progress in the United States.

There being no objection, the memorandum and tables were ordered to be printed in the RECORD, as follows:

## THE FARM PROGRAM AND FARM PROGRESS

Looking ahead to 1940, farmers are hoping for a continuation of the improvement in agricultural conditions which has taken place during the course of the past 7 years. Reviewing their condition, they recall the 12 years of agricultural decline between 1920 and 1932 and most vividly the despair of 1932. The farmers have fought their way up from that devastating year of 1932 and feel certain that, given a continuation of the national farm program, they will

be able to make further progress in 1940 toward a permanent agriculture in the United States.

They feel this hope and confidence in continued progress toward this goal not because fundamental agricultural difficulties have disappeared but because, through the national farm program they have the necessary help for dealing with their difficulties.

In 1932 farmers were burdened with mountainous surpluses of many farm products for which there was no need at home and no sale abroad. Now, through the use of acreage allotments, marketing quotas, and commodity storage loans, they are able to produce and market these crops according to needs for domestic consumption, foreign demand, and for adequate reserves.

In 1932 there was appalling waste of farm products that were needed but were regarded as surplus only because hungry people who needed them had no money to buy them. Now, through surplus removal provisions of the farm program, surpluses of this kind are being used, benefiting the needy and improving the farmers' markets.

In 1932 farmers did not have enough income to take proper care of their land and they were forced into mining the soil through overcropping and overgrazing in an effort to produce more to compensate for lower prices. Now, through production adjustment to eliminate needless soil waste and by treatment of land to control erosion and maintain and improve fertility, they are making real progress in conservation.

In 1932 farm families were losing their homes through wholesale foreclosure, and interest rates on agricultural credit were higher than they could pay. Now they have a complete Federal agricultural credit service at reasonable rates of interest.

In 1932 a large percentage of farmers were unable to pay interest and taxes and most farmers had no money to buy goods that make business and jobs and cities and towns. Now farm families again provide an important market for city goods and services and make an important contribution to national income and national welfare.

The measures that have been taken in the last 7 years in the formulation of the national farm program have made it possible for farmers to work together on a Nation-wide scale in cooperation with Government to protect their income, their land, and their homes and at the same time to contribute to the welfare of all the people.

## MORE FARM INCOME—GREATER SECURITY ON THE LAND

Farmers had nearly twice as much income in 1939 as in 1932. (See table I.) Cash income rose from \$4,682,000 to \$8,518,000. Farm prices increased from 65 percent of the pre-war level to 95 percent. The exchange value of farm products increased from an average of 61 percent of the pre-war level in 1932 to 78 percent in 1939.

From 1932 to 1939 both farm income and prices paid by farmers increased, but farm income made a more rapid advance so that in 1939 farmers were able to buy about 99 percent as much of the things they needed as in 1929. (See tables II and III.)

Since 1933 the number of forced farm sales has declined approximately 69 percent. The number of farm bankruptcies in this period declined 70 percent. The Nation's total farm-mortgage debt has been reduced by more than \$2,000,000,000 from the early 1930 level.

## MOST FARMERS COOPERATE IN FARM PROGRAM

The extent of cooperation of farmers is one of the best measures of success of the farm program. Nearly 6,000,000 farmers are in the program. Under the provisions of the Agricultural Adjustment Act about 80 percent of the farm land and 70 percent of the privately owned range land were included in 1939 participation. (See table V.)

## CONSERVATION ACCOMPLISHMENT OUTSTANDING

Many phases of the farm program contribute to the conservation of the Nation's agricultural resources. Through the adjustment provisions of the program more than a quarter of a million acres of land have been shifted from soil-depleting to soil-conserving uses. Included in soil-conserving uses were fifty-five and one-half million acres of new seedings of soil-conserving crops, fourteen and one-half million acres of contour farming, contour listing, and controlled fallow, construction of 292,000,000 feet of terraces, and construction of more than 16,000,000 feet of contour ridging on pasture land.

Up to June 30, 1939, a total of forty-eight and one-fourth million acres of farm land in 82,000 farms were covered by 5-year agreements with the Soil Conservation Service. These agreements provided for complete farm plans for erosion control and good land management. (See table VI.)

Soil Conservation Service demonstration areas now include sixty-eight and three-fourths million acres. There are 217 soil-conservation districts, organized under State laws, covering an area of 120,000,000 acres. Within these districts there are more than a million farms. Another 100 districts are in the process of organization. (See table VI.)

Range livestock producers have carried out an extensive program of range conservation, cooperating with three agencies of the Department of Agriculture administering portions of the farm program. Range-improvement practices were employed on approximately 190,000,000 acres under the 1938 A. A. A. program.

Under the supervision of the Forest Service, grazing on more than 80,000,000 acres of national forest lands is regulated with the assistance of range committees made up of livestock producers.

The Soil Conservation Service has constructed more than 4,000 ponds, largely on range land. A. A. A. payments have assisted producers, mostly range producers, to construct 25,000 ponds. These ponds control floodwater and store it for livestock.

#### RECORD ADVANCE IN FOREST CONSERVATION

The greatest advance in the history of reforestation and conservation in this country has been made during the last 7 years. About 12,000,000 acres have been purchased or approved for purchase—more than two and one-half times as much as in the preceding 22 years. Approximately 125,000,000 trees, produced largely in Forest Service nurseries, have been planted on 131,000 acres of national-forest lands.

Under the supervision of the Forest Service in the Prairie States forestry project, 127,000,000 trees in 11,000 miles of plantings provide protection for 3,000,000 acres of land.

In the farm-forestry program of the Soil Conservation Service 314,000 forest trees were planted on farm lands in 1938. Under the A. A. A. program of 1938, more than 55,000 acres of farm land were planted to forest trees.

One important reason for the remarkable progress in conservation has been the help of the Civilian Conservation Corps, working largely under the supervision of the Forest Service and the Soil Conservation Service.

Protection of Federal, State, and private forests from fire has occupied a total of four and three-fourths million man-days of actual fire fighting during the time the C. C. C. has been in existence. Since 1933 they have planted one and two-thirds billion trees, built 22 forest nurseries, and carried out forest-improvement work on three and one-half million acres of established forest lands.

In soil-conservation projects, C. C. C. camps have completed work on one and one-fourth million acres of farm land under 5-year agreement for complete plans of erosion control and farm management.

#### DESTITUTE FARM FAMILIES BECOME SELF-SUPPORTING

Because of the national farm program 600,000 farm families who were on relief or near relief status have again become self-supporting. The Farm Security Administration has combined rural rehabilitation loans with assistance in developing farm- and home-management plans. Of the \$360,825,429 loaned up to December 1, 1939, a total of nearly \$107,000,000 has been repaid. (See table VII.)

By the end of September 1939 low-cost medical plans were available to more than 65,000 families in 26 States. Up to January 1, 1940, a total of 231,626 farmers had received the benefit of community-service loans enabling them to share the cost of expensive farming equipment which they could not buy individually. For this purpose the Farm Security Administration assisted in the formation of 11,675 small cooperatives.

By January 1, 1940, camps established for migratory workers accommodated 2,520 families and additional units to accommodate 3,261 families were under construction.

By the end of this fiscal year, June 30, 1940, loans will be made enabling more than 13,000 tenants to purchase farms of their own. (See table VIII.)

#### WIDESPREAD PROGRESS IN IMPROVED LAND USE

In addition to the progress under the adjustment and conservation features of the farm program improved-land use has been brought about on 8,500,000 acres of submarginal land purchased and developed principally for forestry and grazing.

In the dry-land areas this submarginal land, unsuited to continued cultivation, is being turned back to grass and made available to nearby farmers to help them shift more to livestock production and away from the uncertainties of cash crop production.

An important part of the efforts in the Western States toward a more permanent type of agriculture is the development of small water facilities to supply needs for livestock and, in some cases, to irrigate a small portion of a farmer's or rancher's land.

#### CONSUMER PROTECTION PROVIDED

The chief provisions of the farm program helping to stabilize market supplies and prices of farm products provide protection both for consumers and producers.

The ever-normal granary reserves which make the surpluses of good years available in years of crop failure are made possible by commodity storage loans and crop insurance of wheat. (See table IX.)

Forty-six million dollars were loaned to 64,000 wheat producers on 84,000,000 bushels of their 1939 crops.

Premiums totaling 10,741,000 bushels of wheat had been paid in up to October 19, 1939, by 296,505 wheat producers for insurance on the crop to be harvested in 1940. (See table X.)

In the corn-loan program, 271,315 producers stored 257,127,595 bushels of the 1939 crop under loans totaling \$146,562,729.

#### BETTER FARM INCOME MEANS BETTER CITY BUSINESS

Many phases of the farm program have contributed to the protection of farm income. Adjustment in line with market needs, commodity storage loans, marketing quotas, and marketing-agreement programs to regulate the flow to market, removal of surpluses from congested markets—all have played an important part.

Protection and improvement of farm income is essential both to agricultural welfare and to the national welfare. The buying power of farm families is necessarily limited to the exchange value of their products. Parity payments made to producers cooperating in the farm program have helped to bridge the gap between market price and fair exchange value and have helped to maintain the ability of farm families to purchase city goods and services.

The export programs for wheat and cotton have helped to protect farm income and at the same time have helped to protect the interests of United States farmers in the world market.

With the help of the wheat export subsidy 118,000,000 bushels of wheat were sold abroad in the 1938-39 marketing year—an amount equal to a little more than 20 percent of the world wheat market normally supplied by United States producers during the 1920's.

With the help of the cotton export subsidy, more than 6,000,000 bales of cotton have been sold for export since July 1939, compared with only about three and one-half million bales for the entire previous marketing year.

One of the important elements of a sound farm program, essential to agricultural stability and security is adequate credit at reasonable rates. This also is important to greater net income through reduction in financing costs.

From May 1, 1933, to January 1, 1940, individual farmers and their cooperative organizations obtained \$5,951,000,000 in loans and discounts from institutions under the supervision of the Farm Credit Administration.

To the close of 1939 the Rural Electrification Administration of the Department of Agriculture has made total allotments of \$273,000,000 for the construction of 260,000 miles of line to serve 600,000 farm families. Already 400,000 farms have been connected to Rural Electrification Administration sponsored lines, the greater majority of which are cooperatively managed. The number of electrified farms in the United States has more than doubled from 1935 to the present time. Approximately 25 percent of American farms were electrified by January 1, 1940, compared with 10.9 percent on January 1, 1935. (See table XI.)

#### FARM SURPLUSES FEED THE NEEDY

More than 1,300,000 producers are directly affected by 45 marketing-agreement programs which help to protect and improve the incomes of producers of fruits, vegetables, and dairy products. The farm value of crops and of fluid milk handled under marketing-agreement programs approximated \$300,000,000 in 1939.

Expanded domestic distribution and consumption of farm products has been brought about through two types of programs. Direct purchases to remove surpluses from congested markets provide supplies distributed through State relief agencies. The food order stamp plan, by putting increased buying power into the hands of needy families, speeds the flow of surpluses through the regular channels of trade.

Direct purchases in 1939 removed a total of 1,700,000,000 pounds of surpluses for distribution to needy families. A total of more than 6,000,000,000 pounds has been purchased during the 6 years of this work. (See table XII.)

One of the most important phases of surplus-removal programs is the accomplishment in supplying food for undernourished school children. During the 1938-39 school year, donation of surpluses made possible free lunches for more than 800,000 undernourished school children. Efforts to expand this program this school year resulted in 1,250,000 undernourished children receiving free school lunches daily during December 1939.

#### DEFENSE AGAINST INSECTS AND DISEASE STRENGTHENED

While all the new efforts were being made in the field of agriculture, other important work, established earlier, has not been neglected. In fact it has been increased.

Efforts under general legislation enacted in 1937 in cooperation with State and local agencies to protect crops from grasshoppers are estimated to have saved crops valued at more than \$100,000,000 each year.

During the last three seasons, crops on more than a million acres have been protected from Mormon crickets through cooperative efforts.

Expansion of operations for control of black-stem rust of small grains, blister rust of white pines, and peach virus diseases, has brought these diseases under control in large, important areas and has given worth-while employment to thousands of men certified through relief agencies.

Since the appearance of pink bollworm of cotton in some of the Gulf States in 1933, a new insect has been on the list of important ones for which control measures have been provided.

In 1934 infestations of screwworm in new areas in the South-eastern States caused the death of thousands of animals. Special funds provided for an educational and control program which has reduced losses to a minimum.

Eradication of cattle ticks, begun in 1906 in cooperation with States affected, has been so speeded up that now only 1 percent of the original area remains under quarantine.

Bovine tuberculosis-control work, begun in 1917, had by 1934 resulted in 53 percent of the counties of the country being accredited. Additional funds made available have so speeded up this work in the last 5 years that the number of accredited counties has increased from 53 percent to 99.8 percent.

Testing of cattle for Bang's disease control with funds provided in 1934 has resulted in practical eradication of this disease in 209 counties in 17 States.

The national poultry-improvement plan, started in 1934 to increase poultry-production efficiency by disease control and improved breeding, now has active participation through 42,591 breeding flocks and hatcheries in 44 States.

#### NEW EFFORTS TOWARD NEW USES FOR FARM PRODUCTS

Expansion of the efforts to provide additional outlets for farm products through the development of new industrial uses has been made possible through funds provided for four regional research laboratories. This work is important to agriculture, not only to

provide broader markets but to offset the effects of the development of products that have displaced farm products.

Expansion of research in the field of production and marketing and of educational work of the Cooperative Extension Service also has been made possible by congressional authorization as a part of a broad program for the improvement of agricultural conditions.

#### PRODUCER AND CONSUMER SERVICES IMPROVED

Both producers and consumers are benefiting from new legislation of the period since 1932 strengthening marketing regulation.

The Commodities Exchange Act provides for supervision of futures trading in the important agricultural commodities to prevent market manipulation and insure fair practice.

The Food, Drug, and Cosmetics Act has greatly strengthened legal provisions protecting the public against misbranding, adulteration, and deception.

The Packers and Stockyards Act, as amended, now includes protection in the marketing of live poultry against unreasonable charges that would affect both the price paid the producer and the price charged the consumer.

The new Federal Seed Act prohibits misrepresentation of field and garden seeds handled in interstate commerce.

#### TOWARD PERMANENT AGRICULTURAL IMPROVEMENT

Through county and community planning, the provisions of the farm program are being directed toward a permanent, well-balanced agriculture.

Farmers are furthering the democratic ideals of the Nation, not only through their administration of the farm program locally but through planning by democratic processes for a permanent agriculture, with local, State, and Federal aids all applied toward the same objectives, in harmony with natural and social conditions.

TABLE I.—Farm cash income, 1932–39

Calendar year	Farm cash income		
	Income from marketings	Government payments	Total
1932	4,682,000,000		4,682,000,000
1933	5,278,000,000	131,000,000	5,409,000,000
1934	6,273,000,000	447,000,000	6,720,000,000
1935	6,969,000,000	573,000,000	7,542,000,000
1936	8,212,000,000	287,000,000	8,499,000,000
1937	8,744,000,000	367,000,000	9,111,000,000
1938 <sup>1</sup>	7,599,000,000	482,000,000	8,081,000,000
1939 <sup>1</sup>	7,711,000,000	807,000,000	8,518,000,000

<sup>1</sup> Preliminary.

TABLE II.—Cash farm income<sup>1</sup> by commodities, calendar years 1932 and 1938

Commodity	1932	1938 <sup>2</sup>	Increase, 1938 over 1932	Percent increase
Corn	\$110,000,000	\$269,000,000	\$159,000,000	145
Wheat	200,000,000	396,000,000	196,000,000	98
Oats	31,000,000	43,000,000	12,000,000	39
Barley	14,000,000	38,000,000	24,000,000	171
Rye	4,000,000	8,000,000	4,000,000	100
Rice	15,000,000	34,000,000	19,000,000	127
Cotton (seed and lint)	461,000,000	647,000,000	186,000,000	40
Tobacco	115,000,000	294,000,000	179,000,000	156
Potatoes	90,000,000	128,000,000	38,000,000	42
Dairy products	991,000,000	1,398,000,000	407,000,000	41
Meat animals	1,158,000,000	2,180,000,000	1,022,000,000	88
Poultry and eggs	514,000,000	699,000,000	185,000,000	36

<sup>1</sup> All income figures in this table exclude Government payments.

<sup>2</sup> Preliminary.

TABLE III.—Average annual prices received by United States farmers, 1932 and 1938

Commodity	Unit	1932	1938 <sup>1</sup>
Wheat	Bushel	\$0.382	\$0.561
Corn	Bushel	.319	.504
Oats	Bushel	.157	.237
Barley	Bushel	.221	.366
Rye	Bushel	.281	.338
Buckwheat	Bushel	.434	.544
Tobacco	Pound	.105	.197
Cotton	Pound	.085	.086
Potatoes	Bushel	.592	.558
Hay (all)	Ton	6.22	6.82
Apples	Bushel	.602	.83
Hogs	Hundredweight	3.34	7.74
Beef cattle	Hundredweight	4.25	6.53
Veal calves	Hundredweight	4.95	7.92
Lambs	Hundredweight	4.46	7.02
Rice	Pound	.418	.642
Chickens	Pound	.118	.15

<sup>1</sup> Preliminary.

<sup>2</sup> Includes unredeemed loan wheat at average loan rate.

<sup>3</sup> Includes unredeemed loan corn at average loan rate.

<sup>4</sup> Dec. 1 price.

TABLE III.—Average annual prices received by United States farmers, 1932 and 1938—Continued

Commodity	Unit	1932	1938
Butter	Pound	.208	.209
Eggs	Dozen	.142	.203
Milk (wholesale)	Hundredweight	1.27	1.73
Sheep	Hundredweight	2.19	3.51

TABLE IV.—Number and amount of loans made May 1, 1933, through Dec. 31, 1939, including Federal land banks, Land Bank Commissioner, production credit association, emergency crop loans, and drought-relief loans

[Farm Credit Administration]

State and district	Total	
	Number	Amount
1—Maine	18,956	\$20,078,801
New Hampshire	3,647	3,581,866
Vermont	12,207	12,559,554
Massachusetts	11,108	\$17,250,855
Rhode Island	1,971	5,126,867
Connecticut	9,183	16,636,977
New York	55,567	79,276,692
New Jersey	15,098	23,621,753
Total	126,727	178,133,365
2—Pennsylvania	49,723	42,094,020
Delaware	3,522	2,489,615
Maryland	18,648	25,683,890
Virginia	87,302	42,749,004
West Virginia	13,242	11,849,828
Puerto Rico	17,676	14,444,221
Total	190,113	139,310,578
3—North Carolina	251,865	78,366,676
South Carolina	217,204	61,317,056
Georgia	232,575	74,741,484
Florida	35,542	38,584,654
Total	737,186	253,009,870
4—Ohio	92,587	112,144,714
Indiana	86,646	119,861,967
Kentucky	74,010	63,342,838
Tennessee	107,236	55,071,414
Total	360,479	350,420,933
5—Alabama	85,481	40,113,418
Mississippi	172,904	64,253,742
Louisiana	138,476	46,741,295

1 Includes 343,639 families who received both loans and grants. Thus 1,306,204 families have received rural-rehabilitation loans, grants, or both.

2 Includes rural-rehabilitation loans to individuals from emergency-relief and water-facilities funds and excludes loans to cooperatives, loans for tenant purchase or for construction of farmsteads (lease and purchase).

3 Includes cash grants to individuals for subsistence and for sanitary facilities, and voucher payments for purchase of commodities for issuance to migrant farm families

TABLE VII.—Rural rehabilitation loans and grants to individuals by States and Territories cumulative as of Dec. 31, 1939—Con.

State and Territory	Number of families receiving loans	Amount of loans certified	Number of families receiving grants	Amount of grants certified

### Civil Liberties

#### EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. NORRIS. Mr. President, on the 29th day of February the Senator from Washington [Mr. SCHWELLENBACH] delivered over the Mutual Broadcasting System an address entitled "The Relation Between Alien Legislation and Civil Liberties." I desire to read one paragraph of that address. Among other things, the Senator from Washington said:

No objective in mankind's progress has been more difficult of achievement or retention than political freedom. The common man has always desired political freedom for himself. He has, however, been slow to remember that his own freedom ultimately depends upon the equal freedom of all, even those whose views of government he may, upon occasion, dislike and even profoundly detest. It was only after centuries of struggle that the common man realized that political democracy was possible only if the right of all men, without regard to race or religion, to express their political opinions freely and publicly was scrupulously safeguarded.

I ask unanimous consent that the entire address be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Hate and fear. It is through these two emotions that dictators gain power. Place in the hands of an ambitious leader the means of instilling these in the minds of a people and you take the first step toward bondage. In Germany, it was hatred for and fear of the Jews that made Hitler strong. In Russia, it was hatred for and fear of the church which led to Stalin's ruthlessness. It is always so. We in America want no dictator. We want none of Hitlerism nor Stalinism.

That is why we must resist any effort to create hatred for or fear of any class or group here. I don't care what may be their race or religion or social or economic status. Once we set apart any group as our common enemy to be hated or feared, we endanger the rights and liberties of every citizen in the land.

There are pending in Congress four dozen bills directed against aliens. I hold no brief for aliens. Certainly they must not be

granted favors over American citizens. But the danger lies in singling them out as the objects of legislative disfavor. Whether we like it or not we are all the descendants of aliens. No one with good sense—no one with true devotion to American ideals can justify whipping up popular sentiment against them just because they don't have the right to vote.

I know how easy it is for political self-seekers to condemn aliens. It is perhaps the best vote-getting argument in present-day politics. The politician can beat his breast and proclaim his loyalty to America. He can tell the unemployed man that he is out of work because some alien has a job. He can urge the immediate deportation of all aliens. Of course, he won't tell where the aliens are to go or how ships will be provided for their deportation. He has two objectives. One, to instill fear and hatred against the aliens. Second, to raise the false hope that by following his leadership work may be obtained by citizens who so much want it.

The tragedy of it all is that apparently neither the politician nor those who listen realize he is sowing the seeds of discontent that will inevitably bring despair and disaster to all our people.

You say I am exaggerating. Let us look for a minute at H. R. 5643, which provides for concentration camps for aliens. You say that can't be true. Surely here in free America no Congressman would advocate concentration camps. This is not Germany. Unfortunately, it is true. Let me read you an excerpt from this bill:

"Any alien (in certain classes), where deportation or departure is not effectuated within 90 days after the date the warrant of deportation shall have become final, shall be taken into custody and transported to such place of detention as may be designated by the Secretary of Labor and confined until such time as deportation may become feasible."

What does that mean? Simply this—we have several hundred aliens who are subject to deportation. Through no fault of their own the countries from which they came have been destroyed. They may be from Poland, Monrovia, Bohemia, Albania, or one of the other countries which has been wiped out in the last few years. They can't be deported. There is no place which will receive them. So this law says they shall be confined "until such time as deportation may become feasible." That time may never come. It may mean life imprisonment. Do you want laws of that kind upon the statute books of free America?

Maybe you say, after all, they are only aliens. Why should we Americans worry about them? If that is your attitude, I want Abraham Lincoln to answer you. Let me quote from what he once said: "Familiarize yourselves with the chains of bondage and you prepare your own limbs to wear them. Accustomed to trample on the rights of others, you have lost the genius of your own independence."

We have before us another bill under which any alien who even in private conversation favors any change in our Government shall be deported. He need not advocate force and violence. He need not be a Communist or Nazi. He just needs to be critical of our Government or the administration in power. You may again say, "Why should we let aliens remain here who criticize our Government? They are only aliens after all." If you say that, I am going to ask Thomas Jefferson to answer you. In his original draft of the Virginia bill for the establishment of religious freedom he said, "The opinions of men are not the objects of civil government or under its control." Do you think that Thomas Jefferson or any other of the original patriots would countenance measures which are today being advocated? If they had, we would never have enjoyed a democracy here. We still would be English colonies.

I think the height of politics was reached on January 3, 1939, when H. R. 999 was introduced. That bill provided, "That after December 31, 1939, every alien in the United States shall be forthwith deported." The author of that bill knew it could never be enforced. All of our ships and all of our machinery of government could not make it effective.

I do not criticize men who advocate things such as this. I pity them. I do not fear them. Their proposals are too outlandish. I mention this bill only because it indicates the trend—a trend which involves a deep-seated danger so far as our future is concerned.

My appeal is not on behalf of the alien; it is on our own behalf. We don't dare permit these emotions to be kindled in our midst. The fate of any individual alien who might be injured by such legislation is not important as compared with the fate of our own people who will ultimately be injured thereby.

We in America inherit a treasure. That treasure is not in gold or land or other resources. It is the treasure of liberty. The right to be free, the right to think and to speak and to print and to worship—these are our inheritances. He who strikes at them strikes at our democracy itself. He who would restrict and limit the rights of any within our shores endangers the right of all within our shores. He who would ask us to hate and fear our neighbors, just because they are not citizens asks us to light a fire which might well consume us all. He may wrap around himself the cloak of patriotism. He may attempt to charm with impossible promises, but he cannot deceive those who truly understand American democracy, because the hate and fear he teaches is foreign to it.

The spirit of American democracy is a spirit of tolerance. Fortunately, we in America have in our hands the tools with which we may make that spirit effective. The tools of our democracy are

contained in the first 10 amendments to the Constitution. They are known as the Bill of Rights.

It must not be forgotten that the very nature of these tools of democracy is such that they cannot be misused, exploited, or even neglected for long. They cannot be permitted even intermittently to lie dormant. Their nature is such that neglect and nonuse causes them to atrophy and die. Untiring alertness is the price which must be paid for their preservation.

We live today at a time when the need for this untiring alertness is greater than at any previous period in our Nation's history; this for the reason that right now three factors have merged.

1. For a full decade we have undergone a condition of depth-reaching depression. This could not have helped but to have weakened the resistance of our people. False doctrines of government acquire much more attractive color to a depressed than to a prosperous people.

2. The last two decades have seen the acceptance by the peoples of many nations of political doctrines which are the direct antithesis of those in which we believe.

3. At the moment most of the powerful nations of the world either are at war or on the verge of war. This results in a situation in which all of the nations participating feel it essential that every possible effort be made by them to influence the attitude of our people toward them and their enemies.

The concurring of these three factors presents to us the greatest danger, so far as our civil liberties are concerned, that this Nation has ever seen. Our Government and our people must necessarily afford protection against improper activities conducted from outside sources. We cannot afford to permit our actions to be controlled directly or indirectly by those who represent governments other than our own. We must, however, take care that in our desire to defend against improper outside activities we do not run the risk of destroying the civil liberties of our people, and by so doing destroy our very democracy itself.

Each one of us looks upon himself as a patriotic American citizen, interested only in the future welfare of our Nation and our Government. We are inclined to look upon those of whose theories we disapprove as being enemies of our Government and its future welfare. What is hard for you and me to understand is that if we prevent them from stating their point of view, we, at the same time, deprive ourselves of the protection of the tools of democracy upon which we rely for the protection of the doctrines we espouse.

No objective in mankind's progress has been more difficult of achievement or retention than political freedom. The common man has always desired political freedom for himself. He has, however, been slow to remember that his own freedom ultimately depends upon the equal freedom of all, even those whose views of government he may, upon occasion, dislike and even profoundly detest. It was only after centuries of struggle that the common man realized that political democracy was possible only if the right of all men, without regard to race or religion, to express their political opinions freely and publicly was scrupulously safeguarded.

We in America must not permit these centuries of struggle on our behalf to be wasted by the creation of fear and hatred toward our alien groups.

## O'Mahoney Amendment to Reciprocal Trade Agreements Act

### EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5 (legislative day of Monday, March 4), 1940

TEXT OF O'MAHONEY AMENDMENT AND EDITORIALS AND LETTER FROM THE BALTIMORE SUN

Mr. O'MAHONEY. Mr. President, on Wednesday last I appeared before the Finance Committee to submit an amendment to the joint resolution now pending there (H. J. Res. 407) extending the Reciprocal Trade Agreements Act for another 3-year period. That amendment has since been offered in the Senate.

On March 1 there appeared in the Baltimore Sun an editorial replying to the argument I made at that time. To that editorial I made response by a letter which appeared in the Baltimore Sun of this morning. To this letter the editor of the Baltimore Sun has made an additional reply.

I ask unanimous consent that my amendment, the two editorials referred to, and my letter may be printed in the Appendix of the RECORD in the order I have already mentioned.

There being no objection, the amendment, editorials, and letter were ordered to be printed in the RECORD, as follows:

Amendment intended to be proposed by Mr. O'MAHONEY to the joint resolution (H. J. Res. 407) to extend the authority of the President under section 350 of the Tariff Act of 1930, as amended, viz: At the end of the joint resolution insert the following new section:

SEC. 2. No. foreign-trade agreement hereafter entered into under the authority delegated to the President by such section 350, as amended, no amendatory or supplementary agreement hereafter entered into under such section, and no duties and other import restrictions specified in a proclamation issued by the President to carry out any such foreign-trade agreement or any such amendatory or supplementary agreement, shall take effect until the Congress, by law, has specifically approved such agreement, and the duties and other import restrictions so specified to carry out such agreement.

[From the Baltimore Sun of March 1, 1940]

#### MR. O'MAHONEY THINKS THE TRADE ACT UNCONSTITUTIONAL

Senator O'MAHONEY's behavior in the court-pack fight and as T. N. E. C. chairman has been, in general, so reassuring that it is a pity to see him go wrong on the Trade Agreements Act. For administration Senators on the Finance Committee had little difficulty in showing the holes in his plea for provisions requiring congressional approval of trade agreements negotiated from now on. And it is probable that a majority of the Senate will see the same holes if his proposal comes to a vote.

Senator O'MAHONEY's attack upon the constitutionality of the trade-agreements program rests on alternative and conflicting formulas. First of all, he says the agreements are really treaties and so subject to ratification by the Senate. Next he says they are revenue acts and so subject to the authority of the House of Representatives. Without waiting to resolve the conflict thus set up, he proposes a cure broad enough to reach either flaw.

But if, as the Senator thinks may be possible, the agreements are really treaties, then his own proposal seems equally unconstitutional. It admits the House of Representatives to authority over treaties, and it reduces the vote required in the Senate from the constitutional two-thirds to the mere majority of ordinary legislation. If, on the other hand, the agreements are revenue acts, which should originate in the House, then it would be interesting to know just what it was that happened in the House last Friday, when the Members voted 216 to 168 to extend the Hull program for 3 more years.

But Senator O'MAHONEY argues that the House was not passing on the agreements later to be negotiated by the President's agents in the State Department. And that is perfectly true. But if the Senator really means that Congress cannot delegate to executive or administrative agencies specialized jobs under specific mandate as to how the jobs are to be done, then he invalidates a considerable share of the legislation passed since the Interstate Commerce Commission was set up in 1887, to say nothing of earlier enactments.

No one should minimize, of course, the danger of undue expansion in executive and administrative authority and power. What we have been seeing in the Smith committee hearings on the N. L. R. B. is evidence enough of that danger. But there is a middle ground between the abuses revealed by the Smith committee and the notion apparently held by Senator O'MAHONEY that the Congress itself ought not merely to legislate but to administer its legislation. It is a ground already occupied by a long series of provisions under both Republican and Democratic administrations for securing flexibility in the tariff. It is the ground marked out by the Supreme Court of the United States when it said of one such provision: "If it is thought wise to vary the customs duties according to changed conditions at home and abroad, Congress may authorize the Chief Executive to carry out this purpose."

[From the Baltimore Sun of March 5, 1940]

MR. O'MAHONEY REPLIES—THE SENATOR FROM WYOMING FURTHER EXPLAINS HIS OPPOSITION TO THE RECIPROCAL TRADE AGREEMENTS ACT

TO THE EDITOR OF THE SUN:

Sir: I have read your editorial of March 1 commenting upon my argument to the Senate Finance Committee on the Reciprocal Trade Agreement Act. It is clear, however, that before writing the editorial you had not read my argument. May I not therefore take the liberty of briefly summarizing it?

The Constitution of the United States says in so many words (par. 2 of art. VI): "This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land."

The Constitution also provides in section 7 of article I that "All bills for raising revenue shall originate in the House of Representatives."

The Tariff Act of 1930 was a revenue law enacted in accordance with the latter provision. When it was approved by the President it became, under the first provision above quoted, a part of the supreme law of the land.

It is perfectly obvious therefore that the customs duties fixed in that statute can be altered only by an instrument of equal dignity, that is to say by a treaty or by another law.

The State Department contends that reciprocal-trade agreements are not treaties though they are international compacts. If the State Department and, incidentally, the editor of the *Baltimore Sun*, are correct in this contention, then, obviously, a trade agreement which is not a treaty cannot change the customs duties fixed by a constitutional law of Congress.

The only other way to change these customs duties is by law, and, since customs duties are taxes, and the measures which fix them fall within the category of "revenue-raising measures," they must, under the Constitution, originate in the House of Representatives.

But the trade agreements do not originate in the House of Representatives. They originate in the State Department, and the Members of the House of Representatives, to whom the framers of the Constitution committed the responsibility of originating all revenue measures, do not know what changes are being made under the Trade Agreements Act until the changes are effective. That, I contend, is a perfectly plain violation of the intent and purpose of the Constitution.

If the Congress of the United States can constitutionally delegate to the Executive the power of modifying one form of revenue law, what is there to prevent it from delegating the power to change all other forms of revenue law? If the Congress can constitutionally delegate to the Secretary of State the power to modify customs duties, by what authority would you argue that Congress could not delegate to the Secretary of the Treasury the power to modify the income tax rates?

Now, then, with respect to your statement that my argument "rests on alternative and conflicting formulas," let me say again that you have not read the argument. I do not contend that all international compacts are treaties. Executive agreements have been made and recognized as wholly valid throughout our history, but there is a clear difference between Executive agreements and treaties. Executive agreements deal with ministerial details and not with broad questions of public policy. Executive agreements cannot alter law. Only treaties or another law can do that.

Whenever the President makes an agreement with a foreign country which alters a law it cannot become effective, under the Constitution, until ratified as a treaty.

On the other hand, however, if a reciprocal-trade agreement deals only with the modification of customs duties, and does not involve any other question of public policy or alter any other treaty, clearly the Constitution would be satisfied if the agreement should be approved by an act of Congress passed in both Houses.

To put it in another way, a trade agreement which deals only with modification of customs duties would amount to a recommendation by the President to the Congress for a new law, and all questions of the treaty-making power could thus be eliminated.

May I not venture to add another word? Let us not confuse the question of reciprocity on its merits with the constitutional question of how in our country, under our form of government revenue laws may be constitutionally changed. In a world in which the whole principle of popular government is being submerged, it seems to me to be of the utmost importance that the United States of America shall stand out as the unconquerable defender of the principle that the people, through their representatives, and not the Executive shall make the laws which the people must obey. We cannot defend democracy by abandoning it.

JOSEPH C. O'MAHONEY.

Washington, March 2.

[From the *Baltimore Sun* of March 5, 1940]

SENATOR O'MAHONEY GOES IN DEEPER AND DEEPER

Elsewhere on this page this morning Senator O'MAHONEY, of Wyoming, questions our comment that his argument against the trade-agreements program rests on "alternative and conflicting formulas." Our comment was based on the Senator's feeling that the trade-agreements program is in violation (a) "of the constitutional provision that treaties with foreign governments shall be made by and with the advice and consent of the Senate"; and (b) of the constitutional provision that all revenue measures shall originate in the House of Representatives.

Now, agreements which violate the treaty provisions of the Constitution must be treaties. By the same token, agreements which violate the revenue provisions of the Constitution must be revenue measures. If these two interpretations of the trade agreements are, as the Senator suggests, complementary and harmonious, then the defects which he detects in the agreements under either interpretation must be curable by the legislation which he proposes.

As a matter of fact, the legislation which he proposes provides for approval of future trade agreements by mere majority vote of the two Houses. This obviously does not meet the constitutional provision that treaties are to be ratified by a two-thirds vote of the Senate, the House being denied any authority whatever. If Senator O'MAHONEY's letter to us is thus a formal notice that he abandons his earlier view that the agreements are treaties, we welcome it. We welcome its implicit assurance that the Senator will not be found during the debate supporting amendments which rest on the notion that the trade agreements are really treaties.

But it should not be overlooked that Senator O'MAHONEY's amendment does not meet, either, the second constitutional provision, cited by him, that all revenue measures shall originate in

the House of Representatives. "The trade agreements," says the Senator, quite accurately, "do not originate in the House of Representatives." But his proposed amendment does not require that they originate there for the very good reason that it is not administratively practicable that they originate there.

If, then, Senator O'MAHONEY's proposal reaches neither the treaty violation nor the revenue-measure violation which he outlines, it seems fair to say that actually, in the Senator's view, the trade agreements not only are not treaties but are not, in the exact sense, revenue measures. Just what are they, then, in the Senator's view? To judge by the amendment which he proposes, supplemented by his letter of this morning, they seem to occupy a shadowland about halfway between treaties and "Executive agreements," with enough of the flavor of "revenue measures" to require congressional action roughly like that required on a revenue measure.

But this is really a new and adventurous essay in constitutional speculation. More cautious we prefer the view of the State Department that the trade agreements represent a mere valid and familiar delegation of legislative power to the Executive. With the Supreme Court decisions supporting this view from Field against Clark to U. S. against Curtiss-Wright, the Senator is as well acquainted as we are or as are counsel for the State Department. If this delegation is valid, asks the Senator, "what is there to prevent (Congress) from delegating the power to change all other forms of revenue law?" Of course, there is nothing, except the voters, the wisdom of the Congress itself, and, finally, the Supreme Court of the United States, which distinguishes in matters of delegation between domestic and foreign affairs. As the Court, through Mr. Justice Frankfurter, was saying only the other day, "It is always easy to conjure up extreme and even oppressive possibilities in the exertion of authority. \* \* \* But to conjure up is not, happily, to legislate."

We fully appreciate the dangers Senator O'MAHONEY mentions in his last paragraph; and we gladly recognize the special force of such an argument from one who played the Senator's part in the Court-pack controversy. But let us point out that there are two dangers, not one, in the "confusion of the question of reciprocity on its merits with the constitutional question." There is, perhaps, the danger that those who see the merits will forget the Constitution; there is also the danger—to which we do not say the Senator has succumbed—that those merits will be purposely obscured in quite irrelevant constitutional arguments. For "any requirement of ratification would have made it altogether impossible to hope for any successful development of the program of reciprocal agreements," as Senator O'MAHONEY himself was saying in 1937. It is quite possible that constitutional quibbling, however honest, will play into the hands of special interests whose real motives for wishing to kill the trade program are not constitutional at all.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5 (legislative day of Monday, March 4), 1940

ARTICLE BY THOMAS W. LAMONT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the *RECORD* a very illuminating article in *Collier's Weekly* for March 9, written by Mr. Thomas W. Lamont, entitled "Trade Is a Two-Way Street."

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

[From *Collier's* for March 9, 1940]

TRADE IS A TWO-WAY STREET

(By Thomas W. Lamont)

As a lifelong Republican, I am impressed with the importance of renewing the legislation for the Hull trade agreement. Further, I venture to express the hope that my Republican friends will avoid making a party issue of this pending measure. I can understand the attitude of those who are not convinced of the lift the Hull agreements have given to our foreign trade and who therefore may not support this policy. But for the Republicans to take a partisan stand against this manifest effort to expand our commerce would, I submit, place the party in an untenable position. It would jeopardize the success of any Republican administration that might win office next November, for the reason that the next 4 years for America must be made to produce expanding, not dwindling, trade.

In arguing for the trade agreements, I shall not resort to elaborate statistics. I know that the State Department's figures as to the favorable working of the agreements have been challenged on some points, but I have no reason to doubt that the Department's compilations are substantially correct. Yet one has to go behind statistics alone and look at basic principles and larger issues. The real question is: Shall we or shall we not make every reasonable effort to maintain and upbuild our foreign trade?

Among all the criticisms of the trade agreements, I have not yet seen one that even began to prove that the operation of the treaties has been detrimental to America's national interests. Naturally, our trade with all of the 20 countries now bound by agreements with the United States has not yielded spectacular results. But which one of the critics has stopped to figure to what low point our trade might have dropped if the agreements had not been in existence? I doubt whether the public at large has any realization of the extent to which in the last few years normal trade relations over the world have been dislocated and international trade cut down. Indeed it was a lucky thing that, before the world began to turn completely topsy-turvy, we made a vigorous start on this trade-agreement plan for maintaining and increasing America's foreign commerce.

We Republicans are rather inclined to pick holes in the whole theory of trade agreements, seeming to think they are a brand-new invention of the Democratic Party, and therefore of the Evil One. Yet I have noted that even the Democrats have been apt to quote President McKinley as in favor of special trade arrangements. This was his attitude in 1897:

"By sensible trade arrangements, which will not interrupt our home production, we shall extend the outlets for our increasing surplus. A system that provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade. We must not repose in fancied security that we can forever sell everything and buy little or nothing."

Now, frankly, I can hardly bring myself to believe that William McKinley, the high priest of protection, was ever strongly in favor of lowering tariffs very far, but certainly he was on sound ground when he wound up his appeal to an overwhelmingly Republican Congress by declaring that "we must not repose in fancied security that we can forever sell everything and buy little or nothing." And that brings me to my next point.

How many of us, either Republicans or Democrats, ponder enough upon our sins in the whole blind and inconsistent tariff policy that we have followed—both parties—in the last 20 years? In my boyhood days and up to almost the end of the World War, America was a debtor country. For that reason, quite aside from the question of protecting and building up infant industries as an offset to lower wages and poorer living standards abroad, it was natural and proper that America should seek a favorable balance of trade. We had to, as a means of paying the interest we owed on money borrowed abroad, and paying for ocean transportation, insurance, immigrants' remittances, etc., all of which were a heavy debit burden. Therefore the Republican protective policy on the whole, despite many inequalities, worked well. So well, in fact, that the Republican Party grew to believe that if adequate protection had proved sound for development of industry in our infant years, therefore, when as a country we had reached maturity, we should ask for even higher protection. And even the free-trade or low-tariff Democrats began to be bitten with the same bug. The appalling thing that happened was that both political parties and the country at large utterly failed to adjust its policies to America's radically altered position, its spectacular change from a debtor to a creditor nation.

It was about 1916 that America's situation reversed itself. We bought back our debts, we began to build ocean carriers, we undertook more insurance for our own account. As creditor instead of debtor the natural course would have been for us straightway to begin cautiously to lower our tariffs and to encourage imports, to follow President McKinley's advice and to make trade more of a two-way street. Such a gradual change of policy on America's part would not for a moment have meant a diminution of our prosperity. It would simply have helped to put foreign nations where, by having a chance to sell us more goods, they would become profitable customers of ours on a vastly increased scale.

Well, as a matter of fact, what did we do? Loosen up? Let the bars down? Encourage foreign trade through a reasonable lowering of tariffs, and so encourage foreign nations to become better customers?

Not at all. First came the Fordney-McCumber tariff in 1922, which jacked our duties up to an all-time high. Indeed, William McKinley, Thomas B. Reed, and all those old worthies of the gay nineties would have realized, had they lived to see the sorry spectacles, what small-town folks they were in the matter of high tariffs. The foreign nations, not having the wherewithal under the higher tariffs to pay for what they needed to buy from us, found our money markets ready lenders. Thus for several years in the twenties there was a specious show of a very lively export business from America, built in part on the quicksands of overlending.

In 1927 I respectfully protested, in some remarks before the International Chamber of Commerce at Washington, against this easy-mark policy by Americans. It had first started with well-planned loans to European nations that were solvent and utilized the loans for constructive purposes. Then it finally developed into a scramble for unwise loans to many South American countries, and to the extension of many short-time, unsecured credits to various central

European powers, much of which has not been repaid. What we had tried to do was to get the foreign peoples to buy our goods on the strength of lending them money to pay for them. We were unwilling to let them pay for them by selling to us on a liberal scale, and thus let us carry out our proper role as a creditor nation, help increase all-around world trade, and build our own prosperity on a firm foundation.

But America had not yet learned its lesson. In 1929 a tariff bill was introduced in Congress for the declared purpose of assisting the farmers. They were properly complaining. For, although they were getting lower and lower prices for their farm products, they had to pay higher and higher prices for heavily protected articles of manufacture. For generations, during the period when agriculture in this country was constantly developing new and fertile areas and when the foreign demand for its products was almost unlimited, it was all right for us, as I have indicated, to pursue the policy of strong protection for the industries that we wanted to build up; and, in general, with the growth of those industries farmers themselves prospered. But long before 1929, what with the overstimulation and overproduction of farm products here, and the falling off of the heavy World War and postwar demand for such products, a radical change had occurred. The farmers were getting the short end of the stick. And naturally they set up an outcry.

Thus it was not unnatural that consideration should be given to the demand for tariff protection on farm products. But, of course, when the subject was once broached Pandora's box flew wide open and all sorts of industries began clamoring for higher duties. The result was the hodge-podge Hawley-Smoot tariff of 1930. That was the last straw. That act did indeed raise our tariff barriers as never before and in many directions constituted almost an embargo on foreign goods. But its far worse consequences were its evil effects on the whole world of international trade. A score of nations, looking across the oceans and seeing that the most powerful country on the globe, with its immense resources, had felt it necessary to build up higher tariff barriers immediately followed America's example. And there developed the vicious circle of higher tariff barriers all around, quotas, embargoes, and so forth, with the resultant break-down in international trade that we have witnessed throughout the last decade, which unquestionably has been one of the factors contributing to the rivalries and bitterness preceding the outbreak of European war. And among the ill effects of all the demoralization were the intensification and prolongation of our own domestic business and industrial depression. No one will for a moment lay upon the poor old Hawley-Smoot Tariff Act the chief responsibility for all this confusion in the world economy, nor in our own, but it had a sizable finger in the pie.

Another development upsetting to foreign trade has been the overwhelming mass of the world's gold supply that has piled up in America. Our gold holdings amount to almost \$18,000,000,000, over half of the gold in the world.

We continue to siphon from the other nations of the world a good part of their gold resources for which we have no use. To cap that, as a measure of reprisal because of their incapacity to find enough dollars to pay their war debts to our Government, we have maintained a loan embargo against governments like Great Britain and France, so that American nationals are not permitted to lend them any money to be used here in part payment for their purchases. In other words, we are sitting on the top of this heap of gold with nowhere to go with it unless we seize and develop every chance to increase our foreign trade and by loosening trade restrictions, and to encourage imports as well as exports. That is our only recourse. A whole book could be written on this heavy gold problem of ours, but it must be obvious that it has a direct effect and an important bearing upon all our foreign-trade policy.

In fact, we may well ask ourselves what sort of world we are going to find ourselves in after the war ends. We may be sure that it will be a groggy one and hard to keep on its feet at all unless we take this time to encourage our foreign trade on the greatest scale possible—our own foreign commerce and international trade generally. That is the reason that I advocate so strongly the continuation today of the Hull trade policy. I do not contend that the Hull agreements are perfect. Of course, they are not. And I have no doubt that the six New England Governors and others in opposition are entirely sincere in their conviction of the temporary disadvantage of these trade pacts to some of their local industries. It is always true that somebody has got to have his toes trod on a bit. But in the long run, under expanding international trade, those very industries that now complain will benefit from their share of the greater purchases that will eventually come from abroad and from a more prosperous people here at home. Thus our only sensible course is to make every effort to welcome a flow of trade not with our own country alone but all over the world. With this flood coming in, all the ships now stranded on high-sand tariff barriers will be floated off and there will be prosperity all around.

These, then, are my general reasons for hoping that these enlightened trade arrangements will be gradually expanded. So far as I can see, they seem to represent the one tangible effort made during the thirties to dam the tide of intense nationalism, including our own particular brand, that has played such havoc with world commerce. In a darkling world of upset trade they constitute the only bright ray of light.

This country must not turn back the hands of the clock. Despite so many neo- and quasi economists to the contrary, we Americans

believe that prosperity rests not on scarcity but on abundance. We still believe in private initiative and in the honest enterprise that has built up our country over the last 150 years. There are no frontiers to the mind or genius of the American people. We will still fight—believe it or not, as you like—for the ideal of hard work and thrift in private and public affairs. And I believe we shall not turn our backs on the policy of rebuilding world trade. The pursuit of such a policy now will, when anything like peaceful times comes again, mean for us greatly added prosperity and increasingly high standards of living for all our people.

### The Late Father Alphonse H. Van Oppen

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 5 (legislative day of Monday, March 4), 1940*

EDITORIAL FROM THE CATHOLIC TRANSCRIPT

Mr. MALONEY. Mr. President, a few days ago word was received from Holland of the death of Rev. Alphonse H. Van Oppen, who was for a long time a leader in religious activities in the State of Connecticut. At the time of his death he was 90 years old, and had been living in Holland, the land of his birth, for the past 20 years.

In the Catholic Transcript of last week appeared a very fine editorial referring to this distinguished churchman. Among the interesting references of the editorial was a reminder that Father Van Oppen was head of a parish made up of the French-American and German-American people of his city, who worked in harmony for the spiritual development of their families and their community, and did it with great success.

It has seemed to me that a reminder of this good feeling of a long time ago might at least be a little bit helpful to the need for tolerance in this uncertain period.

I ask unanimous consent that this fine editorial be published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Catholic Transcript]

#### THE OLDEST OF ALL

Father Van Oppen, who died in his native Holland last week, was a priest for 65 years. Never, till a few years ago, did a priest of the diocese of Hartford celebrate his fiftieth anniversary. This Belgian-educated priest stands alone—alone he will stand for a century at least, and perhaps forever.

He was ordained before coming to America. After serving for a year or two as a curate in Windsor Locks, he went to Putnam for another short stay. He was then sent to Meriden, to St. Rose's Church, and almost immediately established St. Laurent's parish. The French and Germans of the city were set apart and they worshiped under his direction. He was their pastor for about 40 years.

In the year 1919 Father Van Oppen resigned his Meriden parish and returned to Holland to spend another 20 years, serving as chaplain to a religious community, where he lived and revived his love of home and country. How he could have been happy for 20 years away from the parish which he had established and built up, and absent from his adopted country, is one of the mysteries of human nature which is not ours to solve.

American priests who remember the retired Hollander very well, all agree that kindness was his both by nature and cultivation. His parish loved him and enabled him to do the best possible work for them. He kept a good school for their children, and watched carefully over the spiritual and even the temporal health of all. They were anxious to second him in every endeavor.

Father Van Oppen was not pastor of St. Laurent's parish for a full year before he called upon his people to come out and provide a cellar for their proposed church. They assembled so numerously and worked so diligently that their undertaking was brought to a successful close before the end of the day. Joy reigned supreme, the enthusiastic workers came together under the leadership of their band, and paraded the town, holding aloft their spades and shovels and demonstrating their delight in the performance of the day.

Good nature and good feeling obtained throughout the 20 years of Father Van Oppen's Meriden pastorate. The French loved him

as dearly as did the Germans, and both were almost inconsolable when he decided to yield to the encroachments of age and retire to spend his closing days in his native land. Had Father Van Oppen himself realized that 20 years of his life still remained to him, it is doubtful that he would have resigned his parish in 1919. His Meriden flock were known to him and they were eager to render respect and reverence as well as gratitude and obedience to their spiritual father.

Rev. Alphonse Van Oppen goes on record as one of the church builders of the diocese of Hartford. When he came here many of his fellow countrymen were laying the outposts of the see of Hartford. They were well educated and holy men. They sacrificed themselves generously for their people and they are worthy of whatever of gratitude the Catholics of this State can render them. We must remember Father Van Oppen in our prayers during the holy season of Lent and further on throughout the year.

### The First 7 Years of the New Deal

#### EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 5 (legislative day of Monday, March 4), 1940*

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON

Mr. TRUMAN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the most informative and ablest address upon the accomplishments and the record of the New Deal which it has been my privilege to hear, an address delivered by the distinguished junior Senator from the State of Washington [Mr. SCHWELLENBACH] yesterday evening over the radio in the Washington Star Radio Forum.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Seven years ago today Franklin Roosevelt became President. To get the whole picture, it may be well to think briefly of that day. I am going to let one of the Nation's most respected and reliable newspaper correspondents describe it to you. Yesterday, in the New York Times, Turner Catledge said this:

"That day dawned a dark one in every respect. The great depression hung over the country like a darkening cloud. Banks were closing literally by the hundreds. Life savings in bank accounts and securities were being blown away like so much dust. Homes and farms were going on the auction block in ever-increasing numbers. In certain sections citizens were beginning to grow desperate."

President Roosevelt quickly changed those conditions. Within a week the hearts of the American people, which had been filled with despair, found new hope and courage. They had a leader whom they trusted. Never in our history has one man accomplished what Roosevelt did then. He was acclaimed by everyone. It is hardly understandable how a man who had accomplished this much and had been so acclaimed could have been subjected to the wrath, rancor, and even ridicule which have been the President's lot the last 6½ years.

Tonight Senator TAFT and I are supposed, in 12 minutes each, to set up a sort of balance sheet on Roosevelt's 7 years as President. Balance sheets invariably have two sides. On one are the assets and on the other are the liabilities. The business whose balance sheet shows no liabilities hasn't done very much business. I am not going to be foolish enough to claim that there have been no liabilities in the Roosevelt record. We have had Presidents who have made no mistakes. They are the ones who have accomplished nothing.

What are the Roosevelt accomplishments?

First was the rehabilitation of banks and the establishment of Federal deposit insurance. The number of failures has been brought down from 1,500 per year under Hoover to 51 per year under Roosevelt. Even in these failures 99¼ percent of the depositors have been paid in full.

More than 2,500,000 young boys have been taken off the streets and rehabilitated physically and mentally in the C. C. C. camps.

Two million nine hundred thousand homes have been built or rebuilt under the Federal Housing Act.

National farm income has increased from \$4,682,000,000 in 1932 to \$7,711,000,000 in 1939. Farm wealth has increased two and a quarter billions. Farm foreclosures dropped from 38 per thousand to 13 per thousand. The rural-electrification program has brought cheap electricity to 1,500,000 farm folks. Six million farmers now participate in the soil-conservation program.

Since 1935 the National Youth Administration has made it possible for 2,500,000 young boys and girls to get high-school and college education.

Under the President's foreign-trade program our exports increased from a billion and a half in 1932 to three billion one hundred million in 1939.

Under President Roosevelt Congress has written the Social Security Act, which is our first recognition of the responsibility of Government to the aged. It has adopted a Fair Wage Standards Act under which wages of 900,000 have been increased. It has regulated stock selling and public utilities. It has given those who labor the right to organize and bargain collectively. It is of interest in reference to these controversial questions that the Republican Party policy committee, under Glenn Frank, in its recent report did not urge abandonment of a one of them. The Republicans say they will keep all these reforms. They claim they can operate them better than can the Democrats. In that regard I simply want to say this. It is very seldom that a parent who did not want to have children turns out to be a very good father or mother. Our Republican friends have certainly proved in the last 7 years that they did not want these reform children to be born.

Now, let us turn to the liability side of this balance sheet. Let us examine briefly the most serious charges made against the President.

The first is that he has only half solved the unemployment problem. Our friends say that he has only reduced unemployment from the fourteen or fifteen million down to eight or nine million. Therefore, they argue that he has failed. Yet the figures show that Roosevelt has done a much better job than he is given credit for. In 1929 there were 48,000,000 laborers in the United States, 47,000,000 of them at work. On December 31 last year there were 54,000,000 laborers in the United States, 46,000,000 of them at work. Of the 8,428,000 unemployed at the present time, approximately 7,000,000 are accounted for by increases in the laboring population of the United States. President Roosevelt has come within 1,000,000 of the 1929 figure.

The second charge is that we have increased the national debt. That, too, is true. But that statement is very widely exaggerated. The national debt at the end of Hoover's last fiscal year was \$23,756,000,000. The gross national debt as of December 31 last year was \$41,942,000,000. Therefore it is argued that the debt has been increased by \$18,190,000,000. It must be remembered, however, that we are setting up a balance sheet. Any fair balance sheet makes a showing of the assets as well as the liabilities. On December 31 we had cash on hand in the Treasury, in the Stabilization Fund, and in Government-owned corporations amounting to \$7,715,000,000. Deducting these items leaves a true net increase in the national debt of \$10,475,000,000. Of this, \$2,000,000,000 was spent paying off the obligations created during the Coolidge administration for the soldiers' bonus. Deducting this \$2,000,000,000 payment, which should not be charged against President Roosevelt, you have an actual net increase in the national debt up to December 31, of \$8,475,000. The deductions that I have made are actual cash deductions, but that doesn't mean that the country as a whole hasn't many other assets for the money which was spent. We have school buildings, public buildings, highways and streets, water works, reclamation and power dams, airports, rural electrification lines. There isn't time to list them all or give the amount for each. But these items of a permanent nature which have been added to the total national wealth have a value of thirteen and one-half billion dollars. In addition to that we spent four and one-half billion dollars on national defense. Certainly nobody today regrets that investment.

The third charge is that President Roosevelt has let labor run wild. We have had too many strikes. The other night I heard over the radio a speaker tell of the railroad brotherhoods' record during this last 10 years, with no strikes, no contracts broken by either side. I thought, why couldn't all labor unions be like the railroad brotherhoods? Then I remembered 1916, when they were fighting for an 8-hour day. I got some of the magazines of that day. I found there the same attacks upon the railroad brotherhoods that are now being made upon the A. F. of L. and the C. I. O. Let me read briefly from one of them, which is typical. I quote:

"Are the patriotic citizens of this country going to remain inert and let this disease continue its ravages? Are they going to let the barons of organized labor secure a stronger and stronger hold on their Government until this Nation will be converted into a mere mobocracy?"

That is what they then said about the railroad brotherhoods. Both sides to that controversy have since learned how to deal with each other amicably. So long as we have the Weirs and the Girdlers dominating our industrial scene, just so long will we have labor controversy.

The fourth charge is that business can no longer operate at a profit. The facts are that during the 3 years from 1936 to 1938, inclusive, the net profit of industry averaged 8.3 percent on net worth, the highest return ever made by American industry; this compared with 6.5 percent in the 3 years from 1927 to 1929. The fact is that last year's figures show a substantial increase in net profit over the year before.

For the last 6½ years we have heard scare stories. None of them proved true. You were told that Roosevelt was to plunge us into inflation. Yet today the American dollar is the soundest and most sought after currency in the world.

You were told when we passed the Wheeler-Rayburn bill public-utilities stock values would be destroyed. Since then the average index figure for utilities' common stocks has gone up from 63 to 69.

You were told that the President wanted to control the courts in order that he might destroy your liberties. Yet 3 weeks ago the Supreme Court, a majority of whom he has now appointed, handed down the most outstanding opinion supporting the liberties of the people it has ever rendered.

You were told that if we passed the reorganization bill Roosevelt would become a dictator. Yet the two reorganization orders he has sent to the Congress were approved almost without debate.

You were told last fall, when we passed the President's neutrality bill, that within 2 months we would be at war. The leadership of Franklin Roosevelt has kept and will keep us at peace.

Republican speakers rely chiefly upon their prediction that disaster is just around the corner. Fortunately for the American people, that seems to be the same elusive corner around which Hoover promised to find prosperity.

These last 10 years have been cruel ones everywhere. All about us we see civilization threatened. The rest of the world is at war. We are at peace. The economic structures of many nations have collapsed. Ours has been maintained. Foreign currencies have crumbled. Ours has stood firm. In most places civil liberties have been destroyed. Ours have been protected. Knowing the fair-mindedness of the American people, who view the record in the light of the problems and difficulties, I think most of them on this night are saying to Franklin Roosevelt, "Well done, thou good and faithful servant."

## Letter From Raymond Clapper to Ernest T. Weir

### EXTENSION OF REMARKS

OF

### HON. LISTER HILL

OF ALABAMA

### IN THE SENATE OF THE UNITED STATES

*Tuesday, March 5 (legislative day of Monday, March 4), 1940*

LETTER FROM THE MONTGOMERY (ALA.) ADVERTISER OF MARCH 3, 1940

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Raymond Clapper to Ernest T. Weir, appearing in the Montgomery Advertiser of March 3 last.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Montgomery (Ala.) Advertiser of March 3, 1940]

CLAPPER'S LETTER

(By Raymond Clapper)

WASHINGTON, March 2.—DEAR MR. WEIR: I find that your letter to me of February 28 has been distributed as a general press release by the Republican National Committee. Therefore the controversy must be of more public interest than I had assumed.

Nothing is more important, in a system of private enterprise, than that Government and business have reasonable working relations with each other. Our system rests fundamentally upon private enterprise. But sometimes conditions reach a point where Government must do certain things to cushion the effects of maladjustments. In response to public demand, and I think to real public need, we have adopted Federal guaranties for collective bargaining, for wage-and-hour protection in the bottom levels, for old-age and unemployment insurance, for stock-market regulation and supervision of those who handle the invested funds of the public.

But many businessmen fought most of these and did everything possible to prevent their enactment. I believe you fought Government efforts to protect collective bargaining. Only 2 months ago you said "Fascism, communism, nazi-ism, and new dealism all came out of the same box."

Hence, when the Glenn Frank report was issued, accepting most of these reforms in principle, I said it would be fine if you got behind this report and pushed it. But I doubted if you would in view of your recent speech linking the New Deal as of common origin with communism and nazi-ism.

I am happy to have you say that I am wrong, because a leading and highly respected industrialist like yourself can do much. As you go about in your capacity as chairman of the Republican finance committee, collecting funds, you can induce your business friends to see the light also. For I suspect that some of them are still loyal to the Mr. Weir of old, when you were fighting collective-bargaining legislation and before you saw the great light.

The La Follette Civil Liberties Committee report asserts that you were prominent among antiunion forces and that your Weirton Steel Co. "purchased large quantities of munitions in 1933 during a strike and, in 1934, when there was a threat of a general strike

on the issue of union recognition. Weirton Steel Co., it will be remembered, was instrumental in incapacitating the National Labor Board's order for an election to determine employee representation, and obtained an injunction against the Board."

You were singled out as an unfortunate example of an antiunion employer by William Green, president of the A. F. of L., in his recent book, *Labor and Democracy*.

Mr. Green says: "Among the employers whose cases were heard by the Labor Board (the first board under N. I. R. A.) were men like Ernest T. Weir, of the Weirton Steel Co., who met labor with everything to take and nothing to give. These men were determined from the outset to prevent at all costs any and all forms of workers' exercise of their rights. Their decisions were made and their minds were made up not to yield an inch of power or privilege to which they cling. It was interesting and significant that there were relatively few employers with practical direct experience in management who were so recalcitrant and unbending."

So when you say you fully approve of the Glenn Frank report, I assume that the past is to be forgotten and you now subscribe to the report, including this passage: "The right of the American workers to organize under leadership of their own choosing and to bargain collectively with management is essential to protect the interest of the workers. It is proper that a right so basic should be guaranteed by law."

It is encouraging that you have come to a more broad-minded attitude about these questions because nothing could be more salutary than revival of the Republican Party on a basis that would inspire public confidence. The country as well as the party has suffered from the stupidities of the opposition in recent years.

NOTE.—I hope you will induce the Republican National Committee to grant me the courtesy of giving this reply the same circulation which it gave your letter to me.

Sincerely yours,

RAYMOND CLAPPER.

### Proposed Loan to Finland

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5 (legislative day of Monday, March 4), 1940

ARTICLE BY GARNETT D. HORNER

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD an article by Garnett D. Horner, in which His Excellency, the Minister of Finland, Hjalmar J. Procope, stated that the loan available to his country through the Export-Import Bank would greatly help his country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW LOAN WILL HELP FINLAND GREATLY, PROCOPE SAYS—MINISTRY IS OPTIMISTIC AS HE SPEEDS PLANS FOR USING CREDIT

(By Garnett D. Horner)

Finland, fighting on against Russian invaders with an unbeaten spirit and the conviction that she will get adequate help from the outside sooner or later, sped arrangements today to buy vital non-military supplies here with a new \$20,000,000 credit from the Export-Import Bank.

"Don't think that because the Finnish forces have retreated some and suffered some reverses that we are beaten," Finnish Minister Hjalmar J. Procope told a press conference at the Legation late yesterday after a trans-Atlantic telephone talk with his Prime Minister.

"Most of you thought 3 months ago that we would be beaten in 2 or 3 days, but we are still fighting," he added. "Even if we have to retreat a little more we still will have strong lines of defense and will keep on fighting, convinced that help will come sooner or later."

"No one can help us so much without going into war as the United States."

#### NEW \$20,000,000 CREDIT

He said that gasoline, oil, wheat, lard, and other supplies to be bought with the new \$20,000,000 credit allocated Finland by the Export-Import Bank even before President Roosevelt had signed legislation making possible the loan, would be of great assistance to his country.

In addition to these civilian commodities which can be bought with the Government-loan funds, Finland also needs airplanes, artillery, and ammunition and is buying large quantities of these war materials here with her own funds, Mr. Procope added.

Both Mr. Procope and Col. Per Zilliacus, Finnish military attaché, emphasized that current reverses to the Finnish forces on the Karelian Isthmus were not of vital importance.

"There are two ways to fight a war," Colonel Zilliacus said. "You can hold ground and sacrifice your people, or sacrifice ground to a certain extent and save your people. We have lots of ground and few people and so are sacrificing some ground."

He added that the Russian invaders had an even harder job ahead than they had faced so far in the way of terrain, with hundreds of lakes and hilly, rocky, wooded ground ahead of them.

#### ROADS BAD IN SPRING

Furthermore, he said, spring would provide new difficulties for the Russians. With the breaking up of ice and the melting of snows the last of April, Finland's roads will be virtually impassable for a month or so, increasing the difficulties of an attacking army.

Mr. Procope said there scarcely was one place in Finland that had not been bombed by the Russians "with absolutely no military goals to achieve." The Finnish civilians killed or wounded total between 2,000 and 3,000, he added.

He and Colonel Zilliacus said they did not know definitely why Finnish planes had not bombed Leningrad in retaliation. Colonel Zilliacus said it was an important strategical point for bombing, but assumed that the Finnish Army leaders were not willing to risk the loss of planes on such a venture until they were sure they could do the job effectively.

#### SWEDISH LOAN APPROVED

Jesse H. Jones, the Federal Loan Administrator, announced the new credit allocation to Finland yesterday and at the same time disclosed that the Export-Import Bank had allocated \$15,000,000 to the Bank of Sweden to finance American exports to that country and had confirmed a previously announced \$10,000,000 loan to Norway.

He said President Roosevelt, who has been away from the Capital on a sea-going vacation, had advised him he would sign the measure by which Congress authorized a \$100,000,000 increase in the bank's capitalization.

The agency which is making the advances was created 6 years ago to help trade with Russia.

Warren Lee Pierson, the 42-year-old Los Angeles lawyer who heads the bank, grinned as he reviewed the turnabout since then.

"I can still remember working with Bill Bullitt (then United States Ambassador to Russia and now Ambassador to France) on the Presidential order setting up the bank in 1934," he said.

#### NEVER GOT AROUND TO IT

"We were recognizing Russia and expected to do a lot of trading with them and figured this bank would help finance the business. 'Somehow, we never got around to loaning any money to Russia. Weren't we lucky?'"

The bank now has three main credit lines—Finland and Scandinavia, Latin America, and China.

Under the new law, the bank can have \$200,000,000 of loans outstanding at any one time. With the new Finnish loan and the \$15,000,000 credit given Sweden at the same time, the bank's loans now amount to about \$100,000,000.

Mr. Pierson indicated that Sweden will get more, Denmark is in line, China may get as much as \$20,000,000—maximum loan which may be made to any one country out of the new money—more, and Latin America is slated for generous consideration.

### Reciprocal-Tariff Agreements

#### EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 5 (legislative day of Monday, March 4), 1940

EDITORIALS FROM SIOUX CITY TRIBUNE

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials from the Sioux City Tribune of February 27, 1940. The editorials were written by Mr. O. L. Brownlee.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Sioux City Tribune of February 27, 1940]

#### FOR MR. HULL TO ANSWER

If we were a Congressman—and we're thankful that we are not one—we'd probably make ourselves obnoxious by asking Secretary of State Cordell Hull a few pointed questions concerning certain of his acts and policies with respect to reciprocal trade relations agreements.

For instance, we'd ask him to tell the country what specific reductions, if any, had been made in schedule 304—the steel schedule—and to give his version of why steel tariffs have advanced about 75 percent since 1932 while he has been reducing tariffs on farm and mine products.

We'd ask him to set down in black and white the number of tariff reductions he has made on manufactured goods of all kinds, how much revenue the Government has lost through reductions made in customs duties, and how many and what schedules he has increased, and how much revenue the Government has gained thereby.

We'd ask Mr. Hull to explain why, if the Hawley-Smoot tariff law is such a bad law, nothing has been done in 7 years to repeal or amend it? Why has Mr. Hull let most of its provisions stand while he has been whittling down the tariff on raw materials which those same manufacturers buy from the farmer, miner, etc.

We'd ask Mr. Hull to confirm or deny that his policy actually is intended to favor the very "interests" he denounces by crediting credits here which they can liquidate with their manufactured products.

Yes, we'd probably get in pretty bad with the free traders, but we'd have the satisfaction of seeing anybody squirm when and if he attempted to answer those questions.

#### STEEL AND FARM TARIFFS

Between the years 1922 and 1937, inclusive, the tariff duty on crude and semi-finished steel products enabled American manufacturers to collect approximately \$8,408,000,000 from American consumers.

The Iron Age, organ of the steel industry, of April 1, 1938, printed a financial analysis of the steel industry which showed a capital investment of \$4,430,835,614 in units representing 92.2 percent of the country's total plant capacity.

Thus it will be seen that during the 15-year period 1922-27, the steel industry's tariff "take" alone amounted to approximately 200 percent of the invested capital. Steel manufacturing is definitely a good business.

Out of that extra "take," of course, came the higher wages enjoyed by American steel industry workers than German, English, French, Belgian, and other foreign laborers are paid. One purpose of the tariff, of course, is to enable industry to pay higher wages.

Imagine, if you can, what would happen if tariffs on farm products were as high and equally as effective as they are on steel. Suppose that agriculture could pull down double its capital investment in 15 years.

The total capital investment of agriculture is in the neighborhood of \$45,000,000,000—in land, buildings, machinery, livestock, poultry, etc.

That means in 15 years, operating on the same tariff base enjoyed by steel, agriculture would pull down about \$90,000,000,000 in tariff benefits over and above the world price it generally has received.

That would amount to about \$6,000,000,000 per year. Agricultural income under present conditions amounts to about \$8,000,000,000 per year. That extra \$6,000,000,000 of income is just about what is needed to put agriculture on a parity-price basis with steel.

Accepting the principle that the velocity at which the American farm dollar turns over is seven times each year, it will be seen that with a \$14,000,000,000 annual income for agriculture, the national income would be boosted up to around \$98,000,000,000 per year which is just about where it should be to carry the present tax burden and support Government in the extravagant style to which it has become accustomed.

If we accept that seven-time turnover—and it cannot be mathematically refuted—we can, by the simple process of multiplication, determine that the extra \$90,000,000,000 of a farm income would have created \$630,000,000,000 of national income—and there would have been no depression, no unemployment, no relief problem.

Businessmen generally are beginning to see that side of the picture which probably accounts for the increased consideration the parity principle is receiving in high financial and manufacturing circles. Business wants the extra volume and profits that can be wrung out of increased farm income.

### The Neely Bill

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER  
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

Mr. ALEXANDER. Mr. Speaker, for the past several months a large amount of the time of Members of Congress has been taken up by proponents and opponents of the Neely

motion-picture measure, or anti-block-booking bill, both in the way of private interviews and also in the form of letters, telegrams, and petitions.

Of course, we like to get the varied views of these interested parties, but it does seem as a matter of good, ordinary business judgment, that, if there is need for this proposed legislation, if there is something wrong with the system now in vogue by the motion-picture industry, then are we not justified in asking the question, Why in the name of common sense do they not wake up, clean their own house, and rectify their program so as to meet the criticism on the part of the public which favors the Neely bill?

Why is it necessary to make such business problems matters of legislation? Why do we have to try, and I believe foolishly, to legislate business ethics and principles of business management? It is not only foolish but it is just another one of the many insidious ways in which we are doing away with individual initiative, contaminating business with politics, and otherwise destroying the sound and fundamental principles of free government originally set up in this country, and which worked so well for about 130 years that they made us the greatest industrial nation in the world.

As an illustration of the sort of thing that is going on and that we are asked to pass on in this matter, I submit the following letter just received from the Independent Theatre Owners of the Northwest, and express the hope that these groups will iron out their differences and thus make the Neely bill unnecessary:

FEBRUARY 29, 1940.

Mr. W. H. WORKMAN,  
Metro-Goldwyn-Mayer Distributing Corporation, 1104 Currie  
Avenue North, Minneapolis, Minn.

DEAR MR. WORKMAN: Yesterday afternoon we learned that your company had conducted a preview of a motion picture at a theater in this city. To this preview and under the pretense of showing this picture, and for no other reason, you asked the City Wide Leisure Time Activities Committee of the P. T. A. Central Council of Minneapolis to invite its members.

After you had succeeded in bringing a large number of the P. T. A. members to the theater you asked them to listen to speeches by four hirelings of the producers and their affiliated theaters on the motion-picture block-booking bill which was recently passed by the United States Senate and is now before the United States House of Representatives for their consideration. This bill is more commonly known as the Neely bill, and its purpose is to permit theater owners some right of selection, which they do not now have, in choosing the type of motion pictures which they would like to show in their respective theaters.

Immediately after the speeches by the paid members of the producers and affiliated theaters and as an apparent part of a well-covered-up scheme, someone got up from the floor and made a motion that the group go on record against the Neely bill. It is a tribute to the intelligence of the people present that they refused to be hoodwinked and for that reason would not vote on this motion.

We, of course, have no objections to any meetings which are designed to throw light on the Neely bill and what it means to all theaters of the United States and to the theater-going public.

We know that the above-named Central P. T. A. Council of Minneapolis is also desirous of obtaining all the information they can on the Neely bill. This is especially true in view of the fact that the National Council of the P. T. A. is on record with its unqualified endorsement of the bill and that its national officers have appeared before congressional committees urging its passage.

We know that the City Wide Leisure Time Committee of Minneapolis did not realize they were being called to a meeting at which your company and other opponents of the bill would be present to give them a one-sided discussion and explanation without offering them the opportunity of hearing the other side.

We ask whether you were afraid to have the other side present so that they could explain the merits of the bill to those people whom you had invited to the theater?

The purpose of this letter is simply this: If you plan to hold other meetings of a similar nature, may we be so bold as to suggest, in fairness to those whom you invite, that you advise them of the real purpose of the meeting, and may we further ask that you be so kind as to invite us so that we can give our views on the merits of the Neely bill and why it so vitally affects the interests of the thousands of theater owners in the entire United States.

With kindest personal regards.

Very truly yours,

ALLIED THEATRE OWNERS OF THE NORTHWEST,  
BEN ASHE, Secretary.

## Discriminatory Freight Rates

## EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ARTICLES BY J. LACEY REYNOLDS

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by Mr. J. Lacey Reynolds:

WASHINGTON, D. C.—The attitude of the railroads of the Nation is an important factor in the Interstate Commerce Commission's current investigation of discriminatory freight rates in the South, Southwest, and West.

Success of the southern freight-rate fight may well depend upon the positions taken by the carriers—both North and South—in this proceeding.

So far neither the northern nor southern roads have defined their positions. The American Association of Railroads—whose membership includes the major southern lines, incidentally—is known to have considered petitioning the Commission to abandon the investigation.

The petition has not been filed to date, but any such move would be resented by southerners, particularly if the southern lines were a party to it.

Northern lines opposed the competitive rate reductions granted by the I. C. C. in the Southeastern Governors case last fall, and are now seeking to reopen the case in hopes of obtaining a reversal.

They have fought the South on rates traditionally—and for very tangible reasons.

One reason grows out of the layout of the Nation's rail transportation system. The northern lines are principally east-and-west lines, while the southern roads run north-and-south, terminating with one exception at the Ohio River.

Because they obtain longer hauls and therefore greater revenue, northern lines would prefer to handle east-west traffic. For in taking north-south shipments, they receive revenue only for the relatively short distance to the Ohio River crossings, where the traffic is turned over to southern lines.

This desire for east-west shipments may be a basic reason why northern lines have extended more favorable through rates to the carriers east and west of them—to New England on the one side and western trunk-line territory on the other. This is also the reason why more uniform freight classifications are found on this traffic than on north-and-south traffic.

Since ample joint rates and uniform classification make for lower transportation charges, this is one reason why North and South rates are higher than East and West rates.

Although this may be one explanation of the South's freight-rate plight, it is no justification, rate experts assert. The fact that rates and classifications are comparatively unsatisfactory is given as one salient reason why the I. C. C. should proceed with its investigation into the class-rate structure and bring both into better relationship.

There are other contributory explanations for the traditional opposition of northern carriers to southern rate-equality demands, but one deserves special mention, since it is considered fundamental: The northern railroads do not want southern competition for the industries located along their own lines.

They naively admitted this back in 1935 in a memorandum filed in answer to a request from the I. C. C. for suggestions as to how to remedy the interterritorial freight-rate problem.

"The territory (official territory in the North and East) is hemmed in on the south, southwest, and the west by territories, and carriers serving them, all seeking to market their products within the territory served by official lines," the memorandum read. "In many instances such commodities sought to be marketed within official territory come into direct competition with the commodities produced in that territory."

"Official lines, therefore, are duty bound to protect the geographical or other natural advantages possessed by shippers or producers on their lines, and as a matter of justice and equality they may not be required to join in such low bases of interterritorial rates as to nullify or neutralize these natural advantages."

Of course, the principal "natural advantage" referred to is lower freight rates.

Here we have the spectacle of northern lines pleading in the name of "justice and equality" to maintain an unjust and inequitable rate structure—without thought for the national interest and without regard for the effect of such discriminations on the Nation's economic development.

In the Temporary National Economic Committee's forthcoming study of the effects of freight-rate discriminations on regional

competition and development, its economists are expected to demonstrate conclusively how freight-rate discriminations can be used by interests in the dominant North to insulate themselves against serious competition from the South and West.

In view of the past attitude of northern carriers and their apparent unconcern for the general welfare, a southern leader in the freight-rate fight recently made this significant comment:

"The I. C. C.'s present investigation will determine whether we will permit northern railroads to dictate, rather than serve, our whole national economy."

The attitude of the southern carriers toward the investigation has not been brought out into the open, although some of their officials have been hobnobbing with southern raw-material and heavy-goods shippers, who are working to kill the probe.

In the readjustment of rate inequalities, southern railroads face a fundamental problem: How to effect rate reductions and still maintain revenues.

No disastrous revenue cuts are likely to flow out of rate reductions on a few products, and that may explain why they went along with the southeastern Governors in their recent case. Only a limited number of commodities was involved in that case.

But in any general lowering of the rate level, the southern lines fear that their financial structure will be impaired. Of course, those favoring lower rates are inclined to take the carriers to task for their fears.

They point out that railroad officials too often have been wedded to the theory that rate reductions necessarily mean reductions in revenue. Lowering of rates may attract additional volume of traffic to produce increased revenues, it is argued. Failure of railroads in general to realize this is advanced as one reason why they have taken such a beating at the hands of motor-carrier operators.

Aside from this, however, the southern carriers find themselves in a precarious position in the coming Interstate Commerce Commission investigation. While they may be disinclined to grant a general rate cut for revenue reasons, they cannot argue that the general average of rates to, from, and within the South are anywhere near as low as for official territory.

Recently they admitted to—or rather, tried to convince—the Interstate Commerce Commission that the excess of southern rates over levels in official territory was not less than 20 percent. This figure was arrived at, they said, after actual traffic tests on all shipments moving between southern and official territories for a period of 2 months.

Although the statement was made for another purpose—to persuade the Commission to give them a larger division of the rates on traffic between the two regions—it places apologists for the South's freight rate level in an embarrassing position.

Recently they have attempted to convince the public that southeastern freight rates are not "unreasonably" high. Now they are forced to defend this excess of 20 percent as "reasonable."

Southern carriers, thus having deprived themselves of grounds for denial of the argument that southern rates are higher, may follow one or more of a number of alternatives in the I. C. C. investigation.

Of course, they could join with the southern freight-rate bloc and fight shoulder to shoulder for removal of discriminations, regardless of the attitude of northern carriers or southern heavy-goods shippers, who already enjoy low rates and fear that a general readjustment may deprive them of their advantage.

They may elect to stay out of the fight insofar as possible. Naturally, this would involve separating themselves from the American Association of Railroads in the event the association should actively fight the investigation. To remain in the association, even though maintaining a neutral attitude otherwise, likely would create resentment among the southern reductionists.

There are other alternatives. Southern carriers might fight the investigation outright and try to brave the storm that would inevitably break about their heads in their own territory.

Or they might make concessions on some commodities in the hope of obtaining shipper support to fight a general reduction. But this would be eminently open to attack.

In the absence of definite information as to their attitude, the above merely suggests possible courses of action, to demonstrate the difficulties that lie ahead in the coming months. No one envies them their position.

WASHINGTON, D. C.—In the recent Southeastern Governors freight-rate case, Chairman Joseph Eastman voted against the South and handed down a scathing dissent in which he emerged from the atmosphere of cold impartiality surrounding the Commission to charge that freight rates had become a political issue.

Today the southern freight-rate bloc, which had to take this on the chin, can in turn indict the New England bred and experienced chairman on the equally serious charge of inconsistency.

And the indictment can be leveled not only at Eastman but also at Commissioner Claude R. Porter, from Iowa, who joined in the scorching Eastman dissent.

A check of Commission decisions reveals that both Eastman and Porter were on the opposite side of the fence when rates involving their respective regions were involved.

Had they been consistent they would have been voting with the South in the Governors case. If they should desire to return to the paths of consistency, they need only refer to a couple of decisions they wrote back in 1930.

During that year Eastman enunciated a principle in the eastern class-rate investigation which, if applied to the Southeastern Governors case, would have met completely the southern situation. The eastern class-rate study was similar to that now being undertaken by the I. C. C. in the South, Southwest, and West.

In the Eastern Class Rate case, one basic consideration was whether New England manufacturers would continue to enjoy rates into the North Central States, on a parity with competing manufacturers located elsewhere in official territory.

Factors involved in this determination were not materially different from those in the Southwestern Governors' case. New England is a subterritory of official territory, which embraces the North and East.

That the Southeast is a separate rate-making territory from official territory is not a substantial difference, particularly in view of the fact that many southern shippers are geographically closer to parts of official territory than their New England competitors.

There are other similarities in the New England and southern situations. For example, the cost of operating railroads in New England was a question, and Eastman conceded that cost of operation was greater in New England than in the rest of official territory.

The argument that the cost of operating railroads in the South is greater than in official territory has been advanced as partial justification for the higher level of southern rates.

In the Eastern Class Rate case, Eastman discussed cost of operation and other factors, but minimized their rate-making importance enough to give the New Englanders competitive transportation access to the desired Ohio-Indiana-Illinois-Michigan market.

In the Southeastern Governors' case, however, he ignored the similarities between the situations in New England and the South and voted against the South with this pious comment:

"This Commission has an equal duty with respect to every part of the country, and nothing will speed its ruin more quickly than the disease of sectionalism."

Commissioner Porter, who sided with Eastman in the Governors' case, has an equally inconsistent record.

In the western trunk line class rates investigation he wanted to give manufacturers in his home State of Iowa and in parts of Wisconsin, Minnesota, and Missouri better access to the Illinois market in official territory.

But the majority of the Commission set a level of rates on this traffic approximating 125 percent of the rate level in Illinois.

Porter found himself in "thorough disagreement" with any such arrangement and criticized the majority for the manner in which it arrived at its conclusions.

In doing so, he had incidental occasion to discuss the southwestern freight-rate levels, which he said were 54 percent higher than those in official territory.

Placing himself on record in a manner that should be encouraging to southwesterners in their fight for lower rates. Porter commented:

"This difference (54 percent) is too great, in my estimation."

He summed up his dissent by arguing, in effect, against the continuation of freight-rate barriers which tend to exclude manufacturers of other regions from the markets of official territory:

"The result of all these severe changes in relationships," he said, "is certain to be that the western trunk line (Iowa, etc.) shipper, particularly for short distances within that territory, will be unduly restricted and the long-haul shipper, especially from the industrial East will be unduly advantaged."

His and Eastman's subsequent refusal in the Governors' case to give southern shippers the same advantages they had urged for shippers of their home States 9 years before is best described in President Roosevelt's adaptation of a familiar phrase:

"Inconsistency, thy name is geography."

## The March of Liberal Democracy

### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESS BY HON. HARRY H. WOODRING, SECRETARY OF WAR

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Harry H. Woodring, Secretary of War, at the Washington Day banquet of the Kansas Democratic Club, in Topeka, Kans., Thursday evening, February 22, 1940, as follows:

Tonight on the free soil of Kansas we commemorate the birth of the father of our free country—a Republic of free people—

freedom of assembly, freedom of speech, freedom of the press, freedom of religion—perhaps the last bulwark of freedom—the last bulwark of democracy.

Though born the subject of a foreign king, Washington was the very personification of the dignity of human liberty. He was a liberal of liberals. He pledged his life, his fortune to the cause of freedom. Nay more, he devoted wholeheartedly his splendid talents, his masterful leadership to the creation of our American democracy. Because he was a liberal he was denounced as a radical by the Tories of his day, just as his liberal successor is today denounced as a radical by these latter-day Tories.

Throughout America—indeed throughout the world—the name of Washington is revered and honored. In remembrance of his service to America and to the world, noble statues and towering monuments have been erected. Nevertheless, his greatest monument is the living presence of our vibrant American democracy in the family of nations. So long as America shall live the fame of Washington will continue to shine in deathless glory.

As American citizens and as Kansas Democrats, we are heirs to the liberalism of Washington and of Jefferson and of their successors in the generations that followed—Jackson, Lincoln, Cleveland, Theodore Roosevelt, Woodrow Wilson, and Franklin Roosevelt. Each of these great presidents gave something of his own genius, his own character to the fabric of democracy that has been woven throughout our history. Ours has been a dynamic, a progressive—not a static—nation. With only occasional interruptions, we have moved steadily forward—forward to a better and a fuller life, to a brighter and happier existence. At times clouds of discouragement may temporarily obscure our vision, but from Washington to Roosevelt the course has been steadily upward. Under no one has this progressive advance been more marked than during the administration of our greatest of liberals—President Franklin D. Roosevelt.

In this march of progress the pioneers of Kansas and their successors on the farms, the villages, and the cities of this great State have ever been in the ranks of advancing Americans. Here, amid the rolling prairies, some of our most liberal reforms have been launched. Some of us are old enough to remember that prairie fire of Populism that swept our agricultural West nearly half a century ago. The ultraradical farmers of Kansas demanded such unheard of reforms as popular election of United States Senators, a Federal income tax, the Australian ballot, rural free delivery, parcel post, equal suffrage, regulation of railroad rates, and antitrust laws. Radical for the nineties, yes, but for the 1940's all these reforms are accepted by even the most conservative as the true American way.

Nearly half a century ago, Kansas farmers who proposed such innovations were denounced as starry-eyed dreamers—impractical theorists who would ruin the Republic in a vain attempt to enlarge our liberties. So, too, the Tories of 1776 denounced Washington as loosely advocating a ruinous liberty that would breed anarchy and chaos. So, too, the Tories of today denounce Franklin Roosevelt and his democratic and liberal followers who have brought to many millions of our countrymen the boon of a new freedom—a security and a happiness undreamed of in the philosophy of Mammon.

Seven years ago tonight, the future of our American Republic was none too bright. Banks, business institutions, transportation agencies, insurance companies—all were victims of chaotic economic conditions. Fifteen millions vainly sought nonexistent jobs. Respectable citizens were reduced to beggary. Even farmers, of all people, suffered the pangs of want and hunger. There was only one ray of hope. A new President had been chosen. A Democratic Congress had been elected. There was a sentiment—more felt than expressed—that somehow, some way, Roosevelt would do something to alleviate the distress, something to lessen the cruel blow that had wrought such havoc throughout the land.

Then came the 4th of March 1933. The ringing inaugural address of our new President was a tonic for the country. Hope replaced fear. Courage supplanted despair. It was clear that democracy still lived, and that this was a government of, by, and for the people. Under the inspiring leadership of a great humanitarian President, the country began the colossal task of repairing the damage and rebuilding for the future.

The great problem was made a hundredfold more difficult by the neglect and defeatism of the previous administration. In 1928 in the midst of prosperity a President had been elected on the promise that poverty would be abolished, that all automobiles would be twins, and that chicken pies would grace the family menu with monotonous regularity. In a few months came the great disillusionment. Prosperity vanished like a house of straw in a Kansas tornado. Amid the wreckage was left the forlorn and pitiful figure of an administration, too discouraged and too inept to attempt repairs. For nearly 4 years feeble efforts were equally divided between attempts to minimize the scope of the disaster and to prove that its fury had passed. When prompt courage was required it was hesitant timidity that responded. When bold attack was clearly indicated, a craven retreat was ordered. Thus, precious time was lost and the forces of despair and defeat were in the ascendancy. The change of leadership came none too soon. When relief came, a spontaneous cry arose—thank God for Franklin D. Roosevelt!

The instant task was to restore to millions of Americans the hope of the future. By a series of bold strokes the new administration checked the forces of disaster. The crumbling banking structure

of the United States was promptly repaired. Confidence was restored. Guaranties were provided for bank deposits. To the dismay of carping critics, the Government insurance of deposits not only did not wreck our banking institutions but actually restored the vigor that had all but departed from our banks.

Work was provided—inadequate, to be sure, but nonetheless welcome—for millions of our unemployed. Youths approaching manhood, faced only with bleak discouragement, were provided with useful work in our Civilian Conservation Corps, where, amid inspiring surroundings and clean manhood, millions of young men contributed materially to the conservation of our great natural resources. Many millions of men and women were taken from relief rolls and given useful employment under the W. P. A. and P. W. A. facilities. They were given an opportunity to become self-supporting and at the same time to add appreciably to the tangible assets of our country through the construction of roads, buildings, and other substantial improvements.

Not only was the immediate distress appreciably relieved, but provision was made to minimize the evils of a recurrence of such a disaster. Unemployment compensation and old-age insurance were provided. Payments under our old-age insurance law have just commenced, and already many of our senior citizens are enjoying the comfort provided from annuities which transform a cheerless old age into one of contentment and happiness.

Farmers' cash incomes have increased 85 percent over 1933. Benefit payments, commodity loans, and other advances have vastly ameliorated the distress of agriculture. You and I know that these are mere temporary expedients—a permanent solution for our farm problem is still to be found. With millions of Americans and hundreds of millions in other lands ill-clothed and ill-fed, and with surplus production of textiles and food in the United States, the problem is that of matching huge excesses against desperate needs. One of our great agricultural problems is underconsumption. Maldistribution is the crux of the evil. Grain from Kansas wheat fields transformed into bread for the hungry must reach the ultimate consumers in teeming American cities and foreign countries unburdened by excessive transportation and handling charges. Nevertheless, though our farm problem is not permanently solved, under a Democratic administration the condition of the farmer is vastly improved over that of 7 years ago, and the immediate future is bright with the hope of further betterment.

We would be less than frank if we did not recognize that much remains to be done toward improving the relations of capital and labor, of government and business. Closer cooperation of all elements is necessary if we are to have the progress and prosperity so essential to the public welfare. However, the national income has more than doubled since 1933. Though the national debt has increased, the Nation's private debt has been tremendously reduced. There has been a marked decline in interest rates, a great reduction in mortgage foreclosures and in business failures. By every criterion, by every available test, it is clearly seen that domestic economic forces under our leadership are moving steadily forward toward complete recovery.

Some of our opponents, whose politics warp their judgment, continue to inveigh against the progress that has been made. They pay lip service to liberalism, but cry out against reform with all the zeal of the Tories of Washington's day. Their insistent demand is that we take the Government away from the people under the New Deal and give it back to the Republicans. Without naming the specific reforms they would repeal, these modern Tories emphasize the expense. Expensive? Of course the measures taken have been expensive. It is impossible to relieve the distress of many millions without an appropriate expenditure of funds. But they have been Federal funds, collected from income and excise taxes. And not \$1 spent by the Roosevelt administration in the past 7 years has been a tax dollar on your farm or on your home. But a true picture of that expense demands an examination of both sides of the ledger. We must look at the credits as well as the debits. What have we to show for all the billions that have been expended? Well, first of all, we have unquestionably preserved American democracy. Millions of Americans have found relief under our form of government and have not been led astray by the siren songs of communism and totalitarianism in desperation of personal frustration. This is a very real, though, perhaps, an intangible accomplishment. There are tangible assets also. Thousands of miles of good roads have been constructed. Hundreds of new schools, hospitals, and public buildings are found in every State in the Union. Great new dams have been constructed, developing vast power resources for present and future generations. Rivers and harbors have been vastly improved; navigation facilities have been extended; the national defense has been expanded and materially strengthened. All this has vastly increased the net worth of your Government and has, at the same time, provided for millions of worthy American citizens, at a time when they were faced with threats of permanent unemployment.

Today our eyes and thoughts are focused on a great war in Europe. Another great war is raging in the Orient. The peoples involved in these great struggles number more than half the population of our restless planet. The raging holocaust of war threatens to spread its devastating flames over many countries not now involved, leaving only the independent republics of our Western Hemisphere unscathed by its fury. The advent of spring may redouble the intensity of the conflicts. Horror may be piled on horror! The pale horsemen of death, disease, famine, and desolation may range widely among city, village, and farmstead.

As Secretary of War, I am in a position to know something of the horrors of modern warfare. Death and desolation are no longer confined to the fighting force and the firing line. From the air and from beneath the waves flaming death may and does come to men, women, and children, young and old, strong and weak, fighters and noncombatants. Because I know all this, I know that America must remain at peace. We can and we must keep out of war. Let me pledge to my fellow Kansans that insofar as my influence in the councils of this Government may prevail, no son of mine and no son of yours will be called upon to serve as a blood offering on the altar of Mars. I know that the President of the United States hates war with every fiber of his soul, and I know that he is firmly resolved that no American blood will be spilled on the battlefields of Europe.

Already we have made great sacrifices to insure ourselves against involvement in the war. We have kept our ships out of the war zones. We have sacrificed hundreds of millions in exports. We have suffered an acute dislocation of our foreign trade. This loss has been a well worth-while sacrifice because it has tended to insure the maintenance of peace.

We have a saying—but not always true—that in national emergencies politics stops at the water's edge; that Americans of all parties, however much they may differ in domestic affairs, always support our foreign policies. It is particularly gratifying to know that in this grave crisis of world affairs, the overwhelming majority of the people of our Nation is a unit in acclaiming the masterful direction of our foreign policy under Franklin D. Roosevelt.

Our policy is first of all to keep America at peace. War would bring not only its ghastly toll of death, sorrow, and desolation, but it would likewise seriously endanger the very maintenance of our democratic institutions. The first few months of the war in Europe have witnessed either the complete or the partial suspension of democratic functions in even the most liberal of countries involved. Indeed, a noted British economist recently asked the question, Are democracies committing suicide in self-defense? To paraphrase the Good Book, what would it profit our country to gain a military triumph and lose its democratic soul?

Ever mindful of the realistic fact that force is needed to repel force, we have recently strengthened materially our national defenses. In doing so we have acted not with a view to waging war, but rather that we might speak with authority for peace. Our entire military policy is based on the defense of our territory and our institutions, not on an offensive against any other country under God's heaven.

While we will probably be able to insulate our country in a military sense against the conflicts now raging, America, of course, cannot hope to escape the economic consequences of this disaster. True, there may be some temporary profit from war orders, but, as we know from sad experience, prosperity built on conflict is fleeting and evanescent. War is waste. The waste of war is assessed not merely on the vanquished, but with tragic impartiality on victor and neutral as well.

How long this deadly warfare may continue we know not. It is safe to say that one result of any prolonged conflict may well be the extinguishment of democracy in Europe and Asia. All the more reason then that we in America should preserve our democracy; that we should shield the precious torch of American liberty from the gusts of war. This we owe not only to America but to human civilization. There should be one place on God's footstool where the rights and dignity of man are preserved as a priceless heritage for future generations. With God's help that place will be America.

While our eyes and thoughts are necessarily on the spectacular drama daily enacted on foreign battlefields, we must not permit ourselves to lose sight of the domestic scene. Here at home we have a full field for our energies and our talents. We Democrats have made splendid progress in recent years toward the solution of our problems, but much remains to be done. We have relieved much of the acute distress due to unemployment, but there are still too many jobless who are vainly seeking work. We still have poverty in the midst of plenty. Farmers still raise more food than they can sell at a reasonable profit, yet millions are undernourished. Labor and capital have still to learn the lessons of cooperation. Business and government must work together—not apart. We must now relate our Federal expenditures more closely to our Federal revenues. Franklin Roosevelt, with our Democratic administration, has remedied the more acute fundamental phases of our economic ills. The chronic ailments of our body politic demand the continued attention of a progressive Democratic administration. The incidence of the war in Europe has made the solution of our domestic problems a hundredfold more difficult. Nevertheless, we cannot shirk our responsibility. We cannot delay. The task is at hand. It must be undertaken.

Here in Kansas, as elsewhere in the Nation, there is a great body of independent voters, men and women who put patriotism above partisanship. Here, as elsewhere, these citizens have frequently joined the Democrats in advocating and accomplishing those liberal reforms which have meant so much to the happiness and well-being of the American people. Of recent years, they have formed the commendable habit of voting the Democratic ticket with almost uniform regularity. The results attained have justified their action.

This year is another campaign year. In 1940, as in other recent election years, we aim to present to the American people a liberal platform and liberal candidates pledged to the continuance and development of the liberal policies of the past 7 years. We cannot

afford a lapse in progress. We must remember that 7½ years of Theodore Roosevelt were followed by 4 years of Taft, that the liberal reforms of 8 years of Woodrow Wilson were almost undone in the 12 deadly years of Harding, Coolidge, and Hoover. Let us not permit the progress of 8 years under Franklin Roosevelt to sink in the morass of 4 years of some new Tory.

Here in the center of the great agricultural West, on the anniversary of the birth of our country's founder, let us rededicate ourselves to American democracy. As patriotic Americans, as liberal Democrats, we are proud of our heritage, proud of our achievements, and proud of our record of service to the people. Let us here and now resolve that we will vigorously oppose any recession of American progress. The untainted democracy of the free State of Kansas takes its place in the front ranks to fight for the continued maintenance of American freedom under a progressive Democratic administration both in the State and Nation. We extend a welcoming hand to all others irrespective of past political beliefs, and urge them to make common cause with us in battling for human rights. We will close the ranks of liberals and elect a Democratic Governor in Kansas and a progressive Democratic administration in our State and choose a Democratic President and a liberal national administration.

With such a force and in such a cause we cannot lose. Once more, before another winter's snow blankets the priceless Kansas prairies, the victorious banner of democracy will fly at the masthead of our great Commonwealth and our glorious Republic. Again we will win, because the progressive masses of the American people under a militant democracy deserve to win.

### What the Income Tax Could Yield

#### EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

RADIO ADDRESS BY HON. KNUTE HILL, OF WASHINGTON

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I delivered over the Columbia Broadcasting System at a luncheon of the People's Lobby, March 2, 1940.

During these early days of the month of March a great many of us are engaged in making out our annual income-tax reports. It may seem rather strange to some when I say that this is one of my pleasant duties. In these days of so much unemployment and distress, I for one, am certainly thankful that I am permitted to earn an income on which to pay a tax. Taxes should be levied on the basis of ability to pay and benefits received. It takes money to run a complex modern government; and we who receive the benefits and protection of that Government and have the opportunity of earning an income because of the existence and functioning of that Government should be glad and willing to bear our share of the expense in connection therewith. To those who are disposed to complain may I call attention to income taxes paid in Great Britain:

An Englishman with a wife and one child will pay in income taxes this year as follows:

Tax	
Income:	
\$2,000-----	\$171.25
\$4,000-----	796.25
\$6,000-----	1,421.25
\$8,000-----	2,171.25

Statistics are rather tiresome but let me just briefly outline the situation in the United States:

Figures recently reported by the Treasury Department on personal incomes for 1938, and Treasury data on corporation profits, show that the Federal Government could get at least two to two and a half billion dollars a year more than it does, from taxes on personal and corporation income.

The Treasury reports that in 1938, almost 3,000,000 taxable incomes were reported, with a total net income of about twelve and two-thirds billion dollars.

Upon this enormous income the total Federal income tax, and surtax was only \$765,000,000, an average of \$255, or 6 percent.

The average income of these nearly 3,000,000 individuals was \$4,215.

If these 3,000,000, who received the major part of rent, interest, and profits paid in 1938, had paid an average of about \$700 more in income tax and surtax, they would still have had left an average of about \$3,500—which was nearly three-quarters more than the average family income in 1938.

This would have given the Government a little over \$2,000,000,000 more than it got from income taxes and surtaxes in 1938.

Of course, under our system of progressive income taxes and surtaxes people with incomes under \$5,000 would not pay much more income tax, not over \$100 to \$150 more at most, while those with incomes of over \$10,000 could pay \$1,000 to \$50,000 more than they do.

In 1938 almost 176,000 people reported net incomes of over \$10,000 with a total of \$3,987,000,000, upon which they paid just under \$625,000,000 in taxes. After paying these taxes they had left \$2,000,000,360, an average of \$13,433.

In 1936 the reporting corporations paid in cash and stock dividends over seven and a half billion dollars. In 1939, 3,058 companies paid \$3,241,000,000 in dividends. In 1939, 3,239 companies paid \$3,566,000,000.

In addition to these huge dividend payments, the surplus and undivided income of corporations, estimated on their reports for 1936, are about \$50,000,000,000.

This is more than the total national debt, upon which the interest payment alone, next year, will be \$1,100,000,000!

Every year about 20,000 people get nearly one-third of all dividends paid, and they also have rights to about one-third of the \$50,000,000,000 of corporation surplus and undivided profits.

On the basis of British income-tax rates, we could raise nearly \$3,000,000,000 more in income taxes than we do, through the personal and corporation income tax.

Today the National Government raises nearly three-fifths of its income by taxes which fall heaviest on those least able to pay.

You are probably asking yourselves why Congress doesn't change this tax system, now, and tax according to ability to pay. The real reason is that those who could and should pay are opposed to it.

Every progressive Member in both branches of Congress, and in all parties represented, want Congress to do this. No individual Member, however, and no small group of Members can force this.

Under the Constitution all revenue bills, that is, tax bills, have to start in the House of Representatives. That means the House Committee on Ways and Means has to have hearings on amending the present revenue act. The chairman of the committee is the Honorable ROBERT L. DOUGHTON. If enough people will write him, urging that his committee hold hearings, and get their Representatives to also ask him, the hearings can be held.

Unless income-tax rates are raised, needed relief and farm-aid will be cut. The American people must make themselves heard on this question in Washington.

We must revise our outmoded tax system so as to place the burden of taxation on those best able to pay and in such a way as to make collections certain and economical and, lastly, to raise enough revenue to run our Government and retire our debt.

### Utah Republican State Committee

#### EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. STYLES BRIDGES, of New Hampshire, at a rally of Utah Republicans under the auspices of the Utah Republican State Committee, at Salt Lake City, Utah, Monday evening, February 19, 1940:

On November 5, in less than 9 months, you in Utah, along with the rest of the American people, will go to the polls. The decision you make at that time will be not merely the selection of a President for the next 4 years. You must decide whether you want 4 more years of new dealism and all that it represents. You must decide whether you want 4 more years of bureaucratic government by the arbitrary decree of men whom neither you nor anyone else elected to office, but who hold the power of life or death over your farm, your business, or your job, or whether you want to return to the democratic ideal of a government limited in its powers over your lives and responsible only to you. You must decide whether you will tolerate 4 more years of mass unemployment, paralyzed business, and ruinous agricultural prices, or whether you are determined to elect an administration that will release the energies of our people and the vast productive powers of our Nation. You must decide whether you will be content with 4 more years of industrial strife, of jealousy, hatred, and dissension fostered by men in high office, or whether you will insist that those who administer the affairs of your Government set

an example of justice and tolerance and inspire the spirit of voluntary cooperation by which a free people must go forward together.

The planners have had their chance. They have held office for 7 long years, entrusted with powers such as no officials of a free government have ever before enjoyed. They have made their charts, they have tried their theories, they have regulated and reformed every phase of our economic life. And, after 7 years, the major problems of unemployment, industry, and agriculture with which we were faced when they took office are with us still—with many others added to them. An administration vested with the vast powers which have been entrusted to the New Deal, an administration that boasts that "we planned it that way" when things are looking up, must also be willing to take the responsibility for its failures.

Today, as election draws nearer, the American people are making a mental balance sheet. They are taking the subject of government more seriously than ever before, because they are more and more aware of its influence upon their lives. Ten years of depression have made them a soberer and a somewhat disillusioned people. They will no longer be beguiled by alluring promises, by eloquent declarations of "social objectives." They are not likely to be fooled by alibis or red herrings drawn across the path. They are looking at the record. They are looking for results. And more and more they are coming to the conclusion that the New Deal, whatever temporary benefits they may have received, has failed them fundamentally. The myth of the New Deal is exploding. More and more clearly they are realizing the difference between promise and performance, between theories and results, between dreams of Utopia and the cold, harsh facts of reality. They are remembering that well-known road paved with good intentions.

First, there was the myth that the New Deal was the champion of those in need—the underprivileged, the ill-fed, ill-housed, and ill-clad. The unemployed, the worker, and the farmer were to receive special care.

The unemployed have received a meager subsistence that has held body and soul together. But, after 7 years, they are weary of dependence upon the bounty of the Government for the necessities of life. They know, despite the New Deal propaganda to the contrary, that they would not be allowed to starve by any administration, regardless of party. More and more they are demanding an administration that will permit them to go back to work, to take their place as self-supporting and creative members of their communities, and to rise according to their abilities. More and more they are awakening to the fact that no subsidy can compensate for the right to work, and that an administration which, after 7 years, has been unable to assure them that right has failed.

The worker has received a law presumably designed to put a floor under wages and a ceiling over hours. But of what use is it to him if he is barely subsisting on part-time work? He has also learned that when it is administered without regard to economic conditions, in an attempt to regulate all wages and hours, it increases unemployment and endangers his job. Moreover, he knows that increased wages cannot be raised by legislation alone, but must come from increased business. He has received the Wagner Labor Act, presumably designed to assure his right to collective bargaining. But he has learned that the Board which administers the act may force him to join a union for which he never had an opportunity to vote and arbitrarily destroy the union of his choice. He has had a social-security law written on the books for his benefit. But he has seen the money taken from his pay envelope lumped in with the general fund of the Treasury and spent on pump-priming projects. He knows that if Government extravagance continues at its present rate new taxes will have to be raised and that they will hit him. Today he is awakening to the fact that the New Deal has actually failed to assure him these things. He is demanding an administration that will assure him the genuine rights of collective bargaining, free from coercion from the Government as well as from his employer. He is demanding an administration that will assure him the true source of higher wages and social security—a full-time job in a prosperous and expanding industry with an opportunity to rise.

The farmer has received subsidies from the Government. But he has paid for them with his independence. No longer is his farm his own to do with as he thinks best. It is now being run by the planners in Washington. Today the prices he receives on many products are down to the levels of 1932 to 1934. He has seen his markets, both at home and abroad, dwindle away. He has seen Government taxation of industry and industrial strife add to the cost of all that he must buy. More and more he is awakening to the fact that the meager subsidies he has received are nothing compared to such losses. He too has come to realize that the New Deal has failed to fulfill its lofty promises or meet his primary needs—expanding markets and an urban population that is able to pay a fair price for agricultural products.

Today a disillusioned American people are asking themselves which, if any, of the New Deal policies that were supposed to bring about recovery have succeeded in any appreciable degree. I challenge the Administration to point to any of its policies which have accomplished all or even a major portion that was promised for it.

The spending for recovery? Including the estimates for 1940 and 1941, the Administration of President Roosevelt has spent

approximately 66 billion dollars in 8 years—more than half the amount spent by all the administrations of the 31 previous Presidents in the preceding 144 years of our history. The New Deal has likewise collected well over 40 billions of dollars in revenue, or nearly one-third of all the revenues of all previous administrations in our history. It has had more deficits than all the rest of the Presidents in our history, thereby succeeding in the unprecedented feat of doubling the national debt in time of peace.

More and more the American people are awakening to the fact that this spendthrift policy has, instead of bringing recovery, made it impossible. The President has been boasting recently of the improvement of conditions since 1932. But it is no more fair to compare conditions today with those at the depth of the world-wide depression than it is to compare them with the boom days of 1929. Average the 7 years of the New Deal with the last 7 years of Republican administration and you get a different but a fairer picture. Gross farm income is nearly \$2,000,000 less a year—despite Government subsidies. The average of factory pay rolls dropped 24 percent; and the average of national income per person dropped 33 percent during the last 7 years compared with the previous 7—and we still have some 10,000,000 unemployed. One can conclude only that spending for spending's sake has not only failed to solve our major problems, but has only added to them the problems of crushing debt and oppressive taxation.

Another experiment of the New Deal which was promised to raise the level of prices was the devaluation of the dollar. That it failed to do so is apparent. But what the fantastic policy of buying silver and gold indiscriminately from all the world has done is to drain the world of these metals on one hand and to accumulate, at the expense of the American taxpayers, a hoard unparalleled in history, for which we can have no possible use. Year after year we have paid in cash for gold not only the value of our exports to other nations, but a bounty besides. The world, glad to get American cash, has increased its production of these metals. In the last 10 years the world production of silver has averaged 175,000,000 ounces. In 1939 it is estimated to have been approximately 266,000,000 ounces, only 57,000,000 of which was mined in the United States. We have been buying at a rate of better than 4 foreign ounces of silver to every American ounce. As for gold, less than twenty-five and one-half million ounces were being mined annually in 1933. In 1938 this jumped to over 39,000,000 ounces—an increase of 54 percent in 5 years. And yet we are buying it several times faster each year than it is being mined. Our hoard has risen from approximately \$4,000,000,000 worth to some eighteen billions in 6 years.

Every additional ounce of silver and gold for which the American people pay the rest of the world a handsome subsidy now but hastens the day of reckoning when, having drained the other nations of these riches, we make these metals virtually useless as far as the rest of the world is concerned. Although Secretary Morgenthau seems to enjoy his trusteeship of this vast hoard, other new dealers are frank in admitting that this gluttonous policy of chasing the gold and silver rainbow is rapidly decreasing its true value. It has even been suggested that, having paid so many billions to the rest of the world for these metals with the hard-earned money of the American people, we may have to give them away.

Every additional ounce for which we subsidize other nations today increases the dangers of inflation tomorrow so long as the President retains his power over our monetary system, for it adds to the hoard against which he can make new money and write off a paper profit.

If we are to protect the currency of the United States and of the rest of the world; if we are to protect our American miners of these precious metals; if we are to protect all of our people from the peril of inflation, this reckless, senseless policy of buying the world's silver and gold from the rest of the world, only to return it to the earth again, must be curbed. Today the New Deal has placed us in the position of disrupting the currencies of the world if we abandon the policy suddenly and completely, but it must be gradually reduced if the currencies of all the world are not to be threatened with collapse, and if American prices, wages, savings, and investments are to be safeguarded. Thus another New Deal panacea for prosperity has not only failed miserably but has endangered all that it was designed to aid. Another New Deal bubble has burst.

Another panacea for recovery was the reciprocal-trade program which, it was promised, would help us recover our world markets, which had naturally shrunk during the world-wide collapse at the end of 1929, through the general stimulation of world trade. After 6 years we must face the fact that, as administered, the program has not only done far more harm than good but that it has been particularly disastrous to those whom new dealers promised us would gain the most—the farmer.

Here again we must recognize the difference between idealistic dreams of beautiful theory and the harsh, stern truths of reality. We must face the fact that our share of world trade has not increased and that American foreign markets, which the administration policy of scarcity at home made it impossible to recapture, have been taken over by other nations. There is no denying that the only thing which has given the United States a favorable balance of trade in recent years has been the armament race throughout the world, which was climaxed by the outbreak of war. It is equally true that not only have competitive imports increased alarmingly in recent

years but that the chief reason we have not been even more flooded with the cheap products of peasant labor abroad has been the pre-occupation of the great nations of Europe and Asia with undeclared wars or preparation for war.

We must face a truth that has been demonstrated time and again to our sorrow, a sad truth that we should have learned since the first World War, namely, that other nations are not as philanthropic and as idealistic as we. The late Will Rogers never spoke truer words than when he declared that we Americans had never lost a war or won a conference. For example, just before negotiations began for a trade treaty with the French they raised their duties on almost all imports. The Secretary of State was greatly pained. Not only did he publicly denounce this practice but he declared that he would not deal with a nation that employed such tactics. But nevertheless he did.

In our altruism, we have not only made more concessions than we received from the nations with which a treaty was concluded, but we have let down the bars to every country in the world, while receiving concessions from only one. We have reduced duties in the same amount to every nation, regardless of the extent to which its standard of living differed from ours. In the United Kingdom, for instance, wages are one-third of what they are in this country. In Italy, wages are less than one-fifth of American wages, and in Japan, they are less than one-tenth. And yet the same reduction in duties applies to all of them alike.

The Research Division of the Raw Materials National Council has made a study of leading agricultural imports which compete with domestic production during the 3 years of 1935, 1936, and 1937, estimating the value of these imports had they been produced in the United States, and the displacement of American acres of land caused by importing them instead of raising them at home. The figures are startling. For these 3 years alone, it estimates that competitive farm imports, valued at a little under \$3,000,000,000, would have valued over eight and a quarter billion dollars had they been produced in the United States. In other words, the average foreign value is approximately one-third of the American value. And it estimates the number of acres displaced by importing these products at an average of nearly 79,000,000 acres a year.

Let me give one specific example which directly concerns the people of Utah, and other sheep-raising States. During the 3 years of 1935 through 1937, approximately seven hundred and eighty-six and a half million pounds of wool and mohair were imported. The value given to them was the foreign value of something over one hundred and seventy-nine and a half million dollars. But the American value, had this wool and mohair been produced in the United States, would have been over five hundred and thirty-eight and three-quarters million dollars. The average number of acres thus displaced each year was approximately 58,000,000. As for wool manufactures, our imports were valued at less than sixty-four and a half million dollars, but the American value would have been well over \$193,000,000. The number of American acres thus displaced was over twenty-nine and a half million—to say nothing of the men and mills which might have been employed to manufacture the wool had it been produced in this country.

And still these imports increase. In 1938 we imported one hundred and four and a quarter million pounds of unmanufactured wool. The value placed upon it was a little over twenty-two and a half million dollars. But at the ratio of 3 to 1, estimated by the Raw Materials National Council, the American value, had this wool been produced in this country, would have been over \$69,000,000. In 1939, our importation of wool was more than double the amount of the preceding year, amounting to nearly 246,000,000 pounds. Here again, although it was valued at a little over forty-nine and a half million dollars, the American value would have been over \$149,000,000.

We cannot hitch our economic wagon to the star of the altruistic ideal of free trade and preserve the American standard of living. We cannot mesh our economy to the economy of the world—particularly in its chaotic condition today—and avoid being dragged down to its level. The alternative is not a policy of self-sufficiency and selfish nationalism. It is rather a return to the principle of true reciprocity by which we receive concessions comparable to those we give, and seek to promote world trade through the exchange of goods and materials which nations need but do not have and cannot produce. Such a program is not incompatible with the protection of our American standard of living.

I am heartily in favor of trade treaties between the United States and other nations. But they should be used as the means of helping the American farmer and worker to dispose of those products which they have for export. They should safeguard the American farmer and worker against cheap competitive imports sold in this country below the American cost of production. Our people must be assured of ample hearings before negotiations are concluded—and the democratic right of appeal at all times—a right of which they were deprived by the Reciprocal Trade Act. And they must be given the opportunity to pass on all treaties through their Representatives in Congress. In no other way can the American standard of living and the American processes of democratic procedure be preserved. Here, again, Americans are awakening to the fact that the reciprocal-trade program, as administered, has not only failed to achieve what was promised for it but has proved one more stumbling block in the way of recovery.

The American people may reelect an administration once to give it a fair chance to make good on its promises. But, after 8 years, they are not going to reelect an administration on the basis of noble motives or grandiose social objectives. The ill-fed, ill-housed, and ill-clad want more than solicitude and insufficient hand-outs from those who hold public office. They are weary of promises instead of prosperity, and reform for reform's sake at the price of recovery. They are tired of the tinkering of pseudo-intellectual theorists and professional experimenters with their economic system and their lives. They will no longer be satisfied with the stone of bare subsistence for the bread of prosperity. What they ask is an opportunity to go forward on their own steam.

If I did not think that the American people were capable of going forward through their own initiative, energies, and effort, then I would say that the New Deal has not gone far enough. If I thought that the American people had fallen so low that they are incapable of caring for themselves and planning their own destiny, then I would say that they must fall prey to a paternalistic despotism, benevolent at first, but gradually stripping them of their liberties and their independence. That has been the tragedy of one people after another throughout history. Indeed, we have seen it happen before our very eyes in recent years. But, because my faith in the American people, to achieve progress for themselves under a Government that makes it possible, remains firm, I accuse the New Deal of stifling their initiative, wasting their energies, and holding them back when they might have gone forward.

Today the American people are awakening to the fact that the New Deal experimenters have nothing new to offer. The President's recent defenses of his spending policies are eloquent evidence that we can expect nothing more from a third term of the New Deal than a continuation of reckless spending, mounting deficits, and rising taxation, repressive regulation, and enforced scarcity at home, coupled with a policy of economic internationalism in our trade relations with other nations. We know that the continuation of these policies can lead only to bankruptcy, inflation, or repudiation, economic stagnation, and lower level of living for our people.

Such a prospect should be particularly repulsive to a people who chose for their motto the one word "Industry." You in Utah have demonstrated how men and women of varying beliefs can live together, work together, and advance together with mutual tolerance and respect, through voluntary cooperation for the welfare of all. You have demonstrated how a people can face hardships and overcome difficulties that seemed at the time insurmountable by your courage, your faith, and your industry. You have furnished an inspiring example of the American way of life and progress in the past, and I believe that you will continue to do so in the future.

The American people today are looking for an administration that will put an end to government by repression. They are looking for an administration that will ease the burden of debt and taxation, of bureaucratic regulation of their lives, of scarcity caused and subsidy made necessary by government folly. They are looking for an administration which will release their energies and unite them in the common cause of going forward together. The Republican Party stands ready to answer that challenge.

We solemnly pledge ourselves to remove every restraint upon recovery, and to lend every encouragement to an expanding economy of plenty. But cutting every unnecessary governmental expenditure and a thorough revision of our entire tax structure, we will release the flow of funds into increased wages and greater employment. By a revision of the administration of the Securities and Exchange Commission we will encourage investment and thus the expansion of business. By a revision of the Wagner Labor Act we expect to assure genuine collective bargaining for the worker, free from coercion from any source, and to assure equal justice to employer and employee alike. It will be administered by a board whose purpose is neither the direction of a class struggle nor the triumph of one group of workers over another but the promotion of the partnership of capital and labor which alone can bring industrial peace and progress. We will not administer the Wages and Hours Act in an attempt to dictate all wages and hours regardless of economic conditions, thus putting men out of work, but rather for the purpose intended by the law, namely, the assurance of minimum-wage and maximum-hour standards.

Under such a program the unemployed will be assured of the one hope of real jobs—an expanding economy. The worker will be assured of the one true source of increased wages—a prosperous business. The farmer will be assured of his one chance of adequate markets and prices—a healthy, prosperous domestic market and a fair opportunity to compete for the markets of the world. Every citizen may look with confidence to friendly government for protection of his right to the fruits of his labor, and for encouragement to rise as high as he is fairly able so long as he does not interfere with the equal rights and opportunities of others.

Such a program presents no panacea. It is no short cut to Utopia. But, after 7 years of bitter experience, these are not what the American people seek. It is a program by which freemen can advance under a free government and a free economy. It is a program under which the American people will be assured the freedom and the opportunity to go forward, as they have in the past, through their industry and their genius, to the building of a better America and to the conquest of new frontiers for all mankind.

Hon. Cordell Hull

## EXTENSION OF REMARKS

OF

HON. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

EDITORIAL BY WALTER M. HARRISON

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask unanimous consent to incorporate the editorial in the Daily Oklahoman written by Walter M. Harrison on March 1 concerning Hon. Cordell Hull, Secretary of State.

[From the Daily Oklahoman]

WALTER M. HARRISON APPRAISES THE SECRETARY OF STATE—HULL: ALERT, EXPERIENCED, SANE, SOUND

WASHINGTON, D. C., March 1.—In order to make up my own mind as to just how old Cordell Hull is, I have been watching him at press conferences and before committees.

The first thing the third-term boys fling at you when they say there simply isn't anybody to carry on, with "Greatheart" out of the picture and you say how about the Secretary of State: "Hull is a good man but too old."

Born in October 1871 the Tennessean will be 69 years old before the votes are counted in November. But older men have been President of the United States. Older men have ruled France, England, Germany, with iron fists.

The fact is a fiction is spreading that none except flaming youth in this chaotic era of groping seems gambler enough to carry the torch.

Mere years should not check a good man out, when it is the virility of the thinking mechanism that counts. I believe Cordell Hull is at the height of his faculties, possessed of an alert and learning mind, a sounder body than the average man of his years and a wealth of experience, sanity, and idealism which ought to be given the utmost consideration.

Moderns turn their noses up at the rococo pile across from the White House known as the State, War, and Navy Building. A relic of Grant, little in keeping with the classic buildings which have mushroomed in the last generation. It contains no chromium, bronze, nor W. P. A. murals. Its checkerboard stone floors are worn and sagged. The swinging latticed doors, with their black-paint borders to hide dirty hand marks, remind one of emergency construction.

But there is a sense of sanity, poise, dignity, and smoothness there, one never can find in such ornate piles as the enormous and ultra Department of Commerce.

The conference room just off Mr. Hull's private office, decorated with Georgian furniture, presided over by the ghosts of late, great Secretaries, counseling from their canvas and pigment selves, is as quietly sure of itself as is Secretary Hull, standing there behind the big chair at the end of the table, with gray McDermott by his side, facing the ring of newspapermen and their belt of machine-gun-question ammunition.

State Department press conferences are not wisecracking sessions, as they so often prove across the way. Short questions. Short answers. If there is nothing to discuss, nobody's time is wasted. But when an element of State Department activity is of value, Hull speaks with exact information, sure knowledge, and the few times he is in doubt, he holds the query to get the facts.

This week Mr. Hull was the first witness before the Senate Finance Committee considering the extension of the reciprocal-trade treaties. Here would be a swell place to watch the Secretary under sharp-shooting fire. Here Senators VANDENBERG, CAPPER, LA FOLLETTE, LODGE, JOHNSON of the G. O. P. would enfilade him.

I knew the press associations would carry reams of testimony, so I watched only the byplay, the time of Hull's reactions, his alertness, his speed in ordering thoughts, his mastery of himself.

For 3 hours the hearing continued with Hull in the well, surrounded by Senators on the oval bench, with PAT HARRISON in the chairman's position. For 2 hours of the time, cameramen worked close in, flashing bulbs at unexpected moments, movie cameras stuck their black noses in the door behind the bench and ground, the opposition pricked with their questions. Hull was as fresh at the finish as he was when he went on and began by reading his prepared statement.

I saw no cameraman work on what, to me, was the best composition of all. VANDENBERG, leaning over the mahogany, peering down at Hull, poking out a forceful finger to establish his point, the Secretary leaning forward, eyeglasses on a black ribbon stuck on his right thumb, intensely alert to follow his inquisitor.

It might be that these two men, sitting there sparring in the Finance Committee room, less than 6 feet apart, would be the nominees of the summer conventions.

Secretary Hull had no office assistant there to prompt him. He brought his portfolio full of papers. He fumbled for one occasionally, groping for the right answer, but he generally got what he needed without pause. More than once he halted to order his thoughts, but not too long. Generally he was ready before the Senator's question was finished. When the situation called for a little political dig, he gave as good as was sent. When the occasion called for repartee, he had it. After 2 hours he held up a flimsy sheet and read from it. I noticed not the slightest quiver in his hand. He did not reach for a glass of water a single time.

He was never offended, never belligerent, never raised his voice. That kind of appearance is hard work. Mr. Hull walked out of that session as fresh as a spectator, instead of the principal actor.

It is traditional that a Secretary of State should have dignity. Hull has developed much of the cold front he wears on the stage. Behind his private office doors he can still utter a good round damn if the occasion requires. He has the fire of his fighting days in Congress, but such attributes are unbecoming the second officer of the Government, in his lexicon, and he lives a fine mask for himself.

It will take something more than the "old man" campaign to destroy Hull, who daily becomes more interesting to the American people as they ponder the mysteries of politics in a Presidential year.

WALTER M. HARRISON.

## The Water Pollution Control Bill, S. 685, and the East Bay Sewage Disposal Project

## EXTENSION OF REMARKS

OF

HON. JOHN H. TOLAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

Mr. TOLAN. Mr. Speaker, on Friday last, March 1, I took the floor of the House to offer an amendment to the so-called Barkley bill, S. 685, which would authorize the creation of a Division of Water Pollution Control in the United States Public Health Service.

The amendment I offered was absolutely necessary to restore the original provisions of the measure in the form in which it was passed by the Senate. Although the House refused to take favorable action on this amendment restoring the 33 1/3-percent grant provisions to municipalities to aid in the construction of sewage-treatment plants, I intend to do everything in my power to have the conferees of the House and Senate keep Senator BARKLEY's bill in its original form.

Mr. Speaker, last Friday I acted upon my own responsibility in proposing this amendment. In my mind there is a real interest among the residents of my district in obtaining Federal assistance for the proposed East Bay sewage-disposal project. Yesterday, I received fresh assurance that the concern of our community is still with the possibility of direct assistance from the Federal Government, and I would like to insert in the RECORD at this point the following letter from the Berkeley Chamber of Commerce, Berkeley, Calif.:

BERKELEY CHAMBER OF COMMERCE,  
Berkeley, Calif., February 27, 1940.

Congressman JOHN H. TOLAN,  
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN TOLAN: Advice from the United States Chamber indicate that the Barkley bill, S. 685, is soon to become active again.

The Berkeley Chamber of Commerce for the last 2 years has been urging the support of our California delegation for the passage of this bill.

The sewage-disposal problem along the east shore of San Francisco Bay, is one difficult of solution, and the assistance of the Federal Government under the terms of the Barkley bill would prove very helpful. The Berkeley Chamber of Commerce, therefore, reaffirms its position and requests that you use your good offices in securing passage of this measure.

Cordially yours,

BERKELEY CHAMBER OF COMMERCE,  
J. D. SARBEE,  
Vice President and General Manager.

**Father Abraham's Men**  
**EXTENSION OF REMARKS**  
 OF  
**HON. BERTRAND W. GEARHART**  
 OF CALIFORNIA  
 IN THE HOUSE OF REPRESENTATIVES  
*Tuesday, March 5, 1940*

AN ABRAHAM LINCOLN ARTICLE BY EMANUEL HERTZ

Mr. GEARHART. Mr. Speaker, in the February issue of the American Legion magazine there appeared an article from the most capable pen of Emanuel Hertz which is of unusual interest, especially during this season of the year when the name of the immortal Lincoln is upon the lips of everyone.

In this article, which he has entitled "Father Abraham's Men," Mr. Hertz reveals more clearly than ever before Lincoln's deep concern for the common soldier. No one other than a thoroughgoing student of the life and character of the wartime President could have amassed so much heretofore unknown or inadequately evaluated evidence as this eminent scholar has collected in the essay to which I refer.

Because I am quite sure that that which Mr. Hertz has written will add tremendously to a better understanding and appreciation of the real Lincoln, I feel that I am privileged, indeed, to offer Father Abraham's Men for inclusion in the CONGRESSIONAL RECORD.

The unanimous consent of the membership having been given, the article referred to follows:

[From the American Legion magazine]  
**FATHER ABRAHAM'S MEN**  
 (By Emanuel Hertz)

Aside from a few events, which for a brief moment focused popular attention on Lincoln's treatment of a particular soldier, no one has had occasion to dwell upon that phase in its entirety and chronicle for all time to come Lincoln's relations with the Union soldiers and sailors. He has been documented on quite a number of outstanding policies which to the historian and biographer seemed important. Many a useful treatise is the result of such research. But taken all in all no one has deemed it of sufficient importance to reveal what Lincoln said and did and thought of the young man in his Army and Navy—of the fighting soldier and daring sailor and what they thought of him.

The sick and the wounded had to be cared for—and they were, as far as the methods of the day would permit. The United States Sanitary Commission and the Christian Commission were supported and encouraged in their work and he constantly helped to make them more efficacious and workable. All that seems to be known is that he called for volunteers, he increased the Army, he declared a state of war and blockade, he authorized huge expenditures, he permitted arbitrary arrest and imprisonment without trial, and that he suppressed some newspapers.

Congress generally validated these acts after their promulgation, and the Supreme Court, in days to come, sustained both the Executive and Congress. But he did a great deal more of which little or nothing is known. If there was one department unknown and nonexistent, it was what is today called the publicity department. He was a poor advertiser—he was genuinely humble and he declined to boast of his performances. He understated the importance of what he did and he refused to "point with pride" at what he did. His Gettysburg address, he said, after he uttered those imperishable words, "wouldn't scour." It took him some time to admit to Thurlow Weed, who praised his second inaugural address, that, "Everyone likes a compliment—thank you for yours \* \* \* on the recent inaugural address \* \* \* which will wear as well as—perhaps better than—anything I have produced."

In his letter to James C. Conkling, one of the best documents he ever wrote, which was to be read at the meeting to be held in Springfield on September 3, 1863, he says: "It was hard to say that anything has been more bravely and well done than at Antietam, Murfreesboro, Gettysburg, and on many fields of lesser note, nor must Uncle Sam's webfeet be forgotten. At all the watery margins they have been present. Not only on the deep sea, the broad bay, and the rapid river, but also up the narrow, muddy bayou and wherever the ground was a little damp they have been and made their tracks."

In consequence of the absence of adequate records of the performances, none of the numerous manifestations of his relations with the Army are revealed. In round numbers there were about

2,150,000 men in the Army and Navy; about one-fifth were wounded during the 4 years, and about one-tenth were sick throughout the war. From the days of anxiety when he was alone in the White House, waiting for the first regiments to appear and save the threatened Capital, down to the days when they marched to the front, with a short stop at the White House to receive the benediction of Father Abraham, who had summoned them to the service, Lincoln kept in constant contact, and was called upon in one way or another to act upon numerous problems which the War Department could not finally or definitely dispose of.

An entire saga could be written of the innumerable attempts by subordinate officers and by the Secretary of War to prevent the cases from reaching the President. On many occasions judgments were rendered and punishments meted out and report of the cases withheld until it was too late for the President to interfere. Many an injustice was thus perpetrated simply because the system was new and imperfect. When he ascertained what was happening, he issued orders that no capital cases be disposed of without submission of all records to him for final decision.

In so vast an army, thousands of such cases reached him, and he disposed of them after carefully reading the entire record in each case. In practically all, he approached his task with an effort to find a way of saving life. In the slave dealer's case, however, he said to the spokesman, "My friend, that is a very touching appeal to our feelings. You know my weakness is to be, if possible, too easily moved by appeals for mercy, and if this man were guilty of the foulest murder that the arm of man could perpetrate I might forgive him on such an appeal; but the man who could go to Africa and rob her of her children, and sell them into interminable bondage with no other motive than that which is furnished by dollars and cents, is so much worse than the most depraved murderer that he can never receive pardon at my hands. No! He may rot in jail before he shall have liberty by any act of mine."

He could easily be induced to upset the stringent orders of the courts martial. Would that it were possible to compile all his reasons for his repeated acts of mercy. Almost any pretext would suffice. The endorsements on the papers were made and the tearful mother, the anxious wife, the determined sweetheart walked away in joy at the saving of the life of the young soldier for whose life they came from the ends of the land to plead and pray.

He was a lawyer of no mean attainments. How the best-laid plans of the Army men to hold fast to their victims crumbled or were laughed away or were demolished by an apt remark or a pointed story is engrossing and so human that all these ought to be gathered and told.

No other performances throw so full a light upon the war President as does that vast unwritten chapter of his life which had to do with his contacts with the young men from every part of the service. He literally invented means for showing his love for the soldier; but when the officer seeking promotion came before him with the recommendation of his superiors, Lincoln noticed the fact that liquor had stamped its seal upon his features: "I dare not restore this man to his rank and give him charge of a thousand men when he puts an enemy into his mouth to steal away his brains."

"General, there are too many weeping mothers in the United States," was the excuse for thwarting and confounding the professional Army man on the court martial, ever on the alert for discipline, and who asked the President to sign warrants for the execution of 24 deserters: "For God's sake don't ask me to add to their number—for I won't do it."

He made a special study of the term "desertion" and what prompted it in every case, for thousands of these cases came before him. "I would have court-martialed him," he said in one case, "if he had not gone to see his sick mother."

If there was a good reason or a humane explanation for the desertion, he looked behind the record and acted. A boy who was taken to the Army the day after he was married and was late on his return after a short furlough to visit his young bride was pardoned. "And you say, my child, that Fred was compelled to leave you the day after the wedding? Poor fellow; I don't wonder at his anxiety to get back; and if he stayed a little longer than he ought to have done, we will have to overlook his fault this time."

"My son is a good boy, Mr. President; he would not be guilty of an act of cowardice like that," from another. And to the girl who "came with no Governor, Senator, or Congressman to plead your (her) cause," he said: "You seem truthful, and you don't wear hoops, and I will be whipped, but I'll pardon your brother."

In another case he said, "I must put this by until I can settle in my mind whether this soldier can better serve the country dead than living."

Judge Holt presented another case for approval; Lincoln hesitated, then replied, "Well, after all, Judge, I will put this among my leg cases." "Leg cases?" queried the Judge, "What do you mean by leg cases?" Lincoln replied, "They are cases you call cowardice in the face of the enemy, but I call them for short my leg cases; I put it to you, if Almighty God gives a man a cowardly pair of legs how can he help their running away with him in time of battle?"

"No one need ever to expect me to sanction the shooting of a man for running away from battle," Lincoln said to Senator Voorhees. "I won't do it. A man can't help being a coward any more than he could help being a humpback, if he were born with one." Then turning to the Senator, he said, "Voorhees,

were you ever scared?" Voorhees confessed that he had had some little experience that way. "So have I," said Lincoln, laughing, "and I just know what it means. And in any contest or controversy which arises between the head and the heels, I never knew the heels to get anything but the best of it. No, sir; they needn't send any leg cases to me at all, I'll never order a man shot for any such offense."

"I haven't had any pay in 7 months," said the officer charged with disloyal utterances, "and my wife needed the money, I tell you, Mr. President, she was actually hungry; I got drunk that night and talked foolishly, but I couldn't have said anything disloyal. I haven't got a disloyal thought or a disloyal drop of blood in me."

"Well," said Lincoln, after a little pause, and speaking very deliberately, "If I'd been fighting 7 months and got no pay and Mary had no food, I presume I'd say something disloyal myself." Lincoln listened to a widow's story pleading for the life of her only son, a story told between sobs; Lincoln said nothing, but he was scribbling a few lines with a pencil on a pad of paper, and his first words were, "Well, he is a good son. He went to save his mother." Then to the mother direct: "I do not think it would do him any good to shoot him, do you?"

The tired President found time to read thousands of pages of testimony taken by General Sibley in the trial of 303 Indians, who were all condemned to be hanged as a result of one of the most bloodthirsty Indian massacres on record. Lincoln, after reading the whole record, reduced the number to 39.

Stanton was considered the nemesis of the accused soldier. The findings of the court martial were final and should not be disturbed. The findings and decisions of the military clique in the Army were sustained and upheld almost uniformly. It required a superman like Lincoln to overrule these arbitrary decisions of his otherwise indispensable War Minister. And nowhere was this more needed than in the problems raised by the thousands of soldiers whose misfortune brought them in collision with the War Department in the field or in the violation of one of the many rules of the War Department.

Lincoln's sense of humor in many cases came to his assistance. He was never slow to praise or to give a mild reproof. Putting his hand on the shoulder of a young soldier as he was entering a saloon on Pennsylvania Avenue, he said, "I don't like to see our uniform going into these places." The young man never did. "He fixed me so, that whenever I go near a saloon and in any way think of entering, his words and face come back to me."

As he was walking down the stairs in the War Department one day a number of young soldiers dashed up, taking about three stairs at a time and coming into violent collision with the President. A second glance revealed that they had struck the Commander-in-Chief of the Army and Navy. There followed a special tender of ten thousand pardons. To which the President replied, "One's enough; I wish the whole Army would charge like that."

The only manner of judging whether the feeling of the soldier for Lincoln was reciprocated, whether the great love of Lincoln was appreciated by the soldier and the sailor, came for the first time in the fall of 1864, when the ballots of the men at the front were counted and revealed an overwhelming vote for Lincoln's reelection. In many instances the soldier ballots were decisive of the result in close election districts. And what is more remarkable they became the preachers of Lincoln's cause for the rest of their lives.

The records of his deeds of mercy were told and retold on innumerable occasions everywhere, and thus his battling evangel kept alive and burning the torch which Father Abraham entrusted to their keeping as it fell from his lifeless hands. It became the most exalted theme at thousands of firesides and at all succeeding convocations of soldiers and sailors of a reunited Union.

It was agreed at one time among the corps commanders that they would carry into effect the sentences by courts martial before Mr. Lincoln would have an opportunity of granting a reprieve. This was done in many cases. "When on the march to Gettysburg," says General Slocum, "we had with us three prisoners sentenced to death as bounty jumpers. The men extending the telegraph lines were within 2 or 3 miles of my camp. The three prisoners were executed just before the lines reached us. The very first message that came over the line was an order from Mr. Lincoln to postpone their execution." The general telegraphed back to Lincoln that the sentence had already been carried into effect.

Several months after he stopped at the White House to say goodbye to Mr. Lincoln on his way to the West. "The moment I entered the room he said, 'General Slocum, the last message I received from you caused me more pain than anything that has occurred since I became President. When you were at Leesburg I telegraphed you to suspend sentence in the case of a man condemned to death. When I did so, the mother and sister of the soldier were seated here at this table, and I was compelled to open and read your dispatch saying that he had already been executed.'"

Judge Peck on one occasion was walking up and down the East Room with Mr. Lincoln, who looked exceedingly sad, and every now and then threw out his arm in a pathetic gesture. The judge said, "Mr. President, may I inquire what distresses you tonight?" "Oh, Judge," he said, "this is Friday—black Friday, hangman's day; this day they execute farmers' boys for falling asleep at their posts down on the Potomac. If I say anything they say I interfere with Army discipline. Oh, I can't bear it; I can't bear it."

"I remember," said Peck, "a time when Lincoln was sitting at his table with a large pile of papers before him, and after a pleasant talk he turned quite abruptly and said 'Get out of the way, Swett; tomorrow is butcher day, and I must go through these papers and see if I cannot find some excuse to let these poor fellows off.' The pile of papers he had were the records of courts martial of men who on the following day were to be shot."

The President said: "I have done something this morning which has roused the ire of Secretary Stanton. Congressman Dennison of Pennsylvania came to me this morning with the mother of John Russell, a soldier who was to be shot within 48 hours for insubordination, and I gave a peremptory order pardoning the soldier and restoring him to his regiment. At a recent battle, in the face of the enemy, John Russell's captain ran away. When the battle was over, in which half the command was lost, this soldier met his captain and, walking up to him rifle in hand, said, 'Captain, you're a damn coward; you ought to be shot for cowardice.' The captain pulled out his revolver and attempted to kill Russell, who aimed his rifle at the captain's head. They were separated. The captain preferred charges of insubordination against the soldier, and a subservient court martial promptly sentenced Russell to be shot and did not even censure the cowardly officer. Congressman Dennison has just given me all the facts in the case, and I have just made the poor mother happy by saving the boy." And with compressed lips, he said, "And I did more; I dismissed the cowardly captain from the Army."

To an Illinois friend asking pardon for a soldier condemned to be shot for a purely technical "desertion" he said, "Well, I think the boy can do us more good above ground than underground."

When confronted with the task of deciding between life and death for these boys facing the enemy he thought of the words of John Bright, "The Angel of Death has been abroad throughout the land"; he almost heard "the beating of his wings." As the casualty list lengthened he observed: "There is no one, as when the first-born were slain of old, to sprinkle with blood the lintel and the two side posts of our doors, that he may spare and pass on; he takes his victims from the castle of the noble, the mansion of the wealthy, and the cottage of the poor and lowly."

His heart bled for the common soldier of the Confederacy; when General Grant arrived and had told briefly the incidents of Lee's surrender, the President asked, "What terms did you make for the common soldiers?" Grant told him, "I told them to go back to their homes and families, and they would not be molested, if they did nothing more."

An ungrateful posterity has neglected not only to gather and make available these acts of mercy and of justice, but for a long time discouraged the telling of these heartthrobs of the lone man in the White House, struggling to save not only the Union but every human being in it; and he looked upon the Army and Navy as the indispensable instruments to achieve his purposes.

True, some of the official documents of his administration have been preserved; some sort of a record of the battles has been achieved; a vast storehouse of the history of the war has been collected after 30 years of work and enormous expenditure of time and treasure; 140 volumes of 138,579 pages, containing some 76,000,000 words, about the Civil War and all the Army movements have been printed and not a word about the soldier who made success possible is to be found in the vast compilation.

About 9,000 books, pamphlets, and magazine articles about Lincoln have been accumulated, and not one dedicated to the purpose of adequately telling the main facts which would describe the daily contact of Lincoln with the soldier and sailor during his stay at the White House. His addresses to two regiments on their way to the front are illustrative of the importance of these talks.

To an Ohio regiment in 1864 he defined in one phrase the essential character of our Government with more accuracy and clearness than ever Jefferson had done: "There is involved in this struggle the question whether your children and my children shall enjoy the privileges we have enjoyed." To another regiment he said these words, which reveal that the man who gave us the Gettysburg Address thought along those lines constantly:

"I happen, temporarily, to occupy the big White House. I am a living witness that any one of your children may look to come here as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance for your industry, enterprise, and intelligence—that you may all have equal privileges in the race of life with all its desirable human aspirations—it is for this that the struggle should be maintained, that we may not lose our birthright—the Nation is worth fighting for to secure such an inestimable jewel."

Every moment he could spare he spent in the hospitals, seeing that the wounded soldier was properly cared for and made whole.

He found time to study Dr. Robert K. Stone's message outlining and recommending a disinfectant for camps, hospitals, and ships which was odorless but powerful, and asked the Surgeon General to give it a trial. "I am personally acquainted with Dr. Stone—and believe him to be a skillful physician altogether capable of forming a correct opinion on the subject he has spoken about; I think it probable the disinfectant would be valuable in our hospitals and camps."

His many visits to the hospitals, his talks with the wounded boys, their last requests and how he complied with them, is subject matter for another treatise. He saw the surgeon, the doctor, the nurse at work. He was at home in the hospitals, as will be seen from the following incident.

Mrs. E. M. Stanton, wife of the Secretary of War, had given 8 bushels of strawberries to the hospital, and Mrs. Cole, the head dietitian, had supervised the baking of a mammoth strawberry shortcake. As the soldiers were lounging around the kitchen, President Lincoln and his Cabinet entered.

There were few chairs and the dining room was filled. When Mrs. Cole brought the President a large piece of the cake, he graciously took it, walked to the corner of the room, and sat down on the floor. The Cabinet members all followed his example. It was a simple but revealing act.

At the other end of Pennsylvania Avenue everything that was said by the Members of both Houses of Congress was carefully recorded—but the messages of this great soul to the soldiers and to the visitors were not considered of sufficient importance to be preserved. The irony of history has consigned the former to oblivion whereas what Lincoln said is eagerly sought for and preserved with the eagerness and hunger characterized in reassembling the pieces of sacred literature.

What an education for his countrymen if a series of radio talks of such incidents in his life should be prepared and delivered so that the millions of this day to whom Lincoln is but a legendary figure could hear and be inspired. At a time like this when vast multitudes are sacrificed to the Moloch of aggression—how timely the story of the travail of this great man to save a life, to lift a burden of sorrow from a mother, a sister, or a wife would fall upon the expectant ears of us who constantly listen to the story of force, of slaughter, of destruction, and of poison propaganda.

Alas, the men who came in contact with Lincoln are almost all gone from the stage. The Grand Army of the Republic has faded away. But most if not all who came in contact with Lincoln have spoken, have repeated his words; have told the story of their liberation; of his humane deeds; of his pardons; of his help; of his humor; of his anecdotes; of his parables; of his smile; of his handshake—these are the treasures of the memory of the grateful men and women and can never be forgotten, and should never be forgotten.

A number of his predecessors and his successors in the White House have been more thoroughly documented; they left more written words to posterity than did Lincoln. It will require decades to properly classify many of these important documents. But not another one has planted the story of so many humane acts in the hearts of his contemporaries, especially in the hearts of the soldiers and in the hearts of their families, as has Lincoln.

He who will write that story based upon all these available facts, will write the story of the great heart and prophetic soul of Lincoln.

### Multnomah County Pomona Grange Against Renewal of Reciprocal Trade Treaty Act

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

RESOLUTION BY THE MULTNOMAH COUNTY POMONA GRANGE,  
NO. 15, OF PORTLAND, OREG.

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by Multnomah County Pomona Grange, No. 15, of Portland, Oreg.:

Whereas, most of the 21 reciprocal-trade treaties consummated thus far have worked a handicap and hardship to most of the farmers, lumbermen, producers, and purveyors in our section of the country and other sections as well by admitting farm products, shingles, lumber, meats, and wool with our comparable duty from countries that have a cheaper labor and probably a lower standard of living, into our country where labor is higher and a higher standard of living prevails; thereby destroying a gainful market for our products and causing the unemployment of many and keeping us from the pursuit of happiness guaranteed to us by the United States Constitution; destroying much initiative and morale and forcing many deserving citizens on relief rolls, destroying their heritage as a worker and producer and placing additional burdens to the taxpayers by the application of such reciprocal-trade treaties. Furthermore we believe the markets of our country should be for our people up to their ability to supply the markets; and whereas we believe that in a democracy as ours no one man should be delegated such authority and power as the making such treaties that so concern the livelihood, interests, and happiness of a democratic people as we; that this power of treaty making should be returned

to the President and Members in the United States Congress, where it constitutionally belongs: Therefore be it

*Resolved by Multnomah County Pomona Grange, No. 15, in its regular session held at Pleasant Valley Grange Hall, February 21, 1940, That we request our Members in Congress to use their voice and vote to try to prevent the renewal of the Reciprocal Trade Treaty Act that expires in June of this year; and*

*Resolved further, That our Members in Congress use such means as aforesaid, to try to restore the treaty-making power to the President and Congress of the United States as specified in the Constitution; and*

*Resolved, That a copy of these resolutions be sent to each of our Members in Congress, the Oregon Grange Bulletin, and the daily papers in this locality.*

### Our Debt to Greece

#### EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the Order of Ahepa on March 4, 1940:

"Where liberty dwells, there is my country!" It was in these words that a Hellenic patriot of years gone by expressed the thoughts and the feelings which have permeated the very life of your great people from ancient days to modern times. Today, as we glance about us, and as we take note of the positive contributions of the Hellenic immigrants to the various fields of American endeavor, we become even more impressed with the full truth of that patriot's declaration.

The Hellenic devotion, your devotion, to the basic principles of democracy reached the zenith of its crowning glory during the World War, when more than 60,000 Hellenic sons, your sons, marched off to battle and offered their "last full measure of devotion" upon the altar of American liberty and democracy.

In peace, as in war, you continue to carry on, yielding to none in purity of purpose or patriotic loyalty. For yourselves and your families you desire only those common endearments of life, liberty and the pursuit of happiness, guaranteed by the Constitution. This is not strange, for your people today are basically not unlike your forefathers of years gone by.

Thus, I am reminded of the oration delivered by Pericles in honor of the Athenians who fell in the Peloponnesian War. He there defined democracy as being that government in which each one has a place, and from which none are excluded, except idlers, who are useless to the state. Did he not thus trace for us a model to follow?

Greek democracy has indeed happily permeated our American democracy. Our debt to Greece is immeasurable.

We often hear of the "Greek miracle," and particularly as pointed out by the famous French writer, Renan. It is that creation of beauty as exemplified in the great Greek masters of prose, poetry, philosophy, painting, and sculpture. What a profound effect this Greek miracle has had upon modern thought, modern artistry—upon democracy—upon our very lives! It is only the departure from the "Greek blessing" that has caused the world's travail and the trials and tribulations that now grip nations abroad.

It is ever well to contemplate our sacred debt of gratitude toward Greece. We must love ancient and modern Greece, or rather, we cannot cease to love her without rejecting what is best in ourselves. To turn away from Greece, to disown her, the human mind must be utterly changed, so firmly are our lives interwoven with the Hellenic laws of reason and its principles of art.

I do not overstate the case when I affirm that Greek civilization is superior to that of all the other races which people the Balkan Peninsula. Educator of the European and Asiatic worlds in ancient times, Hellas continued to be so up to the conclusion of the Byzantine period. In the Middle Ages, when western Europe was plunged into the abysmal depths of ignorance, despair, and darkness, Greece flourished with her culture and refinement. It was so again at the beginning of modern times by its participation in the Italian Renaissance.

Some may contend that this supremacy is more relative than absolute; even so, it is not the less significant. The ancient Greeks lacked, of course, the distinctively modern appliances which have so largely increased human efficiency. The mighty blocks of

the Parthenon were lifted into place by muscle rather than by steam power. The education of the Athenian citizen was accomplished without the printing press. Decidedly, in the matter of plant, our civilization is superior.

But is it not clear that this very fact increases the marvel of Greek achievement? If they could produce such temples and such personalities with their meager appliances, what ought we to produce with ours? If we measure civilization by its plant, ours is easily ahead. But if we measure by ratio of product to plant, ours bears no comparison. Decidedly, the Greek was a success at the task of living. It is this, *How to Live*, which we of today must learn.

Nor can I proceed without pointing out some striking traits of the Greek character, which are also marked features of our own nationality. Ready wit, audacity, resourcefulness, practicality—all these we have in common with the Greeks. We are versatile as they were; we moralize as they moralized; our Franklin is as their Theognis. But their delightful tolerance we today unfortunately do not possess in abundant quantity. I refer to that which was, and I believe still is, a national Greek virtue, called "epielkeia," which has been translated into English by Mathew Arnold as "sweet reasonableness"; and it is this "sweet reasonableness"—this readiness to put up with things, this large allowance for individual failings, this good humor in the crowded mart of life—which many of us should try to cultivate.

I should like to see more of this tolerance, more of this Hellenic "sweet reasonableness" in the Senate and in the House, and, especially, when we consider legislation applicable to aliens. How intolerant are some of the outbursts of our own Members. They forget what Abraham Lincoln said in writing the Republican Party platform of 1864:

"Resolved, That foreign immigration, which in the past has added so much to the wealth, development of resources, and increase of power to the Nation, the asylum of the oppressed of all lands, should be fostered and encouraged by a liberal and just policy."

How cruelly unjust are some of our Members when they fail to hold up the lamp of welcome to the politically homeless and the victims of tragic political and religious tortures abroad. For example, the quota from Greece is but 307 per annum, and the thousands of Greeks who clamor for admission to this country will be unable to come here for years. The British quota, per annum, is 65,721. In the last fiscal year only 3,604 came in from Great Britain. This left 62,117 unused quota numbers. Why couldn't some of these 62,117 wasted-quota numbers be applied to increase the Greek quota? Furthermore, would it not be fairer to take the 150,000 of total quotas and rearrange them as to national ratios. I would take the unused British quota and divide it up amongst nations like Greece, which seek to enrich America with the blood of her nationals. It would be like changing the rooms of a house without changing the size of the building.

It is only because of the prevalence here of an antithesis of Greek tolerance that prevents the action I propose.

You, the modern Greek, commend yourself to our affection and regard by your passionate identification with the Hellenes that once were. Hellenism is your watchword. You could not shake off ancient Greece if you wanted to.

You, the modern Greek, especially realize and practice as did Euclid, Plato, Socrates, Theogenes, that nothing in the world exists by itself but that everything pertaining to the human spirit is correlated and interrelated with everything else. What a better world we would live in if more of us believed as you do.

America may well be proud of your order of Ahepa—American Hellenic Educational Progressive Association—since its purpose is to promote loyalty to the democratic institutions of America; to teach the tenets of government and citizenship; to cultivate the spirit of Hellenic altruism; to champion the cause of education. It is an organization striving to serve practical needs and to solve practical problems on the highest principles of human-kind. Those who are in distress, those who are in want and in trouble are aided and assisted by your order, for you hold fast to the principle that every man is his brother's keeper. Through your order the very soul of Hellenic wisdom and charity speaks. May you continue in your great work and your good deeds.

### What American Democracy Means to Me

#### EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

Mr. VOORHIS of California. Mr. Speaker, democracy means to me a way of life and a form of government in which every man, woman, and child of every race and creed

has an equal right to use his creative effort to attempt to enrich and improve it.

Democracy means liberty; the liberty to speak one's mind without fear; the liberty to criticize those in high places and to oppose the group or party in power; the liberty to work to reform the economic order and perfect the political state. Democracy means as much of liberty as any man or group of men can have without depriving others of that same liberty.

Democracy does not attempt to confine people's minds to dogmas and patterns of thought which are acceptable to the regime in power. It opens to them all the beauty and culture, art, and literature of all peoples.

Democracy means to me the right of every man to call his soul his own and to thank only God for giving it to him. It gives to each of its citizens the right to worship God according to the guidance of his own conscience. And since the very soul of religion is freedom of faith and without that freedom no true religion has ever existed, it is only under the Democratic way that religion can really flourish at all. Democracy means a freedom dearly bought and whatever temporary triumphs dictatorship may achieve, nevertheless when dictatorship destroys its people's freedom, as it must do, it destroys the better part of the heritage of 10,000 years of human struggle. Economic injustice, unemployment, and all the other problems that afflict human beings can be done away with by a determined free people. But a people which has lost its freedom—whatever else it may seem to have gained—must await the slow decay of a stealthy system of dictatorial control and then endure civil strife and conflict before it can gain that freedom back again.

Democracy means a way of life and a form of government in which the common people are the most important because they are most numerous. The greatness of a democratic nation must be measured not by the power or wealth of a favored economic class, political hierarchy, or racial group, but by the general welfare and happiness of the rank and file of its citizens.

Therefore, true democracy can no more endure monopolistic power in finance or industry than in government. Democracy must mean a running fight against monopolistic power because the life of democracy depends upon the continuance of reasonable opportunity for people of small economic resources to develop enterprise and make their contribution to the welfare of the Nation. Monopoly destroys those opportunities.

Democracy means to me basic economic right of the people to consume in proportion to their power to produce, and all things which stand in the way of their realization of this right must be progressively removed until needless poverty has been done away with. Democracy as a form of government and a way of life does not imply any particular economic order. It only seeks the maximum of true economic freedom—including freedom from fear and want and joblessness—for the maximum number of its people.

Democracy is dynamic, not static, and it means an eternal struggle on the part of free people to establish greater justice and a better life for themselves and their fellow citizens.

Finally, democracy can have no part of unemployment; indeed, sincere devotion to democracy requires a really determined effort to put our people back to work forthwith.

Freedom is a positive, not a negative, thing. The man without work to do lives under the dictatorship of fear and hopelessness. Only through the release of the skills and energies which God has given him can that man be set free again—free to help build his Nation, to supply his family with their needs, to warm his soul at the fireside of a duty and a work well done.

Let us therefore solemnly resolve that whatever things are necessary to be done to end the curse of unemployment, those things we will do; and let us also dedicate ourselves anew to preserve, protect, and defend, with tolerance but with deep determination, the constitutional democracy which

the sacrifices of past generations and the blessings of a kind providence have entrusted to our care.

For the first duty which rests upon this generation of Americans is the duty of passing on to our children the torch of freedom with its light burning at least a little more brightly than when our fathers handed it to us.

### A Naval Cruise to the West Indies

#### EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 21, 1940

ARTICLE BY DR. ERNEST RISLEY EATON

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "A Naval Cruise to the West Indies," written by my friend, Dr. Ernest Risley Eaton, of New York:

A NAVAL CRUISE TO THE WEST INDIES WITH THE MEMBERS OF THE NAVAL BATTALIONS OF HARVARD, YALE, GEORGIA TECH, AND NORTHWESTERN UNIVERSITIES

(Described by Ernest Risley Eaton, Lieutenant Commander, Medical Corps, United States Naval Reserve)

A detachment of six destroyers from the Training Squadron, United States Fleet, carrying on board approximately 300 student members of the Naval Reserve Officers' Training Corps from the Georgia School of Technology, Harvard, Northwestern, and Yale Universities, assembled at a previously designated meeting place off the Atlantic coast of the United States on June 18, 1935, for a training cruise to the West Indies. The destroyers of this detachment, before leaving on the cruise, had received on board in the ports of New Haven, Boston, Washington, and Charleston, members of the various R. O. T. C. units.

In my capacity as a lieutenant commander in the Medical Corps (special service), United States Naval Reserve, I had the privilege of serving as the squadron medical officer during the cruise, taking passage in the U. S. S. *Badger* (DD126), one of the six destroyers of the detachment. During that time my close association with these college students gave me the privilege and opportunity of observing them in training and practice; and in the belief that my observations may offer a more comprehensive understanding of the objectives and educational advantages of the N. R. O. T. C. to newly enrolled members, and university students who may become members, as well as to those who are interested in learning how young men are trained for Naval Service, I give a brief description of the training received on this cruise, together with certain fundamental qualifying instructions in naval science and tactics.

As a part of a sane peacetime program, to further the expansion of the United States Navy in time of national emergency, the Naval Reserve Officers' Training Corps deserves the thoughtful attention of all college students who wish to perform more efficiently their part in the defense of their country. Besides receiving the benefits of a broader general education and a better disciplined mind and body, it teaches courage and self-reliance in assuming responsibilities of leadership.

The Naval Reserve Officers' Training Corps was established on March 4, 1925, by an act of Congress which authorized a total enrollment of 1,200 Naval R. O. T. C. students in six institutions of higher learning, namely, Harvard, Northwestern, and Yale Universities, Georgia School of Technology, University of California, and University of Washington. The corps is a voluntary organization of undergraduate students at these six universities, and commonly called the Naval R. O. T. C. unit, the enrolled members being known as Naval R. O. T. C. students of their particular university. Judging by its popularity on the campus, the comments of students enrolled, and the patriotic approval of their parents, membership in a naval unit is highly prized.

The qualifications necessary are the usual physical requirements as laid down by the Naval Academy, as well as good character and evidence substantiating their United States citizenship. In addition, they must be not less than 14 years old. No member of the Regular Army, Navy, Marine Corps, Officers' Reserve Corps, the Organized Reserves, the Enlisted Reserve Corps of the Army, Marine Corps Reserve, Naval Reserve, Coast Guard, Naval Militia, or Army Reserve Officers' Training Corps is eligible for membership.

In other words, it is composed of college students having no connection with any other official military or naval organization. The Navy Department hopes to disseminate by means of these units a more widespread knowledge of the Navy, and to accomplish the equally important task of building up an officer reserve of sufficient proportions to be of material value to the Government in the event of a national emergency.

The subjects covered, and the hours or units given during the school year are, with slight variations, substantially as follows:

	Hours
a. Seamanship.....	60
b. Communication.....	60
c. Ordnance.....	40
d. Gunnery.....	40
e. Engineering.....	22
f. Electricity.....	10
g. Navigation, piloting.....	90
h. Navigation, dead reckoning and sailings.....	
i. Navigation, celestial.....	90
j. Navigation compasses.....	
k. Aviation.....	20
l. Military drills and instruction.....	60
m. Administration.....	20
n. Navy Regulations, all lectures.....	10
o. Naval Reserve Force.....	10
p. Naval leadership.....	10
q. Naval history.....	30
r. Military law.....	20

The total number of hours for the course is approximately 500. The course in naval science and tactics is divided into two parts: Freshman-sophomore years, basic course; junior-senior years, advanced course. Three hours per week, during the first 2 years, and 5 hours per week, for the last 2 years, are required. Each university credits its students with 2 hours each semester for the basic course, and 3 hours for the advanced course, some awarding additional credits for nautical astronomy and cruises. The total university credit amounts to 20 to 36 hours. The system of lectures by Regular naval officers as instructors accounts for 25 to 30 percent of the students' total college curriculum, and is, in substance, an extension course of the Naval Academy at Annapolis. At least one deep-sea cruise must be made in order to receive a commission as ensign (deck-volunteer), United States Naval Reserve, upon graduation or completion of a regular 4 years' course in naval science. The new sophomore and junior students at Northwestern University usually make a cruise on the Great Lakes each summer, providing the Navy Department does not arrange for a salt-water cruise. Other units take week-end cruises throughout the year in submarines and eagle boats.

The training squadron, now designated as the training detachment, United States Fleet, is comprised of 4 battleships and 15 destroyers. The primary purpose of this detachment is to train Naval Reserve divisions—organized and located at various pivotal points in the United States—throughout the year, and to cruise midshipmen of the United States Naval Academy, members of the naval R. O. T. C. units, and men of the United States Naval Reserve divisions.

The detachment of destroyers of Squadron 10 making this particular cruise, under the command of Capt. R. E. Cassidy, United States Navy, was composed of the following vessels: U. S. S. *Tatnall*, flagship of Captain Cassidy, squadron commander; Lt. Comdr. H. A. Sailor, United States Navy, commanding; U. S. S. *Badger*, Lt. Comdr. S. H. Hurt, United States Navy, commanding; U. S. S. *Tillman*, Lt. Comdr. W. D. Sullivan, United States Navy, commanding; U. S. S. *Schenck*, Lt. Comdr. I. N. Kiland, United States Navy, commanding; U. S. S. *Leary*, Lt. Comdr. V. Bailey, United States Navy, commanding; U. S. S. *Dickerson*, Lt. V. Rathbun, United States Navy, commanding.

These destroyers, designed at or near the time of our entrance into the World War, and constructed either during the war or immediately thereafter, have therefore been in service in the Navy for more than 15 years. In age, design, and length of operating service they may be termed obsolete, yet they still serve a useful purpose. Their armament of guns, torpedoes, and depth charges, and their high rate of speed, make them an indispensable force in a well-balanced fleet. They have a length of approximately 315 feet, a displacement of about 1,250 tons, and a potential speed of 33 to 35 knots. The term "destroyer" meant originally destroyer of torpedo boats, but destroyers themselves are now torpedo boats which have evolved into a higher efficiency and power than the boats they were originally designed to destroy.

The first contingent of the Naval R. O. T. C. was not to be embarked until we arrived at New Haven, Conn. Later we received on board the Harvard members of the R. O. T. C. unit, and sailed out of Boston Harbor. The Yale and Harvard students, coming on board at New Haven and Boston, were accompanied by a United States naval officer, member of the naval science and tactics staff of the university. All training and instruction were conducted in accordance with the approved plans of the training detachment commander. The details were worked out by the commanding officer of the ship, assisted by naval science and tactics staff representative, officer in charge R. O. T. C. detachment.

The members of the units, upon arrival on board, were given individual station billets and assigned quarters in the crew's compartments forward. These living spaces contained necessary sleeping bunks, locker space for storage of personal belongings—clothing, books, and other instructional material—tables for messing which served further as writing tables when solving navigational problems, or writing up notebooks on navigation, seamanship, communications, engineering, and other subjects explored during the cruise.

The R. O. T. C. detachment on each destroyer was organized into three sections of two squads each. The normal squad was composed of eight members. Each of the three sections had a section

leader appointed from among its members. A member of each squad was designated as its squad leader. This set-up corresponded with the standard destroyer organization, and facilitated the amalgamation of the members of the R. O. T. C. units and the regular members of the ship's complement. This enabled the members of the units at all general drills and exercises to take up their proper stations with the least confusion. For purposes of instruction, the organized squad composed of eight members seemed best to meet the requirements as regarded size and flexibility.

Subjects covered during the instruction periods were grouped under four major headings: (a) Seamanship and tactics; (b) navigation and communications; (c) gunnery and fire control; (d) engineering.

Instruction under (a) seamanship and tactics was given in ground tackle, lifeboats, heaving the lead, shiphandling, deep-sea-sounding machine, torpedo attacks, bridge details, Naval Regulations, customs and traditions of the Navy, watch-standing duties, lookouts, military and international law.

Under (b) navigation and communications, instruction was given under the following headings: Piloting, charts, sun and star sights, dead reckoning, navigational instruments, light lists, sunrise and sunset tables, tide tables, general signal book, semaphore, blinker, searchlights, signal flags, radio-equipment procedure, etc.

Instruction under (c) gunnery and fire control, covered gun construction, safety precautions, fire-control procedure, gun directors, spotting range finder, loading drills, pointer group drills, rules for modified short-range battle practice, star-shell firing, star-shell safety precautions, rescue breathing apparatus, torpedo control, etc.

Under (d) engineering, instruction covered main engines, boilers, auxiliaries, engine-room and fire-room procedure, safety precautions, etc.

That these students had little time to idle away on a normal day becomes evident when one inspects the daily routine established for the period of the cruise.

Routine (given in sea time, with a period of 24 hours rather than two periods of 12 hours each):

0600 (6 a. m.) Call all hands.  
0615 Turn to, scrub clothes, clean own part of ship.  
0715 Breakfast.  
0800 Quarters, muster, and inspection.  
0815 Clean own part of ship and gun.  
0900 General quarters and gun drills.  
1030 Instruction period.  
1200 (noon) Dinner.  
1300 General quarters and gunnery drills.  
1430 Instruction period.  
1530 Tactical exercises.  
1800 Supper.  
2030 Night exercises.  
2200 (10 p. m.) Taps.

In addition to carrying out the above routine for the normal day at sea, the students stood one out of every three watches.

Without doubt the most interesting feature of the cruise was the firing of short-range battle practice, in preparation for which the R. O. T. C. members drilled forenoon and afternoon. They worked at the loading machine, held pointer and sight-setter drills, fire-control drills, and target-practice rehearsals. These drills and exercises seemed endless to a casual observer; nevertheless, the students certainly put their hearts into this work. Each member took pride in striving to the limit during every hour spent in fitting himself to meet the test of the actual firing of the battery.

Other spectacular features were the firing of star shells at night for target illumination, and tactical exercises conducted in conjunction with smoke-screen procedure. The morning of June 29, after visiting San Juan, St. Thomas, and Guantanamo Bay, orders were given to get under way shortly after noon mess—and our six destroyers steamed out of the harbor—homeward bound.

The first day out was given over to holiday routine, with not much work, and with time to relax and reflect on the many things we'd learned and the sights we'd seen. Then, in the following 2 days, came general gunnery drills, smoke-screen formation, and the actual firing of short-range battle practice, in which it was every student's ambition to be the one actually to fire the gun. It was thrilling to see groups of college students, young, intelligent, quick, and eager to master the many details of life on shipboard, partake in the deadly seriousness of battle practice, with the feeling so clearly revealed in their faces that they were learning to do something that some day might more adequately protect their country in time of war.

In looking back over experiences on board, I remember those connected with tactical maneuvers, and how they were enjoyed by the students—especially those having to do with the actual handling of the ship. In the latter, a student standing on the ship's bridge, was given entire charge of the ship, and was required to state how he proposed to execute a signal from the commanding destroyer detailing the maneuvers, as soon as the meaning of the signal had been determined. He was, as far as practicable, allowed to handle the ship without comment or suggestion. In other words, he gave the commands for shifting the ship's position. Upon completion of the maneuver any errors were commented upon and explained.

On the third day out three of the destroyers left the formation at almost the same place where they miraculously, it seemed to me, had met our contingent of three destroyers on the way south. And on the Fourth of July the U. S. S. *Badger* arrived at New Haven, there to disembark and discharge its students. The following day we arrived at New York, and I left the destroyer that had been my home for 31 days with a deep conviction that there had been instilled into the members of the naval units of Yale, Harvard, Georgia Tech, and Northwestern Universities a resourcefulness and dependability which go to make the essence of sea training. I felt that upon this cruise there had been exemplified the code of an officer and gentleman who follows the sea and who applies those finer principles for which the United States Navy stands—to tell the truth; to fear no obstacle; to use no profane language; to take nothing you do not own; to keep one's body clean and healthy; to fight to the finish; and to coordinate the elements of an officerlike character in loyalty, courtesy, modesty, simplicity, and moral courage.
